Victor Records  
95100, 96000,  
96001, 89080, 55066*

## Could you tell this story?

Music may be just a succession of pleasant sounds or infinitely more than that. It may tell a fine romantic story or it may portray some spiritual struggle that you yourself have experienced.

To know these things, to understand the significance of the music you hear, is to enjoy it to a vastly greater extent.

With a Victrola and Victor Records you get a thorough understanding of music such as can be secured in no other way. You are enabled to observe closely and study every detail of interpretation and become intimately acquainted with all music.

Then you discuss it with the same freedom as you discuss books, art, architecture or the drama—and with the same satisfaction to yourself and to your hearers.

# Victrola

REG. U. S. PAT. OFF.

**Important: Look for these trade-marks. Under the lid. On the label.**  
**Victor Talking Machine Company, Camden, New Jersey**

# Westclox

## Days in and nights out

**I**T'S all the same to Westclox whether you prepare to tuck away four hours of beauty sleep or meet the night shift on their way home.

Getting-in time is your own affair, but when getting-up time rolls around Westclox make themselves heard.

For folks who get in when they please and get up when they must, Westclox are friends indeed.

Of course they butt in on a sound

sleep at its most delightful moment, but they work under your orders. If you ask them to call you they do it punctually, cheerfully, tunefully.

You will find Westclox alarms in several sizes and prices. Each one must run on time and ring on time before it can wear the trade mark Westclox on its face.

Pocket Ben, a watch bearing the Westclox trade mark, furnishes dependable time for the pocket.

**WESTERN CLOCK CO., LA SALLE, ILLINOIS, U. S. A.**

*Factory: Peru, Illinois. In Canada: Western Clock Co., Limited, Peterborough, Ont.*

### Westclox *Big Ben*

7 inches tall. 4 1/2-inch dial. Runs 32 hours. Steady and intermittent alarm, \$3.50. In Canada, \$4.50.

*Washed 10 times with  
Ivory Flakes*

Imported French hand-made blouse. Pure white, square neckline. Embroidered with silver thread, and delicate shades of blue and violet.

Price, \$29.50

Though washed 10 times, washing this blouse, its purchaser confidently laundered it with Ivory Soap Flakes once again, now safe, as now (and safe).

Still pure white, embroidery unfaded, fresh and clinging as when it left the store.

"I have found it difficult to convince my friends that I have washed it at all," says the owner's letter.

(Blouse and owner's letter are on file for inspection in the Procter & Gamble office.)

FREE

*This package and  
booklet*

A sample package of Ivory Flakes and the beautifully illustrated booklet, "The Care of Lively Garments," will be sent to you without charge on application to Section 18-AF, Dept. of Home Economics, The Procter & Gamble Co., Cincinnati, Ohio.

## Crêpe de chine? Wait!

First consider this test for laundering safety

CAN "good soap" ruin a delicate silk blouse or a chiffon negligée—or even a woolen sweater—in one washing?

Yes, of course it can! "Good soap" may not be good enough!

How, then, can you tell—before you run the risk—whether or not any particular soap is good enough—whether it will ruin your really precious garments? Of course, a white soap is needed. Here is a simple test that will prove soap safe or unsafe as easily as you tell night from day:

*Would you be willing to use that  
soap on your FACE?*

Think of Ivory Flakes in this way.

At once you are sure, for Ivory Flakes is just Ivory Soap in flake form—the very same Ivory Soap that millions of women during two generations have found mild and gentle for the skin.

What a relief it always is when a woman first realizes that with Ivory Flakes she need no longer fear for the safety of her most precious garments!

A teaspoonful or so of these delicate, petal-thin flakes; instant suds; a few moments of dipping and squeezing—and the gently cleansing soap has done its work—safely, yet thoroughly.

Ivory Flakes is economical enough even for the family washing, but it has that unique margin of safety which distinguishes its use for the washbowl laundering of exceedingly precious garments.

May we send you a small package of Ivory Flakes with our compliments and a useful booklet of washing and ironing suggestions? You will find the proper address in the upper right-hand corner.

*The full-size package of Ivory Flakes is  
for sale by grocery and department stores.*

# IVORY<sup>SOAP</sup> FLAKES

*Makes dainty clothes last longer*

# Teach Me, My Dog!

*By Booth Tarkington*

ON MY thirteenth Christmas someone gave me a little old-fashioned "quotation book," and at intervals during the next year I made autobiographical entries in it. One of them must have been written on an overcast day in October, but there was a real pang in part of it, for I still have the scar. "It has been a terrible year," I wrote. "Fritz died on the fourth of September. He was the noblest, bravest, truest, and faithfullest dog that ever lived. Yes, poor Fritz is dead and so are the two Stimson boys. Also, Mrs. M. L. Crosby and President Garfield." But this was an order of precedence that came from the heart of one whose first intelligibly spoken words were addressed to a little dog: "Hyuh, Jock!"

James Whitcomb Riley used to tell a story of two boyhood friends of his: they were brothers; someone had given them a pup and each of them claimed exclusive ownership. The dispute was so hot and the problem involved appeared to be so insoluble, that at last the claimants decided to place themselves in the hands of a court of their contemporaries. The verdict of the boy-jury was that the pup was "both their dog," and this was accepted as satisfactory. Nevertheless, it has always seemed to me that the boys belonged to the pup as much as the pup belonged to the boys. They were bound by their hearts to serve him even more than he, with the best will in the world, could serve them. Since he was their dog, they must feed and shelter him, attend upon him and cure him in his illnesses; they must keep him from sorrow, bathe him and help him with his fleas, and be ever ready to rush to his aid when he warned them that he was in danger or in pain.

The point of ownership is thus seen as somewhat subtle, and suggests the general

question: Does anybody really own a dog?

Of course such a question at once spreads itself out into that more general one: Does anybody really own anything? We do not need to die, nor even to read "Hamlet," in order to discover that we have been but temporary tenants of our very bodies, as we have of our garments;

and when a communist accuses a millionaire of owning a country place the very trees shake with mockery of both of them. No, I think we do not own our dogs, although it is proper for us to speak of them as ours; and I well may say "my dog," just as I say "my friend." My dog and I have certain mutual privileges—or obligations, if you choose—of service and affection; and thus simply we arrive at an ideal relationship. There will never be a dog soviet.

The strangest thing about this relationship between a man and his dog is the profound difference between the parties to it. They are congenial; they are intimate; they commune sentimentally, perhaps even spiritually; they often impart to each other their moods; and they are able to communicate in a language with and without words—yet there exists between them that "abyss between the species" of which Maeterlinck speaks in his touching and incomparable essay on dogs. Man and dog, in spite of their deep intimacy, have each of them their secrets, unfathomable by the other; but my dog has the advantage of me here. He is not curious about my secrets, though they may trouble him—as when I inexplicably close a door between us—but I often puzzle myself about his mysteries, and spend time fruitlessly in trying to unravel them. In fact, one mild secret belonging to a little dog, a rather Scotch terrier, has puzzled me for more than twenty years.

He arrived with his mistress one night at a cottage near the border of a lake, and could have had but the vaguest idea of his whereabouts. He had left his city home that afternoon in a carriage; had spent some hours in a baggage car; had been transferred to a steamboat after nightfall; crossed the lake thus to a pier, walked up the pier and through a little grove of trees to a cottage—all of this experience being on the leash and wholly

## The Most Wonderful Dog I Have Ever Known

### Prize Contest Announcement

BOOTH TARKINGTON'S appealing tribute to his canine friends will arouse responsive emotions and memories in your own mind.

While you are still under the magic of Mr. Tarkington's article, tell us about the most wonderful dog *you* have ever known. What were the characteristics or qualities that impressed you so greatly? How did he show his wisdom, or devotion, or powers of perception? Tell us all about it, letting your narrative take the form of definite anecdotes.

For the best letter of not more than 400 words we offer these prizes: \$20, first prize; \$15, second prize; \$5, third prize. Competition closes January 20th. Winning letters will appear in the April number.

Address Contest Editor, The American Magazine, 381 Fourth Avenue, New York City.

Contributions to this contest cannot be returned, so make a copy of your contest letter if you want to preserve it. Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

the hair of our heads is swept from the barber-shop floor; the surgeon and the dentist lightly forget what has become of other bits of us; and we are always three-fourths water, evaporating rapidly. What is left to the man forty years old of the body he had as a youth of twenty?

A tramp is wearing "my" old overcoat, and for a little while (until the ragman gets it) he thinks of it as "his" overcoat;

BOOTH TARKINGTON AND "WOP"

**H**ERE are Booth Tarkington and "Wop," the black Florentine poodle dog to which the famous Indianan pays a touching tribute in this article. Mr. Tarkington is the outstanding figure among living American writers. Recently he won, for the second time in four years, the Pulitzer prize for the most distinguished novel of the year. Almost simultaneous with this award, readers of the "Literary Digest" voted him the greatest American author, and in a poll conducted by the New York "Times" he was included in the list of the greatest ten Americans. No other literary man appeared on the list. Both as a novelist and as a playwright Mr. Tarkington has a long record of great successes. Among his novels are: "Gentle Julia," "The Gentleman from Indiana," "Monsieur Beaucaire," "Cherry," "The Conquest of Canaan," "His Own People," "Penrod," "The Turmoil," "Seventeen," "The Magnificent Ambersons," "Ramsey Milholland," and "Alice Adams," the book that won for him the most recent award of the Pulitzer prize. His plays include "The Man from Home," "Monsieur Beaucaire," "Mister Antonio," "The Country Cousin," "Clarence," "The Wren," and "The Intimate Strangers." Mr. Tarkington is fifty-three years old. He was born and always has lived in Indiana.

unfamiliar to him, as he had never before been out of the city where he was born.

I was staying at the cottage, and, having an errand to the village across the lake, the next morning, I set a signal upon the pier to warn the steamer to stop for me, and noticed that Robin, the terrier, was of a mind to accompany me. As I had his acquaintance in the city and he sometimes walked with me there, I thought it pleasant to accede to his wish for this excursion and so, when the steamer came, I invited him aboard with me.

We crossed the lake, disembarked and went to a drug store in the village, but

there I thought best to leave Robin outside the screen door; for a cat could be seen within, cosily arching herself to make the rung of a chair caress her; and Robin's lifelong inimical convictions about cats were already known to me. Therefore, I told him to wait for me, and went in alone.

When I came out, five minutes later, I was disturbed to find only a dusty village street lying placid in the sun and devoid of any visible animal life—Robin had departed. I returned in haste to the steamboat landing, calling and whistling as I went; I hurried up and down, making

that townlet resound with his name, but Robin continued to be elsewhere and I began to be dismayed. For he was a city house dog; he had no experience of open country or lakes or woods; one direction would certainly seem to him as good as another, and the cottage in which he and I were visitors was deep in a grove of trees, miles away, across the lake.

No one in the village had seen him; no one arriving by the roads that led from the village had encountered him upon the highway; and after an hour of searching and questioning I found myself in a low state of mind indeed; for naturally I was distressed about Robin myself, and almost the last thing anybody cares to do is to lose somebody else's dog.

**F**INALLY, I went to the office of the village newspaper, and there found three men and a boy warmly engaged in the printing of that week's issue on a large hand-press. "I'm too late," I said regretfully, turning back to the door, but the oldest of the three men stopped work, and came toward me genially.

"Too late for what?" he inquired.

"I wanted to put an advertisement in your paper. I'm sorry to see you're already on the press."

"An advertisement?" he said. "You write her out and she'll go in. I'm the editor."

"But I wanted my advertisement to go in this issue."

"She will," he said. "We ain't turned out only seven or eight copies."

I sat at his desk, and he and his assistants looked over my shoulder as I wrote:

Lost! Near Lowe's Drug Store on Tuesday morning, a small Scotch Terrier, mixed; white with brown spots; answers to name of Robin. Return this dog, or bring information that will lead to his return, to Woodland Cottage near Kewonah Landing. \$10.00 Reward.

"Ten dollars?" said the editor. "Well, I don't know as there's any such a terrible rush to get this paper out right now!" And he and his staff immediately went forth to look for Robin.

Other inhabitants were already engaged in the search, and more joined them. They brought me all the dogs they could find, while certain boy optimists, who had been carefully instructed upon Robin's appearance, came hopefully tugging along with them large dogs as well as small, and were disappointed when I could not in good conscience declare an Irish setter or a "part collie" pup to be the terrier for whose sake I had declared myself ready to part with ten dollars. But of his veritable self there was never a word to give me hope, and at last I went aboard the steamboat and departed, leaving the village still busy.

As I approached the cottage from the pier, revolving in a downcast mind how I could best break the news to Robin's mistress, I saw that the veranda of the cottage supported only empty chairs and hammocks; hostess and visitors were either indoors or away, and I sighed a shamed sigh of relief for the respite—and then, coming closer, stared incredulously. For there sat upon the veranda steps a small, complacent figure—that of one who knew himself to be established and at home upon those steps, and had nothing in the world to agitate him.

"Robin!" I shouted.

He approached me genially, but inquiringly. "Why the commotion?" he asked unmistakably.

"See here!" I said. "When I went into the village drug store you simply turned about and came back to the cottage; but that is a thing manifestly impossible for you to do. In the first place you couldn't have known which road would take you 'round the lake; in the second place, if you did find that road by some freakish chance, you couldn't tell which lane would bring you from the road to this cottage; in the third place, you couldn't have followed the edge of the lake itself, because there are insurmountable obstacles; in the fourth place, it's obvious you didn't swim; and, in the fifth place, and all the rest of the places, your entire performance is incredible. So what I want to know is, *How* did you do it?"

"I don't seem to get the drift of your conversation," he remarked, looking somewhat bored, and returned to the veranda steps.

Inquiries addressed to human beings developed for me the fact that he had trotted into the cottage about half an

hour after he had left me at the drug store. He was calm, casual, and neither dusty nor wet.

He was two years old, and of course a human being three times his age could not have done what he had done. And he kept to himself the mystery of how he did it. I suppose that even if he had possessed a human voice, he could not have explained, because the question was "too simple." If you ask a person, "*How* do you walk?" he may reply, in some surprise, "Why, with my feet!" Probably Robin would have made that same reply, in spite of the obvious fact that he did it with his head.

AT HIS home in the city Robin would sit upon the front lawn, observing with an air of meditation the passing traffic of the street. I have watched him as he sat thus, a tiny figure of comedy, alone on the broad space of green, and I have tried to follow his thoughts. "Rather a dull day," he might be saying to himself. "I wonder if we couldn't liven things up around here."

Just across the street lived a brother of

his, Princeton, called Prince, "for short," and Robin, having decided to brighten up the neighborhood a little, would rise and go to see if Prince sympathized with the idea. They would exchange amiable greetings in Prince's yard, and then Robin would obviously offer the suggestion "Let's drive everything off the street!"

Immediately assuming in simultaneous perfect accord a manner of ravening frenzy, they would charge into the highway and attack every passing vehicle. "How dare you!" they would shriek. "How dare you roll your wheels over our asphalt? Out of here with you! Out! Out! Out!"

That is what a dog says when he charges your automobile; he is indignantly ordering you off for trespass, and his words are usually "Get out! Out! Out! Out of our street!" Of course, though, like Robin and Prince, some dogs only pretend to be in a rage and do the thing for their own amusement; because they know well enough that the vehicles will come and go in spite of them. Nevertheless, there are numbers of serious little dogs who are always (Continued on page 58)

## Sid Says:

*Take a seat, mister—the Almighty will see you presently*

A SUBSCRIBER writes—"Give us a New Year's editorial that will tell us what this earthly struggle is for. Sometimes I think it is a lot of foolishness. Why work and thrash around, when the end of it is death, which comes soon?"

Some question! And why pick on me for an answer? I can't solve the riddle any more than you can. But here is a thought, old as the hills, maybe freshly expressed:

This world looks to me like the anteroom to an office. We are shoved into it and told to wait our turn. At the call of death each one of us passes through the door, to face we know not what.

Now you don't have to know anything about the next world in order to know about anterooms. We have all sat in them by the hour—at the banker's, the lawyer's, the doctor's, the customer's. And we all know that it is a dreadful bore unless we have something to do. So, as we sit, we read anything we can lay our hands on, or think as hard as we can, or take a pencil and paper and make notes of things to do and how to do them. In other words, we busy ourselves if we can. And—miracle of miracles—two wonderful things happen! One is that the time passes more pleasantly while we are waiting; and the other is that when we get inside, the business we have come to transact is better attended to than if we had spent the waiting time idly loafing. We are better prepared by work than by idleness.

Now, this is a very simple, a very ordinary statement—but it is all that I see in it. We are in the Almighty's anteroom. We don't know what He wants to see us

about; but while we wait we shall be far happier if we work as hard as we can at the job of developing all our talents. And out of that development we shall be better prepared for the interview that is ahead of us. Nobody has any use for a dead, inactive, lazy mind—and I can't imagine that the Almighty has.

This is all I know and all I can say on the subject; but I can't resist putting down the briefest little account of one of the busiest men I ever saw in the Almighty's waiting-room. I refer to the late Lord Northcliffe, who died a few months ago at fifty-seven, having come from nothing to the ownership of a hundred newspapers and periodicals, and a place of stupendous power—as we poor little human beings look upon power. I saw Northcliffe in a New York hotel at the end of a hot day and had an hour's business with him. During the morning and afternoon he had had personal interviews with one hundred people! I saw him from seven until eight in the evening—the last night he was ever in New York. When I left at eight the man had had no dinner—yet he plunged into another business interview just as I walked out of the door. Perhaps you will think that he was overdoing it—this matter of keeping busy. I suppose that he did overdo it, but of all the active-minded, interested, up-and-coming human beings I ever saw, Northcliffe, I think, took the prize. I don't know what use the Almighty may have for him, but I can assure you that if any questions are asked, Northcliffe will have something to say! He certainly kept stepping while confined to the waiting-room. And it was best for him that he did—just as it is best for you and for me—according to our strength and capacity.

"No," said Jerry quickly, "you must decide yourself. . . . If in your heart of hearts you feel that the change will make you happier, you must make it. I only ask that you think it over another week"

# The Wife Who Wondered if She Could Leave Her Husband

A story

By Christine Whiting Parmenter

ILLUSTRATIONS BY LESLIE L. BENSON

MARGARET MASON closed the door on her departing callers, and going to the window watched them walk down the street in their smartly tailored suits. They were the Brimmers, old friends whom she hadn't seen for months.

Sarah was a teacher in a girls' school, and Caroline had married the History professor at the college. Their talk had been of college days and old times, but, although they had kissed her good-by effusively, Margaret felt a subtle pity in their manner which vaguely hurt her.

"Hadh't she led them both in college?" she thought vindictively.

Neither of them had won the honors she had; yet, because she was married and still teaching, they pitied her.

As they turned the corner, she sighed, and cast a discouraged glance about her living-room. There was an air of fastidiousness about the Brimmers that brought to light all its shabby makeshifts; and it was most unfortunate that her neighbors in the apartment below were cooking cabbage. Margaret had remarked upon it, laughingly, but her laugh had fallen a little flat, and even her dainty tea tray could not cover the aroma from below.

Now that she was alone again the odor seemed to choke her, and opening wide the windows she went into the kitchen to peel potatoes for Jerry's supper. She slashed at them savagely, with an extravagance that would have shocked her in saner moments. The water crept into a half-healed crack in one of her fingers and she winced at the smart, wondering discouragedly if it was all worth while—this eternal dish washing and scrubbing. Had she followed in Sarah Brimmer's footsteps, she, too, might be teaching in a fashionable school; or like Caroline, she might have married—

Suddenly the drift of her thoughts appalled her. Never, in her inmost heart, had she allowed herself to criticize her husband. It was *she* who had insisted on continuing her teaching, much against Jerry's will. Should she blame him, because as time went on he had become accustomed to it? For a long time he had made no protest against a state of things that now seemed permanent; yet she sometimes thought that, had she given in to Jerry at the first, he would have managed to fend for two.

Even had they had children they would have got on somehow. People *did*. They had been married for six years, and for some time Margaret had realized that the long hours, and coming back to a dusty

apartment to get supper, were beginning to tell upon her nerves. She hated the shabby cretonne cushions in her wicker chairs. She *loathed* the Bagdad couch cover, its stripes forever gaping because she was too tired to mend them.

Why on earth, she thought angrily, hadn't they bought something that wouldn't rip?

Her thoughts went back to the day they had bought the couch cover. The salesman had tried to beguile them with one of soft blue velvet, which Jerry said just matched her eyes. Margaret had surveyed it longingly. Had the salesman known *how* longingly he might have pressed the matter—but Jerry knew. He had carried the Bagdad home under his arm, and when she had arranged it to the last cushion, he took her unexpectedly into his arms, and kissed her.

"Bagdad rugs and Mission furniture," he said regretfully, "when you were made for old mahogany and velvet. It makes me feel like a sinner! But some day, dear, when the invention is perfected and our ship comes in—well—my first purchase will be that velvet couch cover."

THAT was five years ago, and the "invention" over which Jerry still tinkered at the electric company's workrooms, was as far from completion as ever. Margaret didn't understand just what it was, but she knew that, once perfected, it would save innumerable moments in a telephone exchange.

It had been a long time now since Jerry had even mentioned it. Perhaps his dreams and ambitions had been strangled by the incessant struggle for bread and butter. It came to her with a sinking heart that Jerry wasn't making good. She wondered if ten years hence she would still be mending the hateful Bagdad.

The thought brought tears, that fell unheeded over the potatoes. Margaret tried unsuccessfully to obliterate their stains before Jerry should arrive—dreading his questions. For Jerry was sensitive, and might not understand why this call from her old friends had left her so discouraged, and she mustn't hurt him.

But—strangely and un-Jerry-like, the questions did not come. He greeted her in an offhand manner that was unusual—spoke of the cold house, and she explained about the cabbage; and when he asked what she'd been doing, she replied with studied carelessness that the Brimmer girls had called.

"Those two aristocratic icebergs?" he asked; then added a hasty and surprising apology for criticizing her friends.

"They're no special friends of mine," Margaret retorted.

"Why, in college—" began Jerry; but she interrupted.

"College, my dear, was a long, long time ago." And her husband, after one furtive glance, was silent.

In the days that followed, Margaret felt that something intangible had crept between them. Jerry was often late to supper, and more often didn't come home till after Margaret was in bed. It was extra work, he explained once. He was sorry to leave her so much alone, but it was only temporary. And she must get someone to help her clean on Saturdays.

"You look tired, Margaret, and I can't stand it."

His voice was strained. He seemed "on edge," Jerry, whose sunny nature she had always leaned on. As the weeks passed all the happy-go-lucky charm of him was clouded. He seemed morose and moody. Then, just as Margaret felt she couldn't endure the strain another day, came an astonishing offer from Sarah Brimmer.

Sarah had been made principal of a girls' boarding-school on the Hudson. An English teacher was needed, and she offered the place to Margaret at a salary which seemed unbelievable. It would enable her to dress as well as Sarah Brimmer. There would be no more dish washing and weekly cleanings. She could even save something for her old age; but—it meant giving up her home. Jerry would have to board, and she would see him only on vacations. Yet, if they made the sacrifice for a few years—

The vision dazzled her. She was to let Sarah know on Saturday—to-day, and she still lacked the courage to talk with Jerry.

SHE would have spoken that morning, but he said he'd be home to supper, and in cowardly fashion she had put it off. Then came supper, and Jerry—her *old* Jerry whom she had almost forgotten, who whistled as he brought in the supper and, once seated, got up again to kiss her. How *could* she tell him? Yet it couldn't be put off longer, and with dessert she made the plunge.

Jerry listened quietly, but as she talked she felt the invisible wall rise up between them. He pushed his dessert away untasted, and looked at her intently:

"You want to do it?"

"I want—to do what's best for both of us," said Margaret breathlessly. "You see, I'd have no expenses except my clothes; and I can never hope for anything else as good. We could afford to spend vacations at decent places, or—or travel—"

"On your money?" cut in Jerry shortly.

"Is there any difference in my paying the butcher, or a hotel bill?" she retorted; then, as he winced, she left her chair to put an impulsive arm about his shoulders.

"Please, please forgive me," she pleaded gently. "You know, don't you, that I've been glad to do my share? I've wanted to. But I'm so tired of having nothing the way I like it. How can I keep house properly? And when I come home to this dusty place it makes me sick! We might try it for a year. It would be a relief just not to mend that Bagdad for a while," she added lightly.

JERRY stood up, facing her. "When do you go?" he asked.

"I sha'n't go at all unless you wish it."

"And you expect me to decide a thing like that?"

"I thought we'd decide it together."

"No," said Jerry quickly, "you must decide yourself. I've led you a wretched life, and you're not to consider me in your decision. I'll manage somehow. If in your heart of hearts you feel that the change will make you happier, you must make it. I only ask that you think it over another week."

He started hastily to clear the table. Margaret, watching him, realized suddenly how much he helped her; but he refused to discuss her plans again, and in the days that followed he wore an air of cheer that hurt her. She wondered if he didn't care.

It was a wretched week; a week of indecision and changing plans. Monday was all uncertainty; but Tuesday, when Jerry departed

whistling, she decided, as she fought for a seat in a crowded car, that she had had enough of it, and that her absence would make no difference to her husband, anyway. She was blue, and school went badly. Two boys had to be kept in, and it was late when she reached home. She was thinking, as she climbed the narrow stairs, that she was too tired to get supper, when the door opened on Jerry, dust cloth in hand.

"Had to come up-town on business," he explained. "It was too late to go back, so I've been dusting. The potatoes are cooking and the table's set. If they fire me at the electric company will you give me a job as housemaid?"

It was impossible not to give an answering smile, or feel a sense of cheer as he kissed her and took her coat.

"I'll get supper," he continued. "You're all used up." And before she could protest he had deposited her on the hated Bagdad and covered her warmly. "Now, don't you stir till I come back. I'm going out to buy some chops."

"There's some left-over stew," she began feebly, when he interrupted: "There is not. I gave it to the cat. Don't look so horrified, honey. This is my treat."

When he had gone a wave of homesickness swept over Margaret at the thought of leaving him. Jerry, himself again, was so dear. She wondered what had caused those weeks of moodiness, and if his cheerful manner was to hide his anxiety about her decision. Her tired eyes closed drowsily, and Jerry had to wake her when supper was on the table.

Late that night, as she lay with her cheek pressed against her husband's arm, she told herself that she couldn't leave him; but in the morning things looked different: It was storming. Her rubbers leaked, and her rain coat was so shabby she was ashamed to wear it. Jerry, too, had lost the cheer that charmed her. They left the house together, that he might hold her umbrella against the wind, and parted breathlessly at the subway entrance.

Jerry didn't come home to supper

When she came from the bathroom to find him sewing a button on his pajama jacket, a queer, uncomfortable feeling crept over her

and Margaret was glad of his absence. It gave her time to weigh things without bias. The rain had changed to sleet, and she shivered at the thought of her early morning start. Those dreadful early starts! There would be an end to them if she accepted Sarah's offer. It was absurd to hesitate. Surely, Jerry could endure the separation for a year; and she would be able to give him things—things he'd wanted for ages. There! Her mind was made up; but she needn't tell Jerry until Saturday. She felt almost lighthearted as she went to the kitchen to make a cup of chocolate against his late return.

Her exaltation lasted even through the early start next morning and the long school day. It lasted while she got supper and pressed the skirt

she'd been wearing in the dampness. She wouldn't always be pressing skirts, she thought relievedly. She even planned recklessly about the wardrobe she would purchase.

Now, if Jerry would only keep on being cheerful—

He did. On Friday, when her new-found courage was again weakening, he came home whistling, and kept the conversation going in a manner that left Margaret breathless. It struck her, as they were getting ready for the night, that his cheerfulness was a little overdone. When she came from the bathroom to find him sewing a button on his pajama jacket, a queer, uncomfortable feeling crept over her.

"Why didn't you call me?" she asked, almost angrily.

"Might as well get used to jobs like this," he answered, still cheerful.

AFTERWARD, when Jerry was asleep, she lay with eyes wide open, staring at the darkness. It was a shame that he should have taken that special time to fix a button! But she mustn't let it upset her. Absence was said to make the heart grow fonder, and didn't she owe something to herself after all these years? If that uneasy feeling would only pass away—

Then with morning came courage—

Saturday morning, with no sense of hurry. The storm had passed. The world was frosty and beautiful. Margaret hummed as she got the breakfast, and decided that sentiment shouldn't run away with her again; but—she would wait till evening to tell Jerry. When she kissed him good-by her mind was firmly settled. She would call Sarah up at noon. Then—strangely—her thoughts reverted to—the button!

It was a busy morning. Margaret went through her slender wardrobe, making neat piles of things to be repaired. Later, she remembered a sweater that needed darning, and going to the storeroom found that Jerry, hunting a pair of gloves, had left a trunk open. She was about to close it when her eyes fell upon a little book, a diary. It must have dropped from Jerry's pocket. She carried it into the warmer room and glanced idly at its contents. It seemed to be specifications of some kind, and sketches—something connected with his work. Then her own name attracted her and she read: "Margaret looks tired. Poor kid! She would have been better off had we never married, but I pray she never finds it out."

Margaret sat down, suddenly. That didn't sound like Jerry. It—it wasn't cheerful. She turned another page: "My

dear girl's birthday, and I can't give her a darn thing. I hope she knows how much I love her. When our ship comes in—"

Here the writing ceased, as if he'd been interrupted. Margaret read the words again. "I hope she knows how much I love her."

Her eyes filled suddenly. She turned more pages—figures mostly, then, only a week back: "And I thought life had already disciplined me thoroughly! Do all dreams come true too late? If I should lose her—" The rest was erased, and underneath in a black scrawl: "Cut it out! Be a sport, can't you? Cheer up!"

That was Jerry! Margaret laughed, even as she cried. Oh, he *was* a sport! He had been one through all this dreadful week. She saw it now in a dozen things that had escaped her notice at the time.

SHE laid the little book down gently, realizing with a sudden lightening of her heart, that her way was clear. Of course she would stay with Jerry!—not from duty, but because she couldn't leave him. All else was secondary: shabby raiment, discouragement, the disillusionment that comes with ripening years were all as nothing, compared with the really big thing that was theirs. The straight road was not always the easy road perhaps; but she had found her way. She felt no shadow of indecision or regret as she went to the telephone to call up Sarah Brimmer.

Jerry was late to supper. Margaret heard his latchkey and called cheerfully from the kitchen. When he joined her some minutes later she thought he looked a little haggard; but he spoke gayly:

"Is it possible that I smell steak?"

"You do; and (Continued on page 80)

# Is Your Brain Power Increasing With Your Age?

There is every reason why it should, says Dean Robinson, who presents some remarkable facts about the mental abilities of students from seventeen to seventy

An interview with Frederick B. Robinson, Ph. D.

Dean of the School of Business and Civic Administration and Director of the Evening Session of the College of the City of New York

*Reported by Merle Crowell*

**D**O YOU still cling to the "camel" theory of education? The camel, as you know, is a queer quadruped that drinks enormous quantities of water before setting out on a long journey across arid sands—and depends on this supply to sustain him for the entire trip! A great many people, unfortunately, believe that their minds have this odd capacity of the camel. By drinking deeply at the fountain of knowledge in school or college they consider themselves stocked up for life. Or, after once having learned their business or profession — after having "made the grade," as they say—they think they can now "coast." These are the people, as I have long observed, who never rise above mediocrity.

I have been fortunate enough to know many men of achievement in industrial life and in the arts and sciences. Almost without exception I have found them to be more eager and effective "students" at forty or fifty than they ever were in their school days. On the other hand, I have seen young men and women start out with plenty of promise, only to wither on the branch as middle age came on. Most of them followed the "camel" theory, and some of them were victims of the general delusion that after a man passes thirty-five or forty his mind is not capable of grasping new subjects with the celerity of youth.

In the evening sessions of the College of the City of New York, we have an unusual opportunity to study the human mind—one of the finest opportunities of its kind in the world. With more than seven thousand students from seventeen to seventy years of age, foreign-born and native-born, male and female, well-to-do and very poor, brilliant and dull, we are handling a typical cross section of

American life. Here I am always discovering fresh confirmation of my observations about the unused talents of age.

Our experience has demonstrated the fallacy of the current belief that the mind of youth is more capable of effective study than the mind of maturity. The young man, I will admit, often gives an impression of mental agility. He seems to

be filled with the mere shadows of knowledge.

In his excellent book on the Elements of Physiological Psychology, Professor George T. Ladd, head of the department of philosophy at Yale University, remarks:

It is from want of mental curiosity, attention, careful and comprehensive judgment, sound moral purpose, etc., that most men fail to develop during adult life in their mental powers. . . . Many minds not only make vast acquisitions but also experience a large unfolding of mental capacities during the period of middle life.

## Who Learns Quicker—the Boy of 20 or the Man of 45?

"COMPARING youth and middle age," says Dean Robinson, "I find that there is hardly a subject in our curriculum that the average mature mind will not grasp with equal ease and with superior understanding. Take two men of equal intelligence, one forty-five and one twenty, both in good health and with good habits, both free from hampering worries, and turn them loose on a new subject in which they are both interested. One finds immediately that the man of age and experience has all the advantage. The individual between forty and sixty—who, as Du Maurier says, has "ceased to hunt the moon"—is normally at the height of intellect and judgment. If health and optimism and determination remain, he has a marked strategic advantage over immature youth."

"catch onto" things more promptly; he is ready with a glib answer. The mature man, meanwhile, is feeling his way. He insists on *knowing*—he refuses to accept labels when he is not sure of the contents of the bottle. He mulls over things and thinks them out for himself.

He is not content with someone else's say-so. Unlike youth, he is seldom satis-

—practically all of whom are regularly employed in office and shop during the day and are thus forced to sacrifice their evenings if they would add to their education. The test was so conceived that it did more than give a line on general information. It challenged one's capacity for thinking out the significance of things.

The freshmen in our day college had an

average age of 19.2 years, while the first-year students in the night classes ranged from twenty to forty, with an average age of 26.6. But despite the fact that the day students generally had educational and cultural advantages, the more mature night students, with the benefit of their practical experience in business, outstripped them emphatically. Their average mark was 80.3, while the regular day students could average only 70.5.

Age has a peculiar advantage in the so-called "practical" branches of knowledge—those that are tied up directly with everyday business and professional experience. I recall vividly the case of a lawyer who had been graduated from a high school many years before and who entered our collegiate night course at the age of thirty-eight. He had come from a family in which culture had always been spelled with a capital C. For years he had lamented the fact that he was not a college graduate and could not write "A. B." after his name. He won his degree, and, incidentally gave us a most interesting record of the operations of a mature mind.

**IN HISTORY**—where his experience and observations were of great value—he achieved a rank of 100 per cent, and he approximated the same mark in the related subjects of government and political science. In philosophy and ethics, two subjects that maturity is particularly fitted to cope with, his ratings were also excellent. In higher mathematics, which had scant practical bearing on his life work, he dropped into a great gulf. Indeed, he barely managed to pass his first-year course. Most young students would have been satisfied merely to "get through," but this man possessed the directed purpose of maturity. Voluntarily he reviewed this course and came out the second time with a considerably higher rating.

An illuminating commentary on his quest for the official seal of culture was that in such purely cultural subjects as Latin his marks were low. In the branches of science that dealt with mere facts and their theoretical manipulation he was a commonplace student, but in the *practical application of science* to the world of industry he did exceptionally well.

Five years ago our night collegiate course was completed by a man holding an important managerial position in the shipping industry. He was about sixty years old and had two daughters who were college graduates. His previous scholastic training had been terminated in the spring of 1874, when he left high school.

Finishing our course with flying colors, he went from our halls a *cum laude* graduate with the golden key of Phi Beta Kappa. His adventures in education corresponded closely with those of the man whose case I have just cited.

Although he won marks of from 95 to 100 in nearly every subject, his poorest showing was made in those studies which were purely academic and remote from daily life. His lowest mark was in advanced algebra, which was for him merely a disciplinary subject unassociated with anything practical. In Latin and German, cultural subjects, he was considerably below his average, but in French his rank was high. This was probably be-

ing geography is its bearing on human welfare, the factors that affect world progress, the national ambitions that produce wars. Only the adult mind can properly appreciate these things. The facts of geography stick in proportion to their associated significance in human experience—and here the mature mind has all the advantage.

A boy who has been graduated from public school at the age of fourteen has been studying geography, presumably, for about five years. By the time he has finished high school, four years later, I venture to say that he will have forgotten nine tenths of the geographical facts that he learned in grammar school. But if a mature man should spend an equal amount of time in the study of the same subject, I would defy you to wrench that knowledge from his mind until the day of his death.

Turning to grammar and habits of speech, we find a somewhat different situation. The words and their arrangement that make up one's conversation are largely the result of daily contact and daily use. At maturity a man has his habits of speech fixed by years of reiteration. He may, indeed, correct his English and familiarize himself with all the rules of grammar, but in moments of emotional excitement or absent-mindedness he is likely to lapse into some of his old inaccuracies. Habit is a mighty taskmaster!

**THE** same handicap does not apply to the acquisition of a new language. I am familiar with the prevalent impression that no adult can learn a foreign tongue perfectly, that one should always start such an undertaking in childhood or youth. This sounds to me like mere theory, and it would take convincing proof to make me accept it—especially in view of the fact that I have known adults who learned to use other tongues flawlessly.

Dr. John D. Prince, our Ambassador to Denmark, is said to be able to converse fluently in twenty-seven different languages.

Strangely enough, Danish did not happen to be one of the twenty-seven at the time he received his appointment. Upon his arrival in Denmark a few months ago he was called on to make an address.

"You will pardon me," he told his audience, "if I speak to you to-day in Swedish. I will learn Danish and be able to use it in an address to you next week. . . ." And it is reported that he kept his promise.

If a youth of twenty and an adult of fifty, both Latin students, should be called on to make a translation of the Odes of Horace, (Continued on page 100)

PHOTO BY CLAUDE A. DILLON  
Frederick B. Robinson, Ph.D., is the recognized leader of the movement for adult education in the larger cities of the United States. Under his direction the College of the City of New York gives to more than seven thousand students regularly employed during the day, an opportunity to gain through night classes all the advantages of liberal, technical, and professional college courses. Dean Robinson planned the reorganization of the evening high-school system of the city of New York, organized the training course for municipal employees, and established the first summer session of the City College. He believes that we should have "more life in education and more education in life"

cause the World War was in progress on the fields of France and he was intensely interested in everything that threw a light on it. In philosophy, ethics, civil government, history, and allied subjects his marks were of the highest.

A man of forty or fifty has a distinct advantage in the study of geography. The child, even in youth, sees no special reason why he should study geography. His interests are confined to the region that lies close at hand. His mind is not yet capable of grasping the world at large.

Now, the underlying reason for study-

# A Great Expert on Nutrition tells us What to Eat

An interview with Professor E. V. McCollum of the School of Hygiene and Public Health, Johns Hopkins University

*Reported by M. K. Wisehart*

SOME years ago, a friend of mine, an architect who was a little over thirty years old, was complaining of his health. He was a typical dyspeptic, with persistent and distressing indigestion—one of those people who, after meals, usually report that this or that particular food has disagreed with them.

The illusion this man was under is common to many people who think that their indigestion is due to some particular food recently eaten, instead of to the diet they have followed regularly for a long time past. The fact is, however, that most of our "stomach aches" and bilious attacks—nearly all our digestive troubles—are due to an unhygienic condition of the intestine.

We know, as a result of comparatively recent discoveries, that when there is a decomposing mass or irritated condition in the intestine, the peristaltic movement of that organ is likely to be reversed; that is, the running waves of muscular contraction move so as to bring the contents of the lower bowel back toward the stomach instead of away from it.

The gas which forms in consequence of the irritated condition does not come from the stomach but from the lower intestine. The regurgitation of the gas and of the intestine's contents cause nausea and belching. Bile is forced from the intestine back into the stomach, and some of it goes up with the gas, so that one experiences a bitter taste. This is a typical "bilious attack." It is not due to sluggishness of the liver as most people think, but to the abnormal reversed direction in which the intestine moves its contents, and this intestinal trouble is most commonly due to faulty diet.

The young man I have mentioned suffered from this "bilious" condition and many other troubles. He seemed to have lost much of his ambition. He could not turn out his work in the way he would have liked to. He became discouraged easily.

When I made known to him certain fundamental facts about the diet he should follow he was not inclined to take the facts seriously.

It was some years before that young man could be convinced that a generous piece of beefsteak did not contain all the essential elements necessary for good nutrition. In the end, however, as he was getting worse, he decided that he would

yielded to the temptation to eat heartily for a considerable period of the foods which had originally caused his trouble, and that trouble came back. Then he returned to a proper diet, and became well again.

Another man I know was in much poorer health than this young fellow. From youth up he had suffered from catarrh, sore throat, and infected tonsils. He was weak, "skinny," and had never known what it was to feel really well. In the end he developed tuberculosis in both lungs.

Having adopted various measures in an effort to gain health, he finally put himself upon a diet, which, in the light of modern scientific discoveries, was the right one. He drank milk, ate eggs, lots of "greens," and fruit. Gradually and steadily he improved. To-day, he is past middle age and has no sign of his old troubles. He will tell you that he feels well, and he is energetic and capable of prolonged hard work daily. Like the young fellow, he had at first made the mistake, while trying to get well, of adhering to the bread, meat, and potato type of meals. In his case, too, the lacto-vegetarian diet, supplemented by eggs, made all the difference.

The error these men made is the very one that is commonest to a great majority of people in this country. Most of us confine ourselves mainly to a diet of cereals, meat, potatoes, and sugar. And yet we know now that a diet consisting mainly of these foods is insufficient to maintain health either in animals or in men.

Some time ago, in a series of experiments I was making with animals, I took two groups of rats and regulated their diets for almost a year. The result was very striking. The rats were taken just after weaning time and, until then, both had had equal chances to grow up to be good, healthy little rats. Rat No. 1 I fed on wheat flour, corn meal, cooked and dried potato, peas, navy beans, beets, turnips, cooked and dried beefsteak. Rat

## Does This Describe You— Or Anyone You Know?

THE man who limits himself mainly to cereals, meat, potatoes, and sugar—and this is the type of diet favored by most of us—is bound to suffer certain bad results," says Professor McCollum. "At an early age he loses his vitality and energy. His intestinal tract becomes debilitated and fails to respond with the production of the intestinal juices. Consequently, he retains, instead of disposing of, waste products. He becomes chronically constipated and poisoned by his own faulty digestion. This causes him to feel fatigued. He has vague disconcerting pains of various kinds. It is almost impossible for him to attain clarity in his mental operations. He shows his age prematurely in thinning hair and wrinkles. And these symptoms come upon him all too soon—when he is between thirty and forty.

"Remember, too, that a man's mental outlook is very much affected by the condition of his digestive tract. Derangement of the digestive function is often the underlying cause for a person's failing to realize the importance of tact in business and social dealings. It sometimes accounts for a person's lack of respect for others and for his failing to see the futility of antagonizing people. It tends to encourage idling, and dislike of one's work.

"The man who finds himself in the physical and mental condition that I have described usually knows vaguely that something is wrong; but he is not likely by himself to discover the real cause of his trouble. His health does not fail completely because his diet and mode of life generally are not bad enough to cause that, but the chances are that if he goes along as he has been going he will find himself wanting additional life insurance at the age of forty-five—and be refused. And the point I want to emphasize is that this man can, by the proper change in his diet, improve his health, increase his happiness, and lengthen his life."

try a diet of the kind recommended. He had been living mainly upon a bread, meat, and potato diet. For a time, he stopped eating these altogether, and his meals then consisted of greens, vegetables, fruit, and milk.

He began to improve from the very start. In three or four months evidence of bad digestive processes had disappeared. Then he was able to add to his diet the kind of things he liked. After a time, he

No. 2 I fed upon the very same diet, with the exception that I added a liberal quantity of milk. What was the result?

The life of the domestic rat is about three years. So, on the 308th day, when the experiment was concluded, the animals corresponded in age to a man of twenty-eight or thirty years. Rat No. 1, which had had no milk, was very much under-sized. Its hair was thin. It was very old, starved, and miserable in appearance, so much so that you would have known it was a sick rat.

Rat No. 2 was much larger than the other. He was youthful and vigorous, alert, and prosperous-looking. You would have known him for what he was, a healthy, well-fed rat. The addition simply of milk to the diet of rat No. 2 made all the difference.

This experiment is but one of many thousands which have brought to light facts which are of great value to all of us. We know now that milk is of great importance in the diet of adults as well as of children. Fresh vegetables and fruits are equally essential. Also, we need to remember that a deficiency in the diet which seems slight may have very pronounced effects on the health.

SOME time ago, the nine-months-old baby of a well-known opera singer became very ill while with its parents on their summer vacation in the Adirondacks. The baby's skin was so sensitive that the least touch of a hand was more than it could bear. It could not be lifted in the ordinary way but had to be carried in a blanket arranged as a swing. Its knees, ankles, and elbows, were badly swollen, and some of the blood vessels in the skin had burst.

Completely mystified as to the nature of the trouble, the parents called a neighbor and friend, a surgeon, who was not, however, a dietary specialist. After examining the baby, the surgeon had to confess that he was without the least suspicion of the nature of the trouble. "In two weeks," he said, "a friend of mine, a specialist in children's diseases, is coming up from New York to visit me. He will take charge of this case, and if anyone can solve it he can."

When the surgeon reached home that evening, he found that his friend, the New York specialist, had sent him his latest book on children's diseases. The surgeon began reading it at once, thinking he might find some light on the nature of the child's mysterious affliction. Finally, he came across a description of "Barlow's disease," and he knew at once that this

was the trouble with his friend's child. The book stated that orange juice given in liberal quantities is the treatment necessary for cure.

The next morning the sick baby was given orange juice, and this treatment was kept up until, at the end of ten days, the child was well along toward recovery. It no longer suffered pain when touched and the swellings of its joints had disappeared. When the specialist in children's diseases arrived his services were not required.

The rapid recovery in this case, which was recently called to my attention,

fact that they have been fed principally upon heated milk. It is definitely established now that heating milk results in the almost complete destruction of its anti-scorbutic vitamin, a substance which protects against scurvy.

Presently, I am going to explain how important it is that all grown people should have an adequate supply of vitamins; but first I want to give a word of caution to mothers. Any mother whose baby is fed upon heated milk (whether pasteurized or heated at home) should see to it that the child has a teaspoonful of orange juice once a day after it is three

months old, and this amount should be increased gradually to a tablespoonful by the time the child is five or six months old. By the time it is a year old the child should be having a whole orange every day. If orange juice is unavailable, the vitamin supply necessary to protect the child from scurvy can be furnished by giving strained tomato juice in the amounts just mentioned.

THE vitamins are newly discovered substances which must be present in the diet of adults as well as of children. We have definite evidence of the existence of four. Any diet containing whole milk, raw fruits and vegetables, especially the leafy vegetables such as are used for greens and salads, will be rich in all the vitamins.

We have found that there are three diseases—we call them the "deficiency diseases"—which are due to lack of specific vitamins. Xerophthalmia is due to the lack of fat-soluble A, or vitamin A. Beri-beri is due to a lack of water-soluble B, or vitamin B. Scurvy is due to lack of water-soluble C, or vitamin C. It is impossible here to give a detailed account of all the conditions which result when the vitamins are not in the diet, but I can give you an elementary idea of the characteristics of the three deficiency diseases.

Xerophthalmia (ze-rof-thal-mia) is an eye disease in which the eye becomes inflamed; the lids swell to an extent which may prevent them from being opened. Blindness may result. In Europe, owing to a lack of the proper food during the war, this disease caused the blindness of many children. The vitamin which protects us against this trouble is found in milk, butter, and egg yolk, leafy vegetables, and codliver oil—and not to any great extent in any other of our ordinary foods.

The disease beri-beri results in general paralysis. It is common in the Orient among people (Continued on page 112)

Dr. E. V. McCollum is professor of biochemistry in the School of Hygiene and Public Health of Johns Hopkins University. He was born on a farm in Kansas forty-three years ago, and after working his way through various schools attended Yale University, where, in 1906, he received the degree of Ph. D. in organic chemistry. A year later he became associated with the work of the Agricultural Experiment Station at Madison, Wisconsin. His work there led him, in 1913, to the discovery of what is known as Vitamin A. Two of the four known vitamins have been discovered in his laboratory. He is the author of several scientific books, among them are "The Newer Knowledge of Nutrition," and "The American Home Diet"

greatly astonished the surgeon and the baby's parents. It was, however, not at all unusual. We have had in the Johns Hopkins Hospital a number of children suffering from Barlow's disease. Some of them have been in such a condition that they screamed merely from the pain of lying on their backs. Yet in some of the worst cases the treatment with orange juice has caused such quick improvement that within a few days the child could be handled without discomfort.

What is "Barlow's disease"? Nothing more nor less than scurvy. Its occurrence among children is generally due to the

# Can You See Through Other Men's Eyes?

The man who sticks closest to his associates, and who makes their problems his own, is the man who wins out, says Owen D. Young, guiding genius of one of the greatest companies in the world—Mr. Young's remarkable personal story proves this

*By B. C. Forbes*

ON a hot summer day in the late eighties a lanky country youth wandered into the courthouse at Cooperstown, New York, the seat of one of the sparsely settled rural counties in the central part of the state. He had come to town on an errand from the tiny hamlet of Van Hornesville, a few miles to the north.

In a big room, its windows shaded with awnings that partly shut off the view of the spreading shade trees on the lawn outside, the youth dropped down on a bench and looked around in wonderment. A smartly dressed man, with an air of easy assurance, was intermittently talking and reading from a big book, while a dignified personage on a raised platform was listening gravely. Presently another prosperous-looking man rose to his feet and broke in. By this time it had dawned on the country lad that these were lawyers and a judge.

In the next few minutes Owen Young made the most important decision of his life. He contrasted the fluent, impressive activity of this cool, high-ceilinged room with the interminable racking labor of the backwoods farm.

"If a living can be earned like this, I'm going to be a lawyer!" he announced to himself.

Dating from that decision runs a curiously consistent and appealing romance that reveals the country boy, to-day, while still in his forties, the guiding head of one of the most important business enterprises in America—an enterprise with national and international ramifications and an army of more than one hundred thousand employees. Moreover, the attainment of this position was so splendidly merited that it was practically inevitable. For years it had been a foregone conclusion in the electrical world that Owen Young would succeed the veteran pioneer and upbuilder, Charles A. Coffin, as chairman of the board of directors of the General Electric Company, whenever Mr. Coffin

was ready to announce his retirement—an event that happened a few months ago.

The lonely farm on which Owen Young was born in 1874—and on which, every year, he still spends many weeks—lies in the fringe of that rugged section made famous by Cooper's "The Last of the Mohicans." It had been cleared of virgin forest by Young's Alsatian and Dutch ancestors more than a century and a half ago.

From a local cross-roads school, which

lated community. When the plan leaked out the neighbors were all scandalized. College, they said, had led thousands of youths into bad habits and ruined their lives. Owen was an only child, with the makings of a perfectly good farmer. Why should he desert the farm operated by his family for generations?

The boy's ambition received encouragement from two sources, however. His parents were willing to sacrifice their modest savings to help him along, and the

principal of the little academy already had decided that he had a brilliant future. Indeed, he believed that Owen could bring glory to the old-fashioned institution, by capturing a scholarship for mathematics from Cornell University. This scholarship would go far toward paying for his college education. Owen steeped his mind not only in mathematics but in Latin, Greek, and physics. Eventually his proud teacher was sure that the scholarship was as good as won. Then, at the last minute, the dismaying discovery was made that competitors must be more than seventeen years old—and Owen was only fifteen!

While pondering over some other method of helping to earn his way through college, Owen kept at his studies with indefatigable energy. Even in the midst of the hardest farm work, when he tried always to do as much as his father and the hired man combined, he pored over books at night by the light of a kerosene

lamp, often falling asleep from sheer exhaustion.

One Sunday there came to the village to preach the president of St. Lawrence University, then a modest institution at Canton, some thirty miles away. Young talked with him, and a family council was held. The president was sure that such money as the youth could earn, supplemented by what he could get from home, would take care of his expenses. So it was decided that he should start his college course forthwith. (Continued on page 62)

## Do You Like Responsibility— Or Do You Run Away From It?

"I HAVE been astonished," says Mr. Young, "to find in business how many men *run away* from responsibility rather than *welcome* it. Most men are willing to venture opinions, but when it comes to deciding on definite action they like someone else to take the final step.

"Now, I have always welcomed responsibility. Nor have I been afraid to spend the necessary amount of study and work to fit me to discharge a responsibility to the best of my capability. Such increasing responsibilities as have gravitated to me have come largely because of my desire to make myself at all times more useful to the company.

"I figured it out this way: The company had bought and paid for everything I had to give. This included my judgment, good or bad. I was prepared, therefore, to exercise that judgment to the utmost—always taking pains to acquire all possible 'raw material' out of which to form my conclusion. Then, having acted with the best judgment I possessed, I never allowed myself to become worried over the outcome. Of course I recognized that if my percentage of mistakes became too great I would have to get out or be put out."

he attended when there wasn't too much work to be done on the farm, he entered, before he had reached his teens, a rural academy in a village five miles away. Every Monday morning his father drove him over, with a cheese box containing his week's food. Up to this time he had never ridden on a railroad train.

It was during his attendance at the academy that the boy reached his momentous decision to become a lawyer. This meant attending college—a step never before taken by anyone in the iso-

*Owen D. Young*

**OWEN YOUNG**, the new head of the General Electric Company, was born in Van Hornesville, N. Y., forty-eight years ago. He managed to get an education despite poverty, taking an A.B. degree at St. Lawrence University in 1894 and graduating in law at Boston University in 1896. To pay for his law course

he tutored and did odd jobs about the university, and even at that finished a three-years curriculum in two years. After a general practice for several years he became connected with the General Electric Company as vice president. He succeeded C. A. Coffin as chairman of the board and active head of the business.

*Hudson Maxim and his little granddaughter, Doris*

ON FEBRUARY 30, 1923, Hudson Maxim will be seventy years old. He was born in Maine and had a boyhood of almost bitter poverty. He was bound to have an education, however, and managed to go through the Maine Wesleyan Seminary at Kent's Hill. He invented "Maximite," the first high explosive

to be fired through armor plate, and has made other important inventions and improvements. He is consulting expert for the Du Pont de Nemours Company at Wilmington, Delaware, and has been a member of the Naval Consulting Board since 1915. He has written a number of scientific books and many articles.

# My Adventures in Learning Self-Reliance

If you haven't anybody to lean on, you've got to do one of two things—fall down, or stand up by yourself!—If you have to carry your own load your back gets stronger—And heavy burdens carried make ordinary ones seem light

*By Hudson Maxim*

**N**OT only was I not born with a silver spoon in my mouth, but also I never saw silver enough to make a spoon during my childhood.

In boyhood, I had only a scant allowance of the bare necessities of life. Our family ogre was the oft-predicted hard snub coming. Mine was the sort of life that makes or breaks body and character. Through it all, I had one supreme solicitude—that of getting an education. There was no hardship that I would not bear, and no difficulty that I would not undertake toward that end.

It would be hard to over-estimate the formative influence of my mother's dauntless courage and prophetic foresight at this period of my career.

Short rations in food was the hardest thing to bear with us children. It did not matter much how coarse the fare might be. It did not matter much that we seldom saw wheat and flour and had to use corn meal instead, so long as there was plenty of it we had no complaint to make.

I had neither a hat nor a pair of shoes until I was thirteen years of age. When it was too cold in winter to go outdoors, I had to stay in the house. But my feet were so accustomed to the cold, never having had a covering, that they could endure a good deal of frost without great inconvenience.

Very well do I remember playing on the ice of a nearby stream with the boys of a neighbor who had shoes. They could run and slide on the ice, while I could not, because my bare feet would not slip. Happily, I thought of the expedient of coating the bottoms of my feet with snow by rubbing them in the snow or frost, when for a while I, too, could slide on my feet.

At one time I went to school barefoot, a distance of two miles, for several weeks after the early snows came. I ran along through the snow as long as I could stand it, then I climbed up on a fence or a big

boulder, and rubbed my feet and ankles to warm them—then, went on.

My thirst for knowledge was always a passion, yet I was nine years old before I had a chance even to learn my letters. I had then made up my mind that I was going to the country school as soon as it opened for the summer session. I went to

Our main interest, however, centered in the dinner that was put up for us to take to school. Although it consisted solely of crackers and cheese, it was, to our minds, a feast fit for the gods.

My sister, being the eldest, took charge of the dinner-pail; but we boys watched her vigilantly from our distant seats to see that she didn't get at those crackers before we had a chance to share them.

The boys and girls did not have recess together, but the girls had recess first, and after the girls were called in the boys had their turn. That morning, when it came time for the girls' recess, Eliza took the precious dinner-pail with her. She did not dare to leave it behind, lest Samuel and I should get possession of it.

As we two boys did not know the ways of the school, we thought it must be dinner time when we saw Eliza making off with the dinner. We couldn't understand why we were not liberated, too; but we were taking no chances, so we ran after her and stuck to her.

At this the teacher interposed, telling us that Eliza was only going out for recess and that she would soon return, when we also could go out. But we refused so emphatically to trust Eliza alone with the dinner-pail that, at the teacher's suggestion, she went back to her seat and lost her recess. When our turn came, the teacher told us we could now go and play, but we wouldn't leave "them crackers." And so

we held the fort until noon.

We rarely saw candy or any sort of bonbons. Our staple diet was mainly corn bread and mush and molasses, and sometimes fried fat pork and boiled potatoes. When we kept a cow, we had milk with our corn-meal dishes—food that is hard to beat.

Once, my mother offered to reward, with a quart of molasses, such of us children as should be able to go a whole day without calling one another names. The

## "To Lick, or to Be Licked!"

**H**UDSON MAXIM is a strong man, strong in body, sturdy and independent in character. He will be seventy years old within a few months. Yet his muscles are like iron and his nerves like steel; he does his own thinking, and he doesn't hesitate to say what he thinks.

In other words, he stands on his own feet; he has the great quality of self-reliance. He developed that quality in the school of privation and struggle. Read what he tells here about his boyhood and youth. No frills and no easy going for young Maxim! But hardships did not make him weak, they made him strong. He might have let himself be licked by circumstances. Instead, he chose to do the licking! When he did that, he became a living illustration of the old myth that if you conquered your enemy his strength would be added to your own.

school bookless, but after a few days the teacher took pity on me and gave me a primer.

My sister Eliza, four years older than I, my brother Samuel, a year and a half younger, and myself, went together to the school. The opening day was a memorable one for the three of us. In the first place, our hands and faces were vigorously washed before we were allowed to start from home—the rigorous thoroughness of this we thought quite unnecessary.

other children did not hold out long, and were soon calling names worse than ever, but I held out all day until supper time, because I so much wanted that quart of molasses; but at the supper table, when my mother was pouring the allowance of molasses into our plates, I thought that she gave Samuel more than his share, whereupon I forgot my resolution and called out that she had given old "Suney," which was Sam's nickname, more molasses than she had given me. Then I realized, to my consternation, that I, too, had lost.

**SCANTY** fare for the body was, in truth, a real hardship; but to me—a boy eager for knowledge—it was secondary to lack of food for the mind. The first book I bought was a geography. I was about twelve years old, and my father had been thrilling us with the story of Napoleon. My school-teacher had told me that I was getting to be a big boy, and ought to know something about geography. The thought that a geography would tell me about France, the country of Napoleon, stimulated my desire to get one. Then my opportunity came: My father offered me five cents a day to help at haying for Deacon Bartlett. My work was to help spread the hay to dry, to help rake it up, to help load it, and, finally, to help stow it away in the barn.

I was barefoot, of course, and there were lots of thistles in that hay! Though my feet were tough, it was painful work. But I thought of the geography and braved the thistles.

At the week's end I received my pay—thirty cents. In spite of my sore feet, I started for the neighboring village, Abbot, as hard as I could run. There I bought a beautiful geography—and the wonder was that it cost just thirty cents.

Then back I started for home, again running for all I was worth, until I got well out into the country. Here I turned into a pasture, climbed up on a big stone and opened my precious book. The first thing I did was to hunt up Napoleon's France.

The next year, when I was thirteen, my Uncle Amos came to our house one day and told us there was to be a private school in the district schoolhouse, to run for three months, and that it was to be kept by a young woman who had an excellent reputation as a teacher.

Uncle Amos said it was a pity that as bright a boy as I seemed to be should not have a better opportunity of getting an education; and he offered to pay for my tuition and books for that term.

This assistance of my Uncle Amos for that term of school was the only help I ever received from anyone toward getting an education—except the primer that

was given to me by my first teacher.

It was a serious problem to find clothes for me that would cover my body sufficiently to clear the law. The only garments the family could muster were a cast-off suit of my elder brother Hiram. On me, these clothes were suggestive of the name of the two towns in France—Toulouse and Toulon. But, anyway, I wore them.

Although I was thirteen years old, I was only in the Second Reader. But I improved so rapidly that I was soon placed in the Third Reader, the teacher lending me the book.

It was customary for the classes to read various poems in concert and, by listening to the classes above me, I soon learned by heart all the verses which were read in concert in all the books in the school—and I remember many of them to this day.

The teacher quickly noticed that I joined the more advanced classes in reading these poems—that is to say, I would repeat the

verses from memory while the others read them. After that she invited me to join the Fourth and Fifth Reader classes when they read in concert.

I have always remembered with profound gratitude the way that teacher awakened my interest and stirred my ambition. She helped me to find myself, directed me to discover my natural abilities.

**MY PROGRESS** was rapid whenever I had an opportunity of attending school, but such opportunities were rare. However, by working on farms, on railroads, in brick-yards and stone quarries, I managed to pay my tuition, during three months of the year, at the Maine Wesleyan Seminary, at Kent's Hill. I boarded myself, while there, living mainly on brown bread and baked beans, which I cooked myself. This I did until I was able to teach school. Then I could go to the seminary two terms a year.

During this time my home was at Wayne, seven miles from Kent's Hill. Every week-end, I went to Wayne to bake my supply of brown bread and beans for the coming week.

One Monday morning, my mother woke me at half-past three with the disturbing news that a great blizzard was raging and that two or three feet of snow had already fallen. But I was young and I was strong, and felt that I (Continued on page 66)

(Above) Hudson Maxim in his laboratory at Maxim Park, New Jersey. Some years ago, an explosion occurred while he was testing some fulminate compound and his left hand was blown off. In the accompanying article he tells the extraordinary story of this accident and describes some of his narrow escapes from death. (Below) Mr. Maxim, at seventy, has the muscles of an athlete. In spite of the fact that he has only one hand, he plays tennis and other games. This picture was taken at his home on the shores of Lake Hopatcong, New Jersey

# Indecision—the Worst Of Bad Habits

*By Dr. Frank Crane*

**I**NDECISION probably causes more human misery than is caused by crime.

Measured in terms of the disagreeable effects it causes, it is worse to be afflicted with indecision than it is to be malicious.

And at that, not only worse for others but for yourself. For, like most bad habits, indecision bears harder on its possessor than on his friends.

I have called indecision a bad habit, for that is what it is. It is nothing more nor less than a vice, like drunkenness, drug-taking, or drumming with your fingers. It is simply a bad rut into which people fall, and ruts are as fatal to human beings as they are to automobiles. In fact, most people who go to the devil go because they got started and could not quit, and not because they are wicked-hearted. Most of the wrong in this world is caused by people who meant to do right, half of whom didn't know, half of whom didn't think.

The indecision victim likes to imagine that it is a matter of temperament, that he was just born that way. He tells you that he hates to decide things and has the audacity to laugh about it. Especially if he is a she, for it is characteristic of a certain type of woman to think that wishy-washiness of character is something feminine and charming. "I never know what to do, what to put on, or what to say. I just can't make up my mind," says Mamie, flirting her fan. To which you are expected to respond, "Ha-ha."

Indecision, however, is a serious matter, quite often a matter of life and death. More people are killed by not deciding quickly what to do than are killed by coming to the wrong decision.

A woman was crossing Fifth Avenue, New York, which thoroughfare, as everyone knows, is as full of automobiles as a sick man's blood is full of microbes. She got half way across, saw a motor coming, and stopped, wondering whether to go on, or go back, or stand still. The traffic policeman saw her, and catching her a little roughly by the arm, said:

"Don't stop, lady. Whatever you do when you are crossing the street, do it fast, and keep doing it. Don't stop and think, if you don't want to get killed."

As a matter of fact, a blind man who is also deaf and dumb could walk across Fifth Avenue at its hurliest and burliest

hour without danger, if he would keep on walking and not change his gait. When a person acts as if he knows what to do, and goes ahead and does it, everybody else knows what to depend on in his movements and nobody bumps into him, runs over him, or even gets peevish at him. It is your hesitator that is the public nuisance.

"Stop! Look! Listen!" is a good motto in its place, but its place is before you start. You should do your thinking before you enter the danger zone. It is no time to sit down and meditate when the sheriff is chasing you or when you are running to catch a train.

A marked and almost invariable characteristic of the efficient man is the habit of

The other desk is that of Judge Elbert H. Gary, chairman of the United States Steel Corporation, which is one of the biggest business concerns of the world. I called to lunch with him one day. I found him alone in a big room in which the furniture was very scarce. He sat at a big table in the middle of the room. On this table there was nothing at all except a little bundle of papers that contained things about which we were going to talk. There were no secretaries flying in and out, there was no stock ticker, there were not half a dozen telephones buzzing; in fact, I did not see any telephone at all. The room was as peaceful as a church. And the judge's mind was as orderly and as satisfying as the room he was in and the table at which he sat.

I might mention a third desk, which was that of an actuary in a Massachusetts life insurance company. When I made a visit to this gentleman his desk was piled a foot deep with all kinds of papers. There was only a little clearing down in front where he could write. He had occasion to look for some document, and it took him ten minutes before he discovered that he could not find it. I was not surprised when I heard several months afterward that this official had died of softening of the brain.

You can also tell the character of a woman by looking at her house. Of course you cannot tell everything about her, but you can tell one very important thing, and that is whether she has the golden habit of decision. Of course every house gets cluttered once in a while and at certain times of the day; but the point is that the houses of some

women stay cluttered because their souls are cluttered.

It is a good thing to go through your catch-all every so often and clean up. Junk accumulates from the habit of indecision. In fact, we might express it scientifically by saying that indecision secretes junk. The reason the top bureau drawer looks like a Kansas town after a cyclone is because you could not make up your mind what to do with this, that, or the other, and so just put it there for the present. Thus the superfluous accumulates. Dr. Lorena Breed, the distinguished biologist of Pasadena Hospital, once made an epigram which I have never forgotten. Speaking of diseases and their causes, she said, "The superfluous is always septic." (Continued on page 98)

## One Way to Tell a Decisive Man

**"M**OST of us hate to think about money. That is, we hate to decide," says Dr. Frank Crane.

"The way out of poverty is by thrift; but no one can come to thrift except by daily decision and self-mastery. The idea of thrift we are perfectly willing to entertain so long as it can float as a beautiful golden cloud in the sky of our mind. But actually to be thrifty requires that we form the habit of swiftly deciding twenty times a day not to spend money on foolishness.

"Most of us get tired of the eternal struggle. That is, we think it is eternal. Really, it is not, for if we persistently keep up the struggle by and by it ceases to be hard and becomes the rarest form of pleasure.

"Most people dislike to speak of money, and the reason is that money is about the hardest fact in the world. And if you speak of it at all you must speak decisively. You can hem and haw over the color of your necktie or the quality of your ice cream. But fifty cents is fifty cents, and it is never anything else but a half dollar."

decision. Perhaps that is why most of the wobbly-minded and flabby-willed hate him. He is a constant rebuke to them.

You can tell an efficient business man by looking at his desk. Two desks are in my mind's eye now: One is that of Paul Dupuy, who owns and manages "Le Petit Parisien," the Paris newspaper of enormous circulation. I called on him recently at his invitation to go to lunch with him, and sat down for a moment until he had finished up his morning's work. There were three or four pieces of paper on the table. He picked them up, called in a clerk and disposed of them before he left, leaving his desk clean; and said with a smile, "I do not like to go away leaving anything undone." That remark may contain a hint of one reason for his success.

• There he stood now, balancing the light hay fork in his

**H**IS full name, which was too long for ordinary use, was entered upon the books of the breeders' association, together with the date of his birth, a record of his blue-blooded ancestry, and his registry number. For short, he was called "Sir Colintha." That was the way his polysyllabled title began.

He was black and white, and weighed nearly a ton. Just now he was standing motionless, regarding with luminous eyes a small, two-legged animal on the other side of the paddock fence.

This other animal's full name, as far as society was informed, was Bill. If he had any blue-blooded ancestry, all trace of that fact had been lost forever. He was fourteen years old, and none too big for his age. He was looking at the new herd sire with a curiously intent and preoccupied glance. Bill knew something about pure-breds. He had been raised among them.

Instinctively, the keen, puckered eyes of the boy took in the Holstein's splendid heart girth, his symmetrical barrel, the straight back line, the perfect V of the

dairy type, his superb masculinity. These things were to be expected. Sir Colintha came of a long line of known milk producers, and he showed his aristocratic descent in his perfect conformation. So far as the boy could see, the Holstein wasn't "out" at a single point. But to-day, Bill was studying not so much form as temperament.

Sir Colintha confronted the staring boy without so much as the quiver of a nostril. His glowing eyes never wavered. His fine, silky tail, carefully groomed, hung limp. Yet Bill felt, rather than saw, that the

blood lust which seizes most of these big fellows at one time or another was seething in the heart of Sir Colintha.

A short, brisk, perspiring man came hurrying along the path fronting the paddock. He seemed not to see Bill, and was passing by, engrossed in his thoughts, when the youngster spoke timidly to him, with the hesitation of a boy who has been much neglected:

"You ought to do something about the fence, Mr. Adams."

"Nonsense," returned Adams brusquely. "That fence has six wires and good solid

posts—if you're scared of the bull, stay away from him!"

He hurried on, and Bill looked after the retreating figure for a moment with troubled eyes. He didn't blame Mr. Adams. The superintendent of Knollcrest had his hands full managing the farm; and as for kindness or sympathy for an almost nameless and entirely homeless boy, the little man had his own family to think of whenever he had time for that sort of thing. It was good of him to let Bill hang about the place and sleep in the great haymow at night. And there

was always plenty to eat at the clean, plain mess hall where the farm hands took their meals. No, Bill wasn't surprised that Mr. Adams hadn't listened to him.

He examined the fence. Evidently, the staples had been driven into the posts when the wood was green, and they had gradually worn loose in the hot white sunshine of California. As Mr. Adams had said, the fence had six wires; the posts themselves were solid and firmly set. But the wires were smooth—owners of prize-breeding livestock have an aversion to barbed wire—and Bill knew something of

what a ton of bone and muscle can do in the way of battering down a fence.

The boy hesitated, studying the face of the herd sire. He imagined those great eyes glowed with a new light. He could read remorseless courage and determination in the massive face, which was turned unwaveringly toward his. . . . Twilight was shifting down over the green and purple hills. The boy shivered; then he turned and betook himself to the tool house, where he got a hammer and a pocket full of bright, new staples. With this equipment he went back to the paddock fence.

He had returned the hammer and unused staples to the shed and was passing the brightly lighted barn, with its broad cement floor, iron stanchions, and narrow-gauge iron track for feed cars, when Dorsey, the barn boss, called him:

"Hey, Bill, bring Colintha over for me, will you? Here's the staff!"

Bill's face brightened. He liked to help, having discovered that people who ask favors are usually cordial. He took the stout oak staff with its snap-ferrule and returned to the paddock. The bull was standing in the corner by the gate. He

stood like a statue while the youngster snapped the clip into the ring in his nose, and then tramped sedately along behind his small conductor. The boy and the bull circled a corner of the dairy barn and entered the big front door.

Hezekiah Adams, superintendent of Knollcrest, beheld this phenomenon from a distance. He stood still, with his hands hanging at his sides, and stared.

"Well, I'll be switched!" muttered Mr. Adams. "I can't make that boy out! You'd think he was scared to be on the same planet with that bull, then he acts like Sir Colintha was a pet lamb! He's a card, that's what he is. I'll be glad when I get a chance to turn his case over to the new boss!"

THE "new boss" was a certain Mr. Baker, who had recently bought Knollcrest and had had the new Holstein sent out from a famous breeding farm. Mr. Baker arrived on the day following the superintendent's soliloquy, and for a time he and Adams walked about the grounds surrounding the "farmhouse"—a modest little affair of fifteen rooms, with five bathrooms and a "library"—destitute of books but provided with a splendid floor on which thirty couples could dance to the music of the phonograph. Farmhouses are that way sometimes—on "gentlemen's farms."

Eventually, the two men came out into the lane from which the pastures and paddocks opened. Half way down it a boy in ragged overalls and a diminutive cap with a worn tassel was standing with his back toward them. In his left hand he held a coil of rope, and in his right was a loop, which he swung briskly round his head. Suddenly he released his hold of the rope, and it shot out with a vicious hum and settled over a post. The youngster gave it a jerk and for an instant held it taut.

"Neighbor's boy?" Mr. Baker asked.

"He doesn't belong in this neighborhood, Mr. Baker," said the superintendent. "The fact is, I don't know where he belongs. And I don't know what to do about him. That's one of the things I wanted to ask you about."

He met now the attentive look of the city man, leaned with his back to the paddock fence, and continued:

"About six months ago, this boy and his father came walking in here, with a blanket roll and some other junk on their shoulders. They were tramping it, and at first I was for having them move on. However, I was short a hand in the milk shed—I usually am. Milkers are the hardest people in the world to keep, and I don't wonder at it, for it's a dog's life. So I asked the father if he could milk, and he told me he could. I had him scrub up and gave him a clean jumper, and he went to work. I soon found that he knew more about cows in a minute than most of us are ever going to know."

"The man told me part of his history. He owned a farm once, back in the corn belt. Had bad luck—sickness in the family, a run of bad crops, the old story. You've heard it before. When the wife died, he and the boy came West, mostly on foot. They had worked their way down through the dairy country in Washington and Oregon, and had kept on till they reached our place. The father didn't look very well to me. He was pouchy un-

der the eyes, and had a bad color. But he did his work right up to the handle until about two weeks ago, when he suddenly went into a sort of stupor, and died without ever regaining consciousness. And now we come to the funny part of it all."

Mr. Adams may have seen the joke he referred to, but his honest face looked anything but amused:

"When I asked Bill there who his nearest relatives were, he told me that, as far as he knew, he didn't have a relation in the world. And there was no friend, nor old neighbor, whose address he could give me. He was just a little tad when they began their travels. That's all I know about it!"

The superintendent ended his story abruptly and looked at the boy. Bill had finished his practice with the rope and was leaning against the pasture fence, eyeing a bunch of young heifers. Mr. Baker regarded him with something approaching consternation:

"Why, great Scott, man! I don't know what to do about it!" he said. "Where does he sleep—and eat?"

"He sleeps in the barn, and he eats with the men. He's a helpful little chap, and more than pays for his board and keep. But there's the matter of his dog—the pair of 'em had picked up a mongrel of some sort in Idaho. The old man said he was a good ranch dog; but my idea of good ranch dogs is the same as the old Westerner's idea of a good Indian: the deader they are, the better. That's him howling now. I make Bill keep him fastened up in the garage—when he doesn't manage to get out!"

Mr. Baker called to Bill. "Come over here, my boy. I want to talk to you."

BILL came promptly. He seemed anxious, but he raised his eyes courageously to this stranger's.

"Mr. Adams tells me you have no friends nor relatives to take care of you," began Mr. Baker, not unkindly. "Are you sure you can't think of someone who might know if you have a family?"

Bill shook his head. He had answered that question many times.

Mr. Baker eyed Bill much as he would have looked at a unique and not particularly attractive deep-sea creature washed up by the tide. He was not unsympathetic, deep down in his heart; but he had an aversion to getting entangled in anything with a sentimental aspect. He heartily wished Bill's father had found some other place in which to die.

"Well, we'll see what we can do," he said. "But if I were you, my lad, I'd get rid of that howling cur and that rope. You aren't in shape to support much live stock. That rope looks to me like dime-novel influence. I hope you don't read such rubbish!"

Bill stumbled away. The green lane danced before him like a gaudy many-colored ribbon dotted with diamonds. How was he to know that the big, florid, prosperous-looking man from the city was at heart a baby, afraid of his own gentleness? How was he to know that most of the superintendent's brusqueness was an attempt to steel himself against misfortune with which he felt himself too clumsy to deal? All Bill could see was that he seemed to belong nowhere. They even wanted to take his dog from him—

"Slim," the shaggy greyhound collie who had been Bill's only real friend for many a month! Slim would not bother the cattle. He never molested any animal that minded its own business. He was a grave-eyed, self-respecting fellow, always ready to live and let live.

AS FOR the rope, Bill had learned to throw that up in the panhandle of Idaho, where he and his father had been for a time on a beef ranch. In that country, a few old-time cowboys were still to be found. Various kindly members of the vanishing species had taken the boy in hand and instructed him in the use of the lariat.

Bill's first impulse on leaving the two men was to hurry off to a thicket and lie down on his face and cry. That was what he felt like doing. But there was something on his mind that kept him from carrying out this impulse. He knew that Mr. Baker and the superintendent were looking over the place, and that sooner or later they would visit the paddock where Sir Colintha was confined. Earlier that morning Bill had led the Holstein from his box stall to the little pasture. Sir Colintha had walked with the stately tread of conquerors, and had seemed unaware of the youngster's presence. But again Bill had felt, with that mysterious, unclassified sense of the true live-stock man, the radiant energy of the huge body. He suspected that spring madness was stirring in the brain of Sir Colintha, that the first unwary act might release it like the spring of a trap.

Instead of running away, therefore, he kept within sight of the men as they tramped about. Finally, the superintendent in the lead, they came out of the calf barn and crossed to the paddock gate. The superintendent approached the gate, and was about to enter without so much as a club in his hands.

Again Sir Colintha was standing like a breathless statue. His head was up, his nostrils wide, his great eyes smoldering with hidden fires as he watched the newcomers approach. His tail twitched, ever so slightly.

"Gentle as a lamb, sir," the boy heard Adams tell his employer. "Anyone can handle him!"

Bill stepped forward, greatly concerned by this heresy.

"Please, sir, never trust a bull!" he said earnestly. "I like 'em as much as anyone, sir, and I get along with him—with this one. He can't help it, sir; but never trust him, nor any of 'em!"

He felt his knees quivering under him as the two men turned and looked at him.

"What did you say, my boy?" Mr. Baker asked, not unpleasantly but with stiff formality.

"If you please, sir, never trust a bull because he acts gentle. Any dairyman'll tell you that. The safest bull is the one everyone is afraid of. Then he's treated careful, and he won't do no hurt. It's the gentle ones and the ones that have been made pets of that kill people. The fit comes on 'em sudden; you don't know when to expect it, unless you've been watching 'em close. They go mad, like, and no one can stop 'em."

It was a long speech for Bill to make. He felt very shaky and uncomfortable, especially as the superintendent

turned red and eyed him resentfully. "Better get back to the barn, lad," he said crisply. "And don't talk such nonsense. The animal is absolutely gentle, sir," he added reassuringly. "After lunch I'll show you."

Bill went back to the barn; but he was troubled. Sir Colintha had been tearing up the sod in the paddock. Bill had watched him rest his huge head against a corner post in the fence and throw his mighty body against it, till the post creaked and sagged.

Mr. Baker ate a leisurely luncheon in the cozy room attached to the superintendent's bungalow, and afterward sat looking peacefully off across the shimmering valley. His mind came back to the Holstein and to Bill. Then with a shrug he threw off these irritating details. The world was beautiful. Down by the paddock there were great patches of flowers. Birdstrilled in the underbrush, and the wistful kiss of spring was in the air. He sighed luxuriously and stretched himself.

**P**RESENTLY he noticed that the superintendent's four-year-old daughter was playing in the lane adjoining the paddocks. She had a gaudy little tin pail and a small shovel, and was industriously collecting dirt and flowers. He smiled and waved his hand to the tiny laborer, and forgot her. In spite of himself he was thinking of the boy whose story he had heard that morning. It seemed a pity that pure-bred cattle should be cared for so tenderly, while a growing animal that would one day be a man should have no home. Even so, Mr. Baker was thinking, one human being could not be expected to correct the imperfections of civilization. Obviously, this waif should be placed in an institution of some sort. The state ought to look after him; it was its duty.

A sound—a cry of fear and anguish—brought him back to earth. It seemed to come from the distant orchard. Looking in that direction, he saw Adams, the superintendent, running toward the house. He was at the farther end of a long meadow. The words he screamed as he ran were indistinguishable. Instinctively,

the man on the porch turned to look for the child he had seen in the lane between the paddocks. She had disappeared.

The next moment, having located the child, Mr. Baker had vaulted across the low railing of the porch and raced toward the yard occupied by Sir Colintha. He shouted hoarse words of command and entreaty.

The little girl had gone under the fence. With tin pail and shovel in her hands, she

on his way across the farm yard; but he would have gone just as readily without anything. But there was no chance that he could save the child—the bull was already three quarters of the way across the paddock, galloping, head down, his front hoofs circling high at each bound, his tail swinging.

Mr. Baker saw that he could never make it. Again and again he shouted.

Then, something dark shot like an arrow from under the laurel bushes at the south of the paddock. That something was a slim-nosed, shaggy dog, which ran like the wind, with leveled head and tail stretched straight behind—not at Sir Colintha's head but at the flank. The dog crossed the bull's path, and in doing so shot up and grabbed the Holstein's tail close to the body. The bull let out a roar as his hind quarters swayed, and he was swung off his stride. He stumbled and all but fell.

**T**HEN he gathered himself, whirled, and belled again—a raucous, ear-shattering challenge to his enemy to face him in the open. The dog released his hold, and after standing for a moment with his sharp ears cocked straight up, regarding the bull, disappeared in the thicket.

Sir Colintha swung back with his face toward the middle of the paddock. He could not deal with a phantom; but there were more substantial enemies. The child had slipped back through the fence, but Mr. Baker had reached the middle of the enclosure before this sudden change in the situation.

There he stood now, balancing the light hay fork in his hand and staring unwinkingly for an instant at the bull. Then hastily he appraised the distance to the four sides of the paddock. There was small chance of his reaching even the nearest.

And now the bull, every ounce of his terrific strength aroused, every drop of his hot blood boiling, was tearing up the sod with his hoofs and swinging his horns down and to the right and up, with a mighty swing. The man in the path of the charging bull (Continued on page 125)

As for the rope, Bill had learned to throw that up in the panhandle of Idaho, where he and his father had been for a time on a beef ranch

was trudging briskly up along one side of the bull's enclosure. Her bright eyes were intent on the nodding blue and yellow flowers beyond, and already she was within twenty feet of the upper fence. But below, his great body alert, his tail switching slowly, stood Sir Colintha, biding his time. There was menace in the quiver of his massive shoulders. Suddenly, he belled. The roar rumbled over the hillside and down into the valley, like the echo of distant drums.

He charged. Mr. Baker was under the fence. He had caught up a pitchfork

# How I Sold Myself To My Wife

I AM beginning to suspect that every suburbanite leads a double life. I have week-ended with many of them, and I know.

Especially I have in mind James C. Waverly, star salesman of the most important lumber company in our part of the world, with whom I spent a week-end only recently. He is a big, jovial human being with a laugh like the exhaust of an automobile, and a fund of comic stories which Al Jolson might envy. There are fifty concerns that have given him their business for years just because of the joy that he carries with him into their offices.

Saturday noon he and I took a taxicab over to the depot and rushed through the gate just ten seconds before the train pulled out. As we settled ourselves in the smoker and opened the afternoon papers the change began to come over him; it was well developed by the time we stepped out onto the platform at Mixenhurst.

An attractive little woman, with a couple of bounding youngsters, was waiting for us in an open car. Jim took me over and introduced me, kissed his wife perfunctorily, asked the boys if he hadn't told them a hundred times to keep their feet off the upholstery, took his place at the wheel, and threw the car into gear. As he leaned forward to release the emergency brake, however, a sudden frown gathered between his eyes. He pointed to the hood and looked accusingly at his wife.

"That big scratch wasn't there this morning," he said; "how did it come?"

"I was just going to tell you, Jim," she answered nervously. "The baby climbed up there. I came out of the back door and there he was, standing on both feet and laughing away. I thought surely he was going to fall; it scared me 'most to death, but I got him just in time. He must have made that scratch."

"It's funny to me that with all the folks around the house to watch him you can't keep the kid off this car," Jimmy responded.

With which genial little comment the week-end started.

It continued just like that all day Sunday, which was rainy; and all Sunday evening. The three youngsters, cooped up by the rain, were noisy and restless, and Jim grumbled and growled from nine o'clock in the morning until nine o'clock at night. At that hour I made some excuse and slipped up to the spare bedroom and turned in. The sun was flooding the house the next morning, but there was no sunshine in Jim's soul when we met at the breakfast table. He grumbled about the coffee.

"Three women in the house," he sputtered, "with nothing to do all day but to learn how to make good coffee; and they can't learn to make good coffee."

I maintained a discreet silence. Later, when I had said good-bye at the depot and Mrs. Waverly had told me how much she had enjoyed my visit (which couldn't have

been very true), and I had told her how glad I was I had come (which wasn't true at all), and Jim had given her a little husbandly peck on the cheek, we climbed on board the smoker. And immediately the change began.

"Hello, Jim," cried three commuters in unison. And, "Well, Jim, how's the gentlemanly bootlegger," echoed another voice farther down the aisle. Jim broke forth into one of his famous laughs and we made our way to a vacant seat, shaking hands and exchanging pleasantries all the way. The Jim of Mixenhurst was gone; the Jim of Business had returned.

We had little time for talk that morning, but a week later I had him for lunch at the club. As I was lighting my cigar I looked across the table and said: "Jim, you're a rotten salesman."

"How come?" he demanded, a little taken back in spite of his effort to appear unconcerned.

"You cover a lot of territory and turn in a nice bunch of orders," I answered; "but you're in Dutch with your most important customer, and it's all your fault."

"I don't get you," he answered, and there was no smile in his tones.

"You take an awful lot of pains to sell yourself to every two-by-four jobber on your list," I went on evenly; "you make him think that you're the greatest fellow in the world. But you've never made the slightest effort to sell yourself to your wife."

His face flushed; he was about to tell me pretty plainly that I was talking about something which was none of my business, but I got up and put my hand on his shoulder and led him away from the table.

"Come into the library a minute," I said, "I want to tell you a story."

THIS was the story I told.

My father was one of the thousands of men who might have been rich and famous if the "interests" hadn't held him down. He was a country lawyer who moved to a town that wasn't so very big, but was just a little too big for him. There we lived in a cottage on a quiet street which might have held us quite snugly if we had been able to use every room. But the biggest and best room on the second floor couldn't be used for sleeping or for play. It was Father's study, sacred to him; and when he wasn't there it was locked tight.

I can well recall my mother's half-reverent, half-terrified look as she pressed her fingers to her lips and warned us that Father was at work in the study and must not be disturbed. We were never allowed to go to his law office, but from the hints that he dropped at our solemn Sunday-morning breakfasts we children pictured a great suite of rooms, furnished with rich Oriental rugs and mahogany desks. It was not until after his death that I learned the truth.

Most of the wisdom which Father imparted to us came at the Sunday-morning breakfast. He would sit enthroned at

the head of the table, turning the pages of the Sunday paper and settling the affairs of the universe by vigorous pronouncements which none of us ever opposed. He knew so well just what was going to happen. "Prohibition!" he said sarcastically; "when Gabriel blows his trumpet there will still be saloons on Broadway. Prohibition might go in Kansas, but it will never go in little old New York." He was positive that the day of opportunity in this country had passed. The Interests had worked everything into their own control; there would never be any more chance for the poor man—so he assured us very positively. And neither he nor we knew, of course, that a poor man named H. Ford was, at that moment, struggling along on twenty-five dollars a week in Detroit, and a poor man named C. Schwab was driving stakes for a living in Pennsylvania.

I WOULD not seem to paint an unfriendly picture. He was a devoted parent, after his fashion. The point I want to make is simply this—for fifty years my father fooled himself and my mother about himself. It would have been worth a comfortable little fortune to my father if he and my mother had sat down frankly in the early days of their marriage and analyzed themselves. If he had said to her, for example, "I'm not a remarkable man, but I am honest and willing to work. And if we are frugal and have reasonable luck I know we can get together a competence." That single speech would have established them on a basis where she could have been of immense help to him; it would have created a wholly new outlook for him on the business world. Instead, he sold himself to his wife as a Success, and by so doing he sentenced himself to lifelong failure.

I enter into this rather long explanation regarding my father because his character and example had a profound effect on my own married life. My wife and I met in the offhand fashion which big city life makes possible. I was walking along the Lake Shore in Chicago one Sunday afternoon when I noticed a young woman coming down another path a hundred feet ahead. Suddenly the wind caught her hat and whirled it toward the lake. We both started after it; I arrived first, picked it up, and handed it to her. She smiled and our acquaintanceship began. It ripened fast and three months later we were married.

My wife was an orphan. At the time we met she was employed as an assistant buyer in one of the department stores of the city—a very good and well-paid position. She pretended, however, to regard her work as merely a sort of extended lark. Whether she ever said it in so many words I am not sure, but I got the distinct impression during our courtship that she had been very carefully raised by a wealthy aunt who thought it scandalous that she should stay alone in Chicago instead of going back to take her proper place in the society of the home town. It seemed to

me a perfectly natural story, for she was clearly a girl of superior talent and refinement. She enjoyed opera and had a fine taste in art. She had read books I had never heard of, and spoke familiarly of people and places in New York and Europe.

From the very beginning I was afflicted with a bad case of that lover's malady whose principal symptom is a profound sense of unworthiness. How could I, a low-brow of the low-brows, ever make myself good enough for a girl whose cultural background was so rich? What would she think if she knew that I had never seen a performance of opera in my life? That about all I ever carried away from a visit to the art gallery was a couple of blisters on my feet? What a shock it would be to her to visit my home town and see my family!

That visit should never be made, I determined. At least not until we had been married a year. Nor would I run the risk of exposing my crudities to the critical inspection of her aunt if it could possibly be avoided. I suggested to her that we keep our engagement and marriage a secret, and surprise them by a visit later on. To my intense relief she consented after a little protest; and I took it as a wonderful evidence of her affection that she should be willing to spare me what her woman's instinct must have told her would be a severe ordeal.

HAVING thus made myself secure, I built up a little harmless platform of deception in order to lift myself a trifle nearer to her high level. I hinted that the "Judge," my father, might have been United States senator from our state if he had been willing to compromise his principles only a little. I pictured to her our big, hospitable old home, presided over by my mother, the daughter of an old Southern family; and she, on her part, told me of her aunt's eccentricities, of her prejudice against fine clothes and automobiles. "She's a lot like Hetty Green," she said with a laugh, "although of course not nearly so rich."

So with opera, picture exhibitions, and reading aloud from the works of advanced thinkers, we plunged onward toward the great day. My twelve-hundred-dollar salary was crying "Kamerad," but I had a few hundred in the bank, and there was always the hope that the sales manager would act the way good bosses do in books, and celebrate the young man's wedding with a handsome raise. After the wedding was over she and I would have a talk about finances; but I couldn't bring myself to cheapen the fine intellectual atmosphere of our courtship by mentioning money. At least, not such a small sum of money as twelve hundred dollars a year.

She weakened a bit at the end on one point. It would break her aunt's heart, she said, if we did not confide our secret to her and at least send her an invitation to the wedding. "She won't come,"

Marion explained confidently. "She hates railroad travel like poison. But she would never forgive me if I deceived her. And remember, dear, that I owe everything to her, and she's just a lonely old lady." Of course, when the girl you love puts her arms around your neck and talks that way you do whatever she suggests. So auntie was advised and invited. I spent an awful week in fear lest she should come, but she didn't. Instead, we received a money order for two hundred dollars and a note of blessing in a cramped old-maidish hand. We cashed the money order, and I borrowed the two hundred of my wife to get us back from New York at the end of the honeymoon, making the excuse that I had foolishly forgotten to bring along any blank checks.

So we laid the foundations of a new

I just can't run the risk of letting her know the truth."

The strain was telling on me, both at home and in the office. Two or three times during the summer I sneaked off to a ball game; and of course whenever I got out on the road I washed the opera out of my system with a good dose of vaudeville and motion pictures. But this relief was temporary. Something had to happen; my steadily mounting indebtedness would have told me that even if my low-brow soul had not. And one evening toward the end of our first year the Something came. A thick-voiced Something with a black mustache, and a very plain and outspoken intimation that if we did not pay a certain bill at once the lawyers would have an unpleasant message for us.

I must say that I think I carried the thing off pretty well. I assumed the tone of the injured aristocrat who finds himself brought into distressing contact with the vulgarities of trade. I refused to debate the bill. I went into our bedroom, and digging down to the bottom of one of our bureau drawers I brought out the little stake which we had salted away as a last line of defense in case of grim necessity. With a disdainful gesture I paid the bill in cash, took the receipt and showed the intruder out.

RETURNING to the bedroom I tucked the balance of our little hoard back into its place. I took my time about the matter; I needed time to compose myself and think out what I should say to Marion. As my hands fumbled around in the bureau drawer they touched a book. Mechanically I pulled it out and looked at it. And in that moment my whole little world began to whirl around me. The book was Marion's, there could be no doubt about that; she must have been in the midst of it that afternoon, for the place where she had stopped reading was marked by a little red slip. I opened to that page and received a second shock.

The book was the latest and most sensational novel; and the bookmark was the stub of a theatre ticket, issued by a theatre which specialized in light operas of the lightest type. A novel and a comic opera—and this from a wife who loathed any music except "the best" and to whom only serious books had any appeal at all! Holding the novel in plain sight I stepped back into our living-room and sat down on the couch beside my wife. . . .

It was two o'clock when we finished our talk; and she had cried twice and I had been almost on the point of crying myself. But we made a complete job of it. She knew, at two o'clock, that my father wasn't a judge but only a poor country lawyer and that my real salary was twenty-one hundred dollars, and that I sold jewelry to jewelry stores, and hated opera and loved baseball and would rather see a good boxing match than to hear Michael Angelo explain his statues and pictures while (Continued on page 126)

## If You Have a Smart Wife —Use Her!

"THE instinct of a fine woman is one of the greatest business assets any man can have," says the writer of this article. "It supplements his judgment and often leaps directly to the goal which he, with his slower reasoning, reaches only after a long struggle. The man who doesn't talk his business over with his wife—provided of course that she is the right kind of a wife—is hitting on only three or four cylinders instead of six."

household, using hollow tile instead of granite; and sweet chocolate for cement.

We told ourselves that young couples ought to have the fun of starting economically, whether they needed to or not. So we took a "cute little apartment," which was just about twice too big and expensive, when measured by my income; and she set to work joyfully to furnish it by opening charge accounts at all the stores. The boss did celebrate the wedding with a raise of eight hundred dollars, and by a series of diplomatic interviews with the credit men of the stores where we—or rather *she*—traded, I managed to arrange to take care of the furniture and rugs and even her clothes, on the instalment plan. I was full of the optimism of youth, as well as of opera, art, and literature. I had my moments of bitter self-criticism, you may be sure. I accused myself of deceiving the finest, truest little girl in the world; I called myself a cad and a villain, and more than once I was on the point of coming out with the truth and asking her to try to love me for just what I was—a two-fisted specialty salesman with a sneaking fondness for detective stories and fried tripe. But I just couldn't quite make the grade. I excused myself with this plea: "If I am pretending to be better than I really am," I said, "at least, I'm struggling hard to improve. And perhaps some day I'll catch up with myself. Meanwhile,

# On What Does a 100,000-

Here is the answer, along with thrilling stories of our torrents, and other

*By Franklin*

**F**RANKLIN REMINGTON founded and is chairman of the board of directors of the Foundation Company, which has built the foundations beneath many of New York's greatest skyscrapers and put through many other important and spectacular engineering jobs in all parts of North America. Starting on borrowed capital in 1902, Mr. Remington has built up the biggest organization of its kind in the world. Its war contracts alone, from April, 1917, to the end of 1918, reached a total of more than one hundred million dollars.

**O**N a crisp morning in the early fall of 1910 one of our engineers was standing on the Third Avenue Elevated platform at the Brooklyn Bridge terminal. Below him to the west was the spreading stretch of ground on which was shortly to be erected one of the greatest office buildings in the country—the Municipal Building of the city of New York. Two men, leaning over the platform rail a few feet away, were viewing the same site.

"Just look there, will you?" remarked one of them. "A million and a half dollars sunk in the foundations for that building—and nothing to show for it!"

*Nothing to show for it. . . .* The remark seemed almost true. And yet beneath that scarred, unrevealing surface lay a supremely difficult piece of foundation work, in many ways the toughest job of its kind ever tackled by the company of which I happen to be the head.

The great building shortly to stand on

The photograph in the oval shows an enormous Canadian grain elevator, weighing forty million pounds when empty, after the lopsided settling of the concrete mat that served as its "floating" foundation. Engineers had made allowance for the foundation to settle, but they had not expected that a ridge of boulders fifty feet below the surface would make the earth jam on one side and throw the huge structure off balance to the rakish angle of twenty-seven degrees. How the building was restored to the upright position, shown at left, is one of the ingenious engineering jobs described by Mr. Remington

Carrying on construction work in the face of an ice jam is one of the many difficulties with which the engineer is confronted. He must battle continually with the forces of nature to prevent the results of long months of painstaking effort being swept away in a single night. When the photograph at the left was taken, caissons were being sunk in midwinter to the bedrock at the bottom of a Western river. With the thermometer standing at twelve degrees below zero, work progressed steadily, despite the fact that the stream had been brought by unseasonable floods to a thirty-foot level

# Ton Skyscraper Rest?

battles against floods, landslides, quicksand, underground  
relentless forces of nature

## Remington

that piece of ground would contain *one hundred and sixty-five thousand tons* of steel and stone. Below, to a maximum depth of more than two hundred feet, lay bedrock. Our job had been to link the two—the bedrock and the building-to-be—with gigantic columns of solid concrete.

For nearly a year that placid-looking site had been a battleground of engineering ingenuity. Straight through the heart of it, at the surface, ran one of New

York's busiest thoroughfares, ribbed with street-car tracks. The building was to straddle this, like some stub-legged colossus.

Parts of the site were veined with three-foot water mains, sewer mains, fire-service mains under two hundred pounds of pressure, and telephone, telegraph, and electric lighting conduits, serving one of the most important areas of the city. During the excavating, all these had to be

carried on steel girders and bracket hangers, without the slightest interference with service.

South of the lot was one of the most congested traffic centers in the world: underground at the western boundary was a subway tube; at the east was an elevated railroad, with piers forty-two feet below the curb; and near the lot in every direction were important buildings, with comparatively (Continued on page 107)

Two photographs showing work in progress on the foundation of the world's tallest office structure, the Woolworth Building. The picture at the left shows a concrete caisson and the one at the right gives a "close-up" of the air lock—both of which Mr. Remington describes

The foundation of the 165,000-ton Municipal Building presented some of the most difficult underground problems ever encountered in the skyscraper area of New York. Part of the site of the building was found to be over the surface of an old pond. Although the caissons sunk in this area are among the deepest on record, it was impossible to carry them to bedrock. The photograph at the right shows the foundation work in progress, with one of New York's busiest thoroughfares, Chambers Street, carried across the excavation on temporary supports. The completed building straddled this street. Much of the excavated earth was treacherous quicksand

"You mean—*David Brown*? I'm  
not responsible when I talk about  
*David Brown*. He's wonderful!"

# Back Home—And Back

The story of a conquering hero who gets a great surprise

By Hartman La Forge

ILLUSTRATIONS BY C. F. UNDERWOOD

**Y**OUTH leaves the old home town with but a single vow—to come back some day and “show them!” Out of the many, most of them never come back at all. That’s pride. A few straggle in from year to year and remerge themselves with a sad bravado. That’s tragic. Fewer still occasionally visit the old town, semi-successful, pretending large and implying much. That’s amusing. Fewer yet come back in the fullness of real success. And that’s a wonderful thing.

It was a wonderful thing to David Brown. As the train rushed through the farm lands of Indiana he stretched languidly in his berth and laughed out loud.

He had looked forward to this day for a long time. He could have come three years ago; but the goblins of success had compelled him to put it off from time to time. His play had shown two hundred nights on Broadway, and each of his latest novels had been a best seller. No small achievement for a man still young.

So David Brown was returning to the certain adulation of Elk Bend’s best. He was certain to be entertained at the Century Club. He would be compelled to speak before the Chamber of Commerce and the Thursday Club. He would have to stand up on the platform of the old high school and tell Elk Bend’s youth how easy it is to make the sparks fly if you strike when the iron is hot.

He chuckled at that as he was shaving in the dressing-room. Being a conquering hero among his own was going to be a great sensation. He was a bit jaded with the industrious and professional mutual admiration of his own little group of serious thinkers. There would be a new kick in the good old back-home stuff.

Back in Elk Bend they’d be saying, “Why, hello, Dave! Back with the bacon, hey, kid!” Couldn’t he hear them! “Who’d’a thunk it? An honest-to-heaven author! Com’on, gang. Got a little bit left in the locker over at the club. Couldn’t waste it in a better cause, now *could* we? Musta made a lotta money out of that book, Dave, what-da-ya-call it? Haven’t done so worse myself—”

And the women! They would be shy and coyly admiring, or boldly advancing. The same girls that had passed him up in the old days for some football hero would now tell him how wonderful he was.

“How do you think of it all?” they would say. “It’s terrible! I feel so self-conscious! You must know women awful well to write about them so—so understandingly! Will you put me in a story sometime? I’d love it!”

The limited stopped at Elk Bend, and Brown slid off, smiling, undisturbed by the fact that there was no porter in sight to help with the bags. Gathering them together, he entered the dingy red brick

station. He remembered when it was built. Then it seemed a magnificent edifice, but now it was dingy and—*little!* Queer how things change like that.

Inside the station, he went up to the ticket window. The ticket agent had been a great friend of his father’s, and he wanted to say hello to the old fellow. But when Brown asked for the agent of yore, a strange and very bored young man looked out at him indifferently.

“Hasn’t been here for more’n five years,” was the brusque reply.

Still smiling, David went out to the street and found a nice shiny auto that had taken the place of the old two-horse bus. He climbed in with two traveling men, and almost before he knew it they were rolling around the corner onto Main Street.

**H**E WAS just a little annoyed that they passed places too fast for him to recognize certain things set in his mind as landmarks. Nothing seemed to look the same. Dingy, dinky, small. He had got to be a regular metropolitan snob, and couldn’t seem to shake it off. Down at Johnson Avenue and Main Street the bus stopped at the Hotel Corwin, for many years the prize hostelry of Elk Bend. The rottenest hotel David Brown had been in for ten years.

“Wanta check the sample case?” asked the clerk.

David Brown refused to be irritated. “No,” he answered smilingly.

“Charley!” bawled the clerk into vast back spaces; and Charley, an undergrown adult of middle age, ambled into view and led the way to the most deliberate elevator outside of France.

David Brown, playwright, novelist, and widely known teller of tales, was back home.

It was mid-afternoon when he strolled up Main Street with all the glow of ten years’ expectation. However, he was puzzled to see no one he knew. He didn’t suppose there would be so many strangers. He had thought he would know by sight at least one out of every three. But he kept on stopping every now and then before a store. Funny stores! And a lot of strange and unfamiliar names.

He went on down to the Elk Bend “Daily Times.” Somewhere, during the past, the news had trickled into his New York fastness that Billy Barstow was the editor and part owner. Billy was one of the old gang. It would be good to see old Billy again. Being a newspaper man, Billy would appreciate the accomplishment of David Brown. Not that David Brown felt any condescension toward Billy. Not at all. There is a distinct fellowship among all writing men.

But Billy Barstow looked up inquiringly from his desk, slightly puzzled. He

was a little fatter, a little thinner on top but otherwise the same old Billy.

“Well, Billy, the old town sure looks good!”

Billy seemed a trifle embarrassed, “Pretty fair,” he offered, and waited diplomatically.

“I’ll bet you don’t even remember me,” said David Brown.

There was a slow dawning of recollection beating about in Billy Barstow’s news-laden mind.

“Sure I do,” he said brightening somewhat and holding out his hand. “It’s Dave Brown, isn’t it? I’d know you anywhere. When’d you hit town?”

They talked for half an hour, during which time Billy went out seven times to “see about something.” Takes a lot of work to run a small-town newspaper. During the talk, however, David got some of the gossip about the rest of the gang. Most of them married! All more or less prosperous and successful. Stable, conservative citizens! But Billy didn’t seem at all excited to see him. He didn’t ask him over to any club. Didn’t even ask him out to his house for dinner. A world of years lay between them that were strangely impossible of crossing. Only as Dave Brown was leaving came the sudden jolt that rather dazed him.

“You look prosperous, Dave. Whatdya do to get that way in the big town?”

“What do I do?” (Billy must be kidding.)

“Yes, what’s your line?”

It was a blow between the eyes. What did he do? He, David Brown, who had struggled and starved and succeeded as few men do. *What was his line?* He stood there for a moment with his whimsical eyes half closed, smiling a bit as he looked at Billy Barstow.

“Oh, I’ve never set any worlds on fire, Billy,” he evaded, as he moved toward the door.

“Bet he’s a bootlegger,” said Billy Barstow to himself, as he watched Brown cross the street and enter the Elk Valley bank. “Lucky he didn’t try to borrow any money. Wonder what he *does* do.”

**I**NSIDE the bank, David was asking a youth in the cage for Mr. Lewis. Billy had said that Frank Lewis was Elk Bend’s baby captain of industry.

After a few moments of undertoned parley behind old-fashioned ground-glass partitions, Frank Lewis came out.

“Why, it’s Dave Brown!” he said pleasantly. “When’d you hit town?”

“Oh, just this afternoon.”

“Here on business?”

“No-o; just going through. Thought I’d stop off and take a look at the old town before going back to New York.”

“Oh, that’s so. Now I remember, I did hear somewhere that you had located your-

self in New York. What's your line?"

"Line?" said David feebly. "I—I—haven't any line."

"Lucky guy! Musta married an heir-ess!"

"No. Not married at all."

"Oh, you'll fall some day. We all do. But what is your line—your business, or profession, or whatever you call it?"

"Books," said David meekly.

"Book salesman, eh? Suppose you object to being called a book agent. Well," condescendingly, "I've heard that there was big money in it when a fellow had a special gift for it."

"Not bad," acknowledged David.

"But listen, Dave. Don't try to sell me any books. Don't care who wrote 'em, don't care what kind of bindings they've got. I haven't time to read 'em. And Emily's too busy with the house and the kids to read, either. It's just hop, skip, and jump with us all the time."

"All right, Frank. I'm not trying to impose on old friends, you know."

"Course not. I know that. . . . Be sure to stop in again before you leave town. Want to talk to you about little old New York. I'm comin' to that town some of these days and burn a few Roman candles. Want you to put me next to where they burn best."

**H**E WINKED wisely as David Brown, dazed and baffled, walked out of the door and up Main Street of Elk Bend, the back-home town.

Within a hundred feet, he met George Starr.

"Well, if it isn't Dave Brown!" said George, stopping hurriedly. They had kind of a formula in Elk Bend, it seemed.

"It certainly is. You seem in a hurry, George."

"I am. Darn busy. Got an important case coming up to-morrow. Be long in town? Hope I'll see you again. Sorry I can't stop now."

Their hands fell apart, and he was on his hurried way when he turned and hesitated a moment. Men have curiosity, too.

"What are you doing these days, Dave? What's your line?"

"Books!" said David jauntily.

"Selling?"

"Well, yes; I suppose you'd call it that."

"Well, here's luck!" And George Starr passed on.

David Brown stood there in the center of the walk and watched him curiously. Another one of them. The old gang. Yet, as far as they were concerned, David Brown had ceased to exist. He strolled on thoughtfully.

Across the street was Kramer's feed and coal store. Jerry Kramer's father had retired and the son had taken over the business. David crossed the street and stepped into the store, wondering what was going to happen to him this time.

It happened. Just as before. Jerry was friendly, but not too friendly. He repeated the historical gossip that the rest of them had given him. He asked the same question: "What's your line?" But Jerry went a step further.

"Oh, books," he beamed. "Do you remember Al Page?"

"Sure," said David.

"Bet you don't remember Frances; Al's little sister Frances?"

David looked blank.

"Oh, she was just a kid, you know. Skinny legs an' everything. But, say, she's the tall and stately beauty of this town now; and her line's books, too. Librarian over to the Carnegie Library."

David was only mildly interested—until Jerry, running true to his form of old, leaned over confidentially and reduced his high long-distance voice to a local whisper.

"You see, there's coming a time when Frances is going to quit that book stuff. Been trying to persuade her for the last three years. All the time she's been telling me that she couldn't ever marry a man that didn't have what she calls artistic appreciation. Can you beat that? Artistic appreciation! Me, a literary lily! But she'll come around. They always do. My old man's got plenty of dough, and I'm making a lot more right here at the little old stand. That's what talks to the girls these days. Take a look at the new car out there. Some spinning wheel! And you ought to see the house I'm building over the river. That's where all the swell houses in town are these days. Little old Jerry isn't so slow. She'll come 'round all right."

"Sure she will," agreed David.

"You bet! Goin' to be in town a few days? If you are, stop in again for a chin. It's good to see some of the old boys who went out into the cold, cold world. They almost never come back. Haven't got the price, I guess."

**I**F YOU think that David went right to the hotel to pack up for the next train back to New York, you're wrong. He went straight to the Carnegie Library. He sauntered in and looked around gravely. He fingered a book or two. He gazed out of the window into the green treetops of maple-lined Second Street.

But he did it all with a divided glance. The other half was cast in the direction of the main desk, where a girl was dishing out books to the few of Elk Bend's literary wanderers who had the energy to straggle in during the late afternoon of a very warm spring day.

For a few moments business was a bit brisk; then it lagged. The lagging brought David, hat in hand, blandly impersonal—at first.

He asked about several books. How people were taking to Wells's "The Outline of History." Was "Main Street" popular in Elk Bend? Had she read the "Moon Calf," or "Zell"? and then came the innocent question:

"Did—did you ever read anything of Brown's?"

Now, most people don't get Frances Page at first. She has a certain aristo-

"Here's where you get off, kid," Billy Barstow

cratic dignity that fools them. It fooled Frances herself, for a long time. But her brown bonfire eyes, gypsy eyes, gave David about a hundred and twenty volts when she said in her soft warm voice:

"You mean—David Brown? I'm not responsible when I talk about David Brown. He's wonderful! To my mind, the most promising thing about the Great American Public is the fact that 'The Only Thing' is a best seller."

"Do you really think so?" David was only human.

"I do, indeed." She stopped, half confused, looking out where the afternoon sunlight streamed through the doors.

David was noticing her mouth. It was worth noticing. Her gypsy eyes came out of the dream, and caught him noticing. She rolled the pencil, with the rubber date stamp on its top, slowly between her slender palms.

"Did you . . . want a card?"

"No-o," said David; "I'm just a straggler for a day. You see, many years ago, I lived in Elk Bend; and to-day I stopped off for a few hours to see what the old town looks like."

"Does it seem the same?"

"No. It probably is the same; but I've changed a lot, I suppose, and that makes it seem different."

was saying, tugging at one of his arms. "Old Elk Bend's got something on ice for the Honorable David Brown"

She looked at him gravely. "I could never imagine you belonging to Elk Bend."

"I can't myself—now; but I did, very much so. And I'm a little ashamed of feeling so out of place here to-day."

"You needn't be. What I am ashamed of is that I *stayed* here." Her gypsy eyes glowed. "It's hard for a girl to get away. The boys just seem to get up and walk out; that is, the worth-while ones do. All that the town gets are the ones that are left."

TEN minutes later, again outside the library, he crossed over to Main Street and started back toward the hotel, pausing for a thoughtful moment in front of Reed's book store. Then he went in.

As he emerged from the store, David looked at his watch. In just forty minutes the train was due that would carry him back to his own world, back to the crowd that understood. He grinned a little at the fallen idol of himself, the vacuous sentiment that had made him want to come back here a conquering hero. It served him right.

As David Brown loaded his bags into a decrepit taxi in front of the Hotel Corwin, Frances Page looked up from her card file with a nervous jump. A freckled-faced

boy had suddenly plumped a package down on the counter in front of her.

"What's that, Tommy?" she asked.

"Don't know," twinkled Tommy. "He told me not to tell you how I got it."

Frances frowned puzzledly as she started to unwrap the book.

"Who told you not to tell what?"

"The guy with the cane over in front of the Hotel Corwin. He gave me a dollar, and he says—"

But Frances Page was not listening. She turned back the cover of the book and in a dazed tumult read what was written there.

To Gypsy Eyes, the only one in Elk Bend who has ever heard of David Brown.

Not an hour ago, *he* had been standing there! David Brown! And she had chattered to him like a foolish child about "The Only Thing!" She felt herself warm and flushing as she looked over the book at Tommy, who was watching her closely.

"What did he say, Tommy," she demanded.

"Gee, you're red, Frances." Tommy snickered behind his grimy hand. "Thought Jerry Kramer was your fella!" Then he suddenly whirled and beat it, sticking his head back in the door to yell, "Good-by, my lover, good-by!"

Frances was furious, but she forgot it the minute old Mrs. Gardner came in.

"Oh, my dear," said that lady impressively, "I've just heard that David Brown is in town! You know, the David Brown who wrote 'The Only Thing.' You see, I called up Billy Barstow at the 'Times' to put in a little item about Myra's baby, and he said David Brown had just been in. Asked me if I wasn't an old friend of his mother's—when we were more like sisters up to the very day she died. And Billy says David's been in New York these many years all alone—the poor boy! And what do you think that fool Billy told me? He said David told Frank Lewis that his line was books, and Billy thought he meant he was a *book agent*! Can you beat that?"

"BOOKS!" I almost yelled, the name of David Brown suddenly jumping up and down in my mind, 'of course' it's books, you fool! *He* is the author of "The Only Thing." Just to think of it! It never occurred to me that *the* David Brown could be our Dave. When I hung up, Billy was saying a lot of things with swear words, about losing out on the biggest story the 'Times' has had since the lumberyard burned.

"It's just like (Continued on page 132)"

# The Story Of Gay Little Mitzi

When she came to this country ten years ago to do a sketch in vaudeville she was a young girl in her teens, could speak hardly a word of English, and had been less than two years on the stage; but she promptly became one of the most popular musical comedy stars in America

*By Mary B. Mullett*

**S**HE'S only about as big as a minute—in other words, just four feet eleven inches tall. If she really were a minute, it certainly would be one of undiluted gayety and charm, for she's as pretty as a picture and seems to have found, somehow, somewhere, an inexhaustible spring of laughter and enthusiasm.

Her name is Mitzi. Perhaps you guessed it. There are, alas! very few sojourners in what is commonly called this vale of tears who fit the above description as perfectly as does this little musical comedy actress, the popular star of "Lady Billy," "Head Over Heels," "Pom-Pom," and "Sari."

When she came to this country, about ten years ago, she sang and danced her way to success under the name of Mizzi Hajos. That was too much for our American tongues! We loved her—but we couldn't tell our love, because we couldn't pronounce the lady's name; not unless we, like herself, came from Hungary, which few of us did.

But when Henry W. Savage became her manager, he considerably dropped the Hajos and spelled the first name as it was pronounced, "Mitzi." After that, we could talk about her with perfect ease—and did.

She talks about herself the same way, only more so. Interviewing Mitzi is like opening a bottle of the late more-or-less lamented champagne. Remove the cork with a question and, fizz! the stream of talk and of laughter begins to bubble over.

It was just a commonplace little question that drew the cork. Something like: "You were born in Budapest, weren't you?"

Of course I had a whole lot of better ones than that up my sleeve. But you don't have to take a corkscrew to champagne! And you don't have to use a conversational corkscrew on Mitzi. She's too full of life and laughter.

"Yes," she said, "I was born in

Budapest. But, what is more to the point, I was lucky to be born at all! I was the leavings. I was the cookie that's made out of the scrapings from the dish. I came along when nobody expected me and nobody wanted me. I was just the tag end of the family. But some good fairy must have felt sorry for me—insignificant scrap of humanity that I was! At any rate, from the day I was born I've been the family mascot. It began with my father. He had applied for a government position which had become vacant by the

my arrival on the scene, shouted to my mother, as he ran up the stairs, "I've got the job! I've got the job!"

"Yes—and you've got another baby!" my mother informed him.

"After that I didn't need any good fairy to look out for me; my father attended to it. He petted me and humored me, forgave all my pranks—and to do that he had to be the busiest little forgiver in the whole country! But he also aided and abetted me in really worth-while things, especially in my ambition to make a career for myself.

"I guess I was just naturally born for the career I chose. From the time I was five or six years old, I imitated everybody I saw and heard. Long before that, when I was just a baby, I was taken to concerts and theatres. The family wanted to go but didn't like to leave me at home. At an age when most babies weigh twenty pounds I weighed only ten, and my father seemed to think I'd be mislaid and lost if he didn't keep an eye on me. So he used to tuck me under his coat and smuggle me into the theatre as if I were a kitten. I was as quiet as a kitten, too; just watched everything with round-eyed curiosity.

Mitzi has the biggest blue eyes I ever saw. Perhaps it was these early experiences at the Budapest theatre that developed them so phenomenally.

"At first," she went on, "I did imitations just for the fun of it. The family was my only audience. Then

I used to show off my accomplishments to visitors. I began going to school when I was five years old; and of course, as a sort of infant prodigy, I did my stunts at the school entertainments. Before I was ten years old I was giving imitations at concerts and big charity affairs. Mother didn't like it, said it kept me up too late and interfered with my schooling. But my father always encouraged me.

"Not that I *needed* encouragement! It was as natural for me to sing and dance and imitate (Continued on page 92)

## What Mitzi Knows About "The Courage of Fear"

**"I WAS scared!"** says Mitzi, in relating one of her experiences. "But when you are *enough* scared, you can run faster, and jump farther, and shriek louder than you ever dreamed you could. Figuratively speaking, that's what I did when that actress left me in the lurch, hoping I would make a failure.

"I felt as if I could play the whole show that night—and I pretty nearly did. I mean that I made a big hit. She thought she was kicking me into a hole. But if you are kicked hard enough, you sometimes travel a good deal farther than the kicker intended.

"Of course I won't give her all the credit. I had some steam myself! Here was the chance I had been longing for. I knew that if I didn't make good then it would be a weary wait for another chance. I didn't *dare* fail. So that gave me some more of the courage of fear."

death of the man who had held it. That's the only way any position ever did become vacant in Hungary. If you wanted to step up you had to do it in dead men's shoes.

"Well, when this particular pair became available, my father applied for them. So did hundreds of other men! It was about a thousand-to-one chance that my father would be chosen. But the very day I was born the appointment was made—and he proved to be the lucky man. He came rushing home and, not knowing of

# A Great Editor Tells What Interests People

Edwin A. Grozier, who has made the Boston "Post" one of the most successful newspapers in the world, explains the two most important factors in that achievement—Stories of his experiences, and also of the most remarkable man he ever knew

*By Keene Sumner*

**T**HERE is a Boston newspaper which has one of the largest circulations in the world. Now, there is one thing that is true of the story of any great newspaper.

You won't get very far into that story before you come to the figure of some one man. And it is also true that, if you go very far into the story of that one man, you will find that the secret of his ability to interest thousands of human beings is his *understanding* of them—his knowledge of human nature.

The man in this case, the man behind the great success of the Boston "Post," is Edwin A. Grozier. When he bought the paper, thirty-one years ago, its circulation was only about thirty thousand—and that was largely free! I don't know what it will be when this article appears, for it has a way of jumping up every now and then by perhaps ten thousand a week. But even now, almost half a million copies are sold every day.

It isn't often that a man's story is interesting from its very beginning; but Edwin A. Grozier's starts in an unusual way. He was born, September 12th, 1859, aboard his father's ship, as the vessel passed through the Golden Gate to enter the harbor of San Francisco. Some folks are born with a silver spoon in their mouth; but Mr. Grozier is the only person I have met who entered life through a Golden Gate.

When the boy was six years old, he went to live at Provincetown, down on Cape Cod. More than two hundred years before he arrived there, some of his ancestors had gone ashore from the "Mayflower" at that very spot. Their stay was brief; but their several-times-great-grandson lived there and went to school until he was fifteen.

He must have made good use of his time, too; for he was ready for college

then, at an age when most boys are only half way through high school. He was too young, in fact, to go to college. So his family sent him around the world; and for almost two years the boy traveled here and there, mostly on sailing vessels, seeing strange places and learning to take care of himself in any circumstances.

written some fugitive verse. But he needed two things which the writing of verses did not provide: They were *action* and *money*. His mind was too keenly alive to let him become a dreamer, even if his purse had been well enough lined, at that time, to permit it.

"When I graduated from college," he told me, "General Charles H. Taylor was the owner and editor of the 'Boston Globe;' and he, personally, gave me my first job, as a reporter on his paper. My salary, at the start, was ten dollars a week—which seemed large at the time and was very welcome. It was soon raised to twelve, to fifteen, to eighteen dollars. I wanted more money—because I needed it! I couldn't seem to get any more from the 'Globe,' so I went to the Boston 'Herald' at twenty-five dollars a week.

"During the famous Robinson-Butler campaign for the governorship, in 1882—the fiercest political campaign ever waged in Massachusetts—I traveled with Robinson and reported it for the 'Herald.' When he was elected he made me his private secretary, and I was with him at the State House almost two years.

"Then came one of the most interesting, important, and *strenuous* periods in my life. In 1885, I became private secretary to Joseph Pulitzer, then actively engaged in making the New York 'World' one of the greatest newspapers in the country. I was with him, in one capacity or another, for six years. And to any

young man, that experience—provided he could live through it!—was a wonderful training.

"Mr. Pulitzer was the most remarkable man I have ever known. He was Hungarian by birth: half Magyar and half Catholic. During our Civil War he landed in New York, (Continued on page 116)

Although he was not yet seventeen when he returned, he entered Brown University that fall. Later, he went to Boston University, where he was graduated. As a boy, back in Provincetown, his ambition had been to become a writer of novels and of verses. Like most boys with any imagination he really had

# Most Folks Can Be Fooled About Furs

Would you, for instance, know Russian sable and silver fox—the costliest furs in the world—from Hudson sable and pointed fox?—Could you pick out the best mink, or chinchilla, or ermine, or squirrel?—Do you know which furs are the most durable, and which are the most perishable?—An expert tells here all kinds of interesting facts about furs

*By Allan Harding*

**W**HAT would you think of paying three thousand dollars for the skin of a little animal no larger than your pet cat? The answer prob-

ably is that you *wouldn't* think of it. However, there are people who not only think of it but who do it.

A New York furrier showed me two Russian sable skins which he assured me he will sell for three thousand apiece. He added that the purchaser gets her money's worth; but, so long as it's our money, we needn't worry about that.

However, suppose you had an automobile as big as Henry Ford's and that you

decided to buy your wife a fur coat; a grand and glorious one that would cost more than any other fur garment in the world.

"Have you got anything more expensive than these two Russian sables?" you ask the furrier, pointing to the pair I have just mentioned.

"No, sir! There ain't no such animal!" he says, or words to that effect.

most of us are so ignorant that an unscrupulous dealer could fool us without the slightest difficulty. One fur coat may be cheap at fifty thousand dollars and another may be expensive at fifty dollars; but most of us don't know why. We can't even recognize a rabbit skin in some of its disguises.

To become an expert in furs requires years of training. The man who gave me the information contained in this article, for instance, has been dealing in furs since he was a boy. He has graded thousands of skins for the wholesale markets. He knows furs inside and outside. This

A striking garment of Persian broadtail, trimmed with Kolinsky and worn by Alice Brady, the well-known actress. Broadtail, or baby lamb, is beautiful but also perishable. Persian lamb itself, however, is one of the most durable of furs

ment. The sable coat which Mr. Corey, the steel magnate, gave to his wife, Mabel Gilman, is said to have cost eighty thousand dollars. The price of the one Peggy Hopkins received when she was Peggy Joyce has been quoted at from sixty to seventy thousand dollars. Those are the top figures, so far as I know."

And there you are!

But, at any rate, you have learned something about furs, a subject on which

Kolinsky is another fur-bearing animal whose habitat is Russia. It is very soft and silky in texture, light in weight, and of a deep reddish-brown shading into darker brown along the center of each skin. Kolinsky is often imitated in "blended" squirrel

Right: This soft and graceful garment, worn by the young actress Margalo Gilmore, is made of "bunny chinchilla" on a georgette foundation. Bunny chinchilla and bunny ermine are really rabbit fur, sheared and dyed.

Left: Chinchilla, one of the most beautiful and delicate of furs, is becoming so scarce that a coat of the finest quality may cost from \$20,000 to \$35,000. This one is worn by Miss Jules Dowling, a well-known professional model.

man, Mr. Joseph Newman, is now the expert with Otto Kahn, Incorporated, the New York firm which has made three fur coats for Mrs. Harding since her husband became President.

**E**VEN if we can wear only rabbit-skin ourselves, we would like to know about the furs we *would* wear if we had the price. So I asked Mr. Newman what are the most costly ones in the world.

"Russian sable," he said, without a moment's hesitation. "It has brought the highest prices ever paid for single skins, although silver fox is a close second. But if you take into consideration the comparative size of the two furs, sable is decidedly the more expensive, for the fox skins are about twice as large.

"However, silver fox costs enough to put it with Russian sable at the very top of the whole list. I have paid twelve hundred and fifty dollars apiece for silver fox skins, just for the raw furs. When a skin of that quality has been dressed and made up, it may easily bring two thousand dollars or even twenty-five hundred dollars at retail.

"Silver fox is chiefly a rich, lustrous black. It gets its name from the white-tipped hairs scattered among the black ones. On some parts of the animal these white hairs are so numerous that they give the fur a hoary or silvery appearance. The markings are never just the same on any two animals, although the tip of the tail is always white.

"Coats are not made of silver fox, however; the fur is too deep. So no one person could ever wear as many thousands of dollars' worth of silver foxes as of Russian sables, or even of chinchilla.

Irene Castle, wearing a wonderful ermine wrap with a detachable train. The finest quality of ermine must have not the slightest tinge of yellow. It comes from northern Russia and Siberia and is obtained only in winter, the fur being a pale bisque color in summer.

"The fur known as 'pointed fox' is an imitation of silver fox, and is made by gluing badger hairs here and there on the skin of a black fox, or of one that has

been dyed black. Of course no reputable dealer sells this as 'silver fox.' You wouldn't think he could, even if he wanted to. But while I doubt if it ever is attempted, I know it is possible.

"One of my salesmen came to me once and said, 'I have a customer who wants a silver fox scarf. She thinks she knows all about them—but she really doesn't! She won't take my judgment, but I think you can convince her.'

"I selected a number of silver fox skins, put with them one of pointed fox, and took them to the customer. She examined them all very carefully. Then she selected the pointed fox and said, 'There! that is exactly what I want!'

"Are you sure?" I asked.

"Absolutely!" she declared.

"I held the fur out to her and said, 'Give one of the white hairs a sharp pull.' She did so, and, to her surprise and chagrin, it came off! After that demonstration, it was easy to convince her that it was safer to rely on the judgment of an honest dealer than on her own."

**B**UT can't the customer learn enough about furs to be able to judge for himself?" I asked.

"No, he really cannot," declared Mr. Newman. "Even an expert can be fooled sometimes, so what chance has the average person? There is only one rule to be followed in buying furs: Deal with someone you can trust, both as to his knowledge and as to his honesty.

"In dealing with the high-class furriers, a customer sometimes selects the skins to be used in making up a fur garment to order. But the average woman buys one that is already made up, so she does not see the *under* surface of the fur. Suppose

# A Great Editor Tells What Interests People

Edwin A. Grozier, who has made the Boston "Post" one of the most successful newspapers in the world, explains the two most important factors in that achievement—Stories of his experiences, and also of the most remarkable man he ever knew

By Keene Sumner

**T**HERE is a Boston newspaper which has one of the largest circulations in the world. Now, there is one thing that is true of the story of any great newspaper.

You won't get very far into that story before you come to the figure of some one man. And it is also true that, if you go very far into the story of that one man, you will find that the secret of his ability to interest thousands of human beings is his understanding of them—his knowledge of human nature.

The man in this case, the man behind the great success of the Boston "Post," is Edwin A. Grozier. When he bought the paper, thirty-one years ago, its circulation was only about thirty thousand—and that was largely free! I don't know what it will be when this article appears, for it has a way of jumping up every now and then by perhaps ten thousand a week. But even now, almost half a million copies are sold every day.

It isn't often that a man's story is interesting from its very beginning; but Edwin A. Grozier's starts in an unusual way. He was born, September 12th, 1859, aboard his father's ship, as the vessel passed through the Golden Gate to enter the harbor of San Francisco. Some folks are born with a silver spoon in their mouth; but Mr. Grozier is the only person I have met who entered life through a Golden Gate.

When the boy was six years old, he went to live at Provincetown, down on Cape Cod. More than two hundred years before he arrived there, some of his ancestors had gone ashore from the "Mayflower" at that very spot. Their stay was brief; but their several-times-great-grandson lived there and went to school until he was fifteen.

He must have made good use of his time, too; for he was ready for college

then, at an age when most boys are only half way through high school. He was too young, in fact, to go to college. So his family sent him around the world; and for almost two years the boy traveled here and there, mostly on sailing vessels, seeing strange places and learning to take care of himself in any circumstances.

written some fugitive verse. But he needed two things which the writing of verses did not provide: They were *action* and *money*. His mind was too keenly alive to let him become a dreamer, even if his purse had been well enough lined, at that time, to pay for it.

"When I graduated from college," he told me, "General Charles F. Taylor was the owner and editor of the 'Boston Globe,' and he, personally, gave me my first job, as a reporter on his paper. My salary, at the start, was ten dollars a week—which seemed large at the time and was very welcome. It was soon raised to twelve, to fifteen, to eighteen dollars. I wanted more money—because I needed it! I couldn't seem to get any more from the 'Globe,' so I went to the Boston 'Herald' at twenty-five dollars a week.

"During the famous Robinson-Butler campaign for the governorship, in 1882—the fiercest political campaign ever waged in Massachusetts—I traveled with Robinson and reported it for the 'Herald.' When he was elected he made me his private secretary, and I was with him at the State House almost two years.

"Then came one of the most interesting, important, and strenuous periods in my life. In 1885, I became private secretary to Joseph Pulitzer, then actively engaged in making the New York 'World' one of the greatest newspapers in the country. I was with him, in one capacity or another, for six years. And to any

young man, that experience—provided he could live through it!—was a wonderful training.

"Mr. Pulitzer was the most remarkable man I have ever known. He was Hungarian by birth; half Magyar and half Catholic. During our Civil War he landed in New York, (Continued on page 116)

Although he was not yet seventeen when he returned, he entered Brown University that fall. Later, he went to Boston University, where he was graduated. As a boy, back in Provincetown, his ambition had been to become a writer of novels and of verses. Like most boys with any imagination he really had

Left: A year or two ago, the Scottish Rite Masons of St. Louis presented to Mrs. Harding an Alaska seal coat made from the pick of 30,000 skins. This picture was taken outside the White House the time the coat was presented. On Mrs. Harding's left, the fourth man is Mr. Otto Kahn, who made the garment.

In oval: Peggy Hopkins, arrayed in the Russian sable coat which was one of the costly gifts from her husband, Stanley Joyce, during their brief matrimonial experience. Russian sable is the most expensive fur in the world. This coat was said to have cost between \$60,000 and \$75,000. Some years ago, Mr. Corey, the steel magnate, gave his wife—Mabel Gilman, the former actress—a Russian sable coat which was reported to have cost \$80,000. The price would be even higher to-day.

the garment is of Hudson seal. This is really dyed muskrat, but 'Hudson seal' is the recognized trade name for it. The best quality is beautiful; it wears well, and it is not extravagant in price.

"In addition, it is easy to work with. If an Alaska seal garment becomes shabby in spots, you can't simply cut out the worn pieces and sew in new ones. The seams will show, unless they are put in certain places. But when two pieces of Hudson seal are skillfully sewed together there is no external evidence of the patching; at least, none that the average person will detect.

"WELL, then, suppose you go to an *unreliable* dealer to buy a Hudson seal coat. He shows you one at what seems to you a bargain price. It looks all right—on the outside! But, perhaps, if you could see the *reverse* side, you would find that it is made of very poor skins, and also that it contains dozens, or even scores, of little patches of the fur. It isn't surprising that when a hodge-podge coat of this kind has been worn a short time it begins to fall to pieces. That is an extreme example, to be sure; but there is so wide a range in the quality of fur, and there is so great a range, also, in the quality of workmanship, that what *seems* to be a good bargain in price may really be a very poor one.

"There are other ways, too, in which you might be deceived. For instance, the quality of furs depends largely on the season when the animal was killed. Muskrat is at its best in the spring. But the best months for other furs are December and January; the poorest are the summer months. The former are called *seasoned* furs; the latter, *unseasoned*.

"At the height of winter, the fur of an animal is thick, rich, and glossy. In summer it is thinner and less lustrous. Not only that, but the skin itself, the 'leather,' changes with the season. I can tell at what time of the year the animal was killed simply by looking at the skin side

of a pelt. In winter the skin is thick and strong, with plenty of oil in it. As the warm season approaches there is less and less oil in the skin. It becomes so dry that it cracks easily. The skin itself be-

comes thinner. I have seen skins so thin that when the inner surface was shaved off in the process of dressing it there was literally 'fur' on both sides! The roots of the hairs came (Continued on page 134)

# What I Like—and Don't Like— About a "One-Horse Town"

By W. O. Saunders

Editor of "The Independent," Elizabeth City, N. C.

I HAVE lived in big burgs and little burgs. After trying both kinds I am back in a small town and expect to finish out my days right here. I am having lots of fun, and wouldn't trade jobs with a lot of fellows in New York who are making ten times more money than I am making in Elizabeth City.

Life is what you make it, whether in a big burg or a little burg. Your world is no bigger than your own job and your own circle of acquaintances. Folks are folks, wherever you find them; the folks in Elizabeth City are no different from the folks in New York. But the difference in living in New York and in Elizabeth City is: In New York one may live a lifetime without getting acquainted with his next-door neighbor; in Elizabeth City I know just about every man, woman, and kiddie in the town, and we all speak whenever we meet.

I like small-town life because I like folks. Life in a small town is living in a very laboratory of human nature and human experience. The life of the small town, and every man and woman in it, is nearly an open book. Life in the small town is an endless open air drama of human interest; one gets an endless repertoire of romance, comedy, tragedy, and all the rest of it. And one is most times permitted to see behind the scenes as well as from the front row in the orchestra. The gossips are busy from morn till night; they leave no item of human interest uncovered. They know how many boxes of candy every stenographer receives in a week and where she gets them from. A substantial citizen has to be a pillar in the church and walk decorously; he deserves no credit whatever for being the staid and sober citizen that he is; he doesn't dare be otherwise, because he can't fool even his wife in a small town. God bless the gossips!

I say God bless the gossips! That doesn't mean the scandalmongers. The curse of the small town is the disappointed and fading woman whose life has been cheated of experience, and who, embittered by her own barren prospects, is determined that no one else under the sun

shall do the things she would have done herself if she had ever had the nerve or the opportunity to do them. She sits behind half-open shutters at night and spies upon her neighbors, reporting everything she sees or thinks she sees, and often defaming innocent mortals by placing false interpretations upon their conduct. Every small town has that type; I hate them, and am very polite to them.

But the gossips! They are the news gatherers and the newsmongers who never

to his office, and he is now doing time in the state prison.

Only once in a long while are the gossips misled. There was the case of a couple who lived in a nearby town, who were always pointed out as the happiest of married couples. One morning the woman was found in her bedroom with her throat cut from ear to ear. She had done it herself with a razor. When neighbors found her and one sent hurriedly for a doctor, she protested with her dying breath, "Do

not try to save me, I want to die! My life has been a very hell on earth!"

One finds every element of tragedy in a small town that one finds in a great, overflowing, overwhelming place like New York. Only a few months ago two young women came into town on a night train and registered at the hotel. Two hours later the husband of one of them came by automobile and registered at the same hotel. He asked to be shown to his wife's room. When his wife opened the door he shot her dead, shot the other woman to death, and then put the pistol to his own head and killed himself. New York or Chicago couldn't scare up a greater thriller than that.

There have been numerous murders and suicides in the town since I have lived here and the mystery of most of the murders has never been solved. One living in a big city reads about these things in the papers or catches a glimpse of them in vast crowds. In the small town one gets the whole story, views the remains, and follows them to the cemetery.

The greatest difference between New Yorkers and North Carolinians is in their attitude toward per-

sonal wealth. The average New Yorker that you meet wants everyone to believe that he has more money than he really has. The average small-town man is chiefly concerned in concealing his wealth and posing as poverty stricken. Uncle Bart Brownley hadn't bought a new hat in ten years, not because he didn't like new hats but because he was sensitive about letting his neighbors know that he could afford a new hat. A stranger would spot the men of means in my town with a great deal of (Continued on page 128)

## Why Hat Brims Wear Out In a Small Town

"THE speaking part is, by the way, the greatest nuisance of small-town life," says Mr. Saunders. "If I meet Miles Clark or Jule Selig fifty times a day I have to speak to them, and if I have something on my mind and fail to speak on occasion, word immediately goes 'round that I have got the swell head since I got my picture in THE AMERICAN MAGAZINE; or Jule comes around next day and wants to know what I've got against him. Most folks in my town think I go bareheaded for the sake of my seldom hair. I am letting them into the secret for the first time. I don't go bareheaded in hope of restoring my lost hair by exposure to the air and sunshine; I go bareheaded to relieve myself of the confounded nuisance of sawing the air all the way from the post office to the apothecary shop, tipping my hat to every woman I meet. You never saw a small-town man in your life whose hat brim didn't sag and flop about his ears. It gets its dilapidated condition from overmuch handling, saluting every feminine person you meet."

permit small-town life to stale. There was Uncle Bart Brownley; bought himself a brand-new hat one day, the first he had had in ten years, and got up before day and sneaked out of town on a night train. Everybody in town knew it before ten A. M., and knew that he was on his way to some place in Maryland to marry an eighteen-year-old girl that had nursed his former wife in her last illness. And there was another prominent citizen who thought he had 'em all fooled; but the gossips bored a gimlet hole in a side door

**T**HERE were moments—usually just before dinner during an hour's ride on the over-crowded subway—when Mary Dale saw New York, bitterly—as a huge, unfriendly city that lured people to it by its sheer bigness, and, when they had come, swallowed them up and left them unutterably lonely.

She did not mind a solitary breakfast, or even luncheon, but dinners were different. Dinner was a time when you sat across the table from someone who belonged to you, whether husband, mother, or friend, and talked of the trifling happenings of the day. Talking itself was not important, but being able to talk to someone interested—that was important.

Mary had no one to talk to. Tom and Eleanor were too newly married to care for her company, and she knew no one else except the people at the office.

Thinking of the office made her think specially of Malcolm Barr. She wished he would not smile at her with such friendly eyes. It made her doubly lonely afterward. If he had not smiled at her when he left to-night she would not have felt so lonely. . . . Or would she, perhaps, have felt more so? At any rate, there was no use in thinking about him. There was no way of knowing him better.

Mary had been eager to escape from the small town of East Littleton to New York, the city of wonderful possibilities and adventure, to broaden her horizon, to see something of life. By "seeing something of life," she did not think she meant, as most women do, finding romance. Eleanor, who had come to New York with Mary, had found romance. Two months ago she had married Tom Nelson.

Something in Mary was vaguely offended by this. She herself would not have said that Eleanor had followed Tom Nelson from East Littleton to New York, but there were people who said so. Mary could never have followed a man, or taken the initiative like that. Love came. One did not work for it. To Mary, love seemed inextricably bound up with the Hand of Fate.

Eleanor thought differently. Eleanor and Mary did not agree very well in their ideas of men and of love.

"It's up to the girl quite as much as the man," Eleanor would insist. "You pick him out just as much as he picks you. You have to make the opportunities to know him, so

Mary's temper had been rising. Her eyes were bright she said suddenly: "I'd never in the world marry a man

you can decide whether he's the right one."

"Oh, I don't see it . . . it's too much like pursuing a man!"

"Mary, you have to do it! If you think you can sit back and wait for some man to fall desperately in love with you without raising your finger, you're all wrong. That kind of thing's out of date. Besides, there are too many girls looking for a man. The competition is too keen."

"Well," Mary had flung back, "then I

don't want a man. I couldn't scheme and maneuver to make him fall in love with me!"

Eleanor laughed. They were sitting on the divan in her living-room one evening when Tom was out.

"You may think you don't want one, but some day you will. And then just tell me how you're going about getting him."

She looked into Mary's warm brown eyes. They were steady and frank as a man's and just the kind of eyes to go with

and the color glowed in her face. "I know one thing," I didn't thrill about or who didn't thrill about me!"

GERALD LEAKE

auburn hair. Mary's nose was rather small, her mouth rather large. Her figure was attractive, lithe, and boyish.

"I'm not going to 'get' him, Ellie. I think it would happen like this: We'd be just awfully good friends for a long while—and then, by and by, we'd know we were in love. A man ought to like you first as a friend. That's the real basis."

"But it isn't what gets him," said Eleanor. Mary frowned. "I hate your ideas."

"Yours are so impossibly idealistic, Mary dear. It's no use giving a man a perfectly wonderful fifty-fifty kind of friendship. He doesn't want it. It isn't exciting enough. He'd far rather get a thrill out of looking into the depths of your eyes."

"I don't believe thrills have any business coming before friendship," Mary remonstrated.

Eleanor made a despairing gesture.

"Oh, all right, have it your own way. But if you stick to those tactics, if you scorn to try to charm him a little, I'll wager that you'll lose him. You've got to charm men. Don't give them anything too freely—make them work for everything they get. Giving a man too much, even a perfectly square, fine friendship, makes him careless of it."

**B**UT it was nothing Eleanor had said that brought her any nearer to knowing Malcolm Bart. Her little French dictionary was really responsible for that.

Mary kept the dictionary on her desk at the office because business letters which came from France were frequently turned over to her department to be answered. The man whose job it was to make translations of all foreign letters was at luncheon one day when Mr. Marden, the head of Mary's department, came in a hurry to have a French letter translated. Mary volunteered. Thereafter, she kept a small dictionary of commercial French close by, mistrusting her vocabulary, which was not commercial.

Passing her desk one day, Malcolm Bart saw the dictionary. He stopped and picked it up.

"Would you lend me this for just a moment, Miss Dale," he asked, with his ingratiating smile. But it was not until the end of the day

that he returned the dictionary, and then it was with a rueful face.

"Your dictionary's no good," he announced. "Would you think I had an awful nerve if I asked you to . . . translate a French letter for me?"

The letter was from a nineteen-year-old French girl, who inquired solicitously after his health, gave the exact condition of each member of her family, and concluded by saying that though they heard from him but seldom, they would never forget "Monsieur l'Americain."

"I was billeted with those people," Malcolm explained. "Miss Dale, I want to learn French. Would you teach me?"

In view of these circumstances they agreed to have dinner together once a week with the object of speaking French.

During dinner, a few days later, Malcolm explained haltingly, with many lapses into English, that the firm was considering opening a branch office in Paris next fall and that, if he acquired a fair knowledge of French, he hoped to be given a chance to go over. For her part, Mary

She sank one month's pay in a marvelous green and gold gown. The gown had disturbed her peace for two weeks from the window of a Fifth Avenue shop.

explained her fluency in the language by telling about her mother's brother, who had married a Frenchwoman. After the death of her husband this French aunt had lived with the Dales in East Littleton.

Not until the check was brought was any hitch in the new dinner arrangement apparent. When the waiter went for change, Mary, a little flushed, pushed a dollar and ten cents across the table.

"*Qu'est-ce que c'est?*" demanded Malcolm promptly, pushing it back.

Mary replied in English.

"As long as it's going to be every week I can't let you. It must be on a fifty-fifty basis." (Eleanor's words flashed into her mind.)

It was hard to convince Malcolm.

"But why the ten cents?" he grumbled, pocketing the dollar, scorning the dime.

"My part of the tip," said Mary.

Malcolm's scowl gradually relaxed and his face lit up with his delightful smile.

"I didn't know there were any girls in the world like you," he said.

Later, from the vantage point of her own room, Mary felt a glow at the memory of Malcolm's eyes. A man *did* appreciate friendship and squareness. Eleanor was absurdly wrong.

**I**N THE weeks that followed, as she grew to know Malcolm better, Mary became aware of the tremendous rush of social activity that occupied his other evenings. He seemed to know a great many girls. She ran into him one day when he was going out to luncheon with Miss Noyes, Mr. Marden's pretty new secretary.

Unconsciously, she began to be more critical of his manner toward herself. For a while, it had seemed quite satisfactory—half banteringly personal, half friendly and disarming.

"Mary, did you know you were a contradiction of all our best fiction?" he began one night in the usual vein.

"Why?" said Mary, studying the menu.

"You've got red hair, and you're not a vamp."

"Oh," Mary smiled, "are they always vamps?"

"Absolutely. . . . I wish you'd tell me something. . . . Have you ever been in love?"

Mary was slightly piqued.

"Why, of course," she said, hesitatingly.

"That is—well—perhaps not *really*."

"I'll bet you haven't."

"Why?" She was decidedly piqued now.

"I don't know exactly: You're too sort of crisp and cool, and too—square."

Mary's brown eyes frowned on him.

"Can't you be square, and be in love?"

"I never saw a girl who could. . . . Girls do the unfairest things in the world to get their own way."

"But you like it, don't you?" Mary said, suddenly a little cross.

Malcolm laughed.

"Well, maybe I do. I don't see how anyone can help liking girls. I can't."

Mary felt vaguely unhappy.

"Then I suppose (Continued on page 140)

# Folks Who Talk Too Much

We all do—more or less—and sometimes we find it expensive

I HAVE sometimes wondered what was the most expensive word ever uttered in history. What careless remark, what bit of foolish conversation cost the race most dear? The unhappy phrase "Rum, Romanism, and Rebellion" is of course one celebrated case in point. James G. Blaine was tired; he had been speaking and attending conferences steadily for weeks; he made the mistake which no public man should ever make, of allowing a speech to be made to him without having some trusted friend read it over in advance. And when that well-meaning clergyman at the head of the delegation let the unlucky sentence slip, Blaine probably never heard it. At least, he claimed later that he had not heard it; but the denial did little good. The phrase appeared everywhere in the papers the following morning; a storm of protest greeted it, and Blaine lost the Presidency.

How many well-laid plans of statesmen have been spoiled because someone told someone else something in strict confidence? How many battles have been lost because the plans leaked out in advance through the carelessness of one who could not keep guard over his own lips? How many business deals that might have ended with profit all around have fallen through because, in an elevator, or a club, or the smoking compartment of a Pullman, a man who ought to have known better swelled up with the sense of his own importance, as the custodian of big tidings, and talked when he should have been silent?

Every experienced man who reads this will think of instances out of his own career when mere words undid the work of weeks or months. And perhaps a scholar some day will write a history of foolish talk, tracing its consequences for evil in the world. I am not a scholar; merely an ordinary business man entrusted with the management of a rather important enterprise. But I have seen enough of the effects of careless conversation to feel that it is one of the great evils of the business world. And an incident in our own business, so recent that the smart of it still remains, makes me feel that what I have in mind may be worth passing on to other men.

We are manufacturers of certain special lines; and while our business is not

as large as that of some of our older competitors, it has shown a substantial increase every year. What we have lacked is a "leader," a specialty that would, in a measure, carry all of our other products with it, both to the trade and to the public. The ideal "leader" for us has been manufactured for many years by a little factory in the Middle West. We have coveted that factory for a long time, and finally, through a change in its stock control, the opportunity seemed to have come.

our competitors—threats that were not idle by any means—this enterprising gentleman extracted a price from us that was many thousand dollars in excess of the highest figure that we had ever expected to pay. When the deal was finally completed, in an atmosphere of chilly reserve, the gentleman—who scarcely deserved the name—stretched himself, lighted a cigar, and said nonchalantly:

"I really feel as though I should divide this little gift with your Mr. Hawkins; I believe that is his name."

"Hawkins?" I repeated in amazement. "You mean our auditor? What has he to do with this affair?"

"Nothing, nothing," the offensive person replied, with a wave of his cigar. "Nothing except that he unwittingly gave me the tip."

"What do you mean?" I demanded, itching to throw him out of the office. He sensed my hostility, but disregarded it, as he could well afford to do, having our certified check in his pocket.

"I happened to be on a train going to Chicago one afternoon," he explained coolly. "I was in the smoking compartment of the Pullman, not paying any particular attention to the landscape, nor to the other two men who sat there beside me. All at once the train pulled up at some town to take water, and I looked out the window to see this neat little plant

that I have just sold you staring me plumb in the face.

"It meant nothing in my young life—just a bit of brick and mortar like a thousand other bits; but I noticed that one of the two gentlemen sitting beside me got quite excited all of a sudden. He began to tell his companion all about that little factory, and wound up by leaning over and whispering very confidentially that his people expected to take it over before long.

"At that I pricked up my ears a little, for where there're two men anxious to trade there's usually a profit for somebody. I didn't let out a peep, however, until we had traveled fifty miles or so; then I came to sort of sudden and, looking at your man as if I had discovered him for the first time, I blurted out:

"'Aren't you Jim Ritchie of the Consolidated Electric?'"

"He said, no, (Continued on page 114)

## Beware of the Person Who Tells You Things in Confidence

"I HAVE trained myself never to use the words 'confidential' or 'in confidence,' or 'This is under your hat,' or 'This is graveyard stuff,' or any other phrases by which men are accustomed to introduce subjects that ought better to be left undiscussed," says the writer of this article. "If a thing has to be told under the seal of secrecy it presumably should not be told at all. I am willing that anyone should tell me anything he chooses; but when he starts in with 'confidentially,' I put on the muffler and think up interesting things to tell him about the weather; and what Napoleon said to his aid-de-camp at Waterloo."

For very good reasons it did not seem wise for us to appear in the transaction as the intending purchasers. There is a certain jealousy in the trade that would have led the owners to hold us up for a higher price than they could expect to get anywhere else. The negotiations were proceeding through a third party therefore, and were apparently about to reach a satisfactory conclusion when the bomb-shell exploded.

We received word one morning that the plant, stock, and good-will had been sold to another party, and that any future negotiations must be with him. We were not long in hearing from this new individual. He was a business adventurer and promoter, who had somehow got wind of the proceedings and, stepping in ahead with a show of ready cash, had carried away the prize. I need not enlarge upon this part of the story except to say that under threats of selling the plant to one of

"We've got each other, Lollie, anyhow. *I* won't ever run off and leave *you*; and oh, Lollie, *you* won't ever run off and leave *me*, will you—ever, ever?"

How could she hope to compete with this younger woman?  
She had never required youth so much as now

# Stella Dallas

The story of a great love

## This Will Lead You Straight Into the Story

THIS is the story of a mismatched pair, Stella and Stephen Dallas, and their lovely young daughter, Laurel. Stephen came from a good old family of wealth and education. In the midst of his postgraduate course at the university, his father committed suicide. It seems that the family resources were exhausted, and he had even used trust funds of his children and friends. Stephen was in despair at his family's disgrace, and determined to change all circumstances of life. Through an advertisement he got a job in Milhampton. There, after a time of loneliness, he met Stella, a pretty young teacher, daughter of a workman. She was clever, natural, affectionate, with just enough school education to hold her job—but really ignorant, flirtatious, pleasure-loving. She had a way with men. And so in a few months they drifted into marriage.

Shortly after, Stephen woke up to his mistake; saw that Stella was at heart somewhat vulgar, and cared nothing for the things that mattered to him. So his ambition was aroused. Then his good work brought him to the notice of superiors. He became an authority in the complaint department. His mastery of some legal points attracted the attention of his manager. He studied law nights, and later went over to the legal department.

Meanwhile, he and Stella were taken up socially by his associates in business. Her vulgarity became more evident to Stephen, and she would not, or could not, learn. Only his ability and social fitness kept her from being dropped. A daughter, Laurel, was born. Years passed, and the child grew up to girlhood. Stephen made progress, hoping and working. So when a chance came to go into a law firm in New York, he took it. For a while he went back and forth. Then finally he wrote to Stella that he would not come again, perhaps never. The breach was complete.

Stella tried to hold up her head, to keep the position Stephen had given her, but she was slipping. Alfred Munn, a vulgar riding master of the fashionable set, was her main dependence for companionship, and she recklessly accepted his attentions. Poor Stella's social bubble is about to burst.

---

STELLA sent out a dozen invitations to a party for Laurel in June. All Laurel's schoolmates were having parties this year, and Stella intended that Laurel's party should surpass them all. Laurel had been told all about the elaborate plans. She had helped select the invitation cards with the pretty colored pictures in the corner, and had watched the addressing of each one of the little pink envelopes. Afterward, standing on tiptoes, she had dropped them, one by one, into the green box at the corner.

Laurel mailed the invitations on a Friday night. All day Saturday and Sunday she was full of the exhilarating consciousness that others were sharing her wonderful secret now! When she started to school on Monday there was a sparkle beneath the calm gray surface of her eyes that made them look almost black, like the pools of meadow brooks in mid-morning sunshine. When Laurel came home at noon her eyes seemed to have faded, like the pools when the sun is hidden behind clouds. Instead of the blackness and the sparkle, there was a grave, wondering, bewildered look in them.

"Nobody can come to my party, Mother," she announced briefly.

Twice Laurel had to tell her mother that nobody could come to the party, before Stella grasped the significance of the

announcement. Then fiercely she threw her arms about Laurel and held her tight.

"We don't care!" she burst out. "Let them stay away! We'll have the party just the same—you and I and Mr. Munn. Cats! Just because Father runs off and leaves us all alone! Well, we've got each other, Lollie, anyhow. I won't ever run off and leave you; and, oh, Lollie, you won't ever run off and leave me, will you—ever, ever?" Stella was crying now.

Laurel did not cry. She stood very still, and listened and afterward remembered.

It was several weeks before Stella knew how serious the situation was. She was calm by that time. She could talk over its details with Effie McDavitt with perfect composure and with a touch of brusque humor, too.

"Why," she said, "Ed bores me. He never gave me a thrill in his life. Oh, Milhampton makes me sick! I'll tell you just how it was. I was down there in Boston, for two days, shopping, getting favors and things for Lollie's party. Naturally, when Ed suggested that he run down and take me to the theatre in the evening, I was pleased to pieces, and when he suggested after the theatre that he drop around and have breakfast with me, why I said, 'Sure Mike,' quick as a wink. It never entered my head but what that was all right. I didn't want anything of Ed but a little

fun. When Stephen wrote to me and asked me if I would like my freedom, so as to be able to marry Alfred Munn, I could have screamed! Marry Ed? Why, I'd commit suicide first! Hasn't anybody any understanding of the human animal? A woman can have other reasons for liking a little attention than just the one the shady stories are all based on. I like a little dinner and theatre party just for fun's sake. Honestly, Effie, sometimes I think I'm the only one who's got a clean mind in this town."

Stella took rooms, for the season, at a fashionable hotel on the coast of Maine that summer.

"I'll give the mud-slingers in this town a rest for a month or two," she said to Effie. "By the end of the summer perhaps their muck will have all dried up. Of course it would be rather nice if I could fall into some harmless, but showy 'little affair' this summer with some attractive gentleman or other, up there at that fashionable hotel. That would prove there wasn't anything serious to this Ed Munn business. It would be rather nice, too, if some of the cats in this town could hear that I was having a wonderful time this summer—being taken right into all sorts of inner circles and select groups. Oh, there are lots of possibilities in this summer-hotel scheme of mine, Effie, my dear."

STELLA equipped Laurel with a dozen new frocks, replenished her own wardrobe, and, stout-heartedly, set forth to new fields and untried country, in search of fresh laurels with which to cover up the dried and dead ones.

That was the beginning of her summer-hotel era. In the fall, not even Effie was told of the disheartening experiences of the first experiment.

Stella didn't go back to the detached house when she returned from Maine. Instead, she took two-rooms-and-a-bath in an apartment hotel that had lately been built in the residential section of Milhampton.

The apartment-hotel offered her more companionship than the detached house. Besides, she could have people to dinner more safely. The invaluable Minnie, who had been with Stella ever since Stephen had engaged her and trained her in, more than half a dozen years ago, had left to be married. Stella hesitated to trust a new servant, with all the hard and fast rules. Moreover, there were social advantages. The King Arthur (that was the name of the new apartment-hotel) was to

be patronized by what Stella called "the right people." She needed all the advantages that she could get from close proximity to "the right people." Stella was determined not to let her injury of the preceding spring incapacitate her. Stella wasn't going to become a social invalid just because she'd been unfortunate and the target of a little disagreeable gossip. Alfred Munn had left Milhampton by the time Stella and Laurel returned from Maine. He had gone into another business in another city. In time, people would forget about Ed. Bullet wounds heal! Scars can be covered up.

**W**HEN Stephen's business took him to New York, Laurel was enrolled as a pupil in the exclusive school of the community. She attended the exclusive dancing class, and she attended the exclusive Sunday-school. Stella belonged to a few helpful organizations herself. Her name was in the Blue Book. She had at least a bowing acquaintance with almost everybody "worthwhile." There was, besides, Stephen's membership at the River Club, an asset indeed to her *now*, since she had no house of her own in which to entertain a crowd.

It was a very unhappy day for Stella when she first learned that Stephen had resigned from all his Milhampton Clubs. She thought it was the cruelest blow he could deal her. At that time Stella was mercifully unaware how many more cruel blows were to follow, not from Stephen alone, but from *everybody*—from all sides.

The blows didn't come all at once. Her defeat was gradual. Her various points of vantage and fortresses of strength fell slowly. This season she failed to receive an announcement of the Current Events Class; next season her name appeared to have been dropped from the Charity Ball list. The season after, the small luncheon club she belonged to was reorganized, and she was omitted. But Stella managed to

keep her eyes bright, her lips smiling, and her head erect, in spite of repeated rebuffs.

"Why, I've got to, for Lollie's sake," she said. "Lollie mustn't know. Oh, we'll be all right after a while—Lollie and me," she told Effie McDavitt. "Don't worry, we'll come out on top in the end. You watch us."

**IT WAS** always "Lollie and me," always "we," and "us," by that time. Stella didn't even think in the singular, once her maternal instinct had worked its way up through her vanities and self-interests and appeared in her consciousness. The seed of it must have been planted deep, for it took a period of years to appear. In vain Stephen had looked for it. However, it had been growing be-

neath the surface, and growing according to nature's own methods—sending down tough, wiry roots in the dark, all the while it was sending up its tender arrow-pointed shaft of life, for when it did shoot through into the light, the plant was strong and vigorous.

Perhaps the first time that Stella was aware of the new insistent force within her was the day Laurel came home from school with the news about the party.

"Gosh, Effie," she had said afterward, "I don't care what people do to me, but to stick hatpins into Lollie—into *my baby*! Say, that's more than I can stand. I'm ready to use my claws on anybody who hurts Lollie."

During the years between Laurel's sixth birthday and her thirteenth, there were many times for Stella to use her

Behind the belying paint and elaborate make-up the white Smith clear and defined for an instant, like a white-sailed ship

Image of this woman's innocence stood out before Morley when the fog lifts a moment—a white-sailed ship in distress

claws. There were many times that Laurel was hurt, and Stella knew it, "Though the funny little kid doesn't think I do. She never lets on to me. I just have to guess at it from the way she acts."

It would never be from Laurel that Stella would get the first wind of a party in prospect from which Laurel was omitted. Laurel would never tell her that the girls in her class were meeting every few days at each other's houses to work for a fair, or to rehearse a play or fête in which she had no part. When information of an event of this sort did reach Stella, she knew, then, what had been the cause of Laurel's quiet, brown-study day a week ago. And yet she couldn't use her claws, after all. For the sake of Lollie's future, for the sake of that dim far-away, full-of-promise time

when Lollie would "come out," she must be as nice "and purry," as she knew how to the women who could help her daughter.

AS EXPERIENCED as Laurel was at thirteen in certain of the world's cruelties, she was amazingly young and innocent about many of the facts of life. Much younger and much more innocent than the group of sophisticated little girls in her class at school. They were constantly spending days and nights with each other. Their intimacies led to easy discussions of all sorts of subjects. Most of these girls became perceiving and canny little women-of-the-world before they had finished playing dolls. Laurel was still groping for many of the puzzling whys and wherefores of life long after her dolls were put away.

When Helen Morrison caught in her soft deft hands the timid, butterfly-like little creature Laurel was at thirteen, her interest was instantly aroused. She had never seen a little-girl specimen of Laurel's sort—so composed and self-possessed in speech and manner, so skilled in smart, up-to-date sports, so familiar with the smart up-to-date beauty-shop secrets, but underneath like a child who has lived on an island, alone somewhere, untold and untaught.

"SHE'S like a book I bought in Florence once," Helen Morrison told Stephen one day, after Laurel had been visiting her. "It's a beautifully bound book, in full leather, and hand-tooled, in old blue and gold. But its pages are blank. I bought it to write odd bits of poetry in. Yes. Laurel is a little like that—beautifully finished on the outside, but full of pages, as white as snow, that never have been written on."

On a small table beside Helen Morrison's bed was a picture of a little girl whose pages, also, had never been written on. Often Helen Morrison would take the lovely little miniature of her dead child close to the strong light, and gaze at it hard and long, in a hungry attempt

to recall how the soft cheek used to feel when she brushed her own against it. Helen Morrison had worshiped her gentle flowerlike little daughter. For years and years before she was born, she had longed for something feminine of her own. She had never had anything feminine of her own. Her mother had died before she was old enough to remember her. Helen used to plan by the hour what she would do for a daughter, if she ever had one of her own. Even before she thought seriously about marriage, she built air-castles about that little dream-girl of hers. Helen had ideas about girls, and what made for happiness in their lives. She would have filled the blank pages of her little daughter's book full of inspired and lovely things.

When that little girl was born Helen Morrison had been (Continued on page 70)

# If You Really Want to Win Out— Get Ready for It

How William Livingstone, by substituting "preparation" for "inspiration," has had a remarkable run of business achievements—To-day, at an age when most men have retired, he is president of a big Detroit savings bank and head of the biggest shipping organization of its kind in the world

*By Thane Wilson*

ON a November evening in the year 1860 a fitful wind was rattling the windows of a certain small cottage in Detroit. This wind was the residue of that fearful gale of the day before in which the

steamship "Dacotah" had broken up off Sturgeon Point before the sledgehammer wash of Lake Erie and had gone to the bottom with every soul on board.

Crouched in an arm chair, a boy of sixteen was reading by candle light. It was

a big book over which he bent—five hundred and thirteen pages, to be exact—and from its flyleaf one could gather that it was a recently published life of George Stephenson, by Samuel Smiles. Between its covers was told the amazing story of the "father of railways," whom a nation had called mad when he had declared that his hand-built locomotive could run twelve miles an hour on fixed rails. Breathlessly, the boy read of those years as a cowherd, driver of the gin-horse at a colliery, and assistant fireman at a shilling a day; how Stephenson learned to read at eighteen, and later earned enough money mending his neighbors' watches at night to give his son the education he himself had been denied; of his epoch-making invention and his struggle against the bitter prejudices of the British House of Commons and the eminent engineers of his day.

At one paragraph the boy stopped reading and looked long and earnestly at the guttering candle.

"Stephenson was never cast down by obstacles," said the author; "but he seemed to take pleasure in grappling with them, and he always rose from each encounter a stronger as well as a wiser man. He knew nothing of those sickly phantasies which men, who suppose themselves to be 'geniuses' are apt to indulge. When he failed in one attempt, he tried again and again, until eventually he succeeded...."

The wind was rising again and its hollow moan was ghostly. Once more the boy thought of the ill-fated "Dacotah," gone to join that spectral fleet which to-day, more than two thousand strong, studs the bottom of the Great Lakes from Oswego to Duluth. Also there came to him the memory of the "Lady Elgin," which, two months earlier, had collided with the schooner "Augusta" in Lake Michigan, and had gone down with three hundred men, women, and children. Great tragedies were these to the boy—for they had happened on "his seas."

Long since he had learned to climb the rigging of the big fore-'n'-afters, that were yet monarchs of the lakes, and he was on friendly terms with every bark, brig, and sloop that touched at Detroit. But it was the steam vessels that fascinated him most—the side-wheelers and propellers that made up scarcely more than five per cent of the total tonnage on the wind-swept waters. Whenever he had a few hours of freedom he would spend it out on the river and lakes, climbing into pilot

WILLIAM LIVINGSTONE

Long a prominent figure in the Great Lakes shipping industry, Mr. Livingstone was elected president of the Lake Carriers' Association in 1903 and has been reelected unanimously ever since. The Livingstone Channel, on which the Government spent many millions of dollars to wipe out the menace to navigation of the lower Detroit River, was named in his honor, as the result of his seven-year single-handed battle for it. One of the organizers of the Dime Savings Bank of Detroit, he has been its president since 1900 and he has raised its deposits from less than \$2,500,000 to more than \$42,000,000

houses and begging the captains for even a tiny turn at the wheel. . . .

But now the candle was burning low. Looking back at the open book, the boy thought again of the successful struggle of the railway builder. Then and there he resolved that he was going to make certain persistent dreams of his own come true. Some day he would know those great inland waterways as well as any man living; he would tread the pitching decks of his own ships; and, particularly, he would strive for the installation of lighthouses and such other aids to navigation as would remove the menace of many an unmarked shoal.

"Genius is the power of making effort. It is nothing but persistent patience!" Stephenson had said. . . . Well, he might not be unusually smart, this boy, but at least he could work as hard as anyone. And work hard he would! With this thought fixed in his mind he closed the book and crept up-stairs to bed.

**SIXTY-TWO** autumns have come and gone since that November evening. And to-day I have been talking for hours with that boy—grown up and grown old, as we reckon time. He is seventy-eight; but you would find no hint of the fact in his brisk step and eager gray-blue eyes.

Aloft in the towering office building that houses the two most important of his many activities we looked down on the Detroit River—that astonishing stream, through which, in an eight-months season, sweeps an endless parade of freighters, bearing a tonnage in excess of that which enters, in a year of twelve months, the four great ports of New York, London, Liverpool, and Manchester. For the Detroit River, you must remember, is in the Great Lakes chain, a narrow link between the enormous ore beds of Minnesota and the hungry furnaces of the East—between the spreading wheat lands of the Middle Northwest and the congested centers of population toward the Atlantic seaboard.

To understand what William Livingstone has done and is doing you must have some idea of the almost incredible volume of this traffic. One enterprising statistician has figured that if the stuff carried by these vessels in a single season were loaded into forty-ton freight cars they would extend in an unbroken line from New York to San Francisco, thence follow the fortieth degree of north latitude across the Pacific, span Asia and Europe to the Mediterranean, and bridge the Atlantic to New York again, with a balance of miles to spare. As president of the Lake Carriers' Association—an office to which he has been elected unanimously for the last eighteen years—William Liv-

ingstone is spokesman and official representative of the grouped companies that create most of this enormous lake traffic.

Nor does this job furnish sufficient outlet for the man's inordinate energy. Since 1900 he has been president of one of the strongest savings banks in the Middle West, a bank whose deposits he raised from less than two and one-half millions to over forty-two millions of dollars. As a tribute to his financial ability the American Bankers' Association elected him president in 1912—when he was sixty-eight years old! Moreover, for many

necessary millions for excavating a great channel decreed that it should forever bear the name of the man whose fight had made it possible.

In the fall of 1917—with the World War approaching its climax—the eyes of the United States and its Allies turned toward the grain crop of our great prairie regions. Although this crop was less than had been expected, the overtaxed railroads were unable to handle their share of it, and an ever-increasing burden was thrown on the bulk freighters of the Great Lakes. Day and night they steamed on their long journeys between the western and eastern lake ports—and still a world on short rations held out its half-empty hands! Thousands of tons of grain remained in the elevators, awaiting shipment, when the usual end of the shipping season arrived.

**MADE** hopeful by an unusually mild November, the Food Administration asked the lake carriers to use every effort to prolong their season until December 20th—so that the grain and ore bins of the East might be stocked for the winter. The ship owners promised to do their best, and their fleets of mammoth freighters strained every steel sinew to meet the test.

On the night of December 4th the temperature at the head of the lakes began to drop with frightening rapidity. In the morning Duluth reported four degrees below zero. This was the first breath of an unprecedented cold wave. By December 10th the temperature in the northwestern lake regions was from ten to twenty below—and then a gale, accompanied by intense cold and a blinding snowstorm, swept down across the whole lake region from the head of Lake Superior—Duluth, Ft. William, and Port Arthur—to Buffalo, one thousand miles distant.

The lower rivers and channels, between Huron and Erie, were ice-locked almost overnight. Lake St. Clair, open water up to this time, became a sea of grinding ice piled up in places many feet deep. The Detroit and St. Clair rivers were frozen fast. The important passage from Whitefish Point, through the St. Mary's River and across the Straits of Mackinac, was also sealed. Even the western reaches of Erie succumbed to the cold. Traffic was paralyzed. More than a hundred great freighters, carrying grain and ore and other precious commodities, faced the appalling prospect of spending the winter hemmed in by insurmountable barriers of ice!

In the office of the Lake Carriers' Association sat William Livingstone—"Sailor Bill," as his (Continued on page 82)

## Preparation Beats Inspiration

**"THIS** quality they call 'inspiration,'" says Mr. Livingstone, "is one of the most worthless commodities I know of. It's not inspiration but *preparation* that counts. You hear about men rising to an emergency—and they often do. But the man who rises to an emergency is the man who has fitted himself to do so by years of labor and study and work.

"Genius is supposed to be some peculiar capacity for spontaneous accomplishment. If so, it's one of the rarest things in the world. I've been studying business and human beings for more than sixty years, and I've never yet seen anything permanently worth-while that was accomplished on the spur of the moment.

"The man who expects to win out in business without self-denial and self-improvement and self-applied observation stands about as much chance as a prize-fighter would stand if he started a hard ring-battle without having gone through an intensive training period. Natural ability, even when accompanied by the spirit to win, is never sufficient. We had the finest raw material in the world when we entered the World War—but you will notice that our men had to spend a long training period on this side, learning discipline, before they were sent to France."

years he has been president of the Detroit Bankers' Clearing House Association.

Make no mistake about either of Mr. Livingstone's main jobs being merely "honorary." As president of the Dime Savings Bank of Detroit he watches every pulse-beat of the institution. As head of the Lake Carriers' Association he coordinates a multitude of activities, projects and propels such state and national legislation as the enormous water traffic demands, and takes a guiding part in all general emergencies. No other man has been responsible for so many aids to navigation on the Great Lakes. Almost single-handed he battled for seven years to conquer the "Hell Gate" of the lakes—the shallow, treacherous Limekiln Crossing in the Detroit River. Eventually he won; and the Congress that voted the

Does anybody in your family know what ambergris is? Just ask them!

## Queer and Ugly, But Worth Its Weight in Gold

Few people have even seen ambergris, or know its strange history, yet it helps to give pleasure to countless human beings—Where it is found, how it is used, and stories of men who, by a lucky chance, have discovered ambergris that was worth a small fortune

*By Stuart Mackenzie*

**T**O YOU, a whiff of some delicate perfumery suggests rose gardens or beds of violets. But to me it is a reminder of an old wharf, redolent of sea smells—fish and oil and tarred ropes.

The wharf is at Provincetown, Massachusetts; and whenever I visit that quaint old town I go down to a little building at the head of this wharf for a gossip with David C. Stull. Before I have been there long, he is pretty sure to take out of his pocket a piece of queer-looking stuff, carefully wrapped in tissue paper. It doesn't look as if it were worth the paper it is wrapped in. Yet that commonplace little lump is worth its weight in gold.

It is ambergris; and they call D. C. Stull the "Ambergris King," because for the past forty years he has bought most of this rare substance that has been found.

The last time I saw him he had just purchased a little over forty-four pounds, and had paid \$9,750 for it. He had delivered it to a New York firm, who probably sent most of it to Paris, where it would bring over \$300 a pound. Pure gold sells for about \$250 a pound. There have been times when ambergris brought twice that figure.

Whenever you buy fine perfumery—and people are buying more of it now than for many years past—part of the high price you have to pay for it is due to the ambergris it contains. A solution of a few ounces of ambergris in a gallon of spirits forms the "binder" for the essential oils used in making the best perfumery. It keeps them liquid and gives the fragrance its lasting quality. There is nothing that is equal to ambergris for this purpose. One reason why cheap perfumery has no "staying power" is that it contains no ambergris.

The story of this strange substance is

one of the most interesting chapters in the whole book of nature. And the stories of the finding of ambergris give the same thrill we get from tales of discovering nuggets of gold, or of picking up pebbles and having them turn out to be diamonds.

People from all over this country, and even from far-off lands, are always send-

ing to the seashore don't waste your time hunting for ambergris.

There is only one place to look for it; and that is where Jonah spent his vacation—in the roomy interior of a whale! Practically all the ambergris found anywhere in the world is obtained by whalers. It forms in the intestines of the sperm whale, which is hunted chiefly in West Indian waters.

"Apparently," says Mr. Stull, "it forms because the whale is sick! Something goes wrong with his digestion. When you know what he feeds on you wonder that every whale doesn't have acute indigestion, for his chief article of diet is the squid, or cuttlefish, an ugly creature with long arms, or tentacles, supplied with dozens of 'suckers' underneath. If one of these devilish, as they are sometimes called, should get hold of you, your only chance of escape would be by cutting its arms off its body.

"The sperm whale has teeth—a lower set, but no upper ones. The lower ones, however, are regular ivory tusks from six to ten inches long. With these big teeth it chews its meal of squid, then swallows it. But there is one part of the squid which seems to defy even a whale's powers of digestion. That part is the bill.

"The squid has a beak like a parrot's. It is about half an inch long and is sharp and horny. Ambergris always

contains some of these undigested squid bills. I have seen pieces that were simply packed with them.

"Now, we don't know just what happens inside of a whale to cause it to produce ambergris. Apparently there is some obstruction in the intestines. Part of the matter which should be got rid of stays there in a lump which keeps growing larger and larger. Occasionally it is a very thick, brown, oily substance; but in this state it is less valuable than the kind

Most of the ambergris found anywhere in the world passes through the hands of D. C. Stull, of Provincetown, Massachusetts. Mr. Stull has paid thousands of dollars for a few pounds of this extraordinary substance, which is found, although very rarely, in the intestines of the sperm whale. It is used in the manufacture of fine perfumery

ing Mr. Stull samples of something they have picked up on a beach or found floating in the ocean. They fondly hope the stuff is ambergris. But it never is! According to Mr. Stull, there isn't one chance in a million that it could be.

The encyclopedias tell you that ambergris is usually found on sea beaches or floating in the water. Yet in Mr. Stull's experience of forty years he has known of only two cases where anything like this has happened. So when you spend a va-

Mr. Stull is not only the "Ambergris King," but a sort of watch-oil potentate as well. The finest watch oil in the world comes from the head of the huge blackfish. These fish are seldom found nowadays, so the oil is worth at least ten dollars a gallon. The above picture shows Mr. Stull, with a force of men, ready to begin work on a small school of blackfish which came ashore on Cape Cod a few years ago

that is dry and hard. The thick, oily variety never becomes dry after it is taken from the whale.

"All ambergris has a faint odor of tobacco leaves. The best quality is pale gray, something like a piece of coal that has been burned but still keeps its shape. It is rather hard, but is very light in weight. It may be in one big mass or in several lumps of different sizes. The better the quality, the lighter the weight.

**A** GOOD deal of ambergris must have been lost years ago, because whalers didn't know enough to look for it. They were after blubber, most of which is taken from the head of the whale. They removed the blubber and turned the rest of the carcass adrift.

"But nowadays, when a whale is brought alongside the ship, the first thing the captain does is to cut down into the intestines with what sailors call a spade, a sharp instrument on the end of a long handle. If this encounters anything hard he has the carcass opened up, for he may find ambergris, which will be worth more than the blubber from a whole season's catch of whales.

"Some years ago, a man wrote a newspaper article on this subject; and when I read it I had to smile.

"When you are walking along the beach at Truro, or Chatham, or Barnstable," this

At the left is a lump of the finest quality of ambergris. The cask on which it rests is eight inches across the head, which gives an idea of the size of the lump. It weighed about nine pounds, and brought \$3,300 at the ship, later selling for considerably more. The largest single mass of ambergris on record weighed over 900 pounds, but no other piece has ever approached this in size

man said, 'Keep your eyes open, for you may run across a small piece of grayish matter. Don't give it a kick and pass on. Examine it carefully. It may be ambergris.'

**I**N THE first place," said Mr. Stull, "the whales that produce ambergris are not found in these northern waters. And, in the second place, I never have known of a piece of ambergris being found on a beach.

"The find that came nearest to it was made years ago down in the Caribbean Sea. There were a couple of Provincetown men mixed up in that case, one of them being the captain of a whaling vessel from this port. He told me that he was on deck one night, as he was homeward bound, when his mother—who had died some years before that—appeared to him and told him that he would not go out with his ship on her next trip.

"He didn't pay much attention to this, because he was perfectly well at the time. They made port all right and returned for another voyage. He had got his papers and was actually on board ready to start when he was taken suddenly and violently ill. They had to put him ashore; but as the vessel was all ready to sail she started, with the mate in command.

"When they were down in the (Continued on page 104)

The rough dark mass here is ambergris, not of the best quality, but semi-solid and very oily. Above hangs the squid, on which the sperm whale feeds; and in front are two of the whale's teeth, about six inches in length. It has only lower ones with which to chew the squid. Ambergris apparently forms because of some trouble with the whale's digestion

## Engineer, Explorer, and Lecturer on Jungle Life

G. Caryeth Wells began his career as a young engineer in the Malay jungle, where he used his opportunities to become an observing naturalist. For his services as an explorer he was made a Fellow of the Royal Geographic Society. A few years ago, when stranded in America and "up against it," he found that his early experiences had given him something to tell of great interest to everybody, and he became a successful lecturer

**G** CARVETH WELLS, an engineer and explorer who has recently become a remarkably successful lecturer on jungle life, owes the turning point in his career to the loss of a finger tip while using a planer in a shipyard. Back of this bit of "bad luck" and what it led to, there is an interesting story of real grit.

Years ago, as a young engineer, Wells was sent to the Malay Peninsula by the British Government to make an exploration survey for the East Coast Railway from Singapore to Bangkok, Siam, a distance of seven hundred miles. Much of the route lay through a virgin tropical jungle.

For nine months at a stretch the engineering party could not see the sun,

which was obscured by the tangled foliage overhead. Wells was the only white man in that region, his helpers being Malays. They lived and worked in daily contact with curious birds of rare plumage, chattering monkeys, monstrous snakes, hungry leeches, lizards, enormous spiders, cockroaches, crocodiles, elephants, tigers, and panthers.

At the end of two years, the authorities gave their consent for his wife to join him, providing he did not ask any favors for her. Together, they made hundreds of unusual snapshots of the jungle. Meanwhile the war came on, and during this conflict Mr. and Mrs. Wells started home, returning by way of San Francisco.

Arriving right after the Armistice had been signed, Wells sought employment as an engineer. He was offered seventy

dollars a month, but refused it. Putting on a pair of overalls, he returned to the shipyards and obtained employment as a laborer at seven dollars a day. Eventually he became a riveter.

After Wells had acquired some skill in his new job, the management discovered that he was a highly educated engineer, and he was promoted to the mold loft.

One day a piece of wood slipped, and the planer cut off about a quarter of an inch from the third finger on Wells's left hand. Small as it was, that accident changed the whole course of Wells's life. He was fired, with a bonus of twelve dollars for hospital expenses, and had to find a new job.

It was rather a gloomy outlook for two young people in a strange land. As a last resort, Mrs. Wells could have appealed to influential relatives in England, but that was not their way.

One evening, while waiting for his finger to heal, Wells went to the public library to hear a lecture on birds, given under the direction of the Audubon Society. After the lecture he got into a dispute with the speaker about robins, which resulted in the discovery that Wells was perfectly familiar with jungle birds. He was challenged to come and tell about them on the following night. He did so, and talked to an audience of thirty people. The next night he had a much larger attendance, and on the third night there was a full house. A lecture-bureau man heard the last talk and offered Wells sixty dollars a week to give all his time to lecturing on jungle life. Wells joyfully accepted; but after he had been on the road for a week or two he discovered that the traveling expenses for himself and wife about equaled his pay and that he was really giving his lectures for nothing. He had failed to specify that he should receive sixty dollars a week "and expenses," and when he realized just what had happened he quit.

When he told his wife, she exclaimed, "That's good. I am glad of it. You will continue lecturing, and I'll be your manager. That will enable us to keep the profits."

"Very well; what is the first move?"

"Have slides made from your snapshots to use in illustrating your lecture, and then take along native weapons and costumes, and dress up some of the people like Malays. That would be interesting. Leave the booking to me."

Mrs. Wells was young and inexperienced, but she realized that she had something to sell that people wanted. And now for over three years she has gone from one city to another, making dates for Wells with high-grade clubs and organizations and institutions all over the country.

"Have you any suggestions to offer others that may help them in the struggles of life," I asked Wells.

"Yes, there is one thing I would like

to impress upon every person," he responded. "Learn to believe in the existence of things that may occur outside of your own experience. The Malays were very curious about the country from which I came, and that meant England and Canada. I told them that in my land I had seen ice come out of the sky in lumps big enough to break the windows in people's houses. Thereupon they shouted '*dia chacap buhong*,'

which in English means 'you are a liar.' That story sounded incredible to the people living on the equator where it is eighty degrees in the shade all the time and hail is unknown. Since I have been telling about the things I saw among the Malays, such as five different animals that fly, fishes that climb trees, and lizards that break off their tails, my hearers in America have more than once looked as if they wanted to exclaim

'*dia chacap buhong*,' but politeness restrained them.

"Another bit of advice I would like to pass along is: Don't be a quitter. There is always a way out of every difficulty. When a man throws up his hands and surrenders in the face of bad luck and discouragement, he is a dead one, unless a friend gives him a swift kick and starts him going again."

ALBERT SIDNEY GREGG

## At Eighty-two She Retires from Active School Work

**F**OR forty years, Mrs. Esther H. Richardson has taught in the Hutchinson, Kansas, public schools, most of the time in the senior high school and part of that time as principal of the high school.

Thirty-four graduating classes have gone out from her schoolroom into the world of business affairs and home-making. Boys and girls who were her pupils in the early '80's are now grandfathers and grandmothers, and pupils of her classes in recent years are the sons and daughters of boys and girls who studied under her years before, studied the very same *Cæsar*, *Cicero*, and *Virgil*, and the same English classics and ancient history.

Thousands in all are the boys and girls who have gone out into the world from the high-school classes taught by Mrs. Richardson, and it is wonderful how she has kept in personal contact with them since they have become business men and women.

"Of all these boys who have gone out into the world, I know of only one, just one, who might be regarded as a failure," she remarked. "And most of them achieved success right here in the old home town. Many of them have become heads of big business establishments, and prominent men of affairs, right here in Hutchinson."

At the age of eighty-two, Mrs. Richardson retired last year from active work, although she will be retained as one of the substitute teachers and has no intention of completely quitting school work.

No; the schools are not doing as efficient work as formerly, in the judgment of Mrs. Richardson, based on her observations and experience of forty years as a teacher. The young folks of to-day have too many outside interests and attractions, and the school authorities are endeavoring to include too many of these in the school curriculum.

"The result is that we are trying to give the young folks too much, in too little time, and they

are not getting anything very well." Mrs. Richardson says the boys and girls of long ago were much the same as the boys and girls of to-day:

"We had the same studious, earnest boys and girls then that we have to-day, and we had the same mischief-makers, and the same careless and stupid ones then that we have to-day. The parents? Just the same. They are just as much disposed to leave it all to the teachers. The main concern is shown in looking after the grade cards. How few parents really pay much attention to the education of their children!

"Of course there is much interest taken in what college the boys and girls are to go to. But the most important education our young people get is in the pub-

lic schools, the high school especially."

"But of course the girls and boys, especially the girls, are changed? Take the flappers, for instance—"

"Flappers?" interrupted the veteran teacher. "I do not believe I know just what you mean. I have heard of the flapper, but, really, I hardly know what a flapper is. If you mean the vivacious, lively, spirited girl who dresses in the modern fashion, does her hair in the modern style, and lives as the modern girl lives, why, of course, forty years ago the girls were just as up to date, for that time, in dress and modes of hair adornment, and way of living as they are to-day. After all, girls haven't changed so much." And so Mrs. Richardson dismissed the discussion of "flappers" right there.

She plays no favorites as between the boys and the girls. Which, in her opinion, are quicker to learn? Which are more mischievous? Which make the best scholars?

"Really, it isn't a question of sex," she insisted. "Some of my brightest and some of my stupidest pupils belonged to either sex. Neither is mischief a matter of sex. Boys, as a rule, are more frank in their mischief, and more willing to admit what they have done and to abide by the consequences. But I should hesitate to say that boys make better scholars than girls. Boys seem more inclined to concentrate, while girls, if studious, seem more conscientious."

It was really sixty-two years ago that Mrs. Richardson began her career as an educator. She graduated in 1860 from school at Springfield, Ohio, and began teaching in the Hillsboro, Ohio, female college. Then the Civil War came along and interrupted, for Doctor Matthews, the president, was a Southerner, and he left for the South. Later she taught in the female college at Springfield, Ohio, and afterward, in the early seventies, went to Kansas.

FRED HENNEY

Mrs. Esther H. Richardson has taught in the public schools of Hutchinson, Kansas, for forty years. Although she "retired" last spring at the age of eighty-two, she says she is still too young to give up active life entirely. She will remain in service as head of the substitute teachers

## A Salesman—And a Poet of Childhood

**T**HERE is a feeling deep-rooted among men that business is a cold-blooded proposition in which sentiment should have little or no place at all. This, according to John J. Eberhardt, is but a time-worn fallacy. And he *ought* to know.

I went to his office the other day, and he talked with me about those things for which most busy men insist they have no time. During business hours he is rated as a high-class insurance salesman. But in the investment of his spare time he has what he describes as "lots of fun."

"You mean that most people don't enjoy picking their share of Ellis Parker Butler's 'goat-feathers'?" I suggested.

"That's it exactly! Aptly applied, I have found that a bit of sentiment embodied in the postscript of a business letter is an invaluable solicitor. For instance, here is a line that resulted in my securing a sizable policy from a man who had withstood all other avenues of approach." He handed me this clipping:

P. S. Life Insurance to you is as a spanking to the little boy: It's what you *need*—don't *want*—but *ought* to have!

"The same thing is true in all lines of work. Regardless of whether it is a striking sentence in a letter, or a bit of community service well performed, they yield mighty big dividends in the long run. The point is, a bit of sentiment well invested is always worth while."

And when I remembered his enviable record of \$249,000 worth of business written at his desk during the first four months of 1919, of the \$172,500 record for one month, of the one week which resulted in \$91,000 worth of applications, likewise of his record day in which ten applicants were signed up, I felt that such a man's counsel must be worth-while.

Mr. Eberhardt, together with the nine other children in his father's family, grew up in Salina, Kansas.

In his early twenties, while leader of the old Fourth Regiment Band, he qualified as an expert penman and was placed in charge of the policy department of one of our great insurance companies in Springfield, Massachusetts. Here he found time heavy on his hands again, and since the mandolin-club idea was then sweeping the country, he organized and directed one of the best clubs in the East, playing in every New England state, besides finding time to write several concert books for stringed instrument clubs.

He has continued his musical work merely as a diversion from his real business—that of building up one of the best insurance agencies in the state. And since his duties as a Rotarian and a Chamber of Commerce member, as well as chairman of a college campaign committee which recently raised one million dollars in a sparsely settled rural district, have not supplemented golf in keeping his spare time filled, what do you suppose he has been doing on the sly?

Writing poetry to his little boy!

He consented to produce it only after considerable urging. The book itself, called "Lines from Ladville," is dedicated to the mother—the poems to the son. This is one of them:

PHOTO BY MAXIMILIAN, SALINA, KANS.

In office hours John Eberhardt is a life insurance salesman, in Salina, Kansas. But outside of office hours he is primarily a father whose greatest delight is writing poems expressive of happy childhood. Most fond parents keep a baby book full of photographs in which to store their recollections. But John Eberhardt keeps a book of poems, poems that have been inspired by the boy's sayings and by the wonderful companionship and understanding that exists between the two. The book itself is dedicated to the mother—the poems to the son.

### My Corduroy Breeches

I kept my Mother darnin', kept her patchin'  
half the night  
Until, in desperation, she exclaimed, "This  
isn't right!  
I'm gona be heroic—gonna save a lot o'  
stitches."

So she purchased me the toughest kind o'  
"Cordurary" Britches.

The first day I possessed 'em a football game  
we played,  
An'—'course—when I came home, at night,  
I looked tore'd up 'n' frayed!  
But if a lickin' has to come (the kind with  
willow switches)

It doesn't feel so "burny," under—  
Cordurary Britches.

An' when I'm runnin' races my britches make  
a noise  
That spurs me on 'n' helps me win from other  
britchesed boys.

I somersault 'n' "rassle," on the grass er in  
the ditches,  
When my mother's got me locked up in my  
Cordurary Britches.

On Sunday morn they dress me up, they  
"scrub" my hands 'n' face,  
Put on a tie, paste down my hair (I'm usually  
"a disgrace"),  
But 'fore the day is half used up my body  
fairly itches  
Fer the com-fer-ta-ble feelin' of my  
Cordurary Britches.

Oh! the fondness of possession—the gladness  
of the heart  
Paradin' past the Big Folks—a-feelin' kinda  
smart;  
You could never buy me *nothin'*—with your  
pockets full o' riches—  
That'd make me feel much *gooder'n*  
My Cordurary Britches.

Mr. Eberhardt has tasted of the fruits  
of material success, yet he knows of no  
possession which can equal that so splen-  
didly described in his own lines:

There's nothing sweeter  
Than a little boy's smile  
When he's fillin' up the buckets  
In the old sand-pile.

EUGENE TINKER

SOUP MAKES THE WHOLE MEAL TASTE BETTER

I'm simply full of nerve and punch  
 For I've had Campbell's for my lunch.  
 It gives me all the strength I need  
 And makes me just a train for speed!

## It's all in knowing how!

And the very first spoonful of Campbell's Vegetable Soup proves it! Thirty-two different ingredients prepared and blended by master-chefs whose whole lives have been devoted to good soup-making! Serving Campbell's regularly is one of the ways a housewife shows she "knows how" to set a good table.

### Campbell's Vegetable Soup

is a hearty, filling dish. Sweet little peas, baby limas, juice-laden tomatoes, sugary corn, Chantenay carrots, golden turnips, white and sweet potatoes, chopped cabbage, snowy celery, alphabet macaroni, choice barley, French leeks, okra, and fresh parsley combine their rich flavors and nourishment with invigorating meat broths. Real food when you're hungry!

**21 kinds**

**12 cents a can**

# Teach Me, My Dog!

(Continued from page 7)

in earnest about such trespasses, and have no humor at all in the matter.

A friend of mine was acquainted with a scrubby little dog who lived in a village through which passed twice a day, at a high rate of speed, a magnificent limited express train. When the hum of the coming train grew into a roar as of a planet approaching, this little dog, who weighed seven pounds, would rush from his yard, beside himself with indignation. "Out! Out! Out!" he would shriek. "How dare you come here again? How many times have I got to chase you out of this town! Out! Out! Out!"

Then, when the rear car dwindled in the distance, Fido would give over the pursuit and return, frowning and muttering to himself—"Well, I guess *now* he knows I mean what I say!" My friend said he never knew a vainer dog or one more offensive in manner. When people addressed Fido, or offered to pet him, he turned away coldly, with the air of one upon whom care sat too heavily to permit frivolous intimacies.

"Kindly refrain from annoying me with these attempted familiarities," he would seem to say. "My time is not my own. A dog that has to whip an express train as often as I do cannot forget in dalliance with inferiors either his position or his duties to the public."

EVERYONE must have observed that it is almost always the smallest dogs who are the most self-important, who believe themselves to be charged with the greatest responsibilities, who assume the widest supervision of what goes on in their neighborhoods, and feel called upon to express the most authoritative disapproval of everything. Large dogs and middle-sized dogs often retain their optimism even in old age; but little dogs, especially very little dogs, are likely to become pessimists soon after adolescence.

Now, here appears to be a contradiction, or at least some inconsistency: If a little dog has so much self-importance, why is he not happy to be great, and why is he not hopeful of a world in which he thinks he plays so grand a part? How can he be pessimistic who has so stout a faith in himself? The answer is that pessimism and self-importance may well and consistently be united in the one bosom, for a pessimist is one who believes that his own plans for the universe are better than those of the Supreme Being.

Perhaps the smallest dogs are not the best dogs—but here we run into danger of self-importance ourselves, for there may be the most obnoxious self-importance in one who sets himself up to tell you just which or what is "best." We can show with reason that some pies are half cooked and that some writings are written in ignorance, but it is only little Fido who is pompous enough to set forth his own likings as the law, and proclaim a certain pie to be the best and greatest of all pies. When Fido does this he may mean less about pie and more about himself; you are to find the prophets embodied in him, final authority and best of all critics.

Therefore, when we timidly suggest that in a general way the littlest dogs may not be the best dogs, we must at once admit that they are certainly the best to the ladies who love them; and they most touchingly help many a lonely life to be the more happily lived. It happens that middle-sized dogs have been the best to me, three of them; the first in my boyhood; the second in my younger middle age, and the other—well, let me say—later.

If we choose, we may see the life of a man falling into the seven ages; or, if we choose, we may see that life as a series of groupings, close relationships: such as the infant and his nurse; the boy and his dog; the youth and his sweetheart; the young man and his wife; the middle-aged man and his children; the grandfather and his grandson; but if I were painting pictures of such groups there would be none upon which I would bestow a more sentimental care than upon that called, "A Boy and his Dog."

For indeed such a picture should be most sentimental and old-fashioned; the figures pensive beside a picket gate at sunset, so that no banker or labor leader could pass this one touch of nature by without feeling the whole world akin. The man has lived too hard who has forgotten the little companion that followed his every boyish step, and worshiped him as steadfastly on a day of disgrace and punishment as in the hour of glory.

The boy that I was, so short a while ago (reckoning in geologists' time), had a beautiful spaniel—mostly he was spaniel—the "Fritz" whose passing seemed to me then so much more calamitous than the merely national tragedy of the death by assassination of a President of the United States. The mortal part of Fritz was buried in "our yard" and still lies there; and beside Fritz, three decades later, we laid the body of Gamin, a native of France.

GAMIN, whose American negro friends called him "Gammire," was a Parisian, of that coal-black breed of poodle known favorably to fashion in this country after the pug and before the terrier and the Airedale. With remorse I recall my first sight of a French poodle, an occasion coincidental with my first sight of Fifth Avenue, when I was a schoolboy escaped from New England for an Easter holiday in New York. The strange creature lolled beside a large and bedizened matron in a glittering victoria; and I stared, finding such a dog incredible. With his jowl, nose, legs, and afterparts shaven, but fantastically tufted, and the rest of him a great hummock of curled and corded long black fleece, he seemed to me the topmost effect possible to pretentious artificiality. So I said to my schoolmate, "Anybody who'd have a dog like that awful black thing ought just to be shot!"

Not until I knew Gamin did I discover that dogs like "that awful black thing" are made of black sunshine. They are the friendliest humorists in the world; you must laugh with them and at them—Gamin would do anything to make you

laugh at him. He was as ardent as any circus clown or stage comedian for your laughter; and begged you to help him to learn imitations of human beings and other tricks that would make people laugh. He took the world as a place to be made merry, and did so much more than his share of the merrymaking that little trouble would be left on earth if the rest of us could be of Gamin's way of thinking. Yet he knew how to be serious at the right time, but sometimes he had too much of D'Artagnan in him.

Mr. Harry Leon Wilson and I were doing some work together in Paris, and Mr. Wilson had an English bulldog named Sprangle, Gamin's almost daily companion; they played together amiably and were of good accord. However, Mr. Wilson and I had occasion to come over to America for a few months, and Mr. Wilson took Sprangle with him, but I left Gamin with a friend of mine in my own apartment. This friend was also a friend to Gamin; and the latter, in good company and accustomed surroundings, did not repine unduly; but letters reported that he would sometimes bring an old slipper of mine from a clothes closet, set it down on the floor before my friend, then look up at him wistfully and utter sounds of plaintive inquiry: "When is he coming back?"

GAMIN made great rejoicings upon my return—I never knew a creature who more eloquently welcomed his friends. He would rush at you and, just before he reached you, leap high in the air—quite as high as your shoulders—and keep on leaping thus, time and time again, like a great bouncing rubber ball with a very genius of elasticity; and all the while he was in the air he shook himself and gestured in such an ecstasy of hilarious welcoming that your mood was grim indeed if it gave not way to merriment at Gamin's door. How much that means—a true rejoicing as you open a door to come in!

He forgave me for having been away from him so long, but there was another whom he could not forgive, and here we touch upon what seems a kind of divination; yet I believe the matter was simple enough. The morning after our return, Mr. Wilson came to my apartment, bringing Sprangle; and Gamin greeted that complacent bulldog thoughtfully, and then, all upon an instant, made a decisive attempt to slaughter him. Gamin's reasoning was as clear as day: "I haven't seen you since my man and your man went away. Upon my soul, I believe they left me here and took you with 'em! I'll destroy you!"

Never afterward could he by any means be reconciled to Sprangle, but always began to swear hysterically at sight of him, and could not be left at liberty with the bulldog in reach. Sprangle was the only creature Gamin ever really hated. Other dogs became acquaintances of his for a time; would be absent from his horizon a while, then encountered again and received upon the previous amiable footing; but not the odious Sprangle, who had gone upon a voyage from which Gamin

Robt. Burns  
Perfectos  
2 for 25c

WHAT cared the Cloud Blowers for bite or rasp in their peace tobacco? Would not the wigwam-dried leaf conjure up words of wisdom quite as great as leaf dried in any other way? Was not tobacco the weed sent by the Great Spirit to promote good will and sober thought among men?

But in the Havana tobacco that you enjoy today in Robt. Burns Cigars, the drying of the harvested leaf is an important step in the direction of the perfect cigar. The accumulated tobacco wisdom of centuries is employed to keep the flavor IN and to keep the rasp OUT.

The selected leaves are suspended by the stalk and allowed to dry slowly in huge sheds. Nature is allowed to do her work unhurried and unhampered. The finest leaf of the world's chosen tobacco country is thus made ready for the process of curing that may extend for months and years into the future.

And so the best of care of the best of tobaccos has, year by year, developed a cigar of such marked individuality of flavor, that smokers everywhere who might select higher priced brands, insist upon Robt. Burns.

Have you tried one lately?

All Robt. Burns cigars are filled with the choicest Havana tobaccos, aged, cured and blended to a wonderfully pleasing mildness of flavor.

was excluded. The poodle knew what had happened; he could not have known it better had he been human.

He had disagreements with other dogs sometimes, when D'Artagnan or Cyrano de Bergerac prevailed too valiantly in the French soul of him; and his most disastrous encounter was on the heroic scale but magnificently ill-considered. He and I went to live in a country house outside Paris; and, after taking possession, our first exploration of the place brought a discovery that delighted Gamin with the promise of happy hours to come. Close by the garage there was the cottage of the *gardien*, or lodge keeper, and there, enclosed within a rectangle of high iron fence, were the keeper's two watchdogs; great fierce creatures, mighty in size, rough, plebeian, and wholly warlike. They were kept in their cage until sundown, then let out to range the place and protect it until morning, when the keeper would lock them up again—and from the very first, the sight of the free-running Gamin, that clipped and elegant dandy of the boulevards, roused in them a most vehement class-consciousness.

He knew it, and for his pleasure played upon their loathing of him. He would come strolling leisurely from the house and seat himself upon the terrace with the air of the Marquis de St. Evremonde idling about his estate, while the two watchdogs dashed at their iron bars and shocked the quiet country air with ravings: "You horrible swell! We'll kill you! We've got to kill you! We've got to! Got to! Got to!"

Gamin would watch them indifferently, and when they had wrought themselves into a state of hoarse and foamy insanity he would rise, yawn with insufferable languor, and stroll away, remarking, "Odd beings, very; but not too exciting! I wonder where I can find something going on among my own class!"

LATER, when the two had exhausted themselves, quieted down and gone to sleep, he would return by another way, keeping out of sight of the enclosure until he was within a few feet of it. Suddenly he would rend the silence and the slumbers of the two with outrageous barking: "Who? Who? Who was it you were going to do all that to?"

The watchdogs would leap up, trying in vain to express their feelings, and ranting at the bars that saved their enemy from them; whereupon Gamin would sit down and observe them for a time. Then, while still they raved, he would turn his back to them, scratch his ear dreamily, yawn again, and saunter away. "Dear me! How noisy the laboring classes are this afternoon!"

He did not care to stroll about the place at night, however, when those two were at large; he was careful to keep out of their way then, and thus showed wisdom. But one day he and I had gone into town, and for an hour we sat outdoors at a café table on the boulevard, watching the unending parade of Parisians and tourists, as so many generations of men and poodles have watched that show from those same tables. Gamin, upon a leash that was looped about my wrist, sat under the table, discreetly out of the waiters' way, and I had almost forgotten that he was there, when a princely youth came along the pavement before us, followed by a

Great Dane. This was a dog almost astounding in size and stateliness, the largest Great Dane that ever I saw, and the most imposing. In a word, he made everybody stare.

He would have weighed better than thrice the pounds of Gamin; was more than twice as tall; more than twice as long; could have eaten him in a pie and have been not incommenced—but when this monster walked by our table and into the limited view of the doughty eyes beneath it Gamin was probably too startled to pause for a second disreeter thought and, uttering terrible threats, made a most violent hostile dash at him. The attack reached only to the end of the leash, which jerked my wrist furiously; but the Great Dane, having no thought that there was near him anything not engaged in admiring him, was so disconcerted by the unlooked-for onset that he shouted in horror, and fled yelping down the pavement, while the occupants of the tables rocked with laughter.

UNFORTUNATELY, this triumph went to Gamin's head, for later it was evident that he said to himself: "Since I can whip a dog the size of a cow with such perfect ease, I certainly don't need to be so discreet as I have been about going up against that riffraff out home!"

The riffraff had dinner in the basement of the house at six o'clock every evening, and it was six when Gamin and I returned from our excursion to Paris. He immediately walked down-stairs, entered the basement room where the two were feeding, and said, "Here! When did I ever give you two outsiders permission to eat in our cellar?"

Probably those watchdogs had become atheists because of too many unanswered prayers that such a moment as this might come into their lives; but now that it had come indeed, they made the most of it. No equal uproar have I ever heard produced by only three dogs; and Gamin outdid himself long after he must have perceived his mistake. Several human beings and strong water-power finally subdued the riot; Gamin was brought upstairs and given first and second aid, but he slept uneasily for several nights, muttering to himself in strange and painful dreams; nor would he leave the house for a week. When he did consent to set foot outdoors again, he could not be coaxed in the direction of the *gardien's* lodge. "No; if you don't mind, I believe I'll go the other way," he would say. "Not that I have any particular reason. No—I just like the landscape on this side of the house better; that's all."

He was in his young middle age at the time; but, except for some futile attempts to get at Sprangle, that was his last fight; and he became something of a pacifist so far as other dogs were concerned. With human beings he had always been a pacifist, for he could never endure that people should fight or even pretend to fight. One night on the "Boule 'Miche" he leaped between a strange man and a stranger woman who were threatening each other; he protested by every means in his power, barking and jumping upon them alternately to push them apart—nor is he the only dog I have seen thus engaging as a peacemaker between human beings. In fact, one might easily come to the con-

clusion that a finely civilized dog hates to see men fight about as much as a finely civilized man hates to see dogs fight.

Gamin was a motorist in the early days of motoring, before wind-shields and muffled exhausts; and he liked to wear a motorist's goggles and to sit beside the chauffeur. To many a peasant of Touraine the sedate black dog, goggled, his fantastic ears streaming on the wind, must have appeared as the demon spirit of the thundering new engine, when that car swept down the road and left old people crossing themselves in the dust cloud behind it. Gamin loved his place in the machine; but, alas! he did not learn how to keep out of the way of one—and there are drivers who will not slacken speed to save the life of a dog. Mr. Augustus Thomas once said what he thought about people like that. The sheriff hero of Mr. Thomas's play "In Missoura" was trying to help a little dog that had a broken leg, and someone said, "Why don't you shoot him?" The sheriff answered, "Why, I wouldn't shoot a man."

Four years after Gamin's passing, there came to me from a friend a larger black poodle of the same race but of Florentine descent; and he should have been named Lorenzo di Medici, for he was truly magnificent, but since we Americans are jealous to preserve our democratic irreverence he was called "Wop." Seven years he kept a household merry, and amazed visitors and neighborhoods with feats beyond all previous conceptions of what a dog might do—or even should do—with a tennis ball. He played games that he invented himself and taught to his human friends; and never was there a dog who more often made you feel surprised that, after all, he could not use our human speech—in his company, it always seemed mysterious that he did not actually "speak English." However, he was eloquent enough; so is his absence, for he is but lately gone, and writing of him not cheerful. "Go lightly over him, wind and rain," over that ardent little body that was so ready to play and so glad to serve our gayety. "Lie lightly upon him, grass so green!"

THAT Duke of Buckingham, favorite of James the First, writing to the "slathering, slobbering old majesty," used to call himself the king's dog. "Your loving, faithful Dogge," he would sometimes sign a letter, not so grotesquely, perhaps, as one might think. For Buckingham was only trying to make his true affection clear, and it has been often enough said that there are not many truer loves than that of a dog for his master. A dog's love is not like the love that is in romantic and desirous youth; but it is like nearly all enduring loves—for the dog worships him who gives and gives kindly; and kindly giving is more the sustenance of love than may be suspected. How strange it is that an angry wife or husband should follow the tradition and cry out, "You treat me like a dog!" No one can be treated better than a dog is treated by a good master; and if the rest of us could feel and behave toward one another as a good dog feels and behaves toward a good master—Ah, well, this troubled world is probably not intended to be at peace so soon, and, besides, the effect on our vanity might be disastrous!

# DODGE BROTHERS BUSINESS SEDAN

The same qualities which recommend the car to business men recommend it with equal force to everyone.

Business requires a car of exceptional hardihood; one that offers weather protection and comfort the year round; a car dignified in appearance and economical to run.

Business absolutely *demands* such a car, but practically everyone *needs* such a car. The Business Sedan meets this universal requirement in a unique and specific way.

Its construction has made closed car history.

The steel body was known before on Dodge Brothers open cars, but its recognized advantages have never before been applied to the construction of a closed car.

The same thing is true of the baked enamel finish, which cannot be applied except where the body is built of steel.

In one new feature, the Business Sedan goes even further than open cars have ever gone in the breadth and scope of its usefulness.

The rear seat furnishings are removable, converting the entire section back of the front seat into a steel-walled compartment, with 64 cubic feet of loading space.

Dodge Brothers peculiar achievement, in other words, has been to make the sedan a practical car, so that everyone may enjoy its protection and usefulness at little more than the cost of an open car.

*The price is \$1195 f. o. b. Detroit*

# Can You See Through Other Men's Eyes?

(Continued from page 16)

"My father drove me and my brand-new trunk to the station, twelve miles away—and I never yet smell the inside of a new trunk without feeling homesick," Mr. Young told me, in the first interview he has ever given about his career. "The rail journey was full of thrills; but I was the loneliest youngster in the world for a few days after I reached Canton."

"The first and greatest thing that college did for me was to help me to adjust myself. An isolated country boy, with a bit of a reputation for precocity, is likely to get some ideas about himself that won't hold water. For instance, I felt that my intensive study of mathematics had girded me with so much knowledge that it was a little beneath my attainments to be tethered to freshman 'math.' So I told the professor that I would like to take an examination for one of the advanced classes. Eying me solemnly, he said, 'Come to my room on Saturday morning and I'll give you an examination.'"

**W**ITH self-confident air I came in the following Saturday. After looking me over once more the professor wrote on the blackboard:

*2 and 2 equal 4. Why?*

"The more I scratched my head the more sure I became that there must be some profound mathematical explanation for this. I underwent a most painful quarter of an hour."

"Have you finished with that question?" the professor asked me presently.

"I think I have; at least, the question has finished me," I replied, very much abashed.

"Do you think I had better write another—or have you had enough?" the professor continued, without a smile.

"That's enough," I replied. "I guess I'll be content to go along with the rest of the class."

"This business of 'going along with the rest of the class,'" Mr. Young continued with a smile, "indicates the most important of all adjustments. Whatever success I may have made in business has come because instead of trying to *elevate myself away* from those with whom I worked I have tried to stick as close to them as possible, to make their problems my own—in short, to see through their eyes. The man who can put himself in the place of other men, who can understand the workings of their minds, need never worry about what the future has in store for him."

"You have asked me to help you uncover some of the definite factors that led to my selection as head of this organization. Perhaps I can help you a bit by quoting a remark of Mr. Swope, our new president. 'The thing that impresses me most,' he said, 'is your capacity to make the other fellow's problems your own. When you sit down and advise me about a thing I have got to act on, I somehow feel that you are taking just as deep an interest in it as I am.' And Albert G. Davis, one of our vice presidents, made

the comment: 'This promotion has come to you because, among other things, you have a positively uncanny interest in the individual man. Thus every man in the company feels that you and he know each other through and through.'

"This idea of putting yourself in the other fellow's place is, after all, nothing more or less than *justice*. Nothing of permanent value is ever built on a false basis. To ascertain all the facts bearing on a given situation and then to ask yourself how you would feel if you were the other fellow is the only successful way of doing business that I know."

"I simply regard myself as the leader of a coöperative organization and as of being charged with the responsibility of doing everything in my power to give a vast number of workmen opportunity to render their service to the world and earn an honorable living. Of course a companion duty is to make this business attractive as a channel for the reasonable investment of capital."

"That underlying loyalty on which any sensible executive must depend for the production of profits has to be fully earned before it can be expected."

This trend of thought and conduct permeated Young's life even in his college days. It was responsible for his election as manager of most of the St. Lawrence teams and director of the college paper. Before he was twenty he had been graduated with the degree of Bachelor of Arts. But the family purse was now empty. How to get his law degree was the next question.

Young journeyed to Cambridge, Massachusetts, and asked the head of the Harvard Law School if there was any way for a young man without money to get a legal training at that institution. He was told emphatically that there was none.

Disappointed but far from discouraged, Young took his personal problems to the dean of the Boston Law School. That kindly old gentleman lent a very sympathetic ear. After hearing the youth's story he assured him that it would be possible to *exist* if he would act as librarian, and tutor a number of the students.

**W**ORKING day and night, Saturday and Sunday, Young managed not only to support himself but to finish the three-year course in two years. He was graduated with honors at the age of twenty-one.

The richness of the youth's mind and the vigor of his indomitable personality are revealed in a dramatic event that followed his graduation. He went to the board of examiners to be tested for admission to the bar—entering through a door on which some student had posted the legend: "He who enters here leaves hope behind." After answering every question flung at him by the veteran examiners Young was leaving the room when the sheriff overtook him and said that the president of the board would like to see him in the Judge's chambers.

The dignified, imposing attorney congratulated the country boy on his excel-

lent showing, and asked him for his life story in detail. After hearing it through, he said:

"I live in Lawrence. Wouldn't you like to come and practice law with me? I'm leaving on my vacation to-morrow, and you've been working so hard that you need one, too. Your salary starts to-day. Here's a check for one hundred dollars. Go back to the farm and have the best time of your life. Be sure to spend all the money. I'll let you know when I want you to start."

Young left the building, head high and heart singing. The old dream of the Coopersville courthouse was blossoming into reality.

**A**FORTNIGHT later came a telegram. Instead of the summons to work, however, it contained a sad message. His benefactor, the Lawrence attorney, was dead. His widow had wired to ask Young to attend the funeral.

Sorrowing over the death of his kindly friend and prospective employer, Young visited the dean of the law school and told him that he was looking for a job. "Don't worry!" said the dean, patting his shoulder. "Go back home and wait until you hear from me. I think it will be soon."

Within a week Young was placed in the office of Charles H. Tyler, of Boston. He made good from the start. In ten years, the firm had become Tyler & Young and had gained a vastly enhanced reputation from the brilliant and painstaking performances of the New York youth.

During these years two young electrical engineers, Stone and Webster, organizers of one of the best-known firms of its kind in the country to-day, were branching out rapidly in the public utility field. Quite early, Mr. Young had handled a case for them. They gave him other commissions, not merely law suits to fight but disputes to be settled and deals to be arranged amicably. He steeped himself in electrical developments. Finding this new field intensely fascinating, he devoted more and more of his time to the affairs of Stone and Webster.

While riding to his Boston office in a street car one morning Young read in a newspaper the account of the tragic death, in an automobile accident, of the lawyer-in-chief of the General Electric Company. Thinking of this vast organization, whose main works at Schenectady were less than seventy miles from the farm where he was born, Young remarked to himself:

"That's the one job on earth I would like!"

Little did he know how prophetic was his unspoken wish.

A year passed. Then, while on a business trip to New York, Young received a telephone message from Charles A. Coffin, the General Electric Company's guiding genius.

"I would like to see you at once," said Mr. Coffin.

Hanging up the receiver, Young turned to his wife. "Mr. Coffin hasn't liked one

# Made for You, Sir

Do me the kindness to try it

*By V. K. Cassady, Chief Chemist*

## GENTLEMEN:

*Abundant lather*

We learned what you want in a Shaving Cream by consulting 1,000 men like you.

Then we set out to meet those ideals for you, better than others had done.

Now we ask a test—a free test—in fairness to yourself and us.

### *We are competent*

This is a famous soap laboratory. For 60 years it has studied soap chemistry. The leading toilet soap of the world—Palmolive—is one of our creations.

We made up and tested 130 soap formulas to attain the utmost in a shaving cream. Step by step we met your desires in ways that will delight you.

Now we offer you a Shaving Cream that excels in these five major ways.

### *Five new virtues*

- 1—It multiplies itself in lather 250 times.
- 2—It acts quickly, softening the beard in one minute.
- 3—The lather maintains its creamy fullness for ten minutes on the face.
- 4—Extra-strong bubbles support the hairs for cutting, while weak bubbles let hairs fall down.
- 5—The palm and olive oil blend makes the after effects delightful.

### *No money wanted*

Now we ask you to prove these claims. Make ten tests at our cost. If we have so excelled the others, you will want to adopt our cream. If we have not, you'll know it. Men can't be fooled in this line.

Do us the courtesy of a ten-shave test. Cut out the coupon now.

*Fine after effects*

THE PALMOLIVE COMPANY, Dept. B-388  
Milwaukee, U. S. A.

or two things I have done lately for Stone and Webster," he remarked. "Probably he wants to spank me."

But Mr. Coffin had a far different purpose in mind. He invited Young to become chief counsel and vice president of the company.

"I am delighted to accept," replied Young instantly.

"But you haven't asked anything about your salary?"

"I am not interested in the amount of salary you pay me—except that I would like you to pay me less rather than more than others holding similarly responsible positions. I would much rather have the organization feel that I am underpaid than overpaid."

**STARTING** with the General Electric Company on January 1st, 1913, Mr. Young confined his activities for two years to the law department of the huge corporation. There were franchises to handle, extensions of territory to negotiate, subsidiary companies to be organized, and a host of kindred problems to be brought to a successful conclusion. Gradually, however, Young got the law department in so perfect a state of organization that it functioned without his daily attention. Before long he was paying direct attention to legal matters only when the active head of the department had some particularly tangled knot to untie.

Thus Young found himself foot-free to tackle other executive work. He became particularly interested in labor matters. Soon the managers of the various plants discovered that he was a never-failing source of sound advice when disputes and other crises threatened. Having worked so long and hard with his own hands on a rocky New York farm, Young felt an infinite sympathy for men who had to depend on their hands for support.

Meanwhile, other executives developed the habit of going to Young for advice. Somehow he contrived to find time to listen to the troubles of anyone and everyone, high and low, and to give sound advice. Moreover, he was always willing *personally to shoulder the responsibility* if his advice was followed.

"I have been astonished," Mr. Young told me, "to find in business how many men *run away* from responsibility rather than *welcome* it. Most men are willing to venture opinions, but when it comes to deciding on definite action they like someone else to take the final step.

"Now, I have always welcomed responsibility. Nor have I been afraid to spend the necessary amount of study and work to fit me to discharge a responsibility to the best of my capability. Such increasing responsibilities as have gravitated to me have come largely because of my desire to make myself at all times more useful to the company.

"I figured it out this way: The company had bought and paid for everything I had to give. This included my judgment,

good or bad. I was prepared, therefore, to exercise that judgment to the utmost—always taking pains to acquire all possible 'raw material' out of which to form my conclusion. Then, having acted with the best judgment I possessed, I never allowed myself to become worried over the outcome. Of course, I recognized that if my percentage of mistakes became too great, I would have to get out or be put out."

Is it any wonder that Young, in the course of time, became the most sought-after man in the organization? He was soon known as the company's problem-solver—its nutcracker, so to speak. Everyone trusted him. Everyone learned to respect his judgment. Everyone felt friendly toward him and indebted to him. Thus it became taken for granted that when Mr. Coffin retired Mr. Young would succeed him at the helm.

The reason that Mr. Young was able to give advice so sound, indeed the underlying secret of all his success, is the one to which I have already called attention in his own words—his ability to see through the other fellow's eyes.

"My legal experience helped me in this," Young explained. "The very essence of being a successful lawyer is to have the happy faculty of putting yourself in your client's place. Indeed, mentally you *become* your client for the time being.

"Also remember that a goodly part of my work was not in contesting cases in court but in seeking to bring about agreements between companies and individuals whose interests either clashed or threatened to clash. To become a mediator or a peacemaker it was necessary for me to see things as the other man saw them.

**IT** IS said that Cecil Rhodes, the empire builder of South Africa, whenever his board of directors was formulating the terms of some important deal, would walk up and down the room, impersonating the other side and firing all possible objections to the terms proposed. It was up to the directors to satisfy him that he, as champion of the other side, was receiving a square deal. I found it necessary, in order to succeed in compromising disputes, to take a somewhat similar mental attitude. As a result, I would not propose anything that I didn't feel was absolutely just to all parties.

"My inclinations along this line were very helpful when the individual plant managers consulted me about labor problems. I think they felt that I had my fingers rather closely on the pulse of the workers. Perhaps I did, for I had heard much about their hopes and troubles in my youth. Since Schenectady was so comparatively near to my birthplace many of the men in our main works were drawn from my home territory. During their vacations they used to come back home and talk about everything at the plant—and I used to absorb what they had to say.

"I still absorb it—for I am still one of that community. I own and operate the family farm, and when I turn farmer I don't do it by halves. Nor is my home there different from any of the neighboring homes. To do things on a different scale would spoil the whole charm of this side of my life.

"So it seems natural enough that I should understand the mental operations of the workingman. Indeed, the first thing I did on being elected chairman of the company was to call together forty of our leading men at the Schenectady works.

**"WE SPEND** an enormous amount of time and money," I said to them, "in trying to manufacture our materials more economically and to make our products more valuable. The man who devises a method of saving a pound of copper in a machine, or who finds we can substitute iron for copper, or reduce the weight and still retain the full strength and efficiency of the machine, is looked on as having accomplished a great achievement.

"Now, our basic trouble is that we really have not learned how to make the most economical, the most effective use of the most valuable material we have. That material is not copper or iron or steel or tungsten. You could strip the plant of those materials and within a week you could resume operations. The thing I am referring to is the *human material*. Strip the plant of this and you couldn't restore it for years—probably not for a generation.

"Let us all give more thought to the proper handling of this human material. If we can bring about in it even a five per cent improvement it will mean more to the real welfare of the company than all the copper and iron and brass and tungsten you could possibly save. This is our main problem.

"We have four thousand engineers dealing with materials. *I'll try to deal with the men!*

"All we have here is an organization of individuals trying to work together cooperatively—each rendering a certain service. In order to perform our big job we must be supplied with capital. To get capital we must establish such credit, such a reputation, that whenever we announce that we need more money there will be thousands of people ready to hand over their savings to us. They won't do this unless they have confidence that we will handle both capital and men in such a way that a reasonable return will be earned and paid regularly.

"Any man, from the chairman of the board to the lowest laborer, who injures in the slightest degree the establishment and maintenance of that credit and reputation impairs the opportunity for providing work not only to himself but to this great aggregation of bread-winners who are striving together for a common purpose."

**"THE Secret of Sound Sleep"** is revealed next month by Boris Sidis, the famous psychopathologist, who will explain what he declares to be the only way to cure yourself of sleeplessness. If you are a victim of insomnia you will find in this practical discussion by Doctor Sidis all the help that modern science can give you.

**BRUCE BARTON** has written for next month the fascinating personal story and business philosophy of the president of the biggest bank in America. You will be surprised at the simplicity of the methods by which a ten-dollar-a-week clerk worked his way to the top of the financial ladder. It is the story of common sense and straight thinking.

# More Strength—Less Strain

**Sedan \$1465—Touring \$995** F.O.B. Factory  
Tax Extra

When you have checked up the interior of the Jewett Sedan, feature for feature, you will find that it offers every comfort and convenience of the truly fine enclosed car.

Then, remember, that there is an additional satisfaction enjoyed by every Jewett owner. It is absolute confidence in a mechanical foundation that, not only assures brilliant road performance, but long life and minimum repair bills.

The Jewett is not a "light" car—the touring model has 2800 pounds of finely tested metal and excess strength. Every single part has

been designed to stand up under brutal punishment—and laugh at it.

Because the six-cylinder motor delivers its power in six overlapping power impulses instead of four distinct, separate jerks, far less strain is put upon the extra strong axle and chassis mechanism. There is no vibration and no undue stress or strain upon any of the working parts.

That is why there can be no mechanical trouble with the Jewett—no universal joint or axle troubles—no "constitutional weaknesses." The Jewett is not only powerful, but *strong*.

*The complete Paige-Jewett line of six-cylinder passenger cars offers a selection of thirteen models priced from \$995 to \$3350. The complete line of Paige trucks meets every haulage need. They are sold and serviced by Paige dealers everywhere.*

# My Adventures in Learning Self-Reliance

(Continued from page 20)

could not afford to lose a single day at school.

I worked my way through the driving, drifting snow until I reached my lodging at the academy. It took me fifteen hours to make seven miles—more than two hours to each mile. When I reached my journey's end I was so exhausted I could hardly stand—but I had arrived with my precious burden of books and my week's supply of food.

Poverty is admittedly a great stimulus. Nevertheless, if I had had less poverty I should have had more opportunity when I was a young man, and I would have improved the opportunity. The privations and hardships of my early life were responsible for a tremendous waste of time and energy. I was twenty-five years old when I left the academy at Kent's Hill. Given the opportunities of the usual schoolboy, I could have made the same amount of progress many years sooner. When I left school, I had only fairly started toward getting an education. I have been a close student ever since.

My earliest impression of the value of money came when I was about six years old. A neighbor of ours—a blacksmith named Hall—was an ardent believer in spiritualism. He told my father about a certain medium, Miss Cunningham, up at Dover Village, who could talk with spirits, tell fortunes, and locate lost property.

The result was that Mr. Hall and my father and mother enlisted the medium's services to find the treasure of Captain Kidd, which was reported to be buried somewhere on the Maine coast. The medium declared it would be quite easy to locate the treasure; so all four of them set off one day in Mr. Hall's wagon, with picks and spades, following spirit guidance to a certain place on the shore. It was a day's journey down, and a day's journey back. But what was a two-days' journey, with untold wealth as the prize?

**WE CHILDREN** were a glad lot during our two days' wait at home. Not a particle of doubt entered our minds as to the outcome of the expedition. Fine clothes! Did we see them in our imagination as we awaited the coming of the fortune? Yes; we saw them, but they did not excite us. It was of *fine food*, and lots of it, that we dreamed! We saw light, hot, flour biscuits, with butter; New Orleans molasses; fried codfish, stewed shank-bone, stewed chicken! We did not dream about roast beef, for that was a luxury that had never come our way.

Chiefly we thought about molasses. Mother wouldn't allow us any more with the molasses! Think of it! We could have all we wanted. We could even make molasses candy! No wonder the moments seemed hours while we awaited the return of the gold-seekers.

Along in the dusk of the second evening, a tired old horse drew up in front of our house, with a bedraggled, dejected human cargo in the wagon.

We raced out, dancing with joy and shouting, "Where's the gold? Where's the gold?"

It was a long time before the truth reached our inner consciousness that they didn't *have* the gold. Then it was something awful. We had not been prepared for disappointment. We plied them with questions. When were they going back for it? Were they *sure* they had looked carefully? Were they *sure* they didn't make a mistake in the place?

Then and there I began to be skeptical of the power and reliability of the spirits.

It was not alone the hardships that I endured and the hard work that I performed that made me exceptionally strong physically, for I inherited great physical strength from both my father and mother.

**ONE** important success in my early career depended entirely upon my physical strength. It was when I was about twenty and still attending the academy at Kent's Hill. One day, when I was absent, at the round-up of students for prayer and the general business, a school agent from East Livermore was present to get a teacher for the school in his district. It had been two years since they had had a term of school, because the boys were so bad that no teacher would stay. The last one had been thrown out of the window, taking the sash with him.

As Mark Twain said: "He didn't need the sash, but it was handier to take it than to leave it."

This man from East Livermore laid the case before our president, Doctor Torsey; and the doctor brought him to "prayers" and explained his mission to the students. The man, however, said he would like to make a few remarks himself. And this is about what he said:

"I don't want anybody, unless I can get a teacher that can lick John Tolman. I know what I'm talking about! I don't care so much about your learning as your ability to lick John Tolman. But he's as hard as nails. You can kick him all day with a copper-toed boot without hurting him. So you can see what kind of a job it is. But as sure as you're born, you've got to have it out with him! Now, if there's any young man here that thinks he can lick John Tolman, I want to see him."

Nobody answered.

Finally, my friend, A. W. Knowles, said, "Doctor, I know somebody that can lick John Tolman, and somebody that will take that school, and teach them a good school too. It's Maxim."

"Yes," said the doctor, "Maxim is your man."

The school agent had to go home that day. But as soon as I heard about the affair I went to see him and his school committee. When they asked me—as they did the very first thing—if I thought I could lick John Tolman, I told them to feel of my arms and legs. They were as hard as stone; and I may add that they are as hard as stone to-day—and I will be seventy years old this coming February.

Well, I got the school. Not a question was asked about any other qualification than my ability to lick John Tolman. When I called the school to order the first

day of the term, I told the pupils the whole story of what had occurred. They laughed, and looked toward a solid, good-natured and very handsome fellow, who I knew must be the famous John.

I told them I was there to teach them and to serve them. I explained the advantages of education; told them it was a tool with which one must carve his way to success; that it was their school, not mine; that I must have their coöperation in order to serve them in the best way.

But I said that, although I wanted to teach them book-learning, I liked physical exercise; and that if it were necessary to lick John Tolman, nothing would please me better; that I intended to teach the school if I had to knock down and drag out every one of them. Then I proceeded to rush the business of the school, and got through the first day as if it had been running a month.

When recess time came, I told them that I liked a general recess—boys and girls together. But if even one girl voted against it, that would settle it. The vote was unanimous, some of the boys even putting up both hands. When they went out for recess, I went too.

"Ring wrestling" was popular then. The participants formed a ring, taking hold of one another, shoulder to shoulder, each trying to throw his neighbor, until only two were left. Then these two would wrestle it out—collar-and-elbow.

No sooner had we got outdoors than John Tolman and some of the larger boys formed one of these rings. I asked if they would let me in. They were glad to do it—but they all stepped out of the ring except John Tolman, leaving us to wrestle together. I threw him before he could wink twice. When he got up, he said:

"Well, Teacher, I acknowledge you're my master. By thunder! I wish you'd teach me to wrestle like that!"

After that, he and I used to wrestle almost every day at recess. I got a set of boxing gloves and we did a lot of buffeting with them. He never got so he could throw me, but he was a strong fellow, nevertheless. He was the soul of good nature, one of the best fellows I ever had in a school.

**SOME** years before this, when I was seventeen, I worked several months for my brother Hiram, who was then making gas machines in New York. One day, two workmen were trying to get the bed of a lathe up through a trap door with a rope. They sneeringly called to Hiram to have his "lazy brother" help them. That made me angry. So I went down, untied the rope, took the lathe-bed in my arms, and carried it up the stairs. Not long after this, Hiram challenged me to a trial of strength with a lifting machine. He lifted over eight hundred pounds, and I lifted nine hundred and seventy-five pounds, nearly half a ton. Of course this was done in a harness with straps over our shoulders.

When I finally left the academy, I went into partnership with a classmate. We started in a small way at Pittsfield, Massa-

# Six Answers to Six

chusetts, where we built up a good printing and publishing business. We got out a new system of teaching penmanship and pen drawing, of which we sold nearly half a million copies. But hard times came and our business failed.

Later, after the invention of the Maxim gun by my brother Hiram, I went to England, where I studied the gun and wrote the service manual of the weapon which has since been in general use all over the world. I returned to America as the representative of the Maxim-Nordenfolt Guns and Ammunition Company. Thus I became interested in explosives and ordnance, the field in which I have worked ever since.

**T**HE man who conducts original research with high explosives must be mentally and physically fit for the work. In experimenting with high explosives and in their manufacture, a little absent-mindedness, a very slight lack of exact caution, a seemingly insignificant inadvertence for a moment, may cost a limb, or even life. The incident that deprived me of my left hand is a case in point.

On the day preceding that accident, I had had a gold cap put on a tooth. In consequence, the tooth ached and kept me awake the greater part of the night. Next morning I rose early and went down to my factory at Maxim, New Jersey. In order to test the dryness of some fulminate compound, I took a little piece of it, about the size of an English penny, broke off a small particle, placed it on a stand outside the laboratory and, lighting a match, touched it off.

Owing to my loss of sleep the night before, my mind was not so alert as usual and I forgot to lay aside the remaining piece of fulminate compound; instead, I still held it in my left hand. A spark from the ignited piece entered my left hand between my fingers, igniting the piece there, with the result that my hand was blown off to the wrist, and the next thing I saw was the bare end of the wrist bone.

A tourniquet was immediately tightened around my wrist to prevent the flow of blood, and I and two of my assistants walked half a mile down to the railroad, where we tried to stop an up-going train with a red flag. But it ran the flag down and went on, the engineer thinking, perhaps, from our wild gesticulations, that we were highwaymen.

We then walked another half-mile to a farmhouse, where a horse and wagon were procured. Thence I was driven to Farmingdale, four and a half miles distant, where I had to wait two hours for the next train to New York.

The only physician in the town was an invalid, ill with tuberculosis. I called on him while waiting, and consoled with him, as he was much worse off than I was.

On arrival in New York, I was taken in a carriage to the elevated station at the Brooklyn Bridge. After we reached my station at Eighty-fourth Street, I walked four blocks and then up four flights of stairs to my apartments, where the surgeon was awaiting me. It was now eve-

ning, and the accident had occurred at half-past ten o'clock in the morning. That was a pretty hard day!

As I had no electric lights in the apartment, only gas, the surgeon declared that it would be dangerous to administer ether, and that he must, therefore, chloroform me. He added that there was no danger in using chloroform, if the patient had a strong heart. Thereupon I asked him to examine my heart, since, if there should be the least danger of my dying under the anesthetic, I wanted to make my will.

"Heart!" exclaimed the surgeon. "A man who has gone through what you have gone through to-day *hasn't* any heart!"

The next day I dictated letters to answer my correspondence as usual.

On the third day I was genuinely ill and had no wish to do business. Within ten days, however, I was out again, attending to my affairs.

It is almost impossible to make the ordinary person exercise sufficient care in the handling of high explosives. Often the life of the careful person is endangered or sacrificed by an act of a careless person.

I went into the boiler house of the factory one day, where a quantity of nitroglycerin had been placed to keep it from freezing. I found one man stirring the fire, while another was standing with his coat tails outstretched in either hand, forming a shield to keep the sparks from flying into the nitroglycerin!

One of the closest calls I ever had occurred in the early nineties. Two of my assistants and myself were weighing out small batches of fulminate of mercury from a ten-pound jar. There were on the bench as many as half a dozen small squares of glass, each with its little pile of fulminate upon it. There was also a five-pound bottle of nitroglycerin standing on the bench. A little way removed, and under the bench, was a fifty-pound case of gelatin dynamite.

**W**EWERE proceeding very cautiously, when all at once the scoop toppled, and an iron weight fell, striking within an eighth of an inch of one of the pieces of glass on which was fulminate of mercury. After a second of suspense, we stared at one another in amazement, wondering whether or not we were still in the land of the living.

An investigation into the cause of the accident revealed the fact that one of the young men employed in the laboratory had broken off an arm of the scales—one of the supports of the scoop—the day before and, with criminal reticence, had made absolutely no mention of the fact to anyone. Had that weight fallen upon the fulminate it must have dealt death to all of us.

I have told here some incidents from my early life because they show how I acquired—how I was *forced* to acquire—the habit of self-reliance. That habit has helped me, and it will help anyone, more than any other thing I know of.

Every man must live with the man he makes of himself; and the better job he does at that, the better company he will be able to keep himself.

It's James Whitcomb Riley, of course. No other American poet ever touched simple human experience with the same wonderful sympathy and charm. He wrote a verse for every mood; he stirs every kindly emotion with his deeply sincere humor and pathos.

The dearly beloved of all America's children and all America's grown folks has passed on. But with even more eagerness Americans turn to the stories and poems he left behind.

More eagerly than ever does the small boy read "The Old Swinmin' Hole," and the girl, "Little Orphant Annie." More gladly do the mother and father read "An Old Sweetheart of Mine." These famous poems, which have become household classics, and a thousand more like them, are now available to lovers of Riley everywhere by the publication of the beautiful

## Memorial Edition of JAMES WHITCOMB RILEY

More than 1,000 Masterpieces  
at a few cents each

For years there has been an insistent demand for all of Riley in one fine popular priced set. That demand can now be satisfied. All his poems, all his short stories—the masterpieces that have caused the schools of his native state to have a Riley Day once a year—are in these ten beautifully bound and illustrated volumes. Every cultured home should at least know something about Riley and his work.

A booklet containing further information about these books will be sent you on request. The booklet is free. Send for it to-day.

*The Good*

# MAXWELL

Rapidly attaining its manifest destiny—the complete conquest of its market by higher quality easily recognized. Outselling on the closest possible comparison of the four great evidences of value—*manufacturing superior-*

*ity, better performance, greater beauty and durability.* Fulfilling and surpassing the promise of two years ago that the good Maxwell would be made so good that leadership would come to it by spontaneous public recognition.

Note in particular the singular beauty of the Club Coupe; the unusual quarter side windows, which can be lowered and raised; the larger window at the rear, with curtain; the advanced type of windshield; the visor, windshield wiper and rear vision mirror; the exceptional hardware; the leather upholstery, the devices for raising and lowering all windows; the comfort of the driving position; the ample leg-room and roominess of the seating arrangement; the convenient package compartment back of the seat, and the unusually large rear-deck compartment. Heater, disc steel wheels and cord tires are standard equipment. In view of these superiorities, *mark the price.*

*To Fully Appreciate the Club Coupe, See it at the Maxwell Dealer's*

# A new day in FIGURE WORK

*Why SUNDSTRAND  
does your figure work  
faster and easier*

IT is easy to explain why Standard Oil Company, Sears, Roebuck & Company, International Harvester Company and many other leaders use 15 to 100 Sundstrands each.

Sundstrand is the simple way—the modern way—in figure work. Its 10-key operation, combined with a natural, logical keyboard, does the work in less time and with less effort. Gives "expert's" speed to the "one-fingered" beginner. Fast touch method is at last made practical.

Other new day features are convenient size and light weight. You comfortably carry the Sundstrand to any desk or job. A third advanced feature is complete one-hand control. Your left hand is free to follow figures or turn checks.

Modern ideas of equal importance are—automatic column selection—more convenient correction methods—a simple method of rapid multiplication—visible writing—and valuable protection features.

Eight years ago many of these ideas were entirely new. Today their complete success is everywhere conceded. "The re-orders tell the story."

Let us show you. Write for free catalog and leaflet—"Testimony."

## Stella Dallas

(Continued from page 49)

married several years. She already had two boys, fine, sturdy specimens, but soldier material, American business-man stuff. When a little girl was placed in the curve of Helen Morrison's arm, it seemed as if a bit of heaven itself had slipped through the clouds. She spent two radiantly happy years with her daughter (Carol, she named her. It became the sweetest name in the English language to her), and then suddenly, with the arrow-like directness of a bolt of lightning from the skies, disease struck straight down into the holy of holies of her heart and killed her darling. By a mere accident, the realization of her life-long hope was broken into fragments, disintegrated into a thousand poignant little memories. Her little girl became a dream again, an ideal, a picture on ivory.

After Carol died, Helen Morrison offered her services to a charitable institution for working-girls in New York City, but she never came in contact with the girls individually. It wasn't until Laurel came to spend a week with Helen Morrison that she felt the same heart-string which Carol had pulled so hard once long ago, gently touched again.

There was something of the same pristine beauty about Laurel at thirteen as about her own child's crystallized innocence. There were areas in Laurel's soul—big white expanses, untouched by experience, unsullied by life. It was almost as if those parts of Laurel had disappeared into a picture also, when she, too, was just learning to walk alone.

After Helen Morrison said good-by to Laurel at the end of her first visit, and laughingly, playfully kissed her good-by, she hurried away quickly to her own room and closed the door. Taking the miniature close to the light, she gazed at it till the slow tears ran down her cheeks.

AT THE same moment that Laurel, high up above the rumbling surface of New York, was packing her trunk on the last day of her never-to-be-forgotten visit to her father (never to be forgotten because of Mrs. Morrison), Stella, many miles away, was also packing a trunk.

There was no sound of traffic outside Stella's window, only the distant sound of the surf and a distant glimpse of a deserted board walk. By the end of September there were only three or four people left at the boarding-house at Beaver's Beach.

Stella had remained until the literal eve of Laurel's return, because she had been very lucky this year and had found a tenant for her rooms at the King Arthur for the month of September. Laurel could have her coon-coat and wrist watch, too, now!

My though, but Stella was glad her job was over! Thank heaven, the four weeks were at an end. To-night she'd be sleeping at the King Arthur! To-morrow night Lollie would be sleeping with her at the King Arthur! She hummed deep in her throat as she packed.

Beaver's Beach hadn't been quite so awful this year, though, as usual. At least it ought not to have been quite so awful.

Ed Munn had taken her to several grand parties! Funny, though, she was almost as glad to get away from Ed as from the cheap boarding-house. What was the matter with her? Ed had been ever so generous. Every single Saturday, since Laurel had been away, and one Sunday, he had planned some diverting form of entertainment. It must have cost him a pretty penny! Stella was filled with remorse that she couldn't work up any real excitement over Ed. How amazing to be so crazy about one's own child that being crazy about a man loses all interest and excitement in comparison.

ONE day last week when Stella's eyes had become suddenly soft with the thought of Laurel, Ed Munn had mistaken the cause of her emotion, and grasped hold of her hand, and that sort of mouth-watery look which always turned Stella's pleasure in a man's attentions to disgust had come into his face. Ed got terribly insistent that day. Stella simply had to come out with the truth.

"I'm sorry, Ed," she had sighed, as she drew away her hand with a little jerk.

At that he had simply imprisoned one of her feet under the table, between two of his, and leaned toward her, his eyes still gobbling her up.

She had drawn away her foot, too, and perched it safely on the rung of her chair.

"Nothing doing, Ed," she shrugged.

He frowned, flushed a little.

"I don't wonder you're mad, Ed. I'm disgusted myself with the way I act, with the way I feel, or the way I don't feel. But don't, please, think it's anything personal. It isn't your fault. It's Lollie's. It's that darned little Lollie's fault!" she broke out fiercely. "I'm so crazy about Lollie that she uses up all the emotion I've got, so I'm just sort of dead ashes with everybody else in the world." A tear had splashed down her cheek.

Ed Munn had leaned over and patted her on the arm, big-brother fashion.

"That's all right. I'm not asking you to get excited over me. I like a woman all the better for being fond of her own kid."

"Oh, Ed, you are nice!" She warmed toward him.

"In fact," he went on (he knew *now* what tack to pursue), "the few times I've seen the offspring I've thought to myself what a peach of a kid she was."

"Oh, she's wonderful, Ed! I'd die without her!" And again the tears welled up in her eyes.

"Well, I've no intention of kidnapping her."

"You see," as Stella told Effie McDavitt afterward, she and Ed had a *perfect understanding*.

When Stella paid her bill of indebtedness to the proprietor of the boarding-house at Beaver's Beach for allowing her to economize for a month on his property, it was with a feeling of triumph and with the comforting sense of a disagreeable job well done. As the train sped along toward Milhampton, at the end of her ordeal, she was happy with the simple joy of release. She had no premonition of the nest of

## Pacemakers of Haulage

**F**ROM the very outset of motor haulage Firestone championed the policy of building a full line of truck tires.

Clearly recognizing that no single type of tire could give the utmost economy under all conditions, Firestone engineers studied the many phases of transportation development and anticipated the needs of the future.

Resources in men, materials and equipment, seasoned experience, a notable record in exhaustive research and in the creation of new types of truck tires, gave Firestone a continuing leadership that became more marked,

year by year. Truck operators, fleet owners—the industry at large—came to accept the recommendations of Firestone engineers as authoritative.

The increasing importance of motor trucks in our commercial program puts a greater responsibility on Firestone today than ever before. But, as in the past, Firestone responds to this need, with tires that assure the maximum economy and dependability.

Over eight hundred Firestone Service Dealers carry the full line of Firestone Truck Tires. They are ready to advise you as to which type you should adopt—and to give you expert service at all times.

bombs lying in her letter box at the King Arthur. Stella had not seen the automobile standing on the opposite side of the street from the boarding-house at Beaver's Beach the late Saturday night when Ed had brought her back and left her, as usual, at the foot of the stairs that led up to her room. She had not seen the same automobile the next morning on the boulevard as she and Ed had started out for lunch in Boston.

The day after Myra Holland and Mrs. Kay Bird had seen Alfred Munn follow Stella into the boarding-house—but had not seen him come out—they had driven to Beaver's Beach again. Myra Holland was occupying a summer-cottage that year, thirty miles inland. She had never been to Beaver's Beach before. It was only because the chauffeur had lost the road that she happened to be driving through such a place at all. Myra Holland wanted to inspect Stella's boarding-house by daylight.

It chanced to be during the only week-  
end of Laurel's absence when Ed Munn  
had both a Saturday and a Sunday en-  
gagement with Stella, that Myra Holland  
and Mrs. Kay Bird made their two visits  
to Beaver's Beach. On the second visit,  
they had seen Ed Munn and Stella Dallas  
again! The pair were leaving the board-  
ing-house this time! It was eleven in the  
morning. It looked pretty bad, didn't it?

It looked still worse when Mrs. Holland  
called at the fashionable hotel, where Mrs.  
Kay Bird had heard Stella Dallas was  
spending the season and discovered that  
Mrs. Dallas hadn't been there for three  
weeks! And that her forwarding address  
was care of a Mrs. Effie McDavitt, in a  
very queer part of Milhampton, way  
down by the mills somewhere. Obviously,  
Stella Dallas had done her best to cover up  
her tracks.

"PROBABLY those two have been carry-  
ing on their little affair ever since the  
scandal about them when her husband left  
her. I wouldn't believe then that she'd  
really gone the limit, but now, I do not  
see that we can very well help thinking  
the worst. My husband says that Bea-  
ver's Beach is full of questionable places.  
He didn't care to go into an investigation  
of that particular one, but you could see  
by looking at it—so dirty, and run-down,  
and ramshackle—and by observing the  
women who came out of it, what sort of a  
place it was. Oh, it makes my blood boil  
to think that the mother of one of the  
girls with whom our daughters associate  
daily at the private school we're all sup-  
porting should be carrying on that sort of  
an affair. As one of the trustees of Miss  
Fillebrown's School, there's only one  
course open to me. A thing like that can-  
not be known about a woman and coun-  
tenanced, can it?"

"Certainly not," was the general dic-  
tum.

"I, for one, won't countenance it, any-  
how," announced Mrs. Kay Bird, with  
emphasis. "Either Mrs. Dallas moves  
out of the King Arthur or I do. I had to  
play bridge with her twice last winter!"

"And either her child is removed from  
Miss Fillebrown's or mine is," another  
voice proclaimed.

This conversation took place in Myra  
Holland's living-room a few days after  
her return to Milhampton in late Septem-

ber. There were half-a-dozen women  
gathered round the tea table.

"But," feebly observed one of them,  
"there's just a possibility that you're  
mistaken, Myra, isn't there?"

"Oh, sweet protector of the innocent,  
virtuous defender of the maligned,"  
laughed Mrs. Kay Bird.

"My dear Mabel," Myra replied,  
"there's just a possibility a man who fre-  
quents corner saloons doesn't drink; but  
whether he drinks or not, the fact that he  
enjoys the company and atmosphere of  
corner saloons is sufficient to bar him  
from certain drawing-rooms. Dear me,  
Mabel, haven't we all endured Stella  
Dallas years enough in this town to sat-  
isfy you?"

"The child seems quite a nice little  
thing."

"But how long will she stay quite a nice  
little thing with a mother like that?  
Really, Mabel!"

"And, nice little thing or not," spoke  
up somebody from the other side of the  
hearth, "I'm sure I don't want my son  
meeting her at dances and various parties,  
as he grows up, and run the risk of having  
him fall in love with a girl with such a  
mother!"

STELLA was safely in the haven of her  
two-rooms-and-a-bath at the King Ar-  
thur when she opened her mail. She had  
just come up from luncheon in the dining-  
room below, where she had greeted every-  
body she knew with her usual enthusiasm.  
She was humming as she moved about the  
two rooms which were hers and Laurel's  
alone, delighting in their luxury and their  
comfort as she laid her hat and veil and  
gloves in their old familiar nooks.

She sat down on the edge of her bed to  
open her letters. There was a post card  
from Laurel. She read that first. There  
was a note from Miss Simpson, verifying  
the hour of Laurel's arrival. Then sud-  
denly occurred an explosion of one of the  
bombs. Miss Fillebrown regretted that,  
owing to the unexpected increase of pupils  
in Laurel's class, there would be no place  
for her next year!

Stella read the note again. She read it  
a third time. She was aware of a certain  
familiar heart-burning sensation which  
usually followed announcements of this  
sort. No place for Laurel at Miss Fille-  
brown's! There was no other private  
school in Milhampton. Laurel couldn't  
go to a public school. Nobody did—ex-  
cept foreigners. There must be some mis-  
take. But deep in her heart Stella knew  
better. Experience had taught her there  
never was a mistake in the cruel stabs  
dealt her.

It was fully ten minutes before the sec-  
ond bomb exploded. The letter immedi-  
ately underneath Miss Fillebrown's was a  
note from the proprietor of the King  
Arthur. The proprietor of the King Ar-  
thur regretted that he would be unable to  
accommodate Stella the following season!  
He had rented her present apartment, he  
explained, to a party who had offered  
almost double what she was paying, and  
there would be no other space available.

What did it mean? What had she done?  
What was to become of Laurel and her-  
self? It wasn't as if there were other  
apartment-hotels in Milhampton. The  
other places were boarding-houses, pure  
and simple. All sorts of people lived in

# "So That's Where Our Profit's Going!"

The very first time his bookkeeper handed him the actual figures, he saw which way his business was heading—and why.

Now—like thousands of others who use this Burroughs Simplified Accounting Plan—he has a really simple, really practical, really economical way to get that information *every day*.

## Solved!—the Century-old Problem of the Small Business

It was the old, old question of the retailer, the small jobber, the struggling manufacturer.

"How can I make this business pay? How can I find the profit wastes and profit opportunities and use that knowledge *now*, before I find myself drifting toward the bankruptcy court and the Sheriff's Sale—where thousands of small business men land every year?"

For 38 years Burroughs has studied this problem. More and more, by contact with hundreds of thousands of retailers, we became convinced that only *daily* figure knowledge would save the business ship. But it was costing the average man too much in time and in money to get that daily figure knowledge.

Out of those years of Burroughs study and years of Burroughs business contact has come a plan that *really works*—and *really fits a small business*—proven in hundreds of cases in 1922.

## Call Burroughs

Call the nearest Burroughs office *now* and ask them to tell you about the new Burroughs Simplified Accounting Plan—how easy it is to operate, how easy to understand and how little it costs for what it gives you—look in the telephone book under "Burroughs" and reach for the 'phone, or

them. She could no more take Laurel to a boarding-house than send her to a public school.

It was half an hour before the last bomb shattered the frail scaffolding of another of Stella's air-castles. The last letter in her pile was from a lawyer in New York. The lawyer stated that he was writing for Mr. Stephen Dallas. Stella's eyes skipped over the introductory sentences. She caught the word divorce. Stephen wanted to get a divorce!

Hope had never died that sometime she and Stephen might live beneath the same roof again. The possibility that when the golden harvest-time arrived when Laurel was old enough to come out, Stephen, too, would wish to give his child every possible advantage, and resume at least the semblance of a conventional relationship with his wife, had been for years a sort of secret candle Stella would take out and light whenever it seemed dark. A divorce would rob her of her candle! Besides, she couldn't say, "My husband" any more, could she? Or refer to his absence as temporary. No one knew what a protection the uncertainty had been to her all these years!

At one o'clock the next morning, Stella lay wide awake in her bed beside Laurel's empty one, tossing and turning in the darkness. At two o'clock she was still awake. At half past three she got up and went into the bathroom. She poured herself out a half a glass of gin, and filled the glass with hot water from the faucet. She placed two sleeping tablets on the back of her tongue and washed them down with the strong hot drink.

Laurel was due to arrive the next morning at nine o'clock. Stella simply must pull herself together before Laurel arrived.

"I SHOULDN'T think that Simpson woman earned her salt. She's let your hands get into a terrible condition," scolded Stella.

Laurel and Stella were seated opposite each other at a card table in their bedroom at the King Arthur. There was a bath towel spread over the table. Laurel held the finger tips of one hand in a bowl filled with warm water, while her mother worked over the other. It was early afternoon of the first day of Laurel's arrival.

"Your nails are all split and broken to pieces!"

"But I've been camping, Mother."

Stella was thankful, with all her heart, that she could work over Laurel, for when she had anything to conceal it was always easier to talk to the funny little perceiving creature if she could keep her eyes down close on some sort of fine, careful job.

When the manicuring was well under way, Stella inquired, "How is your father?" She always asked that question before Laurel had been back many hours.

Laurel always replied, "He's all right."

"Didn't seem different any way?"

"No."

"Didn't refer to me, I suppose?"

"No."

Laurel wished that he would refer to her sometime, so she might tell her he had.

"Goodness," exclaimed Stella, "I should think he'd ask after my health once in a while."

Laurel was silent.

Stella applied the blunt end of a steel

file to the half-moon just appearing out of the pink flesh of Laurel's thumb.

"I should think he'd have some interest in my welfare."

Still Laurel was silent.

"I never did anything to have him treat me as if I was dead."

"You hurt, Mother."

Stella laid down the file. But it was somewhere inside where Stella was really hurting Laurel. Laurel always suffered when her mother talked like that.

"You'd think, by the way he acts, such a thing as a marriage ceremony had never taken place between him and me."

"Oh, Mother," Laurel exclaimed brightly—she must change the subject somehow—"I saw that lovely lady again in New York."

"What lovely lady?"

"The lovely lady who gave me my silver pencil."

"OH, YES, I remember. What did she wear this time?"

"She isn't wearing black at all this year but palish colors, when she dresses up, that you think are white until you see her up against a white wall or something, and then you see they aren't. Oh, you'd love her clothes, Mother! She's got the loveliest negligee, yellowish with not a speck of trimming on it anywhere!"

"Negligee!" exclaimed Stella. "Did she spend the night with you?"

"Oh, no, I spent the night with her. I spent several nights with her, while Father was in Chicago."

"Oh, you did, did you?" said Stella, speaking thickly through an orange stick which she held between her teeth. Stella often used her mouth to hold small tools, when she sewed or manicured. Lucky for her now! A sudden suspicion had shot up and gripped her in the throat. The orange stick helped to disguise the tenseness in her voice. "That was a funny arrangement, I should think."

"I didn't want to go a bit," said Laurel. "I was frightened at the thought of visiting a stranger; but Mrs. Morrison was perfectly lovely to me!"

"What does this Mrs. Morrison look like?" asked Stella.

"A little like an Indian Pipe," said Laurel reflectively. "That's a sort of flower that grows in dark places up in the Maine woods. It hasn't got any color at all."

"Oh, gracious! I mean, is she tall or short, dark or light, fat or thin. I don't care what kind of a flower she looks like."

"Well," Laurel began slowly, methodically, "she's dark—at least her hair is—and tall—at least she looks tall until you see her beside somebody taller, like Father—and slim, and cool-looking and pale—oh, ever so pale. And the queer thing is, she doesn't use any rouge at all. She does her hair," Laurel went on, "with only five hairpins, and no net. And once I saw her put soap right on her face! And she goes out in the broiling sun and lets it beat down on her without any veil or sunshade, or anything."

"What's her age?"

"She doesn't seem to be any special age. She's like one of those goddesses in my Greek Mythology Book, that way."

"Oh, come. You can tell whether she's twenty or forty, I guess."

"Oh, I don't think she's forty! She rides horseback, swims, and plays tennis

# The 17 men in a town of 800 people

## who enrolled for the Modern Business Course and Service

Ten thousand men would send for the little booklet offered at the close of this advertisement if it were not for one thing.

That thing is the fatal habit which we all have of thinking: "This may be all right for someone else, but it isn't exactly the thing for me. My situation is different."

When you read that men in the Steel Corporation have enrolled; or that men in the National City Bank have enrolled; or men in the American Radiator Company, you say: "It must be for men in big corporations. Well, I'm not in a big corporation, it isn't for me."

But it *is* for you. The Alexander Hamilton Institute is for every man who wants his position in the community and his income to be better three years from now or five years from now than they are today.

If you were to run thru the 200,000 names of successful men who attribute a part of their success to this training, you would find somewhere in the list a man whose age, business position and income were the precise duplicate of yours.

We cannot illustrate this by taking the names in a large city; they would fill too many pages of this

### Do men like me enrol for this business training?

*Here is the list of subscribers to the Modern Business Course and Service in one little Nebraska town of 800 people. The Course has something of definite value to each one of them specifically.*

magazine. Let us go to the other extreme; let us take one of the very little towns in the United States, a Nebraska village of 800 people. Read in the center of this page the business positions of the seventeen men enrolled there.

The Superintendent of Schools; several merchants; the doctor; the editor; the railroad man. Have *all* of these men problems in common? They have! Business is the great fundamental interest of every man. No man can be a successful editor who does not know what business men are thinking, and how business is carried on.

No physician can have the whole-hearted respect of the men of his community unless he can talk with them intelligently about their affairs. No man can organize a school system or train young people, most of whom will go into business later, unless he, himself, *knows* business.

Of course, the reason for the extraordinary success of the Alexander Hamilton Institute is that it has helped so many men in practical commercial life to shorten their path to the top; by giving them more knowledge than their competitors possess, it has made it possible for them to enjoy the satisfaction of succeeding while they are still young.

But the point we wish to stress here is simply this—that men of *every* calling and profession—physicians as well as merchants, dentists as well as salesmen, lawyers and engineers as well as accountants and superintendents—have found a way to capitalize their own abilities to better advantage as a result of their enrolment with the Institute.

Just how the training fits in with your needs and plans is made clearer in the book "Forging Ahead in Business" which the Institute publishes for distribution among thoughtful men. It will pay you to add this little book to your library.

# He who smokes last smokes best

Wherein our correspondent  
takes a long shot at  
Zanesville, O.

When we printed a letter from a smoker who professed a preference for the early morning smoke, apparently we started something. Almost the next mail brought along a batch of letters, among which the following is a fair sample:

"Dear Sirs:

"Will you allow me to take issue with your A. K. K. from Zanesville who insists that the best pipe of the day is the one smoked right after breakfast?"

"Of course, I have no intimate knowledge of local conditions down in Southern Ohio, but up here the majority of us regular pipe smokers have a decided leaning towards the last pipe of the evening."

"Take a night when you are sitting in front of the fire after the neighbors have gone. Your wife suggests it is bedtime, and while you admit it is, you have a craving for one last smoke. She goes on upstairs and you promise to follow directly. But instead you take out your pipe and light up. You smoke slowly and peacefully, calling out at intervals that you'll be there in a minute. Only you don't go until the last ash has died in the bowl of your pipe."

"That's my idea of the best smoke of the day."

"Yes, sir, for every smoker A. K. K. can produce who likes his after-breakfast pipe best, I'll guarantee to name a dozen men who prefer the last smoke of the evening. And most of us are Edgeworth smokers, too."

Yours very sincerely,  
(Signed) T. S. Flint,

New York City."

Yes, as we suggested above, when we gave space to an expression of opinion about which is the best pipe of the day, we started something. But we are glad to open our columns to friendly discussions about pipes and smoking in general.

So if you have any particular notions, fads or fancies, send them along.

And if you aren't an Edgeworth smoker, be sure and tell us about it. For we want to send you free samples, generous helpings both

of Edgeworth Plug Slice and Ready-Rubbed.

Edgeworth is sold in various sizes to suit the needs and means of all purchasers. Both Edgeworth Plug Slice and Edgeworth Ready-Rubbed are packed in small, pocket-size packages, in handsome tin humidors, and also in various handy in-between sizes.

For the free samples address Larus & Brother Company, 25 South 21st Street, Richmond, Va. If you will also add the name of the dealer to whom you will go if you should like Edgeworth, we would appreciate that courtesy on your part.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Edgeworth Plug Slice or Ready-Rubbed for the same price you would pay the jobber.

and golf. Father said she could almost beat him at golf."

"Oh, she and your father play golf sometimes?"

"Sometimes, but Con says tennis is Father's game. She can't beat him at tennis."

"Who's Con?"

"Her oldest son."

"Oh, son! Married, is she?"

"Yes, but her husband is dead."

"Oh, dead! That's convenient."

"Oh no, it isn't. Mr. Morrison left a whole lot of money and horses and houses and things, and Mrs. Morrison has to look out for them all alone. She says she wouldn't know what to do without Father to advise her."

"Oh, I see. A whole lot of money and houses, has she?"

"I visited her at her house on Long Island," Laurel went on. "Oh, Mother, it's wonderful! It has a beautiful lawn and garden all around it, and on the first floor, out of all the rooms there are long windows, like doors, which are always kept open, so you can walk out onto the grass any time, just as easily as walking out from underneath a tree. Oh, Mother," Laurel broke off, "would it cost too awfully much for us to have a house all of our own somewhere—a little, tiny one with a front door that's just ours, and a dining-room that's just ours, and a guest-room, so I could ask girls to come and stay all night with me sometimes. Mrs. Morrison asked a girl my age to come and stay with me one night. And she came, and when she went she asked me to come and stay all night with her!" (No girl had ever asked Laurel to stay all night with her before.) "But I couldn't because I had to go back to New York the next day. Mother, next to you, I think Mrs. Morrison is the loveliest lady I ever saw!" Laurel's voice actually trembled.

Stella removed the orange stick from her mouth and laid it down on the table beside the buffer.

"There," she said. "How do those look?" And she held up Laurel's fingers for her to see. She spoke harshly. She had to, or the child might discover the tremble in her voice, too.

LAUREL gave the fingers a hasty glance. "They're all right," she remarked. Then dropping her hands on the bath towel, and gazing out of the window, she added, and a glow stole into her eyes, "Mrs. Morrison has the most beautiful hands, Mother, long and white and slim, like the rest of her. I wish I could have hands like hers."

Stella got up and went into the bathroom. She closed the door and locked it, then turned on both faucets, so that Laurel would think she was busy washing up. She stood staring at herself in the mirror over the washstand while the water gushed into the basin. Laurel had never glowed about a woman before. Stella didn't know what to make of it. It perplexed her. It hurt her. It hurt her more than the possibility that Stephen might be glowing about the same woman.

Laurel was sensitive to beauty. Stella was cruelly aware of it, as she stared into the mirror before her. Good gracious, how could she hope to compete with this younger woman? It seemed lately as if nothing would cover up the defects and blemishes for any length of time. Often,

within as short a period as half an hour after she had left her bedroom, glancing into some unexpected mirror, she would discover the horrible old look sneaking out of hiding. A wave of discouragement swept over Stella. She had never required youth so much as now.

She pulled open the door to the medicine closet in the wall over the washstand with a determined jerk. She produced a large jar of cold cream and began smearing great globs of it over her face. "A cold-cream bath, and a good hot steam is what you need," she announced to her reflection, and with a practiced rotating motion she proceeded to massage her cheeks, chin, neck, forehead vigorously, furiously, admonishing herself the while in the mirror—exhorting and inciting with fresh courage. This wasn't the time to lie down and submit. What if the world was treating her like a bunch of cruel boys treat a dog—kicking her from all sides, all at once. She mustn't put her tail between her legs and yelp and hug the ground. She must stand up and bristle her back, and snarl and show her teeth, if necessary—and she would too. Oh, there was a lot of fight left in her yet.

Half an hour later Stella emerged from the bathroom with all her war paint on. Her cheeks were a little rosier than usual, her eyebrows a little more distinctly emphasized, and her lips a little more definitely bowed.

THREE days later Stella took an early morning train to Boston to meet Mr. Morley Smith, the lawyer who had written her from New York about the divorce. Mr. Smith had suggested in his letter that he would like a personal interview with Stella, and had arranged to meet her at the office of a Boston law firm.

You may be sure that she had on all her war paint when she sallied forth that morning, all her war feathers, too. She had selected a costume of wide black-and-white striped foulard in which to combat this particular adversary (the stripes wound sleekly around her; she resembled a zebra somewhat), and she had made herself as formidable as she knew how, with all her loudest finery.

When she was ushered into the private office, placed at Mr. Morley Smith's disposal, he had to make an effort not to allow himself to betray his amazement. Stephen Dallas had not prepared him for anybody of this sort. As he drew up a chair and asked Stella to be seated, he looked at her closely, and catalogued her forthwith.

"I am glad, Mrs. Dallas," he began suavely, "that you found it convenient to meet me here to-day."

"Oh, that's all right," said Stella.

"It is my hope," Mr. Smith went on, "that I may be performing a service for both you and Mr. Dallas in arranging this affair without publicity, to your mutual satisfaction. I want you to feel, Mrs. Dallas," he smiled, "that I am here, not only as Mr. Dallas's friend and attorney, but as your friend and attorney, too."

"I don't need any attorney."

"I agree with you. This affair should be, and can be, settled without contest—between ourselves. That is your husband's wish, too. He and I have gone into the details of the matter, and there lies open to us a line of procedure which, if

# The Man Who Was "Only A Bookkeeper"

By C. E. Randolph

Illustration by J. J. Gould

HE was twenty-seven years old—married—the father of a boy of seven and a girl of three. If you had asked him why he was a bookkeeper I don't think he could have told you.

But I know this—his father had died while he was still young and he had been forced to leave school and go to work.

There had been no time nor opportunity for him to look around for the kind of work for which he was best suited. "Any kind of a job—quickly"—that was the thought uppermost in his mind.

So he answered the "want ads" in the newspapers and finally landed a "job," for it was only that, in the bookkeeping department of a large manufacturer of office equipment.

He was then eighteen years old—a rather likeable fellow—as keen as most young men of eighteen. Yes—and just as immature. His knowledge of business and business procedure would not have filled many books. But he was the best pool player in the neighborhood!

## A Promotion and Marriage

The men in the office were kind to him, for they liked him. He was interested in their work and ambitious to learn more about it, so they helped him. Pretty soon he was permitted to do some of the posting. Certain small increases in salary came automatically, and finally after two years, he was made bookkeeper.

It was a glorious night when he carried that news to a certain young lady. Three months later they were married.

For a time, everything went swimmingly. They were young—they had saved a little money—there are not many worries when one is twenty-one. Then came the first baby—doctor's bills—the rent was raised—it was not as easy to make both ends meet as formerly.

The years passed. This likeable young man of eighteen was now twenty-seven—the father of two children. His salary had been raised a little each year or every year and a half, but never quite enough. Frankly—he was worried.

And then, one day, it came to him suddenly that the reason he was "only a bookkeeper" was not because he did not have the natural ability to shoulder larger work, but simply because he had never trained himself to do anything better than the work he was doing.

All he knew about bookkeeping and business he had picked up from the men around him. And these men, kindly, helpful fellows though they were, could no longer help him because they had reached the end of the road themselves.

There was only one thing to do, he told himself, and that was to study accounting with some good school—to study it as faithfully as another man might study law or medicine or engineering. So that night he sent in one of those International Correspondence Schools coupons and in two weeks he had started on his course.

It was surprising the way he went ahead. The lessons took up problems that he met every day in his work and had never really understood before. For the first time in his life he began to work toward a definite goal.

His employers heard about his studying and encouraged him to keep on. In ten months, he was the outstanding man in the department. In fourteen months, he was the head bookkeeper, and within three years the chief accountant at a salary of \$7500 a year. And in ten years, a member of the firm!

I am very certain about the salary, and the incidents in this homely little story. For this man who was once "only a bookkeeper" was—myself!

## No Monopoly on Success

The point I should like to stress is that I had no special advantages that are not available to every reader of this magazine.

I had only a limited education—I had a family to support—I might easily have convinced myself that I was "too old to study"—that I "hadn't the time."

Fortunately, I realized in time that I would never get a step farther unless I prepared myself to take that step. And you must do the same thing if you want to get into the \$5000 and \$7500-a-year class—no matter what career you may choose.

It doesn't make a bit of difference what you are to-day. If you really want to get ahead, you can do it. Nothing can keep you down if you're determined to go up.

There is an easy way to get just the

The years passed. This likeable young man of eighteen was now twenty-seven—the father of two children.

training you need to enable you to get ahead and increase your salary. "Easy?" you ask. Yes, easy! You can get this training right at home, in your spare time, through the International Correspondence Schools, just as I did—just as thousands of other men have done.

Your future is in your own hands. It is within your power to decide to-day just about where you will be one, two, five, ten years from now.

## Which Way Will You Go?

Up, through training, to a position that means more money and more responsibility as the years go by? Or down, through lack of training, into the ranks of the poorly paid?

I hope for your sake and the sake of your family or the family that is to be that you will decide to go up.

Believe me when I tell you that the most important thing you can do to-day is to send in that I. C. S. coupon. It's a little thing that takes only a moment, but it may be the means of changing your life, just as it changed mine.

## Brushing teeth won't save them —if you neglect your gums

**N**O MATTER how white and clean your teeth may be, you will lose them if pyorrhea develops through gum neglect.

Soft, sore, bleeding and receding gums are the early symptoms of pyorrhea. Its cause is irritation and infection of the gum tissue. Keeping your gums healthy is the only way to prevent or check pyorrhea.

Pyorrhocide Powder does keep the gums healthy, as well as the teeth white and clean. It aids in restoring gums to health if pyorrhea has developed. It is the only dentifrice whose value in preventing and treating pyorrhea has been demonstrated in clinics devoted exclusively to this phase of oral prophylaxis.

Pyorrhocide Powder removes the mucoid films which harden and form tartar. Tartar is the principal cause of pyorrhea.

See your dentist regularly—use Pyorrhocide Powder daily—and you can avoid loss of teeth from pyorrhea. The dollar package is economical because it contains six months' supply. In every package is our educational booklet which gives the important facts about the causes, effects and prevention of pyorrhea.

All good drug stores and dental supply houses sell Pyorrhocide Powder.

# PYORRHOCIDE POWDER

*keeps the gums healthy*

pursued, will cause almost no unpleasantness, as far as you are concerned."

"And what's that?"

"Why, you are to bring suit against Mr. Dallas for desertion. He will not contest the grounds of your suit, and the divorce will be granted without disagreeable controversy."

"I don't want a divorce," said Stella.

"Really?" Mr. Morley Smith raised his eyebrows in surprise. "Surely, you want your separation of seven years' standing legalized, do you not, and enjoy the advantages thereof?"

"I don't want a divorce," Stella repeated.

"The word has an unpleasant sound for some women, I know," Mr. Smith smiled. "It shouldn't. Let me explain. Perhaps you haven't thought in detail just what the benefits would be of a settlement of the relations existing between you and Mr. Dallas." And in the next ten minutes he laid before Stella, as attractively as he knew how, all the fine arguments, moral, social, and financial, for her consideration, that he possessed. But his display apparently made no impression upon Stella. For when he had finished all she said was, just as if she hadn't been listening, "I don't want a divorce, and," she added, "what's more, I don't intend to have one."

**MR. MORLEY SMITH** frowned and shrugged. "That's a pity," he said.

"I'm sorry to disoblige Stephen, I'm sure," said Stella, shrugging too.

"I meant a pity for you," flashed back Mr. Smith. And the smile and suave manner had disappeared. "Mr. Dallas can obtain his divorce without the least difficulty in the world, by another method. But the other method will not be exactly to your liking, I fear," he announced, fastening his keen, shrewd eyes upon Stella. "I always feel sorry for any woman," he went on, "whose mistakes of a dozen years are dragged out by opposing lawyers from the little hiding places where she thought they were safe. Your husband, Mrs. Dallas, in allowing you to bring suit against him, instead of the other way round, is acting chivalrously. He is offering you an avenue of escape."

"I tell you I don't want a divorce."

Really, it was annoying! "It looks to me, Mrs. Dallas, as if you will be obliged to have a divorce whether you want it or not."

"I don't know why. I don't pretend to know anything about law, but I've got some common sense, and I never heard of a woman's being forced to get a divorce from her husband because he happens to want to go and get married again. Stephen does want to get married again, doesn't he?"

"That's entirely a side issue in this case, Mrs. Dallas. I am unable to inform you."

"He does. I know he does. Well, he can't do it. That's all there is to that. You can go back to New York and tell him that I refuse, with thanks, his chivalrous offer. Gracious! I don't call it exactly chivalrous for a man to walk off and leave his wife for seven years and then, when he gets good and ready, give her the privilege of suing him for divorce, so he can go and marry a rich young widow, and kick the high spots with her."

"You will, then, as I said before, force Mr. Dallas to bring suit against you."

"I never deserted him."

"No, your offense is graver."

"I never knew what my offense was. I've been ransacking my brain for seven years to find some good reason for Stephen's clearing out the way he did."

"Oh, come, Mrs. Dallas," half laughed, half sneered Mr. Morley Smith.

"What do you mean by that?"

"Don't try and pretend innocence with me. I've handled too many cases of this nature. It won't work."

He looked straight into Stella's eyes, as he spoke. It was a horrid look. It was a look not to be endured from a man who was your enemy. Stella could feel the blood throbbing into her neck.

"Are you trying to be insulting to me?"

Mr. Morley Smith's sneer deepened. "That's right. You're acting consistently. It's quite the right tack—surprise, indignation, rage, tears, confession finally. Mrs. Dallas, allow me to spare you further attempt at evasion. I have facts. You were seen," he lowered his voice, "you were seen at Beaver's Beach," he brought out.

"Well, what of that?" flashed Stella.

"You were seen at the boarding-house, with Munn," he added, still keeping his sword-pointed eyes upon Stella.

Oh, so that was it! That was why there was no room for Laurel at Miss Fillebrown's! That was why the proprietor at the King Arthur had rented her apartment!

"Oh, what a rotten, rotten world!" she exclaimed.

Mr. Morley Smith shrugged and looked away. There was a silence. Then, "Well, you understand me now, I think. You have your choice. Think it over. Either the generous escape Mr. Dallas offers or the public exposure of acts you have taken such pains heretofore to conceal and cover up."

**STELLA** stared at Mr. Morley Smith speechless, helpless for a moment. Every word he uttered, every glance of his eyes, every pharisaical shrug of his shoulders shamed and degraded her. She would simply have to get out of his presence, or she would do something horrible, like slapping him in the face.

"I'm going," she said, and stood up.

He stood up, too. He smiled.

"You will accept our proposition then?"

"Accept your proposition? No, I won't. I'll fight! I'll fight! I'll prove to the world whether I'm guilty or not of the filthy things rotten-minded people have said about me. And I'm glad of the chance, too. I hope Stephen will sue me for a divorce. I said I didn't want a lawyer, when I first came here, but I need somebody to defend me against such a pack of muck-rakers. Why, Mr. Smith, I have no more done the thing you come here and accuse me of doing, than your own wife, or, if you're not married, your own mother, or the woman you honor the most in this world, whoever it is, and I'll get the best lawyer in this country to prove it."

Behind the belying paint and elaborate make-up the white image of this woman's innocence stood out before Morley Smith clear and defined for an instant, like a white-sailed ship when the fog lifts a moment—a white-sailed ship in distress. He saw it. He recognized it. He turned away from it.

"You're going through the usual motions, Mrs. Dallas," he commented with another sneer.

## The ALADDIN is magically simple

You have never seen a ledger like this!

All you have to do is to push the sliding lever, and the back expands. You can then insert or remove sheets easily and quickly. There's no key to be lost. It works—always; saves time and fussing.

Just the ledger for business men, professional men, tradesmen, for anyone who keeps accounts—and that means practically everyone.

Though small, and so light you can carry it in one hand, it expands to accommodate more than three hundred accounts. Opened, it lies flat, so you can write upon all of the page.

You will find the Aladdin so wonderfully handy and efficient, you will surely want one. Write us for folder covering special Aladdin features.

## The Wife Who Wondered if She Could Leave Her Husband

(Continued from page 11)

there are flowers on the table—daffodils—the price of my new rubbers! I'll mend the old ones with adhesive plaster. Kiss me, please; and carry in the supper."

Jerry obeyed. "Some spread!" he said. "It's a celebration after the stormy days. Isn't the steak good, Jerry? You're not eating."

"Yes, I am."

Jerry fell to with vigor. Later, when Margaret was ready for dessert, she exclaimed, "You haven't touched the celery! I got it just for you. What is the matter?"

Jerry pushed back his plate and leaned forward on the table. His face had suddenly gone white. "It's not the food," he answered breathlessly, "it's myself. I can't eat—till I know what you've decided. I—"

He stopped to wet his lips, and she cried repentantly, "Oh, my dear! I was waiting—why—of course, I sha'n't leave you, darling! I—I couldn't."

"You mean," asked Jerry steadily, "that you want to stay?"

"I mean—well—perhaps I just mean that I love you," said Margaret gently.

HER hand, creeping toward him over the snowy cloth, was met in a clasp that hurt. Then Jerry drew away, sinking back limply in his chair.

"I thought—I was sure this morning, that you were going. Well—I think I owe you an explanation. I know I've been cranky all these weeks. I know I've been moody and disagreeable, but—you remember the day those Brimmers called on you? You'd been crying when I came home."

Margaret smiled. "And you didn't ask me why. I wondered—"

"I knew without asking. I forgot something at the office that night, and I stopped at the drug store to telephone, hoping to catch Bailey before he left. I couldn't get the line, and the booth was so hot I opened the door a crack while waiting for my call; and just then the Brimmer girls came in. They weren't a foot away and I couldn't help hearing what they said."

He paused so long that Margaret questioned: "Was it so terrible?"

"It was rather terrible to me. I won't go into it. I wondered if you knew—if you could possibly understand, what it meant to me to have you work so hard. Because I ceased protesting, perhaps you thought I didn't care; but that night I made up my mind I'd show those people you hadn't made a blunder when—"

"Oh, Jerry!"

Margaret was on his knee, her face pressed close to his. "Don't—don't go on. What does it matter what others think if you and I—"

"It matters very much—to me. Margaret, do you remember the day we bought the Bagdad? I promised that

when our ship came in I'd give you that velvet couch cover. Well—"

He arose. "Let dessert wait," he said, as she reached for his plate. "I want to finish what I'm saying. Come here."

He moved toward the living-room with an arm about her, and turned her suddenly until she faced the couch. She gave a cry, a cry of dismay at his extravagance. There was no sign of the old Bagdad—only soft blue velvet the color of Margaret's eyes. She glanced in unfeigned consternation at her husband, and saw, incredulously, that he looked taller, straighter, more buoyant than she had ever seen him. Then, like a flash in the darkness, the unbelievable meaning of it shot through her.

"Not—not the invention?" she whispered awedly, and found her answer in the arms that swept her close to her husband's heart.

"There'll be plenty—always—for all your wants," he answered huskily. "I knew last Saturday; but, don't you see, it would have been dust and ashes, dear, without your love. I had to let you decide things without knowing—to act cheerful, so you'd be held by no sense of duty. I think I took only one mean advantage, but—I was desperate when I sewed on that button! I knew, of course, that when you learned the truth you wouldn't leave me, but—had you left me in spirit—"There, dear, don't cry. Don't cry! The ship's in port!"

## If You Really Want to Win Out—Get Ready for It

(Continued from page 51)

crories call him. Before him lay a sheaf of despairing reports. As he studied them he shook his gray head slowly.

"What can be done?" a young shipping man asked.

"Those vessels must be released!"

"But how?"

For a moment a ghost of a smile flickered in Livingstone's eyes.

"My friend," he asked, "did you ever hear the story of the negro parson who preached a powerful sermon on faith. *Anything* could be accomplished by faith, he asserted. And after the sermon was over, one of the good brethren stopped him in the yard, which was surrounded by a wall of field stone.

"Did yo' mean what yo' said, parson, about we-all doin' anything by faith?"

"I shore did, Brother Foster!"

"Then yo' means that if yo' had faith enough yo' could jump right through that stone wall?"

"The old preacher scratched his head.

"Well, Brother Foster," he said finally, 'under dem circumstances I'd jump at it—and I'd depend on de good Lawd to git me through it.'

"Now, that's what we've got to do, young man. We'll jump at this job, and trust the Lord Almighty to get us through."

Commandeering a fleet of ice-breakers that included most of the car ferries and tugs in adjacent waters, Livingstone took personal charge of the attempt to smash

# Are you the Lucky One in Five?

## Not if you neglect your teeth

All too few persons practice the strictest oral hygiene. Far too many are infected with Pyorrhea, and through neglect, lose their teeth and suffer from broken health. For statistics show that four out of every five past forty, and thousands younger, are subject to this disease. At the first sign of Pyorrhea, Nature gives her danger signal—tender gums which bleed easily when the teeth are brushed.

Fortunate is he who heeds that friendly warning; his teeth may be spared, while he who neglects that admonition may pay the extreme penalty.

### Heed Nature's Warning

At the first sign of tender, bleeding gums, go to your dentist for teeth and gum inspection and start using Forhan's For the Gums at once.

Forhan's For the Gums is the scientific formula of R. J. Forhan, D. D. S. If used consistently and used in time, it will prevent Pyorrhea or check its course.

In addition to its efficacy in the treatment of Pyorrhea, Forhan's For the Gums is an excellent dentifrice. It contains nothing but the most beneficial ingredients that keep teeth white and clean, and the gums firm and healthy.

Remember, statistics are all against you. Science proves that four out of every five have Pyorrhea after forty. For that reason it is good health insurance to start using Forhan's For the Gums today. It is pleasant to the taste.

Forhan's For the Gums is sold by druggists everywhere. 35c and 60c in tubes.

# Forhan's FOR THE GUMS

*More than a tooth paste—it checks Pyorrhea*

through the lower rivers and channels, which in many places were frozen solid to a depth of eight to fourteen inches. Out in Lake Erie, great fields of wind-driven ice piled up in windrows five or six feet thick. And the mercury was at zero.

Thus began the famous fifteen-day battle in which lake history was made by Livingstone and the lieutenants who rallied to his aid with matchless courage and loyalty. Time and again it seemed that the unequal struggle would have to be abandoned. Channels laboriously gouged through shattered floes and packs would often fill in and freeze almost as soon as they were cleared—yet, yard by yard, rod by rod, mile by mile, the combat went on. Never before in the memory of lake men had ingenuity and force been massed on so tremendous a scale. Hundreds of sailors threw themselves into the struggle with the spirit of soldiers going "over the top." Eventually they conquered. One by one the imprisoned freighters were released.

THE climax of the fifteen-day fight was reached when twenty giant freighters that had been frozen fast in Lake St. Clair came limping along the river headed by eight ice-breaking car ferries and tugs. Their decks, inches deep in ice, Cyclopean icicles clinging to their steel hulls, cabins transformed into misshapen igloos, they looked more like polar ships than serious-minded freighters.

One hundred and thirteen steamships, in all, were released from their winter bondage and their precious cargoes were discharged. The last boat arrived in Buffalo on Christmas Day. "Sailor Bill" and his cohorts had clinched their victory....

Livingstone's life has been a series of picturesque battles, most of which can be sketched here only in the barest outline. The only child of a ship's carpenter—who was a relative of David Livingstone, the famous explorer—he was born in the hamlet of Dundas, Ontario, about eight miles from Hamilton. On both sides of the house his ancestry was Scotch.

When the boy was six years old his father moved to Detroit, then a lake settlement of twenty-one thousand inhabitants. The romance of steam and steel was just in its infancy. Indeed, it had been only thirty years since the "Walk-in-the-Water," the first tiny steamboat on the lakes, had ended its brief career by foundering off Buffalo. Other steamers had followed in the wake of the frail six-mile-an-hour craft, but the supremacy of billowing white sail on the inland seas had not even seriously been challenged.

His boyhood was crammed with constant activity. In hours out of school he ran errands, did odd jobs in a dry-goods store, and mailed all the out-of-town copies of the Detroit "Advertiser," which turned out a four-sheet paper from its one-cylinder Hoe press. To earn his three dollars a week in this latter berth, he slept in the "Advertiser" building, got up at two o'clock in the morning, folded all the papers by hand, wrapped them, and hauled them to the post office in a little wagon. Then he ate breakfast and rushed off to school. Most of such play time as he had was spent on the river—where he found in the shipping a never-failing fascination.

At the age of seventeen Livingstone be-

CHEVROLET

## Chevrolet Offers Quality at Quantity Prices

Modern requirements for personal transportation are so satisfactorily met in the 1923 Superior Chevrolet that demand leads supply in every section of the country.

Especially in the closed models, the price advantage of quantity production is most apparent.

Chevrolet is the world's largest pro-

ducer of closed cars with Fisher Bodies, hence is able to offer these high grade closed automobiles at astonishingly low prices.

Think of pleasing design, high quality construction, modern engineering that ensures power, ease and economy—then see the cars that embody all these features at the showroom of any Chevrolet dealer.

came an apprentice in the Michigan Central Railroad shops at Detroit. He was to receive fifty cents a day his first year, sixty cents a day the second, and seventy-five cents a day the third. Shortly before the end of his three-year apprenticeship, young Livingstone was released from his contract in order that he might take a better paying position in the Wabash Railroad shops at Fort Wayne, Indiana. He stayed there only a short time, however. Returning to Detroit at the age of twenty, he invested his own savings and a loan from his father in buying a partnership with a ship chandler and general merchant named Robert Downie. Here he spent two significant years. They resulted in his becoming thoroughly familiar with the mercantile side of shipping—and in his marriage to Mr. Downie's attractive young daughter.

Shortly after his marriage, Livingstone opened a ship chandlery and commission business of his own. A year later he secured the lease of a big warehouse and dock at the foot of Randolph Street, where a few years earlier the Detroit town pump had been located.

Within another year the hard-working Scotchman came to be recognized as one of the younger business geniuses of the city. He obtained the Detroit agency for the Western Transportation Company—which had the biggest fleet of steam vessels on the lakes; and when the Detroit Tugmen's Association was formed he was elected secretary-treasurer, and vested with much of the responsibility for the organization's success. By 1869 he owned six tugs, including the "William Livingstone, Jr.," the largest on the river. Most of these had to be bought or built on credit; but Livingstone belonged to the breed of clear-sighted, sure-footed planners whom men with capital are usually willing to back.

FOR the next three or four years prosperity moved with rapid strides—a little too rapidly, as it turned out presently. In addition to his other interests, Livingstone became the most important cordwood dealer in the city. Buying his wood from farmers and Indians who inhabited the well-forested region along Bear Creek, Canada, a day's water trip from his dock, he would run his tugs with barges up the creek at night, load the wood the following day, and chug back to the city under cover of the next night's darkness. As a licensed pilot, who knew every yard of adjacent waters, Livingstone could hold his own at the wheel with navigators of many years' experience.

In 1870 and 1871 he went into the lumbering business. Getting control of a tract of pine timber on the Au Sable River, north of Saginaw Bay, he had it cut and rafted to the Detroit mills. His combined enterprises were bringing in good returns when he was struck a staggering blow by the panic of '73. Within a week two hundred thousand dollars' worth of paper that he had discounted was returned to him, and before the panic had run its course his accumulated winnings had been swept clean.

Within three years after the panic, however, Livingstone was well on his feet again. He was in control of one of the largest fleet of tugs in the waters around Detroit, and his steamship agency and

## What is Mother's greatest obligation?

WITH MOTHER'S HELP the child can build her own mind. But Mother must build the child's *body*, by choosing the right food. This is Mother's greatest obligation.

We all know oatmeal is ideal for body-building, but do we realize the great *difference* in rolled oats?

The safe way is to specify H-O (Hornby's Oats)—the only oats thoroughly steam-cooked and pan-toasted in the old fashioned way.

We steam-cook H-O for hours at a heat of 250 degrees. This dextrinizes the starch and makes H-O digestible, nourishing and *different*.

H-O is also pan-toasted for four hours over live coal fires. This gives H-O its brown color and delicious flavor.

## "I dare not insult the intelligence of my children!"

HE WALKED OUT of a great bookstore and his hands were empty.

He had been trying to buy books for his children and it was an almost hopeless task.

In the "children's department" did he find good, interesting literature—the fine, old fairy tales and myths, the great stories of adventure and heroism? He did not.

The tables were too full of other things—fuzzy animals, comics from the newspapers, silly little stories about what he called angrily "Aunt Busybody and Uncle Nuisance."

And this bookstore is no exception. The situation is as general as it is disheartening. Thousands of conscientious parents have been waiting years for some great publisher to gather all the fine child-literature into one handy set; for all ages some of the enduring things that build mind and character—stories from King Arthur's Court, extracts

## The Young Folks' Shelf of Books

*The Junior Classics*

Introduction by Dr. Eliot

Reading Guide by President Neilson of Smith College

If you have children under sixteen years of age, you owe it to yourself and them to know something about this remarkable new development in home education. The whole story is told in the free booklet we offer you; we want every parent who reads this page to have a copy. It is free; merely fill in the coupon and mail.

The Young Folks' Shelf of Books grew out of the success of Dr. Eliot's famous Five-Foot Shelf. No sooner had the Five-Foot Shelf appeared than parents all over the country wrote us:

"Why can't someone do for children what Dr. Eliot has done for adults? Gather together all that is best in children's literature, from the days of ancient Greece straight down to the present, and give it to us in one set of books.

"Free us from bondage to foolish animal books and depraving Sunday comics."

The Young Folks' Shelf is an answer to that cry for help. In its pages your boy and girl meet the great figures of History; here they learn courage from the courageous, truth from the truthful, and heroism from the heroic.

Here is your chance to know all about these books that can mean so much to your children. The coupon brings an interesting book that describes the set in detail and tells how you may own it.

warehouse showed steady profits. Already he was beginning to lay his plans for entering the shipping business in a larger way.

An interesting sidelight on the place that Livingstone already had carved out for himself came in the autumn of 1874. This had been another bad year for Michigan, particularly in the agricultural districts. Markets had collapsed; such potatoes as were not being fed to hogs or rotting in the ground were being sold for fifteen cents a bushel. All this created a spirit of unrest—which flamed up into a widespread revolt against the political party in power.

Sensing the possibility of losing their long-established control of the legislature, the party leaders cast about for the strongest candidates available. Livingstone was asked to run. At first he refused. Eventually he consented, but only on the condition that he should receive the nomination without opposition. When the smoke of the polls had cleared up it was discovered that the popular young shipping man had been the only Republican elected in Wayne County—and that in his lone victory he had swept the banner Democratic district in the city!

A FEW years later Livingstone organized and assumed direction of the Michigan Navigation Company. Also he became general manager of the Percheron Navigation Company, organized by United States Senator Thomas W. Palmer and controlled jointly by Palmer and Livingstone. After a three-year term as collector of customs at Detroit, under President Arthur, Livingstone and Palmer built for the Michigan and Percheron Navigation companies the largest two bulk freighters on the lakes at that time. The young Detroitier was now playing a leading part in the shipping industry.

In the meantime, Palmer and Livingstone had bought the Detroit "Journal," a moribund evening daily, and Livingstone assumed personal charge of its business and editorial policies. After the "Journal" had been set solidly on its feet, both in finances and prestige, it was sold in 1887. Lacking Livingstone's energetic guidance, the paper started shortly to skid. It was rescued from impending bankruptcy when the shipping man took its helm once more in 1892. He remained at this post until 1901—during the last part of which period he was controlling owner as well as publisher. As a newspaper man, Livingstone proved both fearless and far-sighted. His editorial policies attracted wide attention, and he turned the "Journal" into a real money-maker.

During this period Livingstone not only retained his shipping interests but he was building up a reputation in the banking field. One of the organizers of the Dime Savings Bank, in the early eighties, he became president of the institution in 1900. Of the extraordinary growth of this bank, and of Livingstone's election to the presidency of the American Bankers' Association, I have already told.

Of all the things that William Livingstone has "put through," the one closest to his heart, I think, is the Livingstone Channel—that magnificent man-made waterway in the lower Detroit River, through which all down-bound vessels now pass. Twelve miles long, and ter-

# Are You the Ten-pin —or the Ball?

WHEN a championship contest is impending, the athlete who trains spasmodically, or who refuses to train at all, is regarded by his team-mates with contempt. His self-indulgence is never a subject for joking—it is nothing short of treachery.

The business world views the matter somewhat differently.

If a man neglects to train for a bigger job, why worry? There are plenty of able and ambitious men who *will*.

Every year, for example, more than 60,000 men enrolled with LaSalle Extension University are throwing themselves heart and soul into the all-engrossing contest for the better positions in business—are earnestly declaring their purpose to win or know the reason why.

In the contest for success they know that they must be either the ten-pin or the ball—and they prefer to be the ball.

The career of C. C. Mollenhauer well illustrates the opportunities that unfold to the man equipped to take advantage of them.

Obligated to leave school at the age of twelve, Mollenhauer started life as a clothes-brusher in a factory, at \$2.50 a week. Today, at thirty-five, he is partner in a large real-estate firm, a director in the great First National Bank of Brooklyn, and a trustee of the Dime Savings Bank in Williamsburg, New York.

"The big event of my life," says Mollenhauer, "was the day I enrolled with the LaSalle Extension University. The Problem Method, developed by LaSalle, is surely the quickest way to the top I know of. It has meant thousands of dollars to me, to say

nothing of the innumerable other benefits I have derived from it. The only regret I have ever had is that I did not enroll sooner."

When a man held down to so unpromising a start is able—by the aid of home-study training—to outclass his competition so decisively, how certain should be the future of the man who starts to train without unusual handicap.

Thousands of LaSalle-trained men unconsciously direct attention to this thought; their letters are replete with evidence, of which such statements as the following are typical:

"At the last stockholders' meeting I was made general auditor, at a salary-increase of 200 per cent since my enrollment. Without LaSalle I should not have been considered for this responsible position."—F. H. Ranney.

"Since enrolling I have increased my income from \$90 to over \$400 a month, and the end is not in sight."—M. C. Kochman.

"LaSalle training has meant a tremendous thing to me in mental development and financial profit."—W. A. Twelkenaur.

"Passed bar examination with second highest honors in a class of 71."—M. A. Caruso.

"LaSalle training has taken me from the \$65-a-month class to a present earning power of over \$7,000 per annum."—R. A. Warner.

To overcome the obstacles that every man must face who hopes to attain executive responsibility requires earnestness of purpose; and beyond a doubt the unusual success of LaSalle-trained men is due, in considerable measure, to the inherent pluck and determination which gave them the urge to make the start.

The rapidity of their advancement, however, brings forth a different explanation—to be found, as many assert, in the LaSalle Problem Method.

Under this plan, distinctive with LaSalle Extension University, a member masters business principles by solving actual business problems—under the direction of some of the ablest men in their respective fields in America. The business power that

results from such practical and thoro preparation is a constant menace to the man who will not train.

During three months' time, for example, as many as 1,193 LaSalle members reported definite promotion—over the heads of untrained men. Incidentally, the total salary-increases of these men amounted to \$1,248,536, an average increase per man of 87 per cent.

In the face of such plain handwriting on the wall, how pathetic is the man who fails to see the necessity for specialized business training—or who casts aside his present opportunity, to await a day that never comes.

On the other hand, how great the rewards that accrue to the man who recognizes his need—and acts decisively to meet it.

During coming months what will *you* be doing with your spare evening hours? Will you be preparing to hold your own against these thousands of men who are playing their natural ability and stamina with training—or will you go down like a ten-pin, beaten by some man, not so good as you, perhaps, who has equipped himself to play the game successfully?

A booklet which has proved of unusual worth to many thousands is available to you: it will give you full particulars of a definite plan for self-improvement—will show you compelling evidence of what other men in circumstances similar to yours have done to increase their salaries and to step ahead to responsible executive positions. With this booklet LaSalle will send you without obligation your copy of "Ten Years' Promotion in One," a human-interest recital of how an average man won his way to success.

The arena is built—the great game for success in business is in progress—and whether you will or no you must step to the mark and do your best.

Just such a coupon as appears below this text has given many a man his start toward real achievement. Check, sign and mail that coupon NOW—and write it on your heart that *you* are in the fight to win.

## LASALLE EXTENSION UNIVERSITY

The Largest Business Training Institution in the World

### Outstanding Facts About LaSalle

Founded in 1908.

Financial resources more than \$7,500,000.

Total LaSalle organization exceeds 1800 people—the largest and strongest business training institution in the world.

Numbers among its students and graduates nearly 400,000 business and professional men and women, ranging in age from 20 to 70 years.

Annual enrollment, now about 60,000.

Average age of members, 30 years.

LaSalle texts used in more than 400 resident schools, colleges and universities.

LaSalle-trained men occupying important positions with every large corporation, railroad and business institution in the United States.

LaSalle Placement Bureau serves student and employer without charge. Scores of big organizations look to LaSalle for men to fill high-grade executive positions.

Tuition refunded in full on completion of course if student is not satisfied with training received.

## —and learn from a successful farmer how merchants can get more farm trade

*To Merchants:* What would it be worth to you if you could learn from each farmer in your community some of the things he expects from you in return for his trade—if you could know the workings of his mind, why he buys, what influences his decisions?

What would it be worth to know how to make your windows pull more farm business? To learn how to enlist the co-operation of your present farm customers in an endless chain of recommendation for your store?

Think how valuable it would be to you to know in advance what merchandise will appeal to the farm trade! To have your clerks as interested and enthusiastic about this merchandise and your business as you yourself! To maintain this interest, month after month!

### How to find out these things

We have this information, the answers to these questions, for you in the form of a letter from a successful farmer, a farm owner, a breeder of blooded stock, a farmer who attempts to analyze and describe some of the things that build up confidence for certain merchandise and for the merchants who sell this merchandise.

We are indebted to Mr. Carl G. Brown of Long Meadow Farm, Strasburg, Virginia, for this interesting and instructive letter. So important

is it, from the standpoint of the merchant who would understand the factors which influence farm purchasing, that we have reprinted it, and we will be glad to mail a copy to any merchant who requests it.

Mr. Brown is typical, we believe, of the farmers in your county—one hundred, two hundred, often as many as one thousand or more in the better farming regions—who are influenced and guided in their farming activities and their farm purchasing by *Farm & Fireside*, *The National Farm Magazine*.

We will send you Carl Brown's letter so that you may know why these progressive, prosperous farm families are inclined to give preference to products advertised in *Farm & Fireside*—so that you may know how to gain the greatest benefit from this advertising and the other forms of co-operation which the manufacturers of these products are so willing to give you.

### Send for this letter today

Carl Brown's letter will tell you, from the viewpoint of a farmer, some of the things that will help you to get the farm trade of your community. It is worthy of careful study by every merchant. Send for this letter today.

Just write us on your business letterhead, "Send me Carl Brown's letter. I would like to read it." We will gladly do it.

minating in the deep waters of Lake Erie, this channel is the largest and most expensive undertaking of its kind ever authorized by the United States Government. It removed the menace of the Limekiln Crossing, that had long been the incubus of inter-lake commerce.

In the years when the lake freighters were ever increasing in size and number, the Limekiln Crossing had become the scene of more and more strandings. Indeed, so narrow was the natural passage at this point, that sometimes a stiff southwestern gale would drive the water ahead of it until a considerable stretch of the channel was left unnavigable for any save the smaller boats. Then whole fleets would be held up for hours, waiting for the water to resume its normal level.

The natural waterway at this point was the Amherstburg Channel, wholly on the Canadian side of the international border; but the increasing congestion of traffic and the advent of the six-hundred-foot freighter made this channel wholly inadequate. Foreseeing what was going to happen, Livingstone, several years earlier, had started his fight to have a channel blasted out on the American side to accommodate all down-bound vessels.

AT FIRST, except among the lakemen themselves, he encountered nothing but opposition. Congressmen turned deaf ears. The old channel had always done pretty well, they said; why anticipate trouble? With so many post offices and pensions to be taken care of, why should they vote to sink millions in such a project? But Livingstone, not to be discouraged, kept up his labors year after year. His election as president of the Lake Carriers' Association in 1903 gave him added authority, and he plunged into his fight with more vigor than ever.

One by one he gained the cooperation of the congressmen in the eight great states that border the lakes. One by one he communicated his vision to the members of the Rivers and Harbors Committee. He got the united support of the Engineering Corps of the United States Army by winning over the district engineer, the division engineer, and the chief of engineers, in turn. Finally, in 1907, Congress authorized the project and made an initial appropriation of seven million dollars. In 1912 the channel was thrown open with impressive ceremonies, in which Livingstone was the central figure. Since then the exigencies of traffic have necessitated the expenditure of an extra three million dollars in deepening and widening the channel—a work that is still going on.

"William Livingstone never gives up anything he sets his teeth into," one of the older generation of Detroit business men told me. "He believes that anything can be accomplished if you work hard enough at it—and his life has proved it."

Livingstone's dependence on this philosophy cropped up continually in my talk with him. Indeed, his parting words, as I shook hands to leave him, were these:

"I have lived a long time, and you are kind enough to say that I have accomplished many things. They don't look very impressive to me—but, taken for what they are worth, they are almost wholly due to the fact that I have never been tempted to try the bright and alluring 'short cut' to any goal."

He thought  
he knew her well

NO matter how well you know a person—maybe even your very closest friend—there is one subject you instinctively avoid.

You may discuss the most intimate things about your family, your business and your personal affairs, but this one topic you dodge. There is something about halitosis (the scientific term meaning unpleasant breath) that seems to forbid honest conversation about it.

Yet the insidious thing about halitosis is the unfortunate fact that any one may suffer from it and in nine cases out of ten you are not conscious of it yourself. So unless you use some sensible scientific precaution you may go through your day or evening uncomfortable and concerned, wondering whether or not you are offending people about you.

Unless halitosis is a symptom of some serious organic disorder which a physician or dentist should correct, you may easily put yourself upon the safe and polite side by using Listerine, the well-known liquid antiseptic.

Meet halitosis in this scientific way—by using Listerine systematically as a mouth-wash and gargle. It is the ideally effective breath deodorant.

Fastidious people everywhere make Listerine a regular part of their daily toilet routine. It acts quickly and pleasantly. It halts food fermentation in the mouth and leaves the breath sweet, fresh and clean.

Your druggist has handled Listerine for years, and regards it as a safe, effective antiseptic of great merit. It has now been on the market for half a century, and has dozens of other uses as well.

Start using Listerine today. Put your mind at ease. Don't be in doubt another day about your breath.—Lambert Pharmaceutical Company, Saint Louis, U. S. A.

# The Story of Gay Little Mitzi

(Continued from page 34)

people as it was to breathe. My father understood this. So I proceeded gayly on my way, becoming quite a local celebrity. When I was twelve, they used to bill me for concerts as 'The 12-Year-Old Wonder Prima Donna.'

"I guess I thought I *was* a wonder. Everybody told me so, and it was easy and pleasant to believe it. I might have gone right on—if it hadn't been for one man.

"His name was Eugene Rakosy; and he was a very important personage in Budapest. He was always referred to as 'His Excellency.' You won't be properly impressed by that, but you would be if you came from Hungary. Among other things, he was the Honorary President of the National Theatre, the best in the country.

"ONE day, when I was twelve years old, my mother took me by train to another town where I was to appear at a large charity entertainment. It must have been something of importance because Rakosy attended the affair. He went by the same train we took, but he augustly secluded himself in his private car. From this high and mighty retreat he summoned me to his presence.

"I went!" said Mitzi, nodding her head with solemn emphasis. "And for once, I was dumb; too scared to do more than make my little curtsy to the great man. He had me sit down beside him, eyed me curiously, stroked his goatee for a moment—then the oracle spoke."

Whenever she describes a person, or even quotes anyone, Mitzi ceases to be herself. In pose, voice, and gesture, she becomes the person she has in her mind. I could fairly see and hear the oracular Rakosy saying:

"Ah-h-h—hm-m-m! So you are the child imitator!"

"Yes, sir!" said Mitzi.

"Hm-m-m! Well, my child, I want to tell you something. Imitating is *not* an art."

"No, sir!" said Mitzi, because she didn't know what else to say.

"Let me explain," said Rakosy. "Once, at the National Theatre, we had a very bad actor. We tried him in one part, then in another, and so on through many parts of many kinds. He was bad in them all! Finally, we started to put on a new play. In one scene, someone had to double for the leading man, and we could not find anyone who looked enough like him to do this; no one except this actor who was so very bad.

"As we had no choice in the matter we gave him the part, telling him to watch the leading man and to imitate his work as closely as possible. . . . He did so. And he, who was hopelessly bad in any original work, was even better than the actor he imitated! He could copy—but he could not create. I understand that you can imitate to perfection. But remember what I tell you. That will never make you an actress! Imitating others is really living on their talents. If that is all you can do, you are a pauper, so far as art is concerned."

At that point the friend who had taken

the little girl into His Excellency's presence came to her rescue and conducted her back to her mother.

"I was so subdued," Mitzi went on, "that Mother tried to find out what was the matter. All she could get out of me was the announcement that I never would do any more imitations after that night! And, with one exception, I never did. A few months later I appeared at a charity entertainment. But that ended it.

"At the supper following the concert at which Rakosy was present, I was seated beside him and he was good enough to tell me that my work was something more than the mere 'copy-cat' imitations; that I put an original and creative quality into them. But that didn't make me change my mind.

"Somehow, child though I was, I knew he was right. The person who can do nothing but imitate, really is 'living on other people's talents.' I would rather do one original thing, a thing that I myself created, than to copy a hundred creations of other people! The fifteen minutes I spent in Rakosy's private car that night were perhaps the most important fifteen minutes of my life.

"The immediate result was that I went back to school, determined to learn all I could in a year or two. Then, when I was not quite fourteen, I was admitted to the National Dramatic School in Budapest. I was under the age limit; but through Rakosy's influence an exception was made in my favor. A year and a half later I signed a five-year contract with the manager of two of the leading theatres in Budapest.

"Oh, those foreign theatres!" sighed Mitzi. "There's nothing like them here—thank heaven! The only way a young actress could get on over there was by chance. Usually one had to wait, as my father did, for somebody to die. When that happened, there was a mad scramble for the vacant place.

"ONE of the theatres controlled by this manager was devoted to musical comedy, the other to the drama. I wanted to play musical comedy. But was I allowed to? I was *not*. The public over there is very loyal to its old favorites. The sou-brette parts, which I could have played, were taken by fat middle-aged actresses who had become popular twenty years before and who were still popular. Apparently, only death could pry them loose from their positions.

"I played some ingénue parts at the other theatre, but that didn't satisfy me. I was simply aching to sing and to dance. Finally, I learned that 'The Dollar Princess' was to be put on at the musical comedy theatre, and I asked the manager to let me play the rôle of 'Daisy.' I wish you could have seen him roll his eyes toward heaven.

"Ach!" he groaned. "And now she tells me what parts she is to play!"

"Well," I said, "if I can't have the kind of parts I want and am fitted for, what's the use of my hanging around here? I want to go somewhere else."

# Is Your English a Handicap? This Test Will Tell You

Thousands of men and women make mistakes in their everyday English—and don't know it. The simple five-minute test shown here will tell you where you stand.

As a result of thousands of tests, Sherwin Cody found that the average person is only 61% efficient in the vital points of English. In a five-minute conversation, or in an average one-page letter, from five to fifty errors will appear. It is surprising how many experienced stenographers fail in spelling such common words as "business," "abbreviate," etc. It is astonishing how many business men use "who" for "whom," and mispronounce the simplest words. Few persons know whether to use one or two "c's" or "m's" or "r's," whether to spell words with "ie" or "ei," and when to use commas in order to make their meaning absolutely clear.

## Where Do You Stand?

In the panel are forty examples of the most commonly misspelled, mispronounced, and misused words selected from business letters and ordinary conversations. None is especially tricky. They are just ordinary words, used hundreds upon hundreds of times a day.

Take a pencil, run through the list of examples, checking those you think correct. In two instances neither example is right, and you will write in the correct answer. Most men and women will make from 10 to 20 mistakes. Those especially good will make no more than 5 errors. See where YOU stand. Let the entire family join in this test. The correct answers appear in the lower panel on this page.

## Poor English is a Handicap

People make mistakes in English unconsciously, for if they knew they were making mistakes, they would correct them instantly. You realize, of course, that imperfect English is an unnecessary handicap, that it limits your opportunities and thwarts your ambitions. It leads others (possibly the very persons you want to think most favorably of you) to believe you have been poorly educated, and that you lack refinement and culture.

To achieve your ambitions, it is essential that you use good English as instinctively as you tie your shoes. Business today demands men and women who can use correct, concise, forceful language. Polite society demands good education, good breeding, good culture, demonstrated by the use of correct, interesting, and convincing language.

Your ability, your culture, your education are measured by your English. Nothing else reveals you more clearly. Few things can have so great an influence on your career. If your language does not make people think the best of you at all times, then it must be improved, so that they will be impressed.

## Stop Making Embarrassing Mistakes

The greatest blame for our imperfect knowledge of English can be laid to the old method of teaching as practiced in the schools and colleges. This consisted, in effect, in throwing a book of rules at you and saying, "This is the way to learn English."

It is exactly as though you were given a set of tools without lumber and told to build a house. Or as if you were given a needle without thread and told to sew a piece of embroidery. It cannot be done! That is why the old method failed in so many cases to give even a fair command of language. That is why so many men and women are shockingly lacking in the knowledge of the most simple English. IT IS IMPOSSIBLE TO LEARN ENGLISH BY RULES ALONE!

If you adhere to this clumsy, cart-before-the-horse way, you will always be deficient in English. If you burden yourself with a set of bewildering rules and regulations, you will always have to wonder whether you are right, and you will never be sure of yourself.

## A Remarkable Self-Correcting Device

Mr. Cody's 100% Self-Correcting Device does away with every uninteresting and monotonous drill, characteristic of the old methods. It is this device which has called forth the highest praise from the best educational experts. The work

Sherwin Cody

## Which Is Correct?

Correct answers shown in panel below

### 1. Would You Write—

Between you and I	or	Between you and ME
I HOPE it would come	or	I WISH it would come
WHO shall I call	or	WHOM shall I call
It's just AS I said	or	It's just LIKE I said
How MANY are there	or	How MUCH are there
I WOULD like to hear from you	or	I SHOULD like to hear from you
The FIRST TWO lessons	or	The TWO FIRST lessons
He sat AMONG the three	or	He sat BETWEEN the three
The wind blows COLD	or	The wind blows COLDLY
You will FIND ONLY one	or	You will ONLY FIND one

### 2. Do You Spell—

superCede	or	superSede
recEive	or	reclEve
reprEive	or	reprEve
donKEYS	or	donKLES
factoRIES	or	factoRYS
repEtition	or	repEtition
sepArate	or	sepErate
aCCommodate	or	aCCoModate
traffCing	or	traffCKing
aCCeSsible	or	aCCeSible

### 3. When Would You Use

COM-bat	and	com-BAT
REC-ord	and	re-CORD
CON-lict	and	con-FLICT
AT-tribute	and	at-TRIB-ute
PRO-ress	and	pro-GRESS
PER-mit	and	per-MIT
AC-cent	and	ac-CENT
CON-duct	and	con-DUCT
PRO-ceeds	and	pro-CEEDS

### 4. How Do You Say—

evening	EV-en-ing	or	EVE-ning
ascertain	AS-cer-tain	or	as-CER-tain
hospitable	HOS-pi-ta-ble	or	hos-PIT-able
abdomen	AB-do-men	or	ab-DO-men
mayoralty	MAY-or-al-ty	or	may-OR-al-ty
amenable	a-ME-na-ble	or	a-MEN-able
acclimate	AC-cli-mate	or	ac-CLI-mate
profound	PRO-found	or	pro-FOUND
beneficiary	ben-e-fi-shEE-ary	or	ben-e-FISH-ary
culinary	CUL-i-na-ry	or	CU-li-nary

you do is cut to a minimum. Your progress in acquiring perfect English is amazingly rapid.

This device not only simplifies the whole study of English, not only makes Mr. Cody's course a pleasant game, but it so firmly fixes correct English in your mind that you never forget it. No time is wasted on what you already know. You concentrate on correcting your mistakes, and your mistakes only. That is the most wonderful thing about Mr. Cody's remarkable invention. By actual use, correct spelling, correct diction, correct pronunciation, and correct grammar soon become a fixed habit—as much a habit as talking itself.

## Interesting Book on English Sent Free

A polished and effective command of English denotes education and culture. It wins friends and helps give you added advantages and better opportunities. Spare time study, 15 minutes a day, in your own home soon gives you a power of language worth more than you can realize. Write for the free book, "How to Speak and Write Masterly English." It describes Mr. Cody's invention thoroughly and explains just what it will do for you.

Merely mail the coupon, a letter, or a postal card. Your greatest possibilities in business and social life will be reached only when you know and use correct English. Write today. This involves no obligation on your part whatever.

# Are YOU in a Rut?

## The way to get out

Put your shoulder to the wheel. Stop saying you have no chance, that luck is against you. You have your spare evening hours, even 6 o'clock to ten, which you can use in putting technical or business knowledge into your head. You have to possess this knowledge nowadays before employers will give you more responsibility. Experience is fine teacher, but you should make use of the experience of other men, and that kind of experience has been laid down plainly in the practical correspondence courses of the United Y. M. C. A. Schools.

More than 30,000 ambitious young men have enrolled for our unique form of instruction by mail. The United Y correspondence teaching service "gives the most for the least money." It gives you man-to-man counsel and expert assistance on all of your problems.

Let us help you to get out of the rut and on the high road to the place in the world that is rightfully yours—if you work for it. Mark and mail the coupon below for a copy of our new catalog and friendly counsel on how you can realize your ambition.

## BECOME AN EXPERT STENOGRAPHER AND SPEED TYPIST

A profession that offers men and women rich rewards, fascinating work, big pay, and opens the way for promotion to high executive positions earning \$50 to \$100 a week and up. Many of America's biggest business men and women got their start because they mastered stenography. Demand for expert stenographers and typists always exceeds the supply at salaries of from \$30 to \$50 a week. The Tulloss New Way makes you an expert, one who can start in at a large salary. Complete course in shorthand and typewriting, new principles, master exceptional speed and accuracy. You can write shorthand the new way 125 to 150 words a minute. You can typewrite 80 to 100 words a minute and with this speed goes accuracy and ease of operation—no fatigue as with the old way. Remarkable methods—remarkable results. You learn faster the Tulloss New Way. No previous stenographic schooling necessary. Train at home during your spare time. Only about half usual cost—you will become a far more efficient stenographer—worth more money than the average right from the start. If already a stenographer you nevertheless need New Way training to speed typewriting, for no matter how good you are in shorthand, you can never expect the high salaried position until you get speed, real speed and accuracy on a typewriter. Quickly acquired in ten easy lessons. Will send you free our amazing book, "How to Be a Big Man's Right Hand." It tells how business men choose their private secretaries, how they advance them to executive positions. Send postal or letter and indicate whether you are interested in the complete stenography course or simply speed typewriting. No obligation—write today.

THE TULLOSS SCHOOL 130 College Hill Springfield, Ohio

"He thought I was only bluffing, so he waved his hands jauntily and told me I could go any time I wanted to.

"Put that in writing!" I said.

"I had sense enough to know that this gave me the advantage; because he wasn't breaking the contract, but was simply giving me permission to break it whenever I chose.

"Well, I went off with my precious bit of paper—and the next morning took an early train to Vienna, four hours distant. I didn't tell anyone that I was going. I'm afraid I deceived my mother with some fib about having to rehearse all day.

"I went straight to the manager of one of the best musical comedy theatres in Vienna and asked to be taken on. After I had sung and danced, to show what I could do, he told me to go back home and that he would let me know if he needed me.

"THAT was an unexpected jar! I had thought he would engage me on the spot; and I reached Budapest at seven o'clock that evening, very low in my mind. I was sure I never would hear from him, so I observed a discreet silence about my expedition.

"Three weeks later, however, I almost had heart failure when I received a letter with the name of the Vienna theatre on the outside of the envelope. When I could screw up my courage to open it, I found that it contained an offer of a three-year contract. Maybe I wasn't glad then that I had a written release from my Budapest manager! When I told my parents, Mother wept tears of horror at the idea of letting her 'baby' climb out of the home nest. But my father came to my aid—as he always did, God bless him!—and gave his consent.

"So, at sixteen, I found myself in Vienna, which I expected to take by storm in—well, say a month, at the outside. For six months I didn't do a thing at the theatre—except draw my salary! It was the story of Budapest all over again. The Viennese had just as bad a case of ingrowing loyalty to their old favorites as the Hungarians had. Actresses who had become popular soubrettes before they got their growth had become amazonian in height, and also in circumference, but they were still doing soubrette parts and were as popular as ever.

"Those theatres, you know, have stock companies; and the members who make good get a lifelong lease on their jobs. There's nothing of that sort over here; so it is hard for an American to understand the trap in which I found myself.

"After about six months of salaried idleness, I mutinied. The manager could hold out only a hope that *somebody* would die *someday*. But they all looked frightfully healthy to me, so the hope wasn't a rosy one.

"Then, one day, I was walking in the park with some friends when a man stopped us and began talking to one of my companions. It turned out that this angel in disguise was the manager of an amusement place known as 'Venice in Vienna.' One of the attractions there was a theatre where musical comedies were given. The manager, Mr. Fuerst, was in despair, because his chief soubrette—I'd better call her Smith—had announced that she was going to take a vacation. She was to leave in three days; and Mr.

Fuerst was madly scouring the town to find somebody for her part.

"Here's the very person!" declared my friend, pointing at me.

"He had to point, because I was so small Mr. Fuerst had trouble in locating me. When he finally spied me, he wanted to know if I could sing. 'Sure!' I said—or the German equivalent for it. You see, they spoke German in Vienna and I had been trying to learn it. Could I dance? ... 'Sure!' Had I any experience? ... 'Sure!' 'All right! come to the theatre this afternoon for a rehearsal.'

"The rôle was that of a boy, a shoemaker's apprentice. The Smith woman was almost as big as a drum major! She had a temper that matched her size, too. The morning after my first rehearsal with the company she announced that she was going to leave that afternoon! Mr. Fuerst tore his hair; but he might as well have saved it, for she went.

"She went—and I went on, after only one full rehearsal. But in spite of that I got along all right! She wanted me to fail. But I knew she did; and this very knowledge roused every drop of fighting blood I had. I made a big hit.

"Smith had said she was going away for a month. But at the end of three weeks she turned up one evening when I was getting ready for the performance, and ordered me out of her dressing-room. Evidently the news of my success had made her cut short her vacation.

"You get out of here!" she commanded, with her most drum-majorish manner. 'I am going on, myself, to-night.'

"I rather expected to be taken by the collar and lifted bodily out of the room, but I stood my ground.

"Did Mr. Fuerst say I was to get out?" I inquired.

"No—but I say so!"

"Well," I remarked, much more calmly than I felt, 'I take my orders from Mr. Fuerst, not from you.'

"The upshot of it all was that she and Mr. Fuerst had a heated squabble and she resigned, never dreaming that he would let her go. But he did; and I played out the season. Which all goes to show," laughed Mitzi, "that you never can tell when and where the lightning of good luck will strike.

"LESS than a year after my experience with the Smith person, William Morris saw me in Vienna doing a parody of Rostand's 'Chantecler,' and offered me a vaudeville tour in America.

"That was another time that the lightning of luck hit me. But at least I had the courage to take advantage of it. I hustled back to Budapest, got my father's consent—poor Mother thought he and I were both crazy—and then I made my preparations, with what I thought was the wisdom of Solomon."

Mitzi laughed her irresistible chuckling laugh at the recollection.

"I wish you could have seen me!" she said. "Over there, as I've been trying to explain to you, the popular actresses were—well, I'll be polite and call them mature. So I naturally thought that if I wanted to impress the public over here I must try to look at least thirty, and as if I'd been on the stage for a million years, more or less.

"We got a dressmaker to come to the

# "Good-Bye— I'm Very Glad to Have Met You"

But he isn't glad. He is smiling to hide his confusion. He would have given anything to avoid the embarrassment, the discomfort he had just experienced. Every day people who are not used to good society make the mistake that he is making. Do you know what it is? Can you point it out?

HE couldn't know, of course, that he was going to meet his sister's best chum—and that she was going to introduce him to one of the most charming young women he had ever seen. If he had known, he could have been prepared. Instead of being ill at ease and embarrassed, he could have been entirely calm and well poised. Instead of blustering and blundering for all the world as though he had never spoken to a woman before, he could have had a delightful little chat.

And now, while they are turning to go, he realizes what a clumsy boor he must seem to be—how ill-bred they must think him. How annoying these little unexpected problems can be! How aggravating to be taken off one's guard! It must be a wonderful feeling to know exactly what to do and say at all times, under all circumstances.

"Good-bye, I'm very glad to have met you," he says in an effort to cover up his other blunders. Another blunder, though he doesn't realize it! Any well-bred person knows that he made a mistake, that he committed a social error. It is just such little blunders as these that rob us of our poise and dignity—and at moments when we need this poise and dignity more than ever.

## What Was His Blunder?

Do you know what his blunder was? Do you know why it was incorrect for him to say "Good-bye, I'm very glad to have met you"?

What would you say if you had been introduced to a woman and were leaving her? What would you do if you encountered her again the next day? Would you offer your hand in greeting—or would you wait until she gave the first sign of recognition?

Many of us who do not know exactly what the correct thing is to do, say, write and wear on all occasions, are being constantly confronted by puzzling little problems of conduct. In the dining-room we wonder whether celery may be taken up in the fingers or not, how asparagus should be eaten, the correct way to use the finger bowl. In the ballroom we are ill at ease when the music ceases and we do not know what to say to our partner. At the theatre we are uncertain whether or not a woman may be left alone during intermission, which seat the man should take and which

the woman, who precedes when walking down the aisle.

Wherever we go some little problem of conduct is sure to arise. If we know exactly what to do or say, the problem vanishes. But if we do not know what to do or say, we hesitate—and blunder. Often we realize just a moment too late that we have done or said something that is not correct.

## Are You Sure of Yourself?

If you received an invitation to a very important formal function today, what would you do? Would you sit right down and acknowledge it with thanks or regrets, or would you wait a few days? Would you know exactly what is correct to wear to a formal evening function? Would you be absolutely sure of avoiding embarrassment in the dining-room, the drawing-room, when arriving and when leaving?

Everyone knows that good manners make "good mixers." If you always know the right thing to do and say, no social door will be barred to you, you will never feel out of place no

matter where or with whom you happen to be. Many people make up in grace and ease of manner what they lack in wealth or position. People instinctively respect the well-bred, well-mannered man and woman. They are eager to invite them to their homes, to entertain them, to introduce them to their friends.

Do you feel "alone" at a social gathering, or do you know how to make yourself an integral part of the function—how to create conversation and keep it flowing smoothly, how to make and acknowledge introductions, how to ask for a dance if you are a man, how to accept it if you are a woman?

## Famous Book of Etiquette in Two Volumes, Sent Free for 5 Days' Examination

You have heard of the Book of Etiquette, of course. Perhaps you have been wish-

ing that you could see it, examine it, read one or two of the chapters. Perhaps, even, you have had a secret desire to have your very own little problems solved for you by this famous, authoritative work.

Here is your opportunity to read, study and examine the complete, two-volume set of the Book of Etiquette absolutely without cost. For 5 days you may keep the set and examine it at our expense. Read the chapter on wedding etiquette, on the bride's trousseau, on speech, on dancing. Don't miss the chapter called "Games and Sports" and be sure to read about the origin of our social customs—why rice is thrown after the bride, why black is the color of mourning, why a tea-cup is given to the engaged girl.

You be the judge. If you are not thoroughly delighted with the Book of Etiquette, if you do not feel that a set should be in your home—in every home—just return it to us and the examination will not have cost you anything.

Surely you are not going to miss this opportunity to examine the Book of Etiquette free? We know you are going to clip and mail the coupon at once.

## Send No Money—Coupon Brings Books

When the Book of Etiquette arrives, glance at the illustrations, read the introduction, read a page here and there through the books. Look up and solve the little problems that have been puzzling you. Within the 5-day free period decide whether you are going to return the books without obligation, or keep them and send us only \$3.50 in full payment. Remember this is not an order—it is merely a request for free examination.

Clip and mail this coupon at once, before it slips your memory. There is no time like NOW to do it. Get it into the mail-box today. NELSON DOUBLEDAY, INC., Dept. 581, Garden City, N. Y.

## Free Examination Coupon

NELSON DOUBLEDAY, Inc., Dept. 581,  
Garden City, New York

Without money in advance, or obligation on my part, send me the two-volume set of the Book of Etiquette. Within 5 days I will either return the books or send you \$3.50 in full payment. It is understood that I am not obligated to keep the books if I am not delighted with them.

(Price outside U. S. \$3.50 cash with Order.)

heads off to please them! It really would pay an audience, just from a selfish point of view, to be nice and friendly at the beginning of a performance. They would get their reward, for the actors would inevitably give them a better show.

"A good many stage people will tell you that they would rather play to men than to women. I wouldn't! I love to play to women. It seems to me that they are much more ready to be friends than men are. Most men are from Missouri; they sit there solidly, waiting to be shown. Women are willing to meet you half way.

"There are dozens of women, in the cities where I have played, with whom I have a sort of friendship, although I never have seen them except across the foot-lights. They come to the same show several times and always sit in the same seats. We played ten weeks in Chicago last winter; and there were women who came to the show five or six times. I know their faces as well as I know the faces of my real acquaintances. There is hardly a city where I have played an engagement that I do not look for the faces of these unknown friends. And nine tenths of them are women.

"PEOPLE always want to know which night of the week we get the most responsive audience. The answer is easy; Saturday night! And the explanation is equally easy; everybody is in holiday humor, with the week's work over and no need of getting up early Sunday morning.

"I guess the Monday-night audience is the most difficult. It always seems to be nursing a grouch; so it is usually 'blue Monday' for the actor. Monday night is supposed to be the night when 'the nicest people' go to the theatre. And, of course, 'the nicest people' are likely to be blasé—or they want to be considered blasé. Other people go Monday night because they couldn't get tickets for any other performance. Maybe that makes them peevish. Anyhow, the week usually begins at the ebb of Monday night and works up to the high tide of Saturday night."

"Well," I said, "what is the big thing you have got out of it all?"

"The big thing?" echoed Mitzi.

"Yes. Everyone's story has some meaning for the rest of us; something we can, so to speak, take home and put on the parlor mantel, and look at and say 'There's the nugget of gold that person dug up.'"

"I see!" exclaimed Mitzi, and her blue eyes dilated with interest. She thought for a moment. "You remember what I said about the courage of fear? Well, I guess that's my gold nugget. There have been times when I've been afraid—even afraid of good luck! In fact, it seems to me that *good* luck is ten times as dangerous as *bad* luck; because what you do once by good luck you must be able to do again *without* the help of luck. I know people who are afraid to take a chance when it comes to them. I'll take every one I see! I know failure is right there, ready to get me. But, as I said before, when you know you're in danger you can do more than you dreamed you could. If a burglar attacked me—wow! I expect I'd be a regular little wildcat. I'd have the courage of fear. That's what you have when you tackle *anything* that will get you if you don't get it first."

## Five New Ways

To whiter, cleaner, safer teeth—all late discoveries

Dental science has been seeking ways to better tooth protection.

All old methods proved inadequate. Tooth troubles were constantly increasing. Very few escaped them. Beautiful teeth were seen less often than now.

Dental research found the causes, then evolved five new ways to correct them.

### The chief enemy

The chief tooth enemy was found to be film—that viscous film you feel. It clings to teeth, enters crevices and stays.

Food stains, etc., discolor it. Then it forms dingy coats. Tartar is based on film. Most teeth are thus clouded more or less.

Film also holds food substance which ferments and forms acids. It holds the acids in contact with the teeth to cause decay. Germs breed by millions in it. They, with tartar, are the chief cause of pyorrhea.

### Much left intact

Old ways of brushing left much of that film intact, to cloud the teeth and night and day threaten serious damage.

Two ways were found to fight that film. One acts to curdle film, one to remove it, and without any harmful scouring. Able authorities proved those methods effective. They were embodied in a tooth paste called

Pepsodent, and dentists the world over began to urge its use.

### Other essentials

Other effects were found necessary, and ways were discovered to bring them. All are now embodied in Pepsodent.

Pepsodent stimulates the salivary flow—Nature's great tooth-protector.

It multiplies the alkalinity of the saliva. That is there to neutralize mouth acids, the cause of tooth decay.

It multiplies the starch digestant in the saliva. That is there to digest starch deposits on teeth which may otherwise ferment and form acids.

It polishes the teeth so film less easily adheres.

### Prettier teeth came to millions

One result is prettier teeth. You see them everywhere—teeth you envy, maybe. But that is only a sign of cleaner, safer teeth. Film-coats, acids and deposits are effectively combated.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

# Indecision—the Worst of Bad Habits

(Continued from page 21)

## The 3-in-One Family

has been making things run smoothly for the human family for over twenty-seven years.

There's a suitable size package for every need in any person's house. Three different bottles, 1-oz., 1-qt., and 8-oz.; and a 2-oz. Handy Oil Can with screw top, that fits into any machine device.

A very important thing is the Dictionary wrapped with every bottle, that illustrates and explains the almost endless number of uses for

## 3-in-One

The High Quality Household Oil

Lubricates all light mechanisms, from the lock on your door to the sewing machine and motor of electrical devices.

Cleans and polishes brass, furniture and household, painted and varnished surfaces, including furniture.

Prevents rust and corrosion on metals. Lubricates the parts of compound springs, valves, pistons. Won't evaporate or become gummy.

Say "3-in-One" to your dealer. A good one won't mislead.

**FREE**—Send for sample and literature of uses. Request form on 3 posted.

**THREE-IN-ONE OIL COMPANY**  
100 E. Broadway New York City

U.S.A.

Most of our houses as well as our businesses, and our souls as well as our alimentary tracts, are distressed by lack of elimination.

Take the library, for instance. I have got past the point where I respect a library because of its size. An enormously large library is not necessarily entitled to admiration any more than an enormously fat man. About nine tenths of all the libraries I ever saw are composed of material that ought to be sent back to the paper-making machines.

About once a month the second-hand man's wagon backs up to my door and gets a load of book trash. The books I want to keep are few. I have read somewhere that Oliver Wendell Holmes had reduced his library to but a dozen or so volumes at the time of his death. The reason we keep useless books is because we haven't the moral courage to give them away.

**AND** for that matter you can not only tell the indecisive man by the looks of his desk and the indecisive woman by the looks of her house, but you can tell the indecisive person by his face, by his clothes, by his speech and by his actions. You can tell the woman that does not know what she wants and cannot make up her mind whether to go and get it, by the way she does up her hair.

Decisiveness is a characteristic of mastery. The noticeable thing about any master's work is the sureness of his touch. There is no waste nor any haphazard strokes in the carvings by Giotto on the Campanile at Florence nor in Michael Angelo's paintings in the Sistine Chapel. When Paderewski plays the piano or Isaye the violin, the most marked difference between that music and the performances of amateurs is that every tone is clear, final, sure, and unhesitating. What you pay for when you hire a great surgeon who is at the head of his profession is the way that surgeon has of doing things swiftly but unhurriedly, and also the fact that he knows what he knows and, what is equally important, he recognizes that there are things he does not know, and wastes no time on them.

And yet there are people who take a vacuous pride in indecision. Lucille, for instance, just never answers her letters; she can't get around to it. She's too busy being temperamental. And Hortense has commenced at least six diaries, and managed to keep them up for a dozen days each. She could never form the decisive habit of attending to it regularly. And charming Eva is always late. The reasons of her lateness are many, but the greatest common divisor of them all is indecision. She could not decide when to start getting ready; she could not decide which dress to wear; she could not decide how to do her hair, and she could not decide whether to put on her jade earrings or the pearls. Hence, eleven other people were kept waiting for dinner. Ten of these eleven wanted to murder Eva, and the eleventh man was

restrained from this impulse simply because he was in love with her. He married her afterward and did murder her.

The reason that we fall into indecision so easily is that *decision* involves thinking. And the hardest thing in the world to do is to think. There is nothing people hate more than thinking. We hate it so much that we hate the kind of people that think.

To understand this we must agree on a definition of what thinking is. Thinking is not the aimless functioning of the mind. What most people call thinking is merely reverie, just wandering along from one mental picture to another as a stream of water flows deviously along the ground; but the very essence of thinking is *decision*.

Any thinking that amounts to anything and is worthy of the name consists in weighing probabilities. Nobody can tell exactly what is best nor exactly what is right. All we can do is to weigh the evidence on one side and the other, and see which is the heavier. Most of us hate to decide things, because we are not certain. We can never be certain. That is to say, the only certainty we can have is to be certain of the preponderance of probability.

The decisive man has the advantage over the indecisive, not in the fact that he is always right but in the fact that he is always efficacious. He does not always decide rightly but he always decides something. In other words, he can be depended upon, as they say on the street, to "get action."

**IT IS** a singular thing that the three most important subjects in the world are the three that we most hate to think about. These are religion, government, and money.

I know it is dangerous ground and I don't wish to wound anyone's feelings, but I think we all must acknowledge that the essence of what we call our principles, our fundamental convictions, is that they are things that we simply refuse to think about. Having accepted a creed or platform, we are perfectly willing to read, study, argue, and speechify to prove that we are right. But we are not only unwilling to do any mental work to find out whether we are right in the first place or not, but we regard anyone who suggests such a thing with peculiar horror.

It is the same way with politics. Politics has to do with our Government, which in turn has to do with our liberties, our rights, and our taxes. Surely if there is anything worth thinking about, it is that. But do we think about it? Will we think about it? We do not and we will not.

We have a contraption known as the political party, which does our thinking for us. We love this thing and cling to it simply because it saves us the enormous mental exertion of deciding things for ourselves. Even great minds, such as those possessed by statesmen, judges, senators, Presidents, and other monsters of intelligence come trotting right along with their tails between their legs when the political party whistles.

## How to Reduce your Weight

**YOU NEED** not carry one pound of excess fat. You can reduce in a dignified, simple way in the privacy of your own home.

**I KNOW** you can because I have reduced 50,000 women from 30 to 85 pounds each; and what so many others have done **YOU** can do. Don't reduce by drugs, you'll ruin your health; nor by diet alone, you'll look old if you do. My way is the **correct** safe way and you enjoy every step.

**Individual Instruction** I attribute my marvelous success to the fact that I give each woman special instructions just for her individual case. I build your vitality, strengthen your heart, and teach you how to stand, walk and breathe.

Send me your height, weight, age, and I will tell you just what you should weigh. Your letters are held in strictest confidence. If you write **NOW** I will send you **FREE** my illustrated booklet. Write to me today.

**Susanna Cocroft**  
Dept. 901 1819 Broadway New York

### Read What One Pupil Writes:

"Last year I weighed 214 pounds—this year 146. It is surprising how easy I did it. I feel 15 years younger and very much stronger."

And not only that, but they regard this as a cardinal virtue. They are proud to throw out their chest, slap the same, and call themselves loyal party men. They boast of having been a lifelong Republican, or a Democrat of three generations, which simply means that for one lifetime or three somebody else has done their thinking for them.

Most forms of mob madness are based upon the unwillingness of the many to think. The only way you can organize a strike and work people up to the point where they will burn railroad cars and slaughter scabs is so to drill them in "loyalty" that they will let their leaders do their thinking and make their decisions for them. And the only way you can get perfectly respectable gentlemen to starve women and children and reduce working people to the level of brutes is to furnish them with a corporation that will prepare for them specious, platitudinous "principles," and hire remote agents to carry these principles into infamous operation.

**I SAID** a moment ago that decision may become the rarest of pleasures. This is a truth I implore you to accept. The mind of man is overgrown with many noxious delusions; such, for instance, as that work is an affliction, that war is human nature, or that happiness is a town situated somewhere on the River of Alcohol; but no delusion is more deadly than the delusion that virtue or good habits are unpleasant and that the people who have most fun are the moral slob.

As a matter of fact, contentment is what we are all after. And contentment is almost entirely a matter of good habits, and among all the good habits the habit of decisiveness is chief.

This is true even in love. Many a woman has let herself in for a lifetime of disappointment simply because she could not make up her mind, and allowed herself to be over-persuaded into picking the wrong partner.

And most of the tragedies of affection arise not from too much passion but from indecisiveness of passion. Most people suffer, not because they want too much but because they do not know what they want.

Indecision is a form of weakness, and the greater portion of the tears and heart-break of this world come upon us as a result of the sins of weakness.

Indecision has its root in fear, and fear is the fundamental sin. There are many things we may have to be; we may have to be poor, or to suffer ill health. But there is one thing we do not have to be: We do not have to be afraid.

There are few better rules of life than the three that come down to us from an early English poet:

"Be bold, Be bold, and everywhere, Be bold."

**MARY B. MULLETT** will tell you next month the amazing story of Charles Hutchison, "The Stunt King of the Movies." Mr. Hutchison's career in the motion-picture field has been a succession of thrilling, almost incredible adventures. You will not only find these described and pictured—but you will learn of the physical and mental discipline by which they have been accomplished.

# NOW FREE!

## The Book That Has Shown Thousands the Way to Big Salary Increases

**Do you want to start right out making more money than you ever thought possible? Here is the book which gave many their start. Read how it is now offered to you—FREE!**

Take this situation. A man who had worked all his life in a routine job at low pay suddenly surprises his friends by moving into a better neighborhood, taking a big house, buying a car and blossoming out as a well-to-do and influential citizen in his new community. How did he do it? What is the secret that he used? Simple enough. He knew that the biggest money in business is in Selling, and though he felt that he couldn't sell a thing, he suddenly learned the secrets that make Master Salesmen and then began to make big money.

If only one man had found inspiration enough in this remarkable book to jump to a sudden brilliant success in the Selling field—into a job paying him many times his former salary—then you might call it luck. But a great number have done it. For example: Charles Beery of Winterset, Iowa, stepped from \$18 a week making him \$1,000 the very first month. J. P. Overstreet of Dennison, Texas, read this remarkable book, left a job on the Capitol Police Force at a salary of less than \$1,000 a year and in six weeks earned \$1,800. F. Wynn, Portland, Ore., earned \$554.37 in one week. Geo. W. Kearns of Oklahoma City found in this book a way to jump his earnings from \$60 a month to \$524 in two weeks, and C. W. Campbell learned from it how he could quit a clerking job to earn \$1,632 in thirty days.

### Your One Chance to Make Big Money

Not one of these men had ever sold a thing before—not a dime's worth. If you had told one of them that he could sell he would have laughed at you. Yet every one of these men through reading this book discovered the fallacy of this vicious old idea that Salesmen are "born."

They learned that *Master Salesmen are made!* And in this book they found an easy way to jump from low pay to substantial earnings.

### Simple as A B C

Sounds remarkable, doesn't it? Yet there is nothing remarkable about it. There are certain ways to approach different types of prospects to get their undivided attention—certain ways to stimulate keen interest—certain ways to overcome objections, batter down prejudices, outwit competition and make the prospects act.

If you will learn these principles there is waiting a brilliant success and more money than you ever thought of earning. This book, "Modern Salesmanship," tells exactly how the National Salesmen's Training Association will make you a Master Salesman.

As soon as your training is completed the Employment Service of the National Salesmen's Training Association helps you to select and secure a selling position as city or traveling salesman.

### Now Free to Every Man Who Will Act at Once

We are not making any extravagant claims about what we will do for you. We don't have to. The records of the truly remarkable successes for which we are responsible, are so fine a testimonial of the fact that any man of average intelligence can become a Master Salesman that we are willing to leave the decision entirely up to you. All of this proof and many important features about Salesmanship are contained in our new book, "Modern Salesmanship." It is yours—FREE. Send the coupon for it today. It will show you how you can quickly become a Master Salesman—a big money maker. It will tell you about the National Salesmen's Training Association system of Salesmanship training that has meant prosperity to so many men—about the National Demonstration method that gives you actual experience while studying—and all about the amazing opportunities that await you in the selling field.

Failure to act may mean that you lose the one big chance of your life to leave forever behind you the low pay of a routine job. Mail this coupon now.

HEINZ Tomato Ketchup makes everything on the table taste better. It's bound to—made of only luscious, red-ripe tomatoes pure granulated sugar, the purest of spices—and cooked and seasoned in Heinz spotless kitchens.

HEINZ  
Tomato Ketchup

## Is Your Brain Power Increasing With Your Age?

(Continued from page 13)

you might find that the younger man would give a more accurate verbal rendering of the text. An older man of equal intelligence, however, would furnish a more sympathetic interpretation of the thoughts concealed in the philosophy of the noble old Roman.

History is peculiarly a subject for the adult mind. If I were to remark to a class of young students: "And so, Henry the Eighth, becoming tired of Anne, decided that he would have her executed and take unto himself a new spouse—" their memories would largely be limited to the mere words that fell from my lips. But a group of mature men, ripe in experience and familiar with all phases of domestic life, would get a clear picture that would illuminate both the fickle monarch and the times in which he lived.

IN MY youth I was an energetic student of Greek history. Indeed, I could quote pages of it by heart and I thought that I had a clear understanding of it all. Recently I reviewed my Greek history and I found fresh light shining forth on every page. I read of Pericles and the political life of his day. In the squabbles of the party of the mountains, the party of the plains, and the party of the sea I found mirrored the same sort of political strife with which I had become familiar through years of observation of American politics.

In the study of English and American literature youth may have a slightly greater facility for acquiring names, dates, and the views of *other men* about the author whom they are considering. But for a full understanding of the underlying meaning we must turn to maturity.

Suppose that I were to read to a class from Enoch Arden:

But Enoch yearned to see her face again:  
"If I might look on her sweet face again  
And know that she is happy." So the thought  
Haunted and harassed him, and drove him forth  
At evening when the dull November day  
Was growing duller twilight, to a hill  
There he sat gazing down on all below:  
There did a thousand memories roll upon him,  
Unspeaking for sadness.

A fifteen-year-old student could easily memorize those lines, letter-perfect, but to understand fully and sympathetically the thoughts that swept through Enoch's mind as he sat on the somber autumnal hill one must have the experience and range of maturity.

Our classrooms have shown us that in a study of the bare facts of such sciences as botany and biology, chemistry and physics, youth and maturity are about on a parity. But in the philosophy and reason behind these facts, in the practical application of them, we find that the more mature man has a decided advantage. He is better able to appreciate the trend of evolution; he is abler in the commercial application of chemical formulae to industry.

In those chapters of geology that deal with various rocks and the concrete facts about them, there is little difference in the grasp of the young and of the adult mind. In the commercial application of these facts to mining, to the discovery of oil wells, in the entire scheme of hitching science up to human welfare, the older man is the better qualified, all other things being equal.

Often I hear middle-aged folks remark that their memory isn't "as good as it used to be." To such comments I feel like replying "Neither would your right arm be as good if you were accustomed to carry it in a sling!" Did you ever notice anything wrong with the memory of the old cobbler around the corner, who takes one glance at your face when you leave your shoes with him, and picks them out of a big pile and returns them to you several days later? Have you discovered any mnemonic shortcomings in the bent and wrinkled tailor up the block who receives your suit for pressing and unhesitatingly picks it out of a long row the moment he sees your face the next day?

When the average man enters business he has had at least five years of schooling—during which he has had to memorize a variety of lessons day after day. This drill now becomes a thing of the past. Soon he starts depending on memoranda and jotted notes—a subterfuge that the classroom denied him. Presently he settles into more or less of a rut. Fewer fresh impressions impinge on his mind. Is it any marvel, under the circumstances, that his memory loses some of the easy apprehension and retention of youth?

NOTHING in my experience or observation indicates that a middle-aged man, in good health and with good habits, has the slightest impairment in his power to memorize. Indeed, there should be—and often is—an improvement in this faculty, along with the general mental vigor of maturity. To keep his memorizing ability fully effective, however, he must voluntarily make assiduous use of it, just as he was forced to use it in school.

Philosophy is a subject that appeals preëminently to the mature mind. If I say to a class of young students in philosophy, "All men are interdependent—so each man should be dependable," the average individual might glibly grab my remark as an epigram. An older man, however, would think it over and analyze it. He would consider the industrial fabric of human society. He would remember that everything we eat, everything we wear, the cars and the ships in which we ride, are fashioned for the most part by other hands. Then he would grasp the full significance of the need of dependability on the part of every human being.

Youth may have a slightly greater facility in assimilating the bare facts of such studies as accounting and economics. Age steps into the lead, however, in a consideration of the philosophy of economics,

*"A man has but one moment of life to call his own.  
 "The moment just passed into the score of Time's count, the moment  
 which the hand of the clock trembles over, a hair's breadth yet to go—  
 these are no man's to claim. One is gone forever; the other may mark  
 the passage of his soul.  
 "Only this moment, this throb of the heart, this half-drawn breath, is  
 a living man's to claim. The beggar has it—the monarch can command  
 no more."*

## The Value of Time

CHIEF train dispatcher for the world, I am chief life  
 dispatcher for all men.

Fresh minted from my hand, behold a New Year now  
 spread out before you.

Half a million golden minutes—a royal treasure!  
 Beware lest it slip away through careless fingers.

A New Year's resolution? Aye, here is one. Say to  
 yourself every morning of the year, "Today I will make  
 every minute count!"

That this will make all your dreams come true, who  
 should know so well as I?

*For I am Father Time.*

*For over half a century, Father Time has  
 been the official Trade Mark of those  
 faithful guardians of America's minutes—*

# Elgin Watches

MADE IN ELGIN, U. S. A.

# Which of these two men has learned the secret of 15 minutes a day?

*The secret is contained in the free book offered below. Until you have read it you have no idea how much 15 minutes a day can mean in growth and success. Send for your copy now*

**H**ERE are two men, equally good-looking; equally well-dressed. You see such men in every social gathering. One of them can talk of nothing beyond the mere day's news. The other brings to every subject a wealth of sidelight and illustration that makes him listened to eagerly.

He talks like a man who has traveled widely, though his only travels are a business man's trips. He knows something of history and biography, of the work of great scientists, and the writings of philosophers, poets, and dramatists.

Yet he is busy, as all men are, in the affairs of every day. How has he found time to acquire so rich a mental background? When there is such a multitude of books to read, how can any man be well-read?

The answer to this man's success—and to the success of thousands of men and women like him—is contained in a free book that you may have for the asking. In it is told the story of Dr. Eliot's great discovery, which, as one man expressed it, "does for reading what the invention of the telegraph did for communication." From his lifetime of reading, study, and teaching, forty years of it as president of Harvard University, Dr. Eliot tells just what few books he chose for the most famous library in the world; why he chose them, and how he has arranged them with notes and reading courses so that any man can get from them the

essentials of a liberal education in even fifteen minutes a day. The booklet gives the plan, scope, and purpose of

## Dr. Eliot's Five-Foot Shelf of Books

*The Fascinating Path to a Liberal Education*

Every well-informed man and woman should at least know something about this famous library.

The free book tells about it—how Dr. Eliot has put into his Five-Foot Shelf "the essentials of a liberal education," how he has so arranged it that even "fifteen minutes a day" are enough, how in pleasant moments of spare time, by using the reading courses Dr. Eliot has provided for you, you can get the knowledge of literature and life, the culture, the broad viewpoint that every university strives to give.

"For me," wrote one man who had sent in the coupon, "your little free book meant a big step forward, and it showed me besides the way to a vast new world of pleasure."

Every reader of this page is invited to have a copy of this handsome and entertaining little book. It is free, will be sent by mail, and involves no obligation of any sort. Merely clip the coupon and mail it to-day.

P. F. COLLIER & SON COMPANY

business administration, and business law. Although I taught economics in my youth I found it was only with the advent of maturity that I came to a ripened appreciation of the subject, and I am confident that the years to come will bring clearer perceptions and broader understanding.

I find that many men in their thirties and forties are afraid to embark upon a new business or profession, despite the fact that the years have demonstrated clearly that they are unfitted for the work into which they were thrown by the force of circumstances. Often they doubt their capacity to absorb the technique of the job to which their inclination beckons. There is little need for a man to be paralyzed by such a fear. American industry is studded with the names of men who have gone into new lines of effort in middle age and registered marked successes.

The general principles of most business enterprises are similar. Of course there are some highly technical subjects—electrical engineering—let us say, in which a middle-aged man would be greatly handicapped starting from scratch in a race with men who have been following for years the chameleon-like developments of the profession.

**B**EFORE making a complete change in occupation, a mature man should survey his situation with extreme care. He should remember that the tree of human effort is a main trunk with many branches, some high and some low. In his youth he set out to climb this tree. Presently he saw a branch that looked inviting—and out he climbed! Years have gone by, and now he is tired of the branch, or he is convinced that he made a mistake in selecting it. A higher or a more shady branch looks very inviting. Should he change to it?

Such a change would be a simple matter if he could reach up and lift himself bodily to the other branch. That course, however, is in contravention of the law of human effort. Instead, he will have to wriggle back to the main trunk and shinny slowly upward to the more inviting branch—which is already crowded with permanent residents! Whether his accumulated experience, plus the intensity of his desire, will make the venture advisable is a question he must decide for himself.

He may have the stimulating knowledge, however, that a man of middle age, who has not allowed himself to go stale, is supremely equipped for any undertaking. All human history is proof of this. Several years ago W. A. Newman Dorland made an interesting analysis of the activities of four hundred of the world's most famous men. He found that these men, on the average, produced their *master work* at fifty years of age, and that most of them were working with unabated vigor until long past that age.

The analysis uncovered some other very significant facts. It showed that these men did not start to manifest mental activity along the lines in which they later became famous until an average age of twenty-four.

Composers of music started earliest—at an average age of seventeen. Actors turned their faces toward the profession at eighteen; warriors, clergymen, artists, and jurists at an average age of twenty-two; dramatists and playwrights at twenty-three; poets, physicians, surgeons, inventors, chemists, physicists, and natu-

ralists at twenty-five. It was not until the age of twenty-six that explorers, novelists, essayists, historians, astronomers, mathematicians, and statesmen generally began to develop their respective lines of thought and activity. Philosophers generally got under way at twenty-seven and reformers at twenty-eight, while satirists and humorists did not begin to develop their talents until an average age of thirty-two.

In my observations of thousands of students, and of human activity as a whole, I have come to a positive conclusion that so-called *genius* is a negligible factor in achievement. Men who are known as "geniuses" merely have the priceless faculty of *concentration*—while the companions whom they outstrip are frequently the victims of weak-willed and purposeless wandering. When Walt Whitman defined genius as 98 per cent directness he was voicing a great truth.

Although composers, as a rule, got under way at an early age, many of the greatest musical compositions of all time were the products of riper years. At seventy-four, Verdi gave to the world "Otello," often rated as his masterpiece; while his "Te Deum," a marvelous musical composition in a different field, came at the age of eighty-five.

The range of human activity shows plenty of parallels, Bacon gave us his masterly "Novum Organum" at fifty-nine; Kant was only two years younger at the time of the publication of his "Critique of Pure Reason"—a world masterpiece. Commodore Vanderbilt, Mr. Dorland shows, increased one hundred and twenty miles of railroad to ten thousand miles, and added one hundred million dollars to his fortune between the ages of seventy and eighty-three. At eighty-nine, Michael Angelo was still turning out his great canvases, while Titian was ninety-eight when he painted his "Battle of Lepanto." After a spectacular overthrow of the Conservative Government, Gladstone began his fourth term as Prime Minister of England at eighty-three. At the same age Tennyson gave us his sublimely beautiful "Crossing the Bar." Cato began the study of Greek and Plutarch the study of Latin at eighty. Chevreul, the great scientist, was actively and energetically engaged in his important work until his death at the age of one hundred and three!

**E**VERY man has intellectual self-determination. No tyrant can wrest it from him; no political marplot can juggle the boundaries of his mental conquests. If he allows his ambitions to lag, his machinery to rust in the potential prime of their powers, he has only himself to blame. It was a wise analyst who divided the mental working life of man into four decades: From twenty to thirty, the bronze age; from thirty to forty, the silver age; from forty to fifty, the gold age; from fifty to sixty, the iron age.

In his youth a man has two or three mental searchlights to play on any object whose recesses he would lay bare. Experience, observation, and ripened maturity add light after light. By the time he has reached middle age he should have a battery of forty searchlights in place of the small cluster of his youth. He is wise who will keep them trimmed and burning, and direct them with a steady hand.

## Jim Henry's Column

### Why?

I betray no confidence in saying that, to the best of my knowledge, Mennen's is the most widely, largely used shaving cream in the world.

Of course, the obvious deduction is that Mennen's must be the best, but I dislike comparative claims. All I have ever insisted upon is that it is unlike any other shaving cream.

If we only made a hundred tubes a day and you preferred it to other creams, it would still be the best in the world—for you.

Just the same, our enormous volume must mean something.

It was only a few years ago that every shaver used hard soap. Hard soap had held its own since the dawn of civilization. Habits as deeply rooted as that are not easily changed.

Then I began to ask you to try Mennen's. There never has been the slightest attempt to sweep you off your feet with extravagant claims. If you have honored me by reading a few of my advertisements, you will recall that they have all been built around this idea of trying—learning for yourself—a fair test.

Now, there has never been a sensational response to my advertising. Every day, a few men would send their dimes for my demonstrator tube. Presently, druggists became interested for some reason and ordered.

That, literally, is all there has been to the theory of selling Mennen's.

Yet, today, millions use it. I doubt if you ever go into a drug store that doesn't sell it. Most of these druggists will tell you that they sell more of Mennen's than of any other cream.

Even during the recent hard times, our business gained tremendously.

I can explain this result only in one way. Those who have tried it prefer Mennen's to anything else.

And, to change the subject, when you learn what Kora-Konia does to chafed skin—you'll want that also. It is a medicinal powder of extraordinary healing virtue. It places on raw skin a velvety film which sticks for hours protecting while it heals.

*I will mail a sample of Kora-Konia and my demonstrator tube of Mennen Shaving Cream for 10 cents*

## Queer and Ugly, But Worth Its Weight in Gold

(Continued from page 53)

Caribbean Sea, they hove to one time near a certain island; and while they were there a native negro came aboard bringing some pieces of stuff that he said were valuable. He showed them to the mate, who was in charge of the ship, and told him that he got them out of a dead whale on the beach in one of the bays of the island. He offered to show where the whale was, so the mate could get the rest of the 'valuable' stuff.

"But the mate—who was a Provincetown man and who told me the whole story when he came home—never had commanded a vessel until that trip. He never in his life had seen a piece of ambergris. That's nothing unusual. Many a man has gone whaling all his life and never laid eyes on ambergris. So this mate didn't dare buy the stuff, for fear it might be as worthless as it looked.

**T**HAT morning he had washed out a flannel shirt and a pair of dungarees and hung them over the rail to dry. They were old and ragged, almost worn out. So finally, in order to get rid of the negro, the mate offered him these old clothes in exchange for the pieces of queer stuff. The negro agreed and they made the exchange.

"The next day, another native, a sort of colored preacher, came aboard and told the mate the same story about the dead whale that was full of something 'valuable.' He explained that he was 'a man of God,' and for that reason couldn't take the stuff himself. I don't know why, but he said he couldn't; and he, too, offered to show where the whale was.

"The mate, however, refused again to keep the vessel waiting while he went to investigate. He didn't know what the lumps were, and he wouldn't take a chance on them. When he came home, he brought them to me—and I paid him eleven hundred dollars for the few pounds he had exchanged for a ragged shirt and dungarees!

"Meanwhile, a colored man living on another island down there heard about the whale and the stuff that was in it. He went and got what was left and sold it for thirty thousand dollars! The mate had lost a small fortune, because he didn't know enough to go after that ambergris.

"Even in that case, the ambergris itself wasn't found on the beach. And I have never known another case of its being found in a beached whale. I have known of only one case where it was found floating in the water. Captain Joshua Nickerson, who lives here in Provincetown now, was the lucky man that time.

"It happened a good many years ago, when Captain Nickerson was on a whaling voyage down off the coast of Africa. One day he was in his cabin when the mate came and told him that the lookout up in the crow's nest had sighted something floating ahead of the vessel. The captain went on deck to see what it was.

"Where is it?" he called.

"Comin' alongside, just abaft the bow," says the lookout.

"Well, it did come alongside, a lump of stuff bigger than a barrel, the top of it just showing above the water. The captain walked aft, looking over the rail at it as it went by. He had been going whaling for about thirty years but he never had seen ambergris.

"He followed it along to the stern and was going to leave it behind, when it occurred to him that it looked like a big lump of beeswax; and he remembered that a friend of his, a sailmaker, had asked him to bring home some beeswax if he had a chance to get some. The beeswax we get in this country doesn't begin to be as good as what comes from Africa, you know.

"So, thinking it might be wax, he ordered the men to lower a boat and bring the stuff aboard. When they finally hoisted it on deck, he could see that it wasn't wax, and at first he was going to have 'em heave it overboard again. But just then, he says, the thought came into his mind: 'Mebbe it's ambergris!'

"He couldn't believe, though, that this worthless-looking stuff could be anything as precious as that, so he told the men just to chuck it into the stern boat. The next day he fell in with another whaling vessel. It being calm weather, he signaled the captain to come aboard, and showed him the big lump in the stern boat. That captain, too, had never seen ambergris; but he advised Captain Nickerson to be on the safe side and take it home with him.

"When he reached port, Captain Nickerson had me go and look at it—and, sure enough, it was ambergris, sixty-one pounds of the finest quality! It just happened that the price wasn't very high then, because it fluctuates according to the quantity that is brought in. So it fetched only \$175 a pound; about \$11,000 for the lump. Still, that was a tidy little sum to find just floating in the water.

**T**HERE was another Provincetown captain that let a good-sized fortune slip through his fingers once. They had got some whales and were cutting up one of them alongside the ship when they found a big mass of something inside the carcass. The mate sung out for the men to open the gangway and put it aboard, because he was smart enough to know what it was they'd found. But the captain was a 'smart' fellow of another kind. When he heard the mate give that order, he shouted to him:

"What do you mean, giving orders like that? Don't you know that I'm the captain of this ship? Heave 'em a short-walk line' (that's five or six fathoms of rope), 'take a couple of half hitches around that stuff, and hoist it aboard!'

"Well, of course the crew had to obey the captain; so they did what he told 'em to. But as they were hoisting the lump aboard the rope slipped. The whole mass fell into the sea—and sank! I don't know why it sank. It isn't always light enough to float, and evidently this lump, which

was an immense one, was of that kind. Anyway, it went down in deep water and was lost. If that captain hadn't been so smart, he would have brought home ambergris that would have been worth more than his whole vessel, including the cargo!

"From the description the crew gave me of that piece it was larger than any one amount I have seen. The largest lump I ever saw weighed 110 pounds and fetched about \$29,000. The largest find I ever heard of was brought in by Captain Earle, of the bark 'Splendid,' of Nantucket, more than sixty years ago. According to report, he found a lump weighing over 900 pounds and got \$125,000 for it.

"The discovery of a big quantity like that naturally made the price drop, so he didn't get a top figure for it. If he could have kept the thing quiet and sold it off gradually, he would have made more out of it. But it would be hard to do that. When ambergris is found, the crew of the ship know it, of course. They share in the money it brings, too; and they always want to get their share as soon as possible.

"YOU might think that the dealers to whom I sell it, or for whom I act as agent, could prevent the news getting out and so keep the market steady. But the story of a find of ambergris is almost certain to leak out. It travels from one ship to another and from one port to another. You can't keep it a secret very long, so you might as well not try.

"The most valuable find of ambergris since I have been buying it was what was known as the 'Bank' lot, which was sold in London, in 1891, for about \$50,000. It weighed 162 pounds, 11 ounces, and was a mass six feet in circumference. Like most specimens, its quality was finest at the center, or core, of the lump, where it was whitish-gray in color and entirely free of the squid bills found in the outer layers. The outer parts of a lump are usually brown or black.

"Judging from the accounts I've read of this 'Bank' ambergris, they kept the discovery a secret more successfully than in any other case of a big find. It was called the 'Bank' lot because it was placed in the vaults of a bank for safe keeping. They did not even have a photograph made of it. I never have been able to learn who found the lot, nor where or how it was discovered.

"When an American whaling ship finds ambergris, the money it brings is divided, just as the money for their regular 'catch' is split up. A certain share goes to the owners of the vessel, the captain gets his percentage, or 'lay,' the other officers get theirs, and so on down to the crew. Sometimes a ship brings in only a few small pieces; but even those may fetch several hundred dollars. If there is a large quantity in a whale, part of it may be in a big mass, and the rest in small lumps, like cobble-stones, or like turnips. The queer thing about it is that the small lumps may be of the very finest grade. The whole subject is full of mystery. Even the experts and the scientists cannot explain it.

"As for people in general, they know nothing about ambergris, except that they have a vague idea it is rare and valuable. So if they pick up something on a beach, and can't make out just what it is, they jump to the conclusion that it's am-

## Expansion

A million new subscribers were linked to the Bell System during the past two years—putting into operation a million new routes of talk, and a corresponding increase in all intervening facilities such as switchboards, cable and long distance lines.

No other country is so well equipped as the United States for telephone communication. Yet, because of this—because the telephone is so useful—the demand for service keeps growing greater.

The growth of telephone

demand in the United States is greater than the growth of population. It is an intensive growth. An increasing percentage of the population is seeking telephone service.

The Bell System is providing for more investment, further technical achievement, more wires, switchboards and stations—and more subscribers. The American people require the best service. The best service means the most comprehensive service, not only for the necessities of to-day, but for the necessities of the future.

# Three Successful Men who failed in one great duty

THREE men conscientiously planned for the welfare of their families. To show wherein they failed may help other men in solving their own problems.

## 1

Mr. A. E. P. carried a large amount of life insurance, which was paid in a lump sum to his wife. Through unwise loans, the bulk of it was soon lost. Its protection could have been assured had Mr. P. left it in trust with a trust company. *He did not look far enough ahead.*

## 2

Dr. R. G., a physician, had accumulated considerable money. A friend was named executor of his will. This friend influenced the widow to invest in mining stocks, which turned out badly. Dr. G. could have protected his estate by naming a trust company. *He did not know about trust company service.*

## 3

Mr. R. J. S. was an active young business man. Changed conditions made it desirable to revise his will. However, he put off executing the new will. Recently he was killed in an accident and an old, inadequate will was filed for probate. *This man procrastinated.*

Be sure you take the right steps and take them in time. See a trust company TODAY, and learn how it can render vital service to you and your family.

bergris. Here are some of the samples that have been sent me. This one," taking a little yellowish-brown lump out of a box of miscellaneous stuff, "was sent in by a lady. As you see, she was so choiced of it that she wrapped it up in bright-colored silks. But it is nothing but a piece of wood pulp from some paper mill.

"This sample was sent by a lady in New South Wales. It is petrified wood. This one came from another lady! Apparently the ladies have a keen eye out for ambergris. But this stuff is simply a kind of fungus that grows in sea water. This piece is paraffin. This one is sealing wax.

"Here is another piece, which is 'slush' from some vessel. The cook on a sailing vessel has a barrel into which he throws all the refuse from the galley. It is kept wet, so that the grease rises to the top, where it is skimmed off. This slush, as it is called, is used in various ways aboard ship. Sometimes a lot of it falls, or is thrown, into the water. Of course it floats and it may be washed up onto some beach. I have had a good many samples sent to me which were nothing but slush.

"SOME years ago a gentleman and his family were spending the summer at Gloucester, Massachusetts; and one day this man's little boy was in swimming when he found a lump of something floating in the water. He took it ashore and showed it to his father, who said it might be ambergris. They submitted it to a local apothecary, who said he was almost sure it was ambergris and worth a lot of money.

"So the gentleman—who had plenty of money, but wanted his boy to reap the reward of his discovery—took his son and the mysterious find down to Washington to consult the government authorities. They went from one department to another; but nowhere did they come across anyone who knew whether the stuff was ambergris or not. Finally, at the Bureau of Fisheries, somebody told them to come to me.

"When they arrived here, with their bundle all carefully done up, the man explained that the boy had found something floating off the shore at Gloucester, and that they thought it was ambergris. I didn't even wait for them to unwrap it.

"You ain't got no ambergris!" I said.  
"Wait till you see it," said the gentleman, and took off the wrappings.  
"Looks to me like it come off the Boston dump," I told him.

"I guess maybe it did, too. It was nothing but a lot of car oil; the thick, dark kind for lubricating the wheels of engines and railroad cars.

"I received several samples from Newfoundland, some years ago, that were nothing but soap. Probably it came off a wrecked vessel. One of the life-savers, down on the New Jersey coast, took a piece of something to a New York firm for whom I act as agent. He had picked it up on the beach, and was sure it was ambergris. It was just a lump of rosin.

"Of course, anything that is as valuable as ambergris is sure to be imitated. Plenty of artificial substitutes have been tried, but not one of them has been a successful imitation. I guess you could get a million dollars if you could produce artificial ambergris that would be satisfactory. Some years ago a Frenchman did produce

artificial musk; and I understand that he got a million dollars for the secret.

"Musk is used in the same way as ambergris. It is a binder for the oils employed in making fine perfumery. It comes from two little sacs, called pods, in the musk ox. The supply is limited and the price high. But the Frenchman made artificial musk which was very satisfactory.

"One reason why ambergris and musk are in such demand for perfumery is the fact that they have an agreeable and lasting perfume of their own. Even after the essential oils, obtained from the flowers, have lost their fragrance, there will be a delicate odor due to the ambergris, or the musk, whichever has been used.

"A great many people object to musk—or think they do. I am told that when they buy perfumery they insist that they don't want anything containing musk. They get it, however, much oftener than they realize—and they like it, when they don't know it is there. Both ambergris and musk seem to give out minute particles which cling to an object, like a handkerchief, or a garment, or the sides of a bureau drawer, and to perfume these objects for a very long time.

"It used to be said that one drop of musk would perfume a whole room and last indefinitely. But that was a mistake. Musk does lose its odor in the course of time. I suppose ambergris does, too. But here is a piece I have had for fifteen years. So far as I can detect it has just the same odor now that it had when I got it."

IN ADDITION to being the "Ambergris King," Mr. Stull is, if not the "Watch-Oil King," at least one of the two or three great potentates in that line; and this part of his business is almost as interesting as his dealings in ambergris. When you take your watch to the jeweler to be cleaned it probably gets, as the final step in the process, a single drop of Stull oil carefully distributed among its various bearings. In fact, less than one drop is enough for a watch.

"This oil comes from the head of the blackfish, a huge creature averaging twenty feet in length. Most of it is found in a "melon" in the head of the blackfish. This yields about a gallon of the oil; and about a pint of it comes from the jaw. The supply has the same spectacular ups and downs as the supply of ambergris. It is the most expensive lubricating oil in the world.

Blackfish, like whales, used to be caught for their blubber. But the advent of petroleum oil made it unprofitable to hunt blackfish for their blubber, so the only source of the present supply is from the blackfish that come close to shore and practically give themselves up.

Fortunately for our watches they occasionally do this very thing. A school of these fish sometimes comes near the coast and even wanders up one of the inlets from the sea. They are queer creatures. If one of them gets into shallow water where it is stranded, it sets up a sort of howl for help. Thereupon, another goes to its assistance and promptly becomes stranded itself. More cries for help from the two that are in difficulty bring some of their companions into the same predicament. And so, with much bellowing and a great to-do, the whole school will

pile up on the beach. Sailors call them "fool fish," because in any emergency they act like sheep.

In November, 1884, a school of fifteen hundred of these blackfish came ashore on Cape Cod. Men gathered from the towns along the Cape and killed them with a lance, a sharp sort of knife fastened to the end of a long pole. They are also called pilot whales, because they always follow a leader, or pilot. Forty years ago large schools of these fish were often seen. But after the great killing in 1884 they seemed to disappear from the face of the waters.

If it had not been for the great quantity obtained in that year there would have been a famine in watch oil of the best grade; for no blackfish were seen after that for almost thirty years. Then, in June, 1911, one lone specimen was found on the beach back of Provincetown. Mr. Stull got one gallon of oil from it, which brought ten dollars. The next summer, thirty came in near Truro. A few weeks later, fifty were killed at Wellfleet, the very place where the fifteen hundred had come on the beach years before.

After that, about one hundred were killed farther along the Cape. And the next summer two schools, of ninety-eight altogether, wandered up one of the creeks and accommodately hung around until Mr. Stull had been notified and had got together a force of men to help him handle them. These various schools yielded enough oil to take care of our timepieces for quite a while; which is a lucky thing for us, since only a few blackfish have been taken since then.

## On What Does a 100,000-Ton Skyscraper Rest?

(Continued from page 29)

shallow foundations which might easily be undermined by the flowing of quicksand and gravel.

And now that this labor was completed, there was *nothing to show for it*. Hundreds of millions of future passers-by would see only the imposing superstructure!

I have often thought that the hardest battles of life are likely to be the unseen battles—those which each of us has to fight by himself day by day. So we engineers, in our struggles with nature, are pretty closely duplicating the general human experience. I suppose that this is why it has been suggested to me that some of the fights with natural forces I have been connected with may be of service and inspiration to other people.

Somewhere beneath the closely stacked skyscrapers of lower New York an amazing mining operation is always in progress. As a result of this mining operation the great skyscrapers are able eventually to lift their heads heavenward. I suppose that the average person would be amazed at the scope of this underground work.

Recently we completed the biggest piece of skyscraper foundation excavation work on record. This was for the new Federal Reserve Bank Building in New York.

## Put Sound Values in your Safe Deposit Box

**W**HEN YOU INVEST in high-grade bonds of great railway lines, you are loaning money to one of the moving forces of civilized life—your country's transportation.

Your bond is secured by such valuable properties as rights of way, tracks, locomotives, cars and terminals.

The National City Company carefully studies the underlying values of every bond it offers. The results of these studies will be put before you gladly by National City Company representatives in more than 50 leading cities.

Our broad range Monthly List of well secured bonds will be mailed promptly upon request.

## The South's Answer

The South answers readily the investor's question about the astonishing growth of its industries. It answers the question about development still to be done through the use of new capital. The South makes plain the reason why it can pay high interest on funds put into permanent facilities to house its population.

Secured by adequate property values in income-earning buildings, Caldwell First Mortgage Bonds pay 7 per cent.

## "DIVERSIFICATION" PLUS INCOME

for every investor

"Diversification" is the investment banker's way of saying, "Don't put all your eggs in one basket." But, in most cases, the investor who seeks diversification has to pay for it by accepting a lower interest rate.

Miller Bond Issues offer wide diversification plus an income return up to 7%. They are secured by closed first mortgages on income-earning properties spread over a dozen states, located in a score of thriving cities. These bonds pay 1% or 2% more than is usually obtainable on other kinds of securities of equal grade.

Send today for our Semi-Annual Building and Business Survey, which contains statistics of building operations and business conditions in 84 cities. We will also send a Diversified Selection of Liberal-Yield Bonds, which have an unbroken safety record.

### G. L. MILLER & CO.

1307 Carbine and Carbon Building 30 East 42nd Street, New York  
Atlanta, Ga., and other Southern Cities

"First—The Investor's Welfare"

Our foundation work for this structure extended to a depth of 104 feet below street level, and five stories of the completed building are underground. In our excavations we took out a total amount of earth equal to 62,000 two-horse truck loads. If you were to put these in a line, allowing twenty feet for each team and cart, they would fill a road running from New York City to Washington, D. C.

Nearly all visitors to New York make a point of seeing the Woolworth Building. It is, indeed, an impressive sight! Standing seven hundred and eighty feet above street level, its tower covered with forty thousand feet of pure gold leaf, it proudly proclaims the fact that it is the world's tallest building.

That mighty structure weighs two hundred and six million pounds! This weight is borne by sixty main columns, on some of which the wind stress alone, in a strong gale, reaches a maximum of more than two million pounds. So it is natural enough to wonder what keeps that colossal pile in place. On what does it rest?

WHEN we started work on the foundations for the Woolworth Building in 1910, we found that bed rock was at an average depth of 116 feet below street level. Between this rock and the surface was an almost continuous stretch of the most treacherous material that builders have to handle—quicksand.

One must be prepared for a condition like this almost anywhere in the skyscraper area of New York. The lower part of Manhattan Island is narrow and surrounded, except at the north, by two rivers and the bay. From ten to thirty feet below street level one is sure to strike water—and usually quicksand, too.

This quicksand is so fine that we have passed it through sieves with meshes only one-thirtieth of an inch wide. Saturated with water it flows almost as readily as water itself. If one tries to drain an excavation with pumps, the quicksand flows from all sides along with the water, thus undermining surrounding buildings, which are often on comparatively shallow foundations. There is just one way to get the better of nature—that is to sink pneumatic caissons, those marvelous hollow piers of concrete in which is staged most of the romance of present-day underground work. Without them it would have been impossible to build any of the modern gigantic skyscrapers that lift their heads hundreds of feet above the bustle of lower New York.

If your eyes could pierce the ground beneath the Woolworth Building they would see sixty-six great piers of solid concrete closely grouped and of varying shapes and sizes. Each of them is sunk to the eternal rock; and the terrific weight of the building is distributed among them—36,000 pounds to the square foot.

It took eight months to sink these piers. They started their journey from the surface as hollow caissons with very thick concrete walls. In working chambers at the bottom of each was a gang of "sand hogs," who fought down through water and quicksand until they had carried the caisson to bedrock. Then the hollow core of each caisson was filled with well-rammed concrete, heavily reinforced, and it became one of the piers on which the building was to rest.

We have had more difficult foundation jobs, from the engineer's standpoint, than the Woolworth Building, but there has been none in which the foundations have had to withstand so much vertical pressure. That is because of the building's extreme height.

The entire foundation work was on a massively substantial scale. I remember that it took a truck drawn by fifty-two horses to bring a single foundation girder to the building from a lighter in the river. The girder was of solid steel, eight feet thick, six feet wide, and twenty-three feet long. It weighed sixty-five tons.

The sinking of pneumatic caissons is a fascinating operation, usually difficult and sometimes perilous. Just how it is accomplished is perhaps a little too technical to be described here, but anyone can understand the general theory of operation.

The biggest problem is how to handle the water, which is usually found within a comparatively few feet of the surface in lower New York. As I have already indicated, we use the force of compressed air to drive back the water from the bottom opening of the "hollow box." . . . If you stuck a glass tube into a mud puddle, water from the puddle would naturally rise inside the tube to the level of the water outside it. But if you blew into the tube hard enough, you would force all the water out of the tube. This is a crude illustration of the part played by the compressed air forced down through a caisson.

A tube is round, however, while a caisson is usually rectangular in shape and has walls of concrete many feet thick. Running down through the heart of the caisson is a shaft big enough for a bucket to pass up and down, just as an elevator runs up and down a shaft on its cable. Outside this shaft, the caisson is solid concrete. At the bottom of the caisson the shaft spreads out wider to form a chamber in which men can stand upright and work.

Imbedded in the concrete at the bottom of the caisson is an iron "cutting edge," which slices down through the sand and gravel that the men loosen from the inside with picks and other implements. As a result of its own tremendous weight the caisson then sinks a little farther through the loosened earth.

WHEN water is struck, the top of the caisson is sealed and air is forced down through pipes into the working chamber and shaft to keep back the water. There is an ingenious arrangement of a little room with double doors at the top of the shaft, so that men can enter and leave the caisson, and material be taken out, without losing the air pressure. This room is called an air lock. The men usually travel between the air lock and the working chamber at the bottom in the bucket, although they sometimes make use of a ladder which hangs down through the shaft.

Just bear this description in mind and you will have a rough idea of the picturesque working quarters of the "sand hogs," as caisson workers are commonly called.

The deeper the caisson sinks, the greater must be the air pressure to hold back the water. This pressure has to be increased nearly half a pound for every

added foot of depth. By the time the bottom of a caisson is one hundred feet below water level, the pressure in it is about forty-three pounds to the square inch—or about three times the normal pressure of the atmosphere. This pressure has a strange effect on the human body, and we have to take careful precautions to prevent ill effects to the workmen.

To go "under air" is an unforgettable experience. The first effect one notices is a marked discomfort in the ear drums. This is due to the increased pressure. It is an aggravated manifestation of the sensation that comes when a train rushes into a sub-river tunnel. To relieve it, the worker cramps his nose with his fingers, closes his mouth and forces his breath into the nasal passage. People unused to compressed air have to repeat this continually as the pressure rises.

"Sand hogs" remain in the air lock at the top until the pressure there is gradually brought up to the pressure in the shaft and working chamber. Then they go down and go to work. The danger period comes, however, when they are returning to the surface. Then they must remain in the air lock for some time, so that the pressure in the lock can be brought back gradually to the pressure of the outside air.

Once a "sand hog" reaches the working chamber at the bottom he usually feels a marked exhilaration. This is due to the extraordinary amount of oxygen in the air. He wants to work, and he sweats profusely while doing it. His voice, as he raises it above the roar of the air blast, has a nasal and metallic timbre. He may try to whistle—but no sound issues from his lips. If he tries to smoke, the tobacco in his pipe burns almost like chaff.

The New York State law provides that a "sand hog" shall not work under more than fifty pounds of pressure. This makes it impossible to sink a caisson much more than one hundred feet below water level. One of the outstanding difficulties in the Municipal Building job was that bedrock in places was absolutely out of reach.

THE greatest peril to the underground worker is the "bends," or caisson disease. This strange malady never attacks a man while he is "under air." It develops after he is back on the surface. An attack may take the form of intense local pains, dizziness, partial paralysis, deafness, internal bleeding, embarrassed breathing, itching, blindness—and may even result in death. To avoid its danger the deep-earth worker must pass through careful stages of "decompression." When he is coming out, the air pressure in the lock is lowered very gradually—allowing about one minute of time for every three pounds of pressure he has been under.

You may have read in the newspapers a few years ago how a certain kind of fish, living in very deep water, came in considerable numbers to the surface of the ocean outside New York, and promptly burst. This—a result of the vast and rapid change in air pressure—is an exaggerated illustration of the forces that affect the "sand hog."

There is still a difference of medical opinion concerning the exact cause of caisson disease. We know, however, that under pressure the body absorbs air as a sponge soaks up water. If the pressure is

## How can we send our child to college?

"I'd like to send my child to college, but I haven't an idea how much it would cost!" is often said to us.

When your boy or girl enters high school, if not before, begin to figure on college. A regular sum of money laid aside each of the four high school years, will be a vast help when college days come.

1. This sum should be invested with an institution which has proved its reputation over a long period of years.
2. Satisfy yourself that the investment meets rigid requirements for safeguarding this college fund.

During the many years the American Bond and Mortgage Company

has been in business, many thousands of investors throughout the United States have purchased from us many millions of dollars of First Mortgage Real Estate Bonds, secured by improved city properties, and with not one dollar loss of principal and interest.

We have worked out a detailed statement of college costs which we will send you willingly, together with descriptive literature of the 7% First Mortgage Real Estate Bonds we offer for sale. These are an ideal investment for a college fund. Start planning today, write now.

Ask for Booklet M-66.

**Boncilla**  
Beauty  
Is Deeper Than  
Skin Deep

**Boncilla**  
Beautifier

is a fragrant, grayish classic pack whose action goes far below the surface of the skin—It goes down to the depths of the pores; cleanses them thoroughly; stimulates dull, lifeless capillaries; builds up drooping facial tissues and muscles.

Feel See Know  
**BONCILLA**

It's so easy to apply—simply spread on the face and allow to dry. Takes but a few minutes—no rubbing or massaging necessary. When *Boncilla* is dry, remove with a wet towel, and behold the clear, firm, radiant complexion beauty it has achieved! While *Boncilla* is drying, you can feel its invigorating, rejuvenating action; as soon as it is removed, you can see amazing improvement in your complexion and you will know that *Boncilla* accomplishes results that cannot be secured with ordinary toilet preparations.

**Boncilla**  
Pack O' Beauty Only 50c

The *Boncilla* Pack O' Beauty is a remarkable toilet goods value. It contains large cubes of *Boncilla* Beautifier, *Boncilla* Cold Cream, *Boncilla* Vanishing Cream, and a generous box of *Boncilla* Face Powder—enough for four complete facial packs. Most dealers are supplied with this Pack O' Beauty, but those who cannot get to the store conveniently are urged to fill out and mail the coupon below, with 50c, and we will mail the Pack O' Beauty by return mail postpaid.

Department Stores and Drug Stores can supply you with a complete line of *Boncilla* preparations.

**Insist Upon**  
**Boncilla**  
—the intensely genuine classic facial pack. Its remarkable smooth has been immortalized.

lowered too suddenly the air absorbed in the body is thrown out of solution, forming bubbles—which tend to cling to the surface of the blood vessels and block them. Under the pumping of the heart, these blood vessels sometimes burst.

The capacity of the body to absorb air has an element of the uncanny. If a worker comes up from a deep-pressure job and thrusts his hands into a dish of hot water, bubbles frequently rise to the surface.

Susceptibility to the "bends" seems to follow no fixed laws, although it is supposed that fat men are more likely to be attacked than are thin men. Good health and sound organs, of course, are important factors of safety. Some men seem to be able to dispense with the "decompression" process. I have known old-time "sand hogs" to pass almost instantly from forty pounds of pressure to normal air and show no ill effects. On the other hand, I remember the case of one man who died as the result of being under six pounds of pressure.

**NATURALLY**, we discourage the tendency of some old-timers to take chances. One of our men used to maintain the "decompression" was all nonsense. On a certain afternoon he came out immediately from a pressure of forty-five pounds. As a result, he will drag a paralyzed foot all the rest of his life.

In modern operations we take every possible precaution, and it is rare that a fatal case of "bends" develops. The best remedy for an attack is to put a man "under air" again. For every deep caisson a hospital lock is provided. This is a separate chamber in which men can be kept for hours, if necessary, while the pressure is lowered by infinitesimal degrees. A skilled physician is always in attendance.

In jobs where the pressure is from forty-eight to fifty pounds the "sand hog" works only one hour a day—divided into two shifts. For this hour's work he receives eleven dollars. Twenty-four separate crews are sent into the caissons in the course of the day.

Air pressure must be maintained in a caisson at all times. Its failure may result not only in flooding the working chamber at the bottom but also in loosening the soil under adjacent buildings.

An omnipresent danger to workers is the failure of air pipes. When the foundation for one of the Municipal Building caissons was one hundred feet below ground level the air pipe broke. Soon water had risen forty-two feet above the cutting edge and the working chamber was filled with sand. The workers were on their way up the shaft when the connection broke. A rush of water followed the feet of the last man as they hurriedly climbed up the ladder.

Bedrock on the Municipal Building site was at an average depth of 130 feet below curb, or nearly 100 feet below water level. In one area, however, we drove a drill 209 feet below street level before we struck the earth's crust. Here we sunk a caisson 112 feet below water level—the deepest penetration ever made for a building foundation. Such caissons as were not bedded in rock rested on very hard sand, which we tested to bear a weight 100 per cent greater than its necessary share of the

building's support. The caissons were made with the greatest possible cross-section, so as to furnish as little pressure per square foot as possible.

Skyscraper foundations, however, come far from furnishing all the romance of underground work. One of our most spectacular jobs, from the popular standpoint, resulted from the failure of the foundations of a gigantic grain elevator located near Winnipeg, Canada, and belonging to the Canadian Pacific Railroad. This elevator, 195 feet long and 77 feet wide, rose to a height of 102 feet. It was built to hold one million bushels of grain—an amount equivalent to the production of eighty thousand acres of wheat land.

This great storehouse had walls of concrete six inches thick, reinforced both against bursting pressure and vertical load. It rested on a floating foundation—a two-foot mat of solid concrete imbedded in hard clay about twelve feet below the prairie level. Usually this kind of clay had proved strong enough to support a weight as great as that which the elevator, when filled, would impose upon it. The engineers who built it had anticipated and provided for a slight settling, but no one could foresee the prank that Nature was to play, using as her weapon a ridge of boulders some fifty feet below the surface.

The elevator was put into operation in the fall of 1913. In the middle of October, when it contained 875,000 bushels of grain, the structure began to settle in a most unexpected fashion. It sank four feet vertically and then took a sharp tilt. Within twenty-four hours the west side of the foundation mat had dropped twenty-nine feet below its original position, while the east side, jammed into a compacted ridge of earth, was five feet above its original position. The big building was then dangling at the dangerous angle of twenty-seven degrees. Its center of gravity was so perilously close to being outside its base that the only thing to keep it from tipping over onto the prairie was the holding power of the compressed clay bank on the east.

**BORINGS** were immediately taken to determine the cause of the disaster. They revealed the fact that a ridge of boulders reared itself several feet above the bedrock on the east side of the building. This unexpected reinforcement prevented the clay in that area from yielding as readily as the clay elsewhere. When the elevator started to settle, it naturally started to tip, as well, and the more it tilted the greater became the weight on the west side to drag it down.

The first problem was to save the wheat. The elevator had been built in compartments—with 113 individual bins. Holes were cut through the six-inch concrete wall, and the bins near the ground level were tapped of their contents. Then holes were cut higher up and a new row of tanks were "bled."

Eventually the entire building was emptied of grain. It was a hazardous operation. Weights and stresses of a sharply leaning structure are hard to determine. The tapping of a single row of tanks might have upset the precarious balance, or the earth on the east might have given away at any time. As an added danger, the wreck of a cupola that

had once proudly crowned the roof was dangling far above the heads of the workmen.

Even when empty, the structure, with its floors, partitions, elevators, and conveyors, weighed forty million pounds. Our problem was to set it level again and link it to the solid rock fifty feet below.

The simplest method of doing this—and by no means a simple method, at that!—would have been to excavate under the east side of the building and gradually “ease” it down to the level of the west side. This would not do, however. It would have meant sinking the structure so far into the prairie that its operation would have been hampered, and it would have been difficult to keep dry the grain in the lower bins. On the other hand, to make a sheer lift of the sunken side of the forty-million-pound burden was a task that halted the imagination.

TO DESCRIBE fully the solution of this problem would take a good deal of time and involve much technical explanation. The point of greatest popular interest, however, is the method finally employed to raise the sunken side, which was wedged into nearly thirty feet of compact clay.

To accomplish this we fell back on the old principle of the seesaw—the plank across the rail fence on which most country boys are so fond of “teetering.” As a preliminary, however, holes were cut through the foundation mat of the building, so that the workers could get beneath it. Tunnels were also carefully driven under it from various points outside. Then seven-foot shafts were sunk to bedrock and filled with concrete—to form piers on which the building could rest.

A line of piers running under the building north and south was used as the first fulcrum of the “seesaw.” In a rough way, the building was to balance on these, just as the “seesaw” plank balances on the rail fence, and the weight of the higher side was to help lift the weight of the lower side.

Of course, nothing like a perfect balance was possible. Too much of the building’s weight could not be trusted to a single line of piers, and there were many other complicated engineering problems to be considered. Nevertheless, the seesaw was slowly started into operation.

Powerful lifting jacks were installed under the lower edge. As this edge was raised, some of the earth was excavated from beneath the higher part of the foundation mat, so that the building could gradually settle. A lift of only a few inches a day was possible. Much time had to be spent in bracing the building so that it would not slide on its fulcrum.

After the low side had been lifted a short distance, another line of piers—also sunk to bedrock—had to serve as a new fulcrum. Eventually, the building was brought to a level position only fourteen feet lower than its original site. The old principle of the seesaw had lifted the lower edge fifteen feet!

In fighting the forces of Nature one is always grappling with a dangerous and resourceful enemy. Sometimes it seems that Nature goes out of her way to throw obstacles in the path of those who are trying to take liberties with her. If you start

to dam a river, for instance, the chance seems about three to one that the river will pick that particular season for an extraordinary series of freshets and floods.

In September, 1911, we began the construction of two dams and locks across the Ohio River for the United States Government. These dams were to be at Little Hocking, Ohio, and Wheeling, West Virginia. Their purpose was to keep the river navigable during its periodical low stages in the summer season. They were to be of the familiar “bear trap” or movable type—which have locks for the passage of river craft, and can be let down in sections to lie flat on the bottom when the water is running high.

A coffer dam for the lock at Little Hocking had just been built when an unseasonable fall rain set in and continued mercilessly. In three days the river had risen twenty-five feet and flooded the coffer dam. This was the start of a series of freshets that continued into the usual winter flood tide, that tied up work until spring. Late in May, 1912, the lock and coffer dam was pumped out, and work went on smoothly for a month or so. In July, however, an unexpected summer flood developed. This drove the workers from the river for a fortnight.

The crew returned to the coffer dam on July 25th, and worked through August. On Labor Day, however, another twenty-five-foot flood rushed down upon them. Shortly after the effects of this had been wiped out, another winter’s floods came. Work was continued into January, despite the handicaps. Then the river rose forty-two feet above normal, stopped every kind of operation, and imperiled the buildings we had erected on the banks.

All this was but a prelude to the deluge—the memorable floods of March and April, 1913, that took a toll of more than 400 lives, flooded 60,000 buildings, destroyed several hundred bridges and did general property damage of around \$180,000,000.

At Little Hocking the river rose a foot an hour for forty-eight hours until it stood at the highest mark in recorded history, sixty feet above the normal stage. All our shops, camps, derricks, and other loose material were swept away. Piles of timber were carried down-stream like tooth-picks. After the flood subsided, it took us until well into April to repair the damage and salvage as much of the lost material as possible.

THE men were back in the lock and coffer dam in May, when another flood developed, driving them from the river for two days. In July there came a cloudburst in the Muskingum River region. The flood there dumped itself into the Ohio, and drove the workers out for another two weeks.

September turned in another freshet—that stopped operation for a week. Early in November there was a phenomenal fall of snow, followed by a flood. On Christmas Eve, the almost disheartened workers quit work for the winter, with water, at flood peak, pouring over the top of the coffer dam once more.

Finally, in September, 1914, the dam was completed. Nature’s extraordinary enmity had added an entire year to the normal duration of the job.

## Put Your Name ON THIS Pay-Roll

Men like you are wanted for big-pay positions in the fascinating field of automobile

engineering. We have made it easy for you to fit yourself for one of these positions. You don’t have to go to school. You don’t have to serve an apprenticeship. Fifteen automobile engineers and specialists have compiled a spare time reading course that will equip you to be an automobile expert without taking any time from your present work.

## AUTO BOOKS

6 Volumes Shipped Free

Now ready for you—an up-to-the-minute six-volume library on Automobile Engineering, covering the construction, care and repair of pleasure cars, motor trucks and motorcycles. Brimming over with advanced information on Lighting Systems, Garage Design and Equipment, Welding and other repair methods. Contains everything that a mechanic or an engineer or motorcyclist or the owner or prospective owner of a motor car ought to know. Written in simple language that anybody can understand. Tastefully bound in American Morocco, flexible covers, gold stamped, 2,500 pages and 2,100 illustrations, tables and explanatory diagrams. A library that cost thousands of dollars to compile but that comes to you free for 7 days’ examination.

## Price Reduced

Down goes the price on these famous Auto Books. We have induced our printers and binders to cut the price they charge us. We pass this saving on to our customers.

## Only 10c a Day

Not a cent to pay in advance. First you see the books in your own home or shop. Just mail coupon and pay express charges when books arrive. You can read them and study them for seven whole days before you decide whether you want to keep them or not. If you like the books send only \$2.00 in seven days and \$3 a month until the special introductory price of \$21.00 has been paid. (Regular price \$45.)

## Send No Money Now

Don’t take our word for it. See the books without cost. There is so much profit in this offer for you, that we urge you to waste not a moment in sending for the books. Put the coupon in the mails today. Send no money—just the coupon!

American Technical Society, Dept. A-151 Chicago, Ill.

AMERICAN TECHNICAL SOCIETY  
Dept. A-151, Chicago, Ill.

Please send me the 6-volume set, Automobile Engineering for 7 days’ examination, shipping charges collect. If I decide to buy, I will send \$2.00 within 7 days and the balance at \$3 a month until the \$21.00 has been paid. Then you send me a receipt showing that the \$45.00 set of books are mine and fully paid for. If I think I can get along without the books after the seven days’ trial, I will return them at your expense.

## "Here's an Extra \$50!"

"I'm making *real* money now! Yes, I've been keeping it a secret until pay day came. I've been promoted with an increase of \$50 a month. And the first extra money is yours. Just a little reward for urging me to study at home. The boss says my spare time training has made me a valuable man to the firm and there's more money coming soon. We're starting up easy street, Grace, thanks to you and the I. C. S."

Today more than ever before, money is what counts. You can't get along on what you have been making. Somehow, you've simply got to increase your earnings.

Fortunately for you there is an unfailing way to do it. Train yourself for bigger work, learn to do some one thing well and employers will be glad to pay you real money for your special knowledge.

You can get the training that will prepare you for the position you want in the work you like best, whatever it may be. You can get it at home, in spare time, through the International Correspondence Schools.

It is the business of the I. C. S. to prepare men for better positions at better pay. They have been doing it for 30 years. They have helped two million other men and women. They are training over 150,000 now. And they are ready and anxious to help you.

Here is all we ask—without cost, without obligating yourself in any way, simply mark and mail this coupon.

### INTERNATIONAL CORRESPONDENCE SCHOOLS Box 7465-C, Scranton, Penna.

Without cost or obligation on my part, please send me a copy of your 48-page booklet "Who Wins and Why" and tell me how I can qualify for the position or in the subject below which I have marked an X.

# What to Eat

(Continued from page 15)

whose diet consists mainly of polished rice and fish. It occurs in other parts of the world such as Nova Scotia, Labrador, and in South America, where the diet is limited largely to cereal products and meat. It does not occur among people whose diet is properly regulated as regards the necessary amounts of milk, eggs, and fruit.

Scurvy was once very common among sailors who were deprived of fresh fruit and vegetables while on long sailing voyages, and it has often overtaken men engaged in Arctic explorations. The symptoms of scurvy in adults are similar to those I have mentioned in the case of children. Besides, adults usually suffer from sponginess of the gums and loosening of the teeth.

NONE of the deficiency diseases is common in the United States in a pronounced form, but there are thousands of people with *tendencies* toward these troubles. The round shoulders, flat chests, and poor teeth seen so frequently in school children are in great measure the result of faulty diet. Owing to the same cause we see many adults growing old prematurely and suffering from bad health, which shows itself in a great variety of ways—in their discouraged mental outlook as well as in their physical condition.

A satisfactory diet for victims of wrong living is based upon three principles, the great importance of which have come to light through comparatively recent scientific discoveries.

FIRST: The more generous use of dairy products is essential. Instead of half a pint of milk a day (this is the amount used by the average individual throughout the country), each of us should use at least a quart, either as a beverage or in foods.

Milk is not only a good food and rich in vitamins, it serves us in another way. It encourages the growth in the intestine of bacteria which produce lactic acid, and these help rid the intestine of harmful bacilli which cause the putrefaction of protein foods. When the proper amount of milk is used the amount of noxious products formed in the intestine is negligible.

SECOND: There are dietary properties in the leafy parts of vegetables which differ entirely from the properties of potatoes and the root vegetables such as beets and turnips. Eating leafy vegetables in liberal quantities provides the body with invaluable substances, which it cannot secure in adequate amount from milled cereals, potatoes, and the muscle cuts of meat such as beefsteak, ham, and roasts. They are of great advantage also because they leave a bulky residue, which aids the intestine to empty.

Remember that the leafy vegetables are important for both their vitamins and their inorganic matter. The most important of them are spinach, lettuce, cabbage, chard, cauliflower, Brussels sprouts, collards, kale, beet tops, turnip tops, dandelion, water cress, lamb's-quarters, and rape. The onion bulb is really a mass of thickened leaves, and so may be included in this list.

THIRD: We must all eat frequently of

raw vegetables and raw fruit to make certain of having in our diet the vitamins which protect against scurvy. Raw cabbage, raw tomatoes, and oranges are particularly valuable for this purpose.

You should remember that proper nutrition involves two factors. The body must have the right foods and it must get rid of waste promptly. If you are one of those who have lived mainly upon a bread, meat, and potato diet, you will probably find that you require a pretty severe diet regimen at the start to correct faulty intestinal conditions. This is the procedure I would recommend to the man who wants to get into first-class physical shape by the proper arrangement of his diet.

For at least one month eat no cereals (bread, breakfast foods, cake, pastries, etc.), no meats, potatoes, nor sugar. Drink a quart or more of milk every day. Eat all the greens, fresh vegetables, fruit and vegetable salads your appetite calls for. This is splendid fare, and you will do well on it.

The tendency of this diet is to make the intestines function normally, and at the end of a month the average man will probably notice a marked improvement in his health. But now he should not forget the important place of milk, leafy vegetables, and fruits in his diet. He should continue to eat what I call an *adequate minimum* of these foods. This adequate minimum calls for a quart or more of milk every day, and two or more salad dishes. At all times of the year he should eat as freely as possible of leafy vegetables, and he ought to eat raw cabbage in the form of cole slaw or salad at least three times a week.

AFTER a man has provided himself with the minimum of these essential foods, he can make life pleasant by eating what his appetite calls for. The great danger now is likely to come from over-eating. However, the minimum allowance of milk, vegetables (greens), and fruit just stated should crowd out of his meals a considerable part of the meat, bread, and potatoes he has been in the habit of taking. It is well always to make a practice of taking small servings of meat, and it is a safe rule never to eat meat more than once a day.

Thousands of persons past middle age have obtained increased efficiency and relief from discomfort by partially or wholly eliminating meat from their meals. The toxic products formed from meats and other high protein foods, exert an irritating action on the lining of the intestine and burden the liver and kidneys. When you eat less meat you give relief to these organs.

Eggs contain nearly everything the body needs for its development, except sufficient calcium. In using them, however, you must take care to see that they are properly combined with other foods. A diet in which eggs predominate is harmful, because eggs tend to cause putrefactive processes in the alimentary tract.

The average family would doubtless accept the following as a satisfactory dinner: veal cutlets, boiled or baked potatoes, buttered peas, gelatin salad, bread, butter, mince pie, and coffee. But in the light of the three principles I have given above, this is a very unsatisfactory menu. It is a simple matter to make it right by adding to it milk and eggs. Then it would be as follows:

Breaded cutlets (dressed with egg and bread crumbs), mashed potatoes to which milk has been added, creamed peas, gelatin salad, bread and butter, and caramel custard. This meal would not be less attractive than the first, but it would be decidedly superior for the maintenance of health.

In my book, "The American Home Diet," I have published a series of properly arranged menus for every day in the year. It would be impossible in this space to give specific directions on any such scale as that for arranging your meals. The following menus, which are taken from that book, will present some very striking lessons to most of us. They show the mistakes we are most likely to make, and how to correct them.

**THE** menus below represent the bread, meat, sugar, and potato type of diet, or its equivalent. Bread and potatoes have properties which are similar to the properties of rice, corn, peas, and beans. When you add to these macaroni, spaghetti, sweet potatoes, radishes, beets, or carrots, you still do not get all of the right food properties in your menu. Thus, these menus are examples of what *not* to serve and what not to call for when you order a meal at a restaurant.

#### Unsatisfactory Lunches

**I**  
Canned Salmon    Lemon    Fried potatoes  
Stewed Corn    Butter    Bread    Honey

**II**  
Frankfurters    Macaroni and Tomatoes  
Mustard    Peas with salt and pepper  
Butter    Bread    Apple Sauce    Tea

**III**  
Baked potatoes    Stewed Tomatoes  
Radishes    Bread    Butter    Sirup  
Coffee

**IV**  
Hamburger Balls    Catsup    Boiled Rice  
Bread    Butter    Rhubarb sauce

The lunch menus below are certainly not less palatable nor less attractive than the unsatisfactory lunches, but they are so constituted as to meet your body's needs.

#### Satisfactory Lunches

**I**  
Cream of Corn Soup    Saltines  
Salmon Croquettes    Potato Cakes  
Baking Powder Biscuits    Butter    Honey

**II**  
Cream of Pea Soup    Saltines  
Frankfurters    Mustard    Potato Puff  
Milk    Apple Sauce

**III**  
Cream of Tomato Soup    Croutons  
Escalloped Potatoes    Bread    Butter    Radishes  
French Toast    Sirup

**IV**  
Creamed Dried Beef    Boiled Rice  
Cabbage and Nut Salad  
White Muffins    Butter    Rhubarb Sauce

The menus below represent errors which are likely to be made in planning our dinners. Again, they represent the bread, meat, and potato type of diet, and it is safe to say that anyone who lived on such meals as this for a considerable time

would not continue in good health. Dinners of this type would not be satisfactory even if they were improved occasionally by small additions of the protective foods, milk and the leafy vegetables.

#### Unsatisfactory Dinners

**I**  
Corned Beef Hash    Boiled Potatoes  
Stewed Tomatoes    Bread    Butter    Mince Pie  
Coffee

**II**  
Pot Roast    Gravy    Browned Potatoes  
Buttered Peas and Carrots  
Bread    Butter    Fruit Gelatin    Coffee

**III**  
Lamb Chops    French Fried Potatoes  
Buttered Turnips    Boiled Squash  
Apple Dumpling    Hard Sauce  
Bread    Butter    Coffee

**IV**  
Hamburger Layer    Dill Pickles  
Fried Onions    Baked Potatoes  
Bread    Butter    Gooseberry Pie  
Coffee

The dinners given below furnish a leafy vegetable and, in addition, there are two dishes in which milk forms an important part. These additions correct the faults in the above menus and make the diet complete. Each meal provides the body with the necessary materials for growth or the repair of tissues. If you adopt the system of diet recommended, you will have no need of commercial vitamin.

#### Satisfactory Dinners

**I**  
Corned Beef Hash    Chili Sauce  
Beet Greens    Creamed Potatoes  
Butter    Bread    Caramel Custard

**II**  
Pot Roast    Gravy    Mashed Potatoes  
Creamed Peas    Cole Slaw  
Bread    Butter    Lemon Pie  
Coffee

**III**  
Lamb Chops    Creamed Potatoes  
Cabbage and Nut Salad  
Creamed Turnips    Bread    Butter  
Brown Betty    Foamy Sauce

**IV**  
Hamburger Layer    Dill Pickles  
Creamed Onions    Baked Stuffed Potatoes  
Milk    Bread    Butter  
Chocolate Custard

It is always advisable that the last article eaten at a meal should be of such a nature as to cleanse the teeth. Sticky pastries and cakes are apt to remain in the fissures of the teeth and are not easily removed even by the tooth brush. Residues from such foods tend to cause decay even more than do meat particles. It is a good rule to eat last a salad, cole slaw, celery, apple, or other fibrous food. This helps both to clean the teeth and to prevent decay.

From early infancy children should be given something hard to chew on. During the first two years toast serves the purpose admirably. After that time, apples, crackers, hard bread, raw cabbage, which has been chopped fine with a meat chopper, cooked vegetables, lettuce, and celery will serve to develop and preserve their teeth.

When we chew fibrous foods such as apples, raw cabbage, and carrots, we exert a pressure of a hundred to two hundred and fifty pounds on the teeth. This insures good blood circulation, and is important not only in developing the teeth and jaws of children but in keeping those of adults in good condition.

## Your boy is your greatest business

When you first got him, that son of yours was the most wonderful thing in the world. You told yourself that always he and you would be pals.

Now, suddenly emerging from your own affairs, you are faced with the realization that he is growing up, that he and you are "out of touch." Your boy, again, is your greatest business.

The years between ten and twenty mark the turning of the tide in a boy's life. Then, boys often think parents unreasonable, harsh, unsympathetic. Parents often think boys secretive, unresponsive, callous. Left to chance, a boy in his "teens" may become anything. A mistake may be fatal.

## THE AMERICAN BOY

"The Biggest, Brightest, Best Magazine for Boys in All the World"

is engaged in the greatest business in the world, the making of men. Its editors, lovers of boys, students of boys, believers in boys, are dedicated to the work of helping boys understand themselves, and the world they must grapple. Through suggestions furnished by them, the greatest story writers of the day are inspired to conceive absorbing tales of actual life, in which the forces that move the universe are pictured in all their realism.

They don't mince words, they do not preach. They draw no silly, mollycoddle hero. Their characters are human folk, selfish, proud, honest, generous, treacherous, weak and strong, who move through actions of compelling interest; succeeding, failing, but always teaching a lesson that fires boyish ambition and calls to sleeping capacities.

No boy can read these stories without gaining an appreciation of clean living and clean thinking. No boy can live with the flesh and blood people of these tales without understanding the difficulties that mock at effort and without learning life is service to others and subduing of self.

THE AMERICAN BOY holds out a hand to you and to your son in the business of making him a real citizen.

Give your boy and that other boy you are interested in the advantage of its influence. Give him a year's subscription to THE AMERICAN BOY.

\$2.00 a year by mail. 20 cents a copy at news-stands. Subscribe for a year or leave a standing order at your news-dealer's.

THE SPRAGUE PUBLISHING CO.

# Folks Who Talk Too Much

(Continued from page 45)

he wasn't. So I was much embarrassed, and apologized and gave him my card. He said to forget it, and presented me his card in return, which gave me the name of your company, the only fact I needed. At the next station I got off and took a train back to the little plant; and here we are to-day with everybody happy and satisfied."

In mock politeness he rose and bowed himself out. I sat down at my desk and chewed hard on the end of a cigar, and tried to remember that anger causes high blood pressure and shortens life. It was a bitter pill to swallow; we had lost the larger portion of a year's profits—and to think that the loss was due to the foolish carelessness of one of our most faithful employees, and one of my dearest friends. I could not trust myself to meet Fred Hawkins that afternoon. I put on my hat and went out to the country club and pounded a golf ball for a couple of hours. And the next morning Fred and I had a long and friendly but very earnest talk. Subsequently, I held similar talks with the other important men in our organization, giving them as much of the facts as I could without bringing Hawkins into it. And I have an idea that if there is any business concern in the country whose men are not to indulge in careless conversation in the future, that concern is ours.

I was able to command a certain sympathy for Hawkins, in spite of my keen disappointment and chagrin, because the habit of careless talk is one that afflicted me all through my earlier years and cost me more than one hour of bitter regret. I come of a family that is much given to talk. My father is a noted storyteller in the village where we lived; his brother, my uncle, was a veteran of the Civil War, and the memories of my youth are heavy with stories of how he fought and bled. In my boyhood I regarded him with a certain awe and reverence, assuming from his stories that the Union forces consisted of General Grant, General Sheridan, and himself. He was in every battle that was won. The battles that were lost were fought while he was in the hospital, or away carrying important messages. Later, when I had heard the same tales over and over again, I realized that he was merely a kindly and loquacious old gentleman.

**T**HE ability to talk fluently and easily was in some degree an asset, to be sure. In high school I was a member of the debating team and talked circles around my opponent, even though he had the better of the argument. Benevolent old gentlemen coming up to congratulate me when the debate was over, said, "You should be a lawyer," or, "You should be a salesman." That seems to be the popular impression—that a smooth talker should be either a lawyer or a salesman. Yet one of the greatest lawyers I know is one of the most silent men in the world; and the best bit of selling I ever witnessed was done in less than fifty words.

With my high-school days behind me, I went to the city nearest our home, and

answered the advertisement for a boy. The company was a small one, and the president himself, a crusty old individual, interviewed all applicants. Even from this distance, that interview, when I look back upon it, brings a smile; it must have been about the most ludicrous performance that a stripling ever indulged in. The old fellow asked me to tell about myself; and tell about myself I did with a vengeance. I recited all the incidents of my school days, displayed the marks the teachers had given me, and even told about a football game in which I made the winning touchdown. As he did not attempt to interrupt me, I supposed that I must be making a tremendous impression, and carried on until I was literally out of breath.

At that he looked up over his glasses and inquired quietly:

"Is that all?"

**A**T THAT remark, the first shadow of doubt entered my mind, and I merely nodded.

"I think you would be wasting yourself on the position we have in mind," he said slowly. He tore a piece of paper from a scratch pad, scribbled something on it, folded it, and passed it over. "When you get home you may open that and read it," he continued. "It may be of some help to you in your future career."

I picked up my cap and went out, a little dazed and much discomfited. When I reached my room I opened the scrap of paper and read:

"See Proverbs, 27:2."

In the little Bible that had been my mother's parting gift, I located the passage:

Let another man praise thee, and not thine own mouth; a stranger, and not thine own lips.

For the rest of that day I must have been the most crestfallen youngster in the city. The next morning, however, my spirits revived. I needed a job very badly, and there seemed to be no other jobs. Moreover, I had a good deal of spunk, and rebelled at the thought of being beaten in my first business encounter. I hustled around and got such testimonials to my character and capacity as I could from friends of the family; and these I sent to the old codger with a note, saying that I had learned my lesson and had decided to let these letters speak for me.

He was a good old sport, in spite of his shell-rimmed spectacles and his crusty ways. In a day or two I received a note from him saying that I could report for work.

I need not give my business biography in detail. In its essentials it does not differ widely from the stories of thousands of other men who have worked hard, studied themselves and their market, and realize their share of the general growth and prosperity of the country. I moved from a clerk's desk into the sales department, where it was part of my duty to check the reports of the salesmen and to prepare the literature with which the

goods were presented to customers by mail. After a period of years there came a vacancy in the field which allowed me to pack a grip and call myself a salesman. Other years passed, and I came back to the office again as assistant sales manager. And it was while I was working in this capacity that my fatal tendency to talk exacted a heavy penalty.

I was earning twenty-five hundred dollars a year at the time, I remember, and had just married. I felt as if there were nothing that I might not reasonably aspire to, and in that frame of mind I increased my living expenses considerably and joined the best club in the city. It was an investment, I said to myself; I should be meeting older men there, who would naturally take an interest in me. And who could say but that one of them would some day pick me out for a good job.

I was careful to have everyone around the club know my name and business connections; and I did a lot of reading about general business conditions, so that I might be able to hold up my end in any sort of a conversation. One evening, sitting with a chap about my own age, I loosened up considerably and talked about my affairs and his, and what I thought about the market and the export situation, and pretty much everything else. An older man who was sitting not far away, apparently buried in a newspaper, was actually taking in most of what we said. I was conscious of his interest and rather proud of it; he must be impressed, I felt sure, with the fact that I knew pretty well what I was talking about.

I had never seen him in the club before; he was an out-of-town member. I never saw him but once afterward, and that by one of those strange coincidences which make business so much more exciting than any fiction could possibly be:

**T**HE position of sales manager for a large concern in another city was open a few months later; and one of my friends recommended me for the place. Some correspondence ensued, as a result of which I was invited to meet the general manager of the company in his office. I went to the interview feeling that the job was assured. My record in the place where I was had shown results; I knew that the inquiries which the out-of-town concern had made about me had brought favorable replies, and I felt that the visit to their offices was more or less a formality arranged merely to decide on terms.

And so, in fact, it might have been, but for one thing: The minute I entered the general manager's office I recognized the general manager as the silent old gentleman who had sat behind his newspaper and listened to my conversation at the club. The discovery encouraged me greatly at first; with what he had heard about me, and what he had overheard from me, this man ought to be in a frame of mind to do business at once. So I reasoned with myself, and began our conversation quite jauntily. To my consternation the talk soon took another turn.

"Let me see, you people are doing about a million and a half dollars' worth of business a year, aren't you?" he asked.

"It will be nearer two million this year," I answered.

"And you lowered your selling costs eight per cent last year?"

"We did."

"And the production manager is an old fogey; but in spite of his shortcomings you and the salesmen have managed to push the business ahead? Is that true?"

"I wouldn't want to be quoted to that effect," I said, wondering what he was driving at. "But there is some basis for your conclusions."

**H**E LOOKED at me sharply and his voice hardened:

"And the company changed its account from the First National to the Commercial Trust, because the president of the First National said you were extending too long credit on your foreign business? That's so, isn't it?"

I gasped.

"You seem to be pretty well informed about our affairs," I said to him. "Would you mind telling me how you know us, inside and out, so completely?"

"Can't you guess how I know?" he demanded coolly.

"I can't," I answered. "Unless someone inside has been talking too much."

He leaned across the desk and looked me squarely in the eyes.

"Someone has been talking too much," he answered very deliberately. "And that someone is you. Do you happen to remember one evening in the Howell Club?"

"Of course I remember," I answered hastily. "I remembered your face the minute I came in the door. But certainly I never told these things that you mention—about our bank relations and all."

"You may not remember that you told them," he said. "That is one of the unfortunate things about men who talk freely; they find it difficult to remember what they did say and what they did not say. But every fact about your company which I have quoted to you I learned from your conversation that night; and a good deal more that I could quote, if I would."

"Of course, if I had known your name and connected you with your application I would not have inconvenienced you by this interview," he went on, while I sat and listened, too overcome for words. "Naturally, we could not think of associating with ourselves a man who treats so lightly the business confidences of his employers. I am very sorry for the mistake; and we will, of course, wish to defray your expenses out here and back. Aside from that, I do not think that we have anything further to say to each other."

He rose, as a very decisive signal that the interview was at an end; and I found my way out, and back to the hotel, to send a very different telegram to my wife from the one that I had planned.

**N**OW I do not want to give an impression that I have succeeded in changing myself from a person of free conversation into a cold and calculating machine. I still talk and talk freely; but I guard myself by having always on hand a good supply of harmless conversation that sounds more important than it really is. That trick I learned from one of the leading financiers in America.

## At last she found out

Something was amiss. Her animation and buoyancy, once so marked, were giving way steadily, it seemed, to lassitude, indifference and depression.

In despair, she determined to take careful inventory and try to regain her failing powers.

Back, at last, upon the road to robust health, she had learned—as thousands are now learning—that nine-tenths of all human ills come simply from wrong eating habits and deficient foods.

In other words, if you deprive your body of any vital element, you are bound to suffer from lowered resistance and many ailments usually known as "rundown" conditions.

One particular element that many common foods lack is found in greatest abundance in Yeast Foam Tablets. They supplement your regular food and help you to utilize its full value.

As a tonic to stimulate the appetite, improve digestion and correct many disorders due to malnutrition, Yeast Foam Tablets have been prescribed by physicians and taken by thousands.

Made of pure, whole, dehydrated yeast. Unlike baking yeast, they keep; they are easy to take and they do not cause gas. Sold by all druggists and made by the Northwestern Yeast Company, 1741 N. Ashland Ave., Chicago, Ill. (Makers of the famous baking yeasts, Yeast Foam and Magic Yeast.)

**Generous sample—value 25 cents—mailed free on request.**

## From Bashful Clerk to Successful Branch Manager—

E. J. STULTS  
a Fuller Man at  
South Chicago

"In 1917 I was a bill clerk in a packing plant at Austin, Minn., writes E. J. Stults, a Fuller Man at Chicago. "My pay was low and I was dissatisfied. Desiring a change, I became interested in Fuller Brushes through an old chum of mine, Gordon Maffry, present Manager of the Fuller Kansas City Branch.

"At that time I was only 19 years old, undersized, and self-conscious. However, I figured if Maffry could do it, I could do it.

"For two solid weeks I went through agonies of self-consciousness. However, one thing spurred me on:—I was earning about three times my former salary!

"After three weeks in Albert Lea, Minn., I went to Grand Forks. But when I started to work there, a miracle seemed to have happened. I had all the self-confidence a man could ask for, and felt

as if I could sell Fuller Brushes to the President of the United States. I hit \$200 the first week, and it was clear sailing from that time on!

"On my sales record I was sent to Springfield, Ills. and later was given the Terre Haute office. After four months in Terre Haute I was made Manager of the South Chicago Branch Office.

"I am highly satisfied with my work, my present position, and earnings. I have recommended selling Fuller Brushes to many men, for no man, young or old, could pick a more enjoyable, profitable occupation, whether he be self-educated or college-educated; nor could he pick one that offers the opportunities that selling Fuller Brushes offers.

"If an undersized country boy inflicted with a salesman's worst enemy (self-consciousness) can make a 'go' of selling Fuller Brushes, surely no man should have any doubts about making good and advancing with The Fuller Brush Company."

### This same Opportunity exists for **YOU!**

Right now, Fuller can use more ambitious men to make good selling Fuller Brushes, and then be in readiness for the promotions which are bound to come. No selling experience is necessary, for Fuller gives thorough training, free, to men who are ambitious to succeed.

Write for booklet "Out of the Rut," the book which has started so many Fuller Men to success. Don't wait for it, but get in immediate touch with the nearest Fuller Office (look it up in telephone book). Evening appointments made, if desired. Or address,

Sales Promotion Department

**The Fuller Brush Company, Hartford, Conn.**

Fuller Brush Co., Ltd., Hamilton, Canada  
Branches in over 200 cities.

I called on him at his office one day in company with my attorney. We expected to meet a guarded, taciturn individual who would listen courteously and say nothing. To our surprise, the great man talked quite casually of many different matters connected with the financial world. We had the feeling that we were being taken on the inside and told secrets of large importance. As a matter of fact, when we left the office and compared notes, trying to recall the important revelations the great man had made, we discovered that he simply had not made any. What he had told us sounded important and was important; but it was all set down in such reliable guides as the "World Almanac" and the "Wall Street Journal." His real secrets were just as safe as they had been when we entered his office.

Occasionally I find it impossible to escape the ordeal of making a public speech. I have one set rule for those speeches—never under any circumstances to let them run over ten minutes. Why professional public speakers do not sense the immense appeal of brevity is more than I can understand. They invariably run beyond the time when a majority of their audience wish that they would stop. I sometimes think it would have been a great thing if the Almighty had given every human being a monthly quota of words, as men get a monthly salary of dollars. Each man or woman may use his or her quota as they please; they may blow it all in at one conversational orgy; or they may use it sparingly in the important matters of life, and make it meet all reasonable demands. What a difference in our attitude toward foolish talk such a revolutionary measure would have worked!

Words are wealth; it's too bad that so few of us ever realize it.

## A Great Editor Tells What Interests People

(Continued from page 37)

a penniless immigrant. His first night ashore he slept on a bench in City Hall Park, directly opposite the spot where later he erected the great Pulitzer building. The next day he enlisted in the cavalry; and he fought on the Federal side until the close of the war.

"He found himself stranded then in the Middle West. But he was not the kind of man who stayed stranded. In St. Louis he got work on the 'Westliche Post,' then the leading German newspaper in the West; and in an astonishingly short time he had acquired an interest in the paper. The articles he wrote attracted a great deal of attention and helped to make the paper so prosperous that the other owners wanted to buy Pulitzer's stock. But when they went to him and offered a certain price for it, he said:

"I'm sorry, gentlemen; but my price is just double that figure."

"That was too high for them, so they

## Cotton's comfort Woolen's warmth and but sixty cents a pair

**S**OFT, fleecy cotton and fine, pure wool are skillfully knit together to make these handsome looking, medium weight hose.

The smooth woven worsted—Oxford gray or black—is very rich in appearance and provides snug covering warmth without bulkiness, while the soft cotton next the skin gives unusual searing comfort.

And long wearing is assured by the name—Iron Clad—which is famous for hosiery durability. The price—60c a pair (East of the Rockies)—makes the purchase of several pairs both provident and economical. Ask at your dealer's for Iron Clad No. 334 Oxford gray, or 335 black (same price for either color).

If you do not find them, order direct, enclosing remittance and stating size (9½ to 11½) and colors desired. Your order will be promptly filled, postage prepaid.

**Cooper, Wells & Co.**  
204 Vine St., St. Joseph, Mich

went away. But three months later, they came back again.

"Well, Mr. Pulitzer," they said, "we have decided to accept your offer."

"But, gentlemen, that offer was made three months ago," he said. "My price is not the same now."

"They asked him what it was and he named a figure just double the previous one. Again they went away; and again they came back; and once more the figure had doubled. This was repeated several times before they finally did meet his price.

"He was a veritable genius. In many respects, I never saw anyone to equal him. His mind was like a flash of lightning, illuminating the dark places. His capacity for work was exceeded only by his capacity for making other people work! He was always wanting a private secretary, because few men could stand the demands he made on their time and endurance.

"I'll tell you what one of my days as private secretary to Mr. Pulitzer was like: At ten o'clock in the morning I would meet him, either at his house or at the office. Before seeing him I had to read every word of every morning newspaper published in New York City.

"I mean that literally. I had to read every word on every page of every paper; editorials, news articles, advertisements—everything! I must be able to tell what each paper had printed on any subject. We would take up one news story, for instance; and he would ask what the 'World' had about it? Then what each of the other papers had and what editorial comments were made on it. He would take up the advertising pages, in all the papers, and have me tell him how they compared in space, what the individual advertisers were doing in each paper, and so on.

"I also had to open all his correspondence, both personal and business. Many of the letters I answered without even showing them to him.

"After we had finished going over what had been in the morning papers we went to the office, if we were not there already. Here he gave me directions concerning the editorials he wanted for the next day—and some of them I had to write myself. He told me how he wanted certain news stories handled. He talked over questions of policy, of finance; discussed new presses; the purchase of paper; the problems of circulation and of distribution.

"There wasn't a single feature of the business that he did not take up—and that I didn't have to take up, too! As I said before, it was a wonderful training, if you could live through it.

"About two o'clock we would go out to lunch. But we took the business along. And for two hours he would sit at the table, talking, planning, piling up an almost endless amount of work for me to do. Then, at four o'clock, he would go for a ride in the park, and I would have a few hours to do some of the things he had laid out for me.

"After dinner I would go to his house again, to show him the proofs of the next morning's editorials. At that time he had lost the sight of one eye, and the other was badly affected. He would hold

the proofs a few inches from his face and, with one eye, read every word of every editorial. I used to protest that he would ruin his sight, already almost gone; but my protests had no effect.

"He was tremendously interested in his editorial page; he was always flaying somebody, or something, there. He wanted an editorial page that 'ran blood' every day. In going over the proofs, he made changes with a blue pencil; and when he had finished I took the proofs back to the office, had a revised set printed, and took these up to his house. Again he would read them with his one dimly-seeing eye. And then he would sit there until one o'clock, or two o'clock, in the morning, still talking about the business and its problems, still laying out work for me to do.

"I used to get to bed about three o'clock in the morning. I averaged about three hours' sleep a night; for I had to be up at six o'clock to begin my daily task of reading all the morning papers. It was a gruelling experience.

"AFTER a while, thank heaven," said Mr. Grozier, with a smile, "he was elected to Congress! He didn't give a great deal of attention to it, but he did go to Washington occasionally and he did not always insist on my going with him. So, once in a while, I had a chance, at least, to dig my way through the pile of work that always confronted me.

"I was Mr. Pulitzer's private secretary for a year and a half. I married without consulting him. When I told him what I had done he was quite resentful. He said a newspaper man had no business to be married. I replied that I did not agree with him and that I preferred to follow his example, rather than his precept, in that matter.

"He himself had married a niece of Jefferson Davis, who was the head of the Confederacy during the Civil War. She was one of the most beautiful and charming women I have ever seen. When Mr. Pulitzer was the Washington correspondent for the New York 'Sun' they met, fell in love, and were married. So when he resented my own matrimonial venture it was not hard to justify myself.

"Later, however, we had a difference of another sort. He wanted me to do something which, of course, seemed all right to him. But I, from my point of view, could not approve of it. He insisted, but I declined to do it.

"I suppose you know what this means," he said.

"Yes, I know," I answered. "It means that you will fire me."

"I didn't want to be fired; for by that time I had not only a wife but also a baby to take care of. It was a serious matter to me to lose the position. But I couldn't change the stand I had taken on the question between us.

"He said nothing more about it that day. The next morning he promoted me! But he promoted me to the most difficult job on the paper—that of city editor. It was his way of punishing me. I never had filled an editorial position. He catapulted me into one where I had a hundred highly trained workers under me. I was only twenty-eight years old. Some of the men under me were twice my age and had many times as much experience

Everybody buys. Housewives, mechanics, electricians, jewelers, plumbers, tourists, automobilists, etc. No leak too bad to repair. Just apply a little "Soderese," light a match and that's all. Put up in handy metal tubes. Carry quantity right with you. Write for money-making proposition.

AMERICAN PRODUCTS CO., 7138 American Bldg., Cincinnati, Ohio

'Globe,' under General Taylor. We were still the best of friends. Before I took any steps to acquire the 'Post,' I went to General Taylor and told him I had a chance to buy it.

"But if you have the slightest objection, General," I said to him, "I won't consider purchasing the paper."

"Putting his hand on my shoulder, he said, 'Go right ahead, Mr. Grozier. I don't mind in the least.' And he added, with a smile, 'If you can gather up any of the crumbs that fall from the "Globe's" table, you're welcome to them.'

"Thank you, General," I replied. "But I want to warn you that I sha'n't be satisfied with crumbs. If I can, I shall go after the cake, too!"

"That was in 1891; and always, until his death a few years ago, General Taylor and I were the best of friends. He often came out to dinner at my house in Cambridge and entertained us for hours. He had the most remarkable fund of anecdotes that were full of clean, wholesome fun. He had hundreds of these stories filed under subjects. And when he was to speak at a banquet, or some public meeting, he would ask his secretary to get out some stories on the subject he was to speak on. He would select a dozen out of the batch and use them with great effect in his remarks that evening.

"Well,"—Mr. Grozier interrupted himself—"I told you what I consider the first step in making a successful newspaper: Win the confidence of your readers! And the second step is: Win their affection! There are, of course, other factors. You must treat your employees liberally; you must be square with them, as well as with your clientele. No man can achieve very much without the loyal help of others. He needs the best assistants he can get; and he gets them by being, himself, loyal to their interests."

"HOW does a newspaper win 'affection'?" I asked.

"How does a human being win affection?" he countered. "Isn't it by taking a personal interest in other people? A newspaper does it in just the same way. Let me give you a few illustrations: We—and when I say 'we' I mean the Boston 'Post'—are helping to build up the Zoo at Franklin Park. Now, in the first place, everybody likes animals. Everybody enjoys a Zoo. If it is in a public park it is a source of entertainment and of pleasure to every man, woman, and child in the city. It isn't for a chosen few. It appeals to everybody. So, at the very start, you have a boundless field of possible interest.

"Several years ago an Englishman and his wife, Mr. and Mrs. Ormond, wanted to dispose of three trained elephants. We decided to buy them and present them to the Zoo. Now, we were perfectly willing to pay for the elephants ourselves; but we did not do that. We asked the children in and around Boston if they wouldn't like to be part owners in those elephants! We asked them to send in their contributions, even if they could give only one penny apiece. And we said we would print in the 'Post' the names of every single contributor.

"The 'Post' did pay several thousand dollars of the purchase price, which was

some ten or fifteen thousand dollars. I don't recall the exact figure. But most of it came from the children themselves. We printed columns of names every day. Thousands of the children gave only a penny each. It cost us then about thirty cents a line, on an advertising basis, to print these acknowledgments of penny gifts. But every child, who had given even one cent, wanted to see his name in the paper, and was thrilled by the thought that he owned part of an elephant. We had a formal presentation of the animals to the park; and sixty thousand children were present!

"Of course," with a smile, "it added thousands to the circulation of the 'Post,' but it was a gain that was based, not on appealing to the worst elements in human nature but to the best; to civic pride, to generosity, to interest in animals, to the affection of parents for their children. And so it helped us to win liking and affection.

"HERE is another thing we did: You probably are familiar with the typical 'general store' of the small town and the country village. It is a place where the men gather around the stove in winter, or sit on the cracker boxes on the porch in summer and swap neighborhood gossip. One of the conspicuous figures in every such gathering is 'the oldest man in town.' Age is a subject of universal interest, no matter whether it is among city folks or country folks. A man who has succeeded in cheating Death longer than most of us manage to do it is always an interesting figure.

"Well, some years ago we had a firm import for us from Africa a lot of the finest ebony they could get. We had it made up into gold-headed canes. And we offered to present one of these canes to the oldest man in any community that would send in the necessary evidence. The cane was to belong to this man during the remainder of his life, when it was to be passed on to the man who succeeded him as the oldest in the town. The gold head of the cane was suitably inscribed, showing that it was presented by the Boston 'Post.'

"We started this fifteen years ago and it is still going on. Old men do have to die *someday*, you know. And these canes are being passed on, from one citizen to another, in many of the New England towns. It cost us a few thousand dollars, to be sure. But it won for us many times its cost in the affection and interest it gained for the paper. And, once more, this gain was achieved by appealing to people's good and kindly qualities, not to anything sordid or bad.

"It is perfectly natural and human for people to be interested in themselves; and a great many of the things we do on the 'Post' are based on this fact. A few years ago we started a daily feature called: 'Their Heads Are Cut Off.' Every day our photographer took a picture of some girl, or woman, in the crowd passing along the sidewalks of the shopping district. A print was made from the negative, the head was cut off, and the headless figure was reproduced in the 'Post' the next day. Under the picture was printed:

"Is this your picture? If so, please call at the office of the 'Post,' wearing precisely the

NOTE—To Art and Engraving Firms. Secure practical artists among our graduates. Write us.

same costume, and be identified, and you will be paid Ten Dollars in Gold for your time and effort."

"We printed one of the 'headless' pictures every week day and two on Sundays. It cost only eighty dollars a week in payments to the headless ladies, but a great deal more because of the space given it in the paper. However, it more than paid for itself in increased circulation. Thousands of women who went shopping in Boston watched the paper every day to see if they were in it. Some of them recognized a friend, by her dress; and of course it would please any woman to convey this news to a friend. Rich women, from Brookline, or the Back Bay district, came to the office in their elaborate limousines, to be identified and to receive the ten dollars. Not that they cared for the money, but because it was an interesting personal experience.

"WE RAN another daily feature last summer, which was based on the same personal human interest appeal. We sent Miss Bijou Fernandez out through dozens of New England towns as a movie scout. She had one of our photographers and also one of our reporters with her. Each day they went to a different town, or to a different section of Boston. If she found a girl who was a good movie type, we printed the young lady's picture and had a story about her.

"We were not sure, in advance, how much interest this feature would arouse. We thought we would try it for a week and see what happened. It added ten thousand to the circulation that week! So we continued it for some time. Again it was the personal human interest that brought the response. Practically everybody goes to the movies; and I suppose that every young girl—and many of the older ones, for that matter—would like to be in what they call 'the pictures.' Every town visited was eager to know who would be chosen there, and to compare the young ladies selected by the scout with themselves, their daughters, and their friends.

"Another feature we had was a contest in gathering interesting news items. We paid two dollars for each item printed; and every day we gave a Ford car to the person who had sent in the best item!

"A Ford a Day Given Away!" That made a striking headline, you will admit. The feature was a good one in various ways. In the first place, it naturally aroused a very great amount of interest. But it also supplied the paper with some extremely interesting reading! Many of the things which our readers happened to see, and which they reported to us, were curious and amusing. And again all our readers had a chance to look for themselves, or for their friends, in the paper; to compare the items that were printed; and to discuss their respective merits. Features of that sort tend to make your readers feel as if they 'belong' to the paper; and you know you are always a partisan of what is yours, aren't you?"

Picking up an old copy of the "Post," Mr. Grozier showed me the features he had been describing. Then he turned to the editorial page.

"Another thing which people like," he

## EMERALITE JR.

THE HOME'S HANDY LAMP

Stands, hangs or clamps anywhere

### Your Personal Light

JUNIOR is a personal light of an intimate kind and is always ready for an emergency. Ample cord enables you to get light into those inaccessible corners the other lights do not reach. The sturdy clamp in the base attaches to bed, chair, mantle, sewing machine or any other surface. Junior is at home in the most aristocratic company.

Original in design, artistically finished, with his Emeraldite glass shade—he's a useful member of the family.

Twelve inches high—in brass and other finishes.

A Useful Gift—Always Appreciated

Genuine Emeraldites are branded. Look for name on Emeraldite glass shade. Over fifty patterns to select from.

Sold by Office Supply and Electrical Dealers. Write for complete catalog.

H. G. McFADDIN & COMPANY  
19 Warren Street New York City

Makers of Lighting Devices since 1884

KIND TO THE EYE

You can be quickly cured, if you

## STAMMER

Right to write for 24-page book, "Stammering and How to Cure It." It tells how to get well after months of trouble. B. N. B. 4030 Duane Blvd., 1147 N. 11th St., Indiana

Name \_\_\_\_\_  
Address \_\_\_\_\_

said, "is to learn things—if the learning is made easy and pleasant. So here, on the editorial page, we always have one feature which might be called educational. When this copy was printed that particular feature was: 'Who's Running the World.' In each issue we printed a good-sized picture of someone who has a real influence on world affairs. Underneath the picture we gave a short story of the man and his work.

"We change this educational feature every little while. For instance, we have had 'The Prettiest Women in History.' You see the opportunities there. We could go back to Helen of Troy, call on Cleopatra, and sympathize with Mary, Queen of Scots.

"On the editorial page we have only two columns of editorials. But they are crisp and to the point. We have several Harvard professors writing editorials for us. But I do not believe in too much quantity of that sort; for it is the average man and woman to whom I want to appeal.

"NEXT to the editorials we have a column which is intended to bring a few smiles—and certainly everybody likes to smile. I think we were the first newspaper to print a selected quotation at the top of the first page. We ask our readers to send them in to us, and we choose from among those they submit. We print these quotations across the front page, above the name of the paper. It takes a little space—and we are always crowded for space—but I guess it's worth it. I think it helps our readers to think of us as human; and that's what I want them to do."

"Evidently, you find your greatest satisfaction in work," I suggested.

"Yes," Mr. Grozier agreed. Then he added: "But one can be intemperate, even in work."

"As, for instance, when you were with Mr. Pulitzer?" I suggested.

"Oh, that was nothing, compared with my 'intemperate' working habits later on!" he laughed. "During the first few years after I bought the 'Post,' there were many times when I worked twenty-four hours a day for several days in succession. It was a fierce struggle to keep my head above water. Most of the time, figuratively speaking, there was an 'angel' in one room and the sheriff in another. An angel, you know, is someone who may possibly put up money to back you. But I was generally much more certain of the sheriff than I was of the angel. By working twenty-four hours a day, I managed to stand off the sheriff—but my health paid the reckoning later. It doesn't pay to try to be supermen. If we do, Nature calls us down. Remember that! And it is better to do your remembering beforehand; not after the mischief has been done."

W. L. GEORGE, the famous English novelist and journalist, has written for next month the story of the long and rocky road he had to travel before he won out at last. Mr. George declares that "hope is a liar"—because weak men make it a substitute for work. Anyone can succeed, however, if he will keep his head hard and his heart soft.

# COMMERCIAL ART

## Taught By Improved Methods

Many art school advertisements tell about the great and ever increasing demand for commercial artists—big pay—equal opportunity for both men and women, etc. Very good! This is all quite true, but you must first be properly taught. Understand? Properly taught! Few top notch artists are good instructors. Very few. By searching through many studios we have found them.

## A Master Course Is Offered

Endorsed as the official training school for leading Commercial Art houses, employing hundreds of artists. Correct educational methods applied. A practical educator and a corps of top notch commercial artists, offer students the benefit of 20 to 30 years of high grade experience. Only the best instruction is good enough for you. Students finishing half of this course can secure and hold desirable positions. Course can be made to pay for itself many times while studying. Either class room or home study instruction. Same course. Same credits. If you like to draw, let's talk it over. Ask for our book telling all about Commercial Art and the opportunities it presents AS WE TEACH IT. Send 5 cents in stamps for postage.

**\$50.00 A WEEK** If you are earning less and want to earn more, you must have outside work where you learn profitable drawing and writing and receive a freedom of your own, and the for example of several commercial artists, and you will find that in making this to \$100 a week for others. Foreign opportunities available but not necessary. MAGNUS, 477 West Avenue, Brooklyn, N. Y.

**Printing Cheap** Various styles, labels, book, paper, from \$12. Larger \$15.00 per 100. Have money. Print for others, big profit. All day, every day. Write factory for price catalog, TYP, Carle, etc. THE PRESS CO., D-30, Maricao, Conn.

**YOU CAN** have a business profession of your own and earn big money in service fees. A New system of fast correction; readily learned by anyone at home in a few weeks. Study forms for training, openings every where with all the trade you can attend to. No capital required or needed to buy, no agency or soliciting. Address: Stephenson Lithography, 16 Back Bay, Boston, Mass.

Disease germs in the throat can be actually killed before they reach a dangerous stage of development.

## Prevention, rather than cure, is the keynote of modern medicine

**S**AID a great educator in a recent address before a prominent college of medicine: "Medicine has changed. For centuries it was curative, and is now preventative." We may well ask ourselves what steps we are taking to prevent the entrance of disease germs through the throat—the portal of our system.

We should be as zealous—even more so—in maintaining the health and cleanliness of our throat, as in caring for any other part of the body. It is through the throat that man's greatest enemy, the germ of in-

fection, seeks to invade the system. That is why years ago, a physician gave us *Formamint*, the germ-killing throat tablet.

It is indeed a pleasant tasting tablet. Dissolving slowly in the mouth, it sets free a powerful, yet harmless germicide that mixes with the saliva, thus penetrating every nook and crevice of the throat, searching out and destroying the germs of infection.

Today, science recognizes in *Formamint*, a reliable means of prevention, and physicians urge its regular use for all throat troubles involving infection.

## Formamint

GERM-KILLING THROAT TABLETS

*Formamint is our Trademark—It identifies our product*

To acquaint you with *Formamint* we will send a trial Tube on receipt of ac in stamps, to defray the cost of mailing. Address The Bauer Chemical Co., 113 West Eighteenth Street, New York City, N. Y.

## SPECIAL OFFER of TESTED SEEDS

If you write now for our 1923 Catalogue, we will send the famous HENDERSON Collection of seeds—one packet each of Eclipse Beet, Viroflay Spinach, White Tipped Scarlet Radish, Henderson's Invincible Asters, Henderson's Brilliant Mixture Poppies, Giant Waved Spencer Sweet Peas.

### HOW TO GET THEM

Simply state where you saw this advertisement, enclose ten cents for mailing the Catalogue, "Everything for the Garden," and the seeds will be sent without extra charge. **EMPTY ENVELOPE COUNTS FOR CASH** These tested seeds come in a coupon envelope which, emptied and returned, will be accepted as a 25-cent cash payment on any order amounting to \$1.00 or more. Don't delay; write at once.

### 1923 CATALOGUE NOW READY

Bigger and better than ever, the most beautiful and complete horticultural publication of the year, a book of

176 pages

16 color pages. Over 1000 beautiful illustrations showing actual results. A mass of valuable garden information. Send today for this helpful guide to a better garden and the special seed collection.

**PETER HENDERSON & Co.** 35 & 37 CORTLANDT ST. NEW YORK CITY

and in the movies, men write and produce the plays; women nurse, men heal; women work in the court-room, the judges, sheriffs, prosecutors, and attorneys are almost all men, etc., *ad infinitum*.

The young of man, as of animals, are equal, with the female first reaching maturity; so woman in youth often equals, indeed often excels, the male; but as she reaches maturity, impelled by age-old heredity and the primal decree of nature, she perhaps subconsciously, or unconsciously, ceases to care to advance, and begins to employ her charms to please the males, and finally to please a single individual of the male species; thenceforth losing partly her initiative and self-reliance, and becoming a follower.

In my own experience, in high school the girls led, the valedictory, salutatory, and class historian going to them. Most of the same class continued into the same college in the same town, and by the sophomore year the girls were all mediocre students, excelling in nothing, and often trailing at the end of their classes; while the boys who were mediocre in high school easily outdistanced them. This was partly due to the fact of its being a small town, where the girls would sooner revert to the status to which nature relegates them than if it had been a large city; but it was sufficient to serve as an epitome of the race and to prove that men are smarter than women. J. F. C.

### THIRD PRIZE

## Just What Does One Mean by "Smarter"?

**T**HE question as to whether women or men are the smarter resolves itself into one's meaning of the word "smarter."

My high-school physics teacher used to say that he preferred a class of boys to one of girls, because girls learned like parrots what was in their textbooks, while boys neglected their books but reasoned things out for themselves and remembered the important part of the lesson.

If by "smarter," one means quickness of comprehension, then I am sure that women are smarter than men. I have been annoyed all my life by the slowness shown by my father, three brothers, brother-in-law, and even my husband, so I have decided that it must be a masculine trait.

However, if by "smartness" one means the ability to "sift the wheat from the chaff," I confess with reluctance my belief that there men excel. Men, as a rule, have little time for intellectual fads. The average man, by the very nature of his daily contacts, obtains a breadth of view, a tolerance, and a depth of knowledge which are seldom equaled by the average woman. One instance is men's interest in world affairs. Women seem to find it difficult to feel concern about impersonal questions. Very recently I have heard women admit that they were only slightly interested in international matters.

In view of these facts I am forced to concede that, while in some ways, women are "smarter" than men, that in more important ways men are "smarter" than women.

MRS. W. A. B.

## Little Bill and the Mad Bull

(Continued from page 25)

remembered hearing that just before a bull struck he closed his eyes. That was his only hope. He would step aside at that instant, and then make a dash for the fence. He faced the bull.

From the side of the paddock at his right appeared a boy with a rope in his hands. This weird little figure ran straight out into the pasture, swinging a noose about his head and looking intently at Sir Colintha. He was above the bull and behind him, but he ran down at an obtuse angle.

Suddenly the whistling loop was not to be seen, but there came to the ears of the city man a vicious, whining hum, like that of a hornet. Bill's arm jerked out, poised a moment, and jerked back. He grabbed the rope with both hands and threw his weight upon it. The noose had caught one of those flying forefeet, and in the moment of his wrath Sir Colintha tripped and fell. The earth shook with the impact.

"Quick. He'll be up in a second! Not that way. After me!"

BILL was giving orders like a drill master. In flying overalls, he sped before Mr. Baker, not for the nearest fence but obliquely toward the front of the paddock.

Behind came the pounding of hoofs. Then Bill threw himself upon the turf-padded earth, rolled under the fence, and leaped to his feet. Mr. Baker followed after.

Two seconds later, before the owner had risen from the ground, Sir Colintha struck the six smooth wires of the paddock fence—struck them at a bias, and came off.

Mr. Baker had occasion presently to examine the fence. He noticed that the staples which held the wire in place were shiny and new, and that, even so, some of them had been jerked half way out of the wood. . . .

Evening shadows were creeping over the hillsides. It was cool and pleasant on the bungalow porch, where Mr. Baker sat observing his companion through rather quizzical eyes.

"Bill," he said abruptly, "how did that dog get out? Why did he run away before he finished his job?"

Bill's eyes met the city man's for an instant. Then he looked away.

"I let Slim out," he said. "I knew he wouldn't do anybody any hurt. He was just breaking his heart in there. I knew if he saw anything going on that wasn't right—you see, sir, him and me had been around cattle all our lives. Slim knows when they're up to mischief. So I turned him loose; and he was sneaking around keeping out of sight. He ran at Sir Colintha because he saw the baby was going to get hurt. Slim is a gentleman. He always takes care of babies and women. When he saw the little girl had got clean away, he knew he'd got to beat it, so's he wouldn't be tied up again. He must have figured you were a man, so you could look out for yourself!"

Mr. Baker raised his brows and pursed his lips.

*Apache Trail Highway and Roosevelt Dam*

STOP in Arizona on your "Sunset" way to California and view the wonders of the Apache Trail Highway. A glorious automobile side trip among the crags and canyons once the strongholds of the marauding Apache. Beautiful Roosevelt Lake, like a mirror in a mountain bowl—Roosevelt Dam, outrivalling Niagara in height—cliff dwellings, old as Babylon—and everywhere, over fertile mesa and towering peak, color, vivid, prodigal, amazing in its many tones. Don't miss it!

## Raise Your Own Salary—Others have—You can

You may be hoping for a raise at the start of the new year. Maybe you'll get it, maybe you won't. At any rate—hoping won't bring it to you. It's a grand thing to be in a position to raise your own salary any time you want to. That's exactly what the members of the Subscription Staff, representing *The American Magazine*, *Woman's Home Companion*, *Collier's*, *The Mentor*, and *Farm and Fireside*, are doing!

### Over \$500,000.00 In Spare-Time Profits

was paid out during 1922 to these special representatives. That much and more will be paid to them during 1923, in commissions, bonuses, and special prizes. Instead of "hoping" for a raise, why not join this Staff of spare-time hustlers and raise your own salary? This coupon will bring the information you want.

Chief of Subscription Staff, Desk 27-A  
 THE CROWELL PUBLISHING COMPANY, 416 West 13th St., New York City  
 Please send me without obligation information as to how I can raise my own salary.

**Imperial  
Sanitary  
Floor**

**Base  
and Floor  
one solid piece**

Put on like Plaster  
Wears like Iron  
-waterproof  
-fireproof  
-resilient  
-noiseless  
-dust-  
-less

A magnificent material easily applied to plaster, brick, concrete, and wood. It is a kind of "thin" floor, about 1/8 inch thick. Imperial Floor does not crack, peel, or come loose from foundation. A continuous, homogeneous, smooth, non-slippery surface. No other floor is so strong, durable, fireproof, noiseless, and sanitary.

Imperial Floor has been used in hospitals, schools, hotels, homes, churches, and everywhere. It is a beautiful, modern floor. It is the only floor that is so strong, durable, fireproof, noiseless, and sanitary. It is the only floor that is so easy to apply and so easy to maintain.

IMPERIAL FLOOR CO., 117-119 Belmont St., New York, N. Y.

A Success for 15 Years

**LABLACHE**  
FACE POWDER

"How the elusive perfume of Lablache takes me back! Grandmother's lightly powdered cheek—Mother's dimpled chin—and home." Fifty years of delicate custom-blended powders have established Lablache as the finishing touch on the radiant face of the modern woman.

Refined Beautification

There are no cheap imitations of Lablache. The only genuine Lablache is made in France. It is the only face powder that is so light, so delicate, so refined, and so beautiful.

BEN LEVY CO.

125 Broadway, New York, N. Y.

125 Broadway, New York, N. Y.

"So I thought—till recently," he said. "Now, Bill, here are two more conundrums: First, why didn't you throw that lasso, or whatever you call it, over the bull's neck? That's what they do in the moving pictures. And why didn't you make for the nearest fence, instead of making me run twice as far? I was nearly winded!"

"There was no use roping Colantha by the neck then, sir. My weight wouldn't have hampered him. He'd have kept right on, and maybe he'd have got you. Had to trip him. See? And that fence at the side has only four wires, and the staples are loose. The fence at the front of the paddock has six wires, and I put in new staples there just the other day. And there was one other thing:

"In beating it out of there, we didn't want to go straight at a fence, but at an angle. The old gentleman that followed us—he was running at an angle, too, when he hit the fence. That's why he didn't go right through the fence and come on us. He just struck and kind of slithered off. See?"

Mr. Baker drew a long breath and sighed. Presently he spoke, but it seemed that he was thinking to himself out loud: "It's always a pleasure, Bill, to talk with a man that knows his business, no matter what it happens to be. You're an expert; and that brings me to something else I've been thinking about: How would you like to go to an agricultural school, where you can learn animal husbandry, scientific breeding, and such things? Maybe there's a touch of egotism in this, but I feel that in saving my life you've performed a very creditable act. That's all right, son, you don't have to say a word just now. And to-morrow we'll drive down to the state college and talk with the dean about it. I have an idea he'll see things about as we do. We'll stop in the city and get some clothes and things. Suppose you run along now and talk it over with Slim. Tell him for me he can have the run of the place from now on!"

THE sunset faded, and in the blue of early night the shaving of a moon hung over the jagged ridges. A dog and a boy watched it. The boy put his arm around the shaggy neck and their heads touched.

"Slim," the boy whispered, "that was teamwork! And, Slim—I tell you, Slim, we got a home—and friends—at last!"

## How I Sold Myself to My Wife

(Continued from page 27)

Beethoven played the piano. And I knew that all the art and music information with which she had dazzled me had been cribbed out of the encyclopedia at the public library; and that she didn't have any rich old aunt, and had sent herself that two-hundred-dollar wedding present and faked the note, with the help of one of her girl friends in another town. Also, we knew exactly how much we were in debt, and had decided what to do about it.

So, at two o'clock we sat holding hands and looking into the future out of honest eyes for the first time in our lives, and I

## 40,000 Opportunities in Hotels!

You can have one of these well-paid, pleasant, exciting positions—40,000 of them—in the big hotels of the United States—some America's finest hotels. Industry, initiative, and a few years' experience in every ten hotels will have an opening for a manager this year. Thousands of other positions are also open to those who qualify through training.

The Lewis Hotel Training Schools teach you the valuable knowledge and skill that are the basis of the hotel business. You will learn how to manage a hotel, how to run a hotel, how to sell a hotel, how to buy a hotel, how to build a hotel, how to improve a hotel, how to make a hotel a success. You will learn how to manage a hotel, how to run a hotel, how to sell a hotel, how to buy a hotel, how to build a hotel, how to improve a hotel, how to make a hotel a success.

Send today for your copy of "Hotel Big Opportunity." Don't lose a chance to see how the opportunity of a lifetime is yours. Write today.

LEWIS HOTEL TRAINING SCHOOLS

Clifford Lewis, Pres.

Room 1454 Washington, D. C.

Founded 1910

suddenly realized that I was hungry. "Come on," I cried, "let's have one more fling. Let's put on our duds and hunt up an all-night restaurant. I'm dying for a good thick steak, and I want it smothered in onions."

The next Monday morning she went back to her old job, and at the end of the month we rented the apartment and moved into two rooms down-town. Before the year was over we had paid off our debts, and were figuring out a plan by which I could get into business for myself.

That was the story I told to Jim Waverly.

Being a salesman I would prefer to say that "marriage is like life in this—that it is one long, glorious job of selling." We are all salesmen. The goods we sell are our own characters and abilities and personalities. And the trouble with lots of men is that they sell a very superior quality of these goods in the office, and a very inferior quality at home.

A good salesman never misrepresents his goods. If his silk shirts are half cotton, he says frankly to the merchant that they are half cotton and dwells upon the advantages of that fact. Such a salesman gets onto a basis of frank understanding with his wife at the very start. She knows his strength and his weakness, and he knows hers. Knowing just what cards they have with which to play the great game, they waste no time in bluff.

**T**HE good salesman often under-praises his goods; he deliberately passes over some points of strength and lets the merchant discover these points for himself. He wants the buyer to be more pleased after the goods are delivered than he was when the order was signed. At home he applies the same psychology. He makes it a point to exceed his wife's expectations now and then; to learn some new things, or attain some new distinction which will give her a fresh and unexpected vision of his character and capabilities.

The wise salesman never overstocks his customer, but many marriages suffer from overstocked shelves. The stock is *his* personality and *hers*. No matter how much he loves her or she loves him, they grow sometimes a little weary of each other. The Angel Gabriel is doubtless a very fascinating personality; but we should probably grow tired even of him if he were with us every day and all day forever. This wise husband, if he be a wise salesman, finds some way by which he and she can be away from each other for at least a part of every year. He knows that his personality will be much more in demand if the shelves are not glutted with it all the time.

And finally the wise salesman knows that a sale is only begun when the order is signed—that to keep the customer sold is much harder than selling him in the first place. Of all the principles of selling this is the most important; and wives fail to appreciate it fully as much as husbands.

At our house marriage is a game—the selling game, the greatest in the world. The goods to be sold are myself, the customer is my wife; and the objective is to keep the customer just as happy as she was when she ordered the goods seventeen years ago.

## Stop Wondering How I Teach Piano; I'll Show You FREE!

Year after year you've seen my advertisement in all the leading publications, offering to teach you piano in *quarter* the usual time. Year after year my school has grown until now I have far more students than were ever before taught by one man. In 1921 over a thousand students graduated from my Piano or Organ course and received their diplomas.

Yet, when I first started giving piano and organ lessons by mail in 1891 my method was laughed at. Could my conservatory have grown as it has, obtained students in every state of the Union and in fact practically every civilized country of the world unless it produced very unusual and satisfying RESULTS for its students? See for yourself what it is that has brought my method so rapidly to the front. Write for free booklet and sample lessons.

Now for the first time, you can obtain sample lessons without charge. In the past I have always been opposed to sending out free lessons, even to persons who were seriously interested in my course. But my friends have insisted that I give everybody a chance to see for themselves just how simple, interesting and DIFFERENT my lessons are, and I have consented to try the experiment for a short time. Simply mail the coupon below or write a postcard, and the 64-p. booklet and sample lessons will go to you at once absolutely free and without obligation.

Within four lessons you will play an interesting piece on the piano or organ, not only in the original key, but in all other keys as well. Most students practice months before they acquire this ability. It is made possible by my patented invention, the Colorotone. Another invention obtainable only from me is my hand-operated moving picture device, Quinn-dex. By means of Quinn-dex you actually see my fingers in motion on the piano, and can learn just how to train your own fingers.

When I say that I can teach you piano in *quarter* the usual time, do not think that this is too good to be true. Modern inventions and improved methods have accomplished just as great wonders in other branches of education. You at least owe it to yourself to investigate. Send coupon or postcard at once, before the offer of free sample lessons is withdrawn.

Name \_\_\_\_\_ Street \_\_\_\_\_ City \_\_\_\_\_

lose our identity in a pond of magnificent dimensions. A big town overshadows and engulfs everything, including personalities. In a small town personalities tower. The most towering thing in New York is a monument to a five-and-ten-cent store idea.

Perhaps the greatest thing the small town has to offer is the opportunity for the man of small income to own a home of his own close to his work. One never has to commute to his job in a small town and two or three blocks around the corner takes a fellow out of the high rent district. It is possible for a young man with any sort of salary to buy a piece of ground for a few hundred dollars somewhere in any small town. And small town lots are not city lots. A lot that is less than fifty feet wide by a hundred feet deep isn't considered a lot at all in Elizabeth City, where most lots run a hundred and fifty feet deep, affording the owner an ample garden plot and room for a garage, a tool house, and a chicken yard on the back.

I can show you block after block of houses in Elizabeth City built and owned by their occupants, and most of them never owned a share of building and loan stock; they started by acquiring a piece of ground and saved a little along until they could make a start in building. Often the small home builder is financed by his employer, who realizes that his most valuable and most dependable employee is the one who has a stake in a home of his own. There is no recognized Moving Day in a small town, most of the families owning their homes and sticking to them. I'm speaking of honest-to-goodness towns, and not of factory and industrial settlements.

**H**UMAN cussedness and contrariness are more conspicuous in small towns only because every other human attribute is more outstanding in a small town. Two citizens in New York may have a difference, exchange a few heated words and go their respective ways without seeing each other again for a month. In that time they will have cooled off. But let a pair of citizens in a small town have a quarrel, and they don't have such an opportunity to cool off. What's more, everybody knows they have quarreled, and their human pride and stubbornness prevent them from getting together because everybody is watching them.

Out of mere trifles oftentimes grow factional differences that keep on growing and growing until half the town is dragged into them without knowing just what it is all about. And the women don't help these factional rows a bit. Women are very, very slow to forgive, and they never forget. My wife never will forgive certain citizens with whom I have had differences in the past, and the wives of some of my best friends won't speak to me because once upon a time I said nasty things about their husbands in my paper. When I condemn this unforgiving, unforgetting nature of the female of the species in the presence of my wife, she retorts that men forgive and forget only for business or political reasons, winking at principle for the sake of self or political preferment. And then I shut up.

The one thing that operates to keep the average small town from being a community of kindred spirits with more common interests, is over-organization. We

## How YOU Can Write Stories and Photoplays

By ELINOR GLYN

Author of "Three Weeks," "Beyond the Rocks,"  
"The Great Moment," Etc., Etc.

Elinor Glyn

**F**OR years the mistaken idea prevailed that writing was a "gift." People said you had to be an Emotional Genius with long hair and strange ways. Many vowed it was no use to try unless you'd been touched by the Magic Wand of the Muse. They discouraged attempts of ambitious people to express themselves.

These mistaken ideas have recently been proved to be "bunk." The entire world is now learning the TRUTH about writing. People everywhere are finding out that writers are no different from the rest of the world. They have nothing "up their sleeve"; no mysterious magic to make them successful. They are plain, ordinary people. They have simply learned the principles of writing and have intelligently applied them.

Of course, we still believe in genius, and not everyone can be a Shakespeare. But the people who are turning out the thousands of stories and photoplays of to-day for which millions of dollars are being paid ARE NOT GENIUSES.

You can accept my advice because millions of copies of my stories have been sold in Europe and America. My book, "Three Weeks," has been read throughout the civilized world. For Famous Players-Lasky Corporation, greatest motion picture producers in the world, I have written and personally supervised such photoplays as, "The Great Moment," starring Gloria Swanson, and "Beyond the Rocks," starring Miss Swanson and featuring Rodolph Valentino. I have received thousands and thousands of dollars in royalties. I do not say this to boast, but merely to prove that you can be successful without being a genius.

Many people think they can't write because they lack "imagination" or the ability to construct out-of-the-ordinary plots. Nothing could be further from the truth. The really successful authors—those who make fortunes with their pens—are those who write in a simple manner about ordinary events of every-day life—things with which everyone is familiar. This is the real secret of success—a secret within the reach of all, for everyone is familiar with some kind of life.

Every heart has its story. Every life has experiences worth passing on. There are just as many stories of human interest right in your own vicinity, as there are in Greenwich Village or the South Sea Islands. And editors will welcome a good story or photoplay from you just as quickly as from any well

known writer. They're eager and anxious for the work of new writers. They will pay you well for your ideas, too—a good deal bigger money than is paid in salaries.

The man who clerked in a store last year is making more money this year with his pen than he would have made in the store in a lifetime. The young woman who earned eighteen dollars a week last summer at stenography just sold a photoplay for \$500.00. The man who wrote the serial story now appearing in one of America's leading magazines hadn't thought of writing until about three years ago—he did not even know that he could. Now his name appears almost every month in the best magazines. You don't know whether you can write or not until you try.

I believe there are thousands of people who can write much better stories and plays than many we now read in magazines and see on the screen. I believe thousands of people can make money in this absorbing profession and at the same time greatly improve present-day fiction with their fresh, true-to-life ideas. I believe this so firmly that I have decided to give some simple instructions which may be the means of bringing success to many who have not as yet put pen to paper. I am going to show YOU how easy it is when you know how!

Just fill out the coupon below. Mail it to my publishers, The Authors' Press, Auburn, N. Y. They will send you, ABSOLUTELY FREE, a handsome little book called "The Short-Cut to Successful Writing." This book was written to help all aspiring people who want to become writers, who want to improve their condition, who want to make money in their spare time. Its pages are crowded with illustrations that enthuse, stories of success now hope, encouragement, helps, hints—things you've long wanted to know. The book tells how many suddenly realize they can write after years of doubt and indecision. How story and play writers began. How many rose to fame and fortune. How simple plots and ordinary incidents become successful stories and plays when correctly handled. How new writers get their names into print. How one's imagination properly directed may bring glory and greatness. How to WIN.

This book and all its secrets are YOURS. You may have a copy ABSOLUTELY FREE. You need not send a penny. You need not feel obligated. You need not hesitate for ANY reason. The book will be mailed to you without any charge whatever.

Get your pencil—fill out the coupon below. Mail it to The Authors' Press before you sleep to-night. This little act may be the turning point of your whole career. Who knows?

have more organizations in Elizabeth City than one could count on the fingers of Siamese Triplets, but there is no community organization. I find the same condition existing in other small towns and I guess it's the same the world over. Here in Elizabeth City we have a Chamber of Commerce, a Merchants' Association, Rotary Club, Kiwanis Club, Masons, Shriners, Knights, Pythians, Odd Fellows, Red Men, Elks, Jr. Order United American Mechanics, Volunteer Firemen, and a number of minor organizations. We have three Baptist churches, two Methodist churches, Episcopalians, Presbyterians, Christians, Catholics, and Holy Rollers.

There is enough energy, enthusiasm, and ability in the combination to accomplish anything under the sun possible of accomplishment in a group of ten thousand mortals. But the energy, enthusiasm, and ability that might unitedly transform an ordinary country town into an ideal community of neighbors is scattered—one might say dissipated—in a score of lesser activities. A score of groups are doing good piecemeal when not actually pulling against each other, secretly jealous of each other, or openly hostile.

THE maintenance of so many diverse organizations is a great drain upon the pocketbooks of a small town, and the average fellow who feels compelled to support several at once is inclined to lose interest in one and all. You can't get a meeting of the Chamber of Commerce on Wednesday night because that is prayer-meeting night; nor Friday night because that is Rotary night; nor on Tuesday night because that is Shrine night.

We have about six revivals a year in our town and everybody gets good for a season. But most of us slide back into our indifferent, happy-go-lucky ways, and in three weeks after the evangelists have decamped we are laughing, jesting, and putting raisins in the apple cider just as if there were no death, no resurrection, and no after-life to bother about. Funny how we refuse to take our poor little souls seriously all the time.

Life in the small burg is pretty much like life in the big burg in every particular. The servant problem on Main Street, Elizabeth City, is not different from the same problem on Fifth Avenue, New York, except in the color of our servants. Our servant class is drawn almost wholly from the colored population.

I reckon no discourse on life in a small town would be complete without some reference to the subject that is never dry, to wit: Prohibition. Yes, we have our hootch in Elizabeth City just the same as they have it in New York, but with this difference: we usually know where and how ours is made and the age of it. There's where we have it all over the New Yorker. The rural hootch-maker hasn't the art of chemistry at his command, as has the city fellow, and must rely upon simple formulae calling only for the grains and fruits that he grows, plus sugar, molasses, and yeast cakes that any grocer can supply. It is my belief that the moonshiner and bootlegger are rapidly being forced out of business. Two things are against them—the prohibition commissioners and the tendency of every drinking man to make his own hootch.

## The World's Most Fascinating Volumes—

Sent free—for your approval

Have The Mentor Library, in permanent form, in your own home. Through no other work can you possibly obtain such a vast amount of valuable, interesting, broadening information, in those spare minutes that otherwise would be lost to you forever.

## Make the Most of Your Spare Time!

Open a Mentor volume anywhere. You will find before you some fascinating page. It may be the history of Joan of Arc, a portrait of Napoleon, a travelogue of Yellowstone Park, a chart of the planets, the story of an immortal piece of literature. Every page contains something you not only want to know more about, but something you will thoroughly enjoy.

## Always timely—for every age

The best minds in America have built The Mentor Library—great scientists, critics, mountaineers, artists, musicians, writers, and travelers. And every article is embellished with beautiful full-page gravure and color plates and a rich profusion of splendid text illustrations.

These handsome volumes will widen your cultural background, bring you a thousand new and fascinating interests, and give you a firm standing among well-informed, successful men and women.

The woman in her club, the man in his business, the student in high school or college, will all find The Mentor Library profoundly and genuinely helpful. And it will be just as fresh and living to your children's children years from now as you will find it to-day.

## Owned by tens of thousands

So great was the demand for The Mentor Library that our stock was completely exhausted many months ago. Only now are we in a position to make shipments. The Library is in five volumes, and—specially bound in pebbled green cloth with genuine leather backs, gold titles, numbers, and designs. This durable binding is not only dignified and beautiful but will also survive years of the most constant handling. A special cross-reference index will come to you free.

## Send no money now

We shall send The Mentor Library on approval. You can pay for it in small monthly installments of \$3.00, or we shall allow you 5% discount for cash. But lose no time. Only a small edition is printed. Mail your order to-day and receive the most beautiful and richly illustrated library ever published.

Sign and mail this coupon to-day!

The Mentor Association,  
416 West 13th Street, New York City.

Send me, on approval, your Mentor Library in five volumes, with the special cross-reference index. If not satisfied, I may return the set after a week's free examination and you will cancel my order. Otherwise, I will remit \$3.00 each month until the full price, \$36.25, is paid. Until that time, title will remain with you.

Name \_\_\_\_\_

Address \_\_\_\_\_

City \_\_\_\_\_ State \_\_\_\_\_ Amer. 1-23

But to get back where I started, life in a small town is just as interesting and just as remunerative for a live wire as a big town; and the slow birds are infinitely better off in a small town than in a busier place, where they would live in imminent danger of being knocked down and run over. You make your own world, whether you live in a big burg or a little one. There are restless mortals who can never know the art of taking life leisurely nor the refreshing joy of a full night's sleep. The country town is not for them; they think they would die of ennui in the country, when they will surely die of high blood pressure, apoplexy, or sunstroke in the rush and excitement of city life.

A New Yorker may get more money, more entertainment, more jazz and more excitement out of life than we poor rubes back in the small towns; but he'll never get the human touch, the human companionship, and the human smell that is found in the small town. His golf links are his confession that a fellow cannot know the joy of life without comfortable clothes, fresh earth for his feet, clean air for his lungs, and leisurely hobnobbing with friendly spirits. Life in a country town is as good as a game of golf every day except Sunday; on Sundays we all go flat. That's another story.

I LIKE my own small town better all the time. Its faults are always interesting, its weaknesses generally amusing, its leisureliness and neighborliness ever delightful. It hasn't the glamour of bigger places; but from my own front porch, through the arched branches of the oaks and myrtles I can see the whole procession of human life go by in fancy undisturbed. I may be rusty on the standing of the big leagues and the latest song hits on Broadway, but I can get more out of a book in my hammock than Mr. Gothamite can get out of his New York Public Library, and more fun out of my kiddies playing in real honest-to-goodness dirt than he can get out of a night at Coney Island or ten nights in a jazz parlor. All of which brings me to the conclusion that Cræsus with all his gold, Solomon with all his wives, Cyrus with all his soldiers, the Pharaohs with all their slaves, Cleopatra with all her charms, Napoleon with all his generals, and Louis XVI with all his furniture, could never purchase the freedom of movement, the peace of mind, the security of life and the friendliness of neighbors that are obtainable without price by the poorest moron of any of us who live in a small town.

There's a lot of fun in living in a one-horse town if you are capable of making your own little world. You probably couldn't be satisfied in the biggest town on earth if you are not naturally inclined to be busy, to be friendly, and to find your own and enjoy it no matter where you are.

"YOU Can't Live on Your Reputation," says Edgar A. Guest, the famous newspaper columnist, poet, and philosopher, in one of his delightfully human and wholesome articles next month. Mr. Guest shows why success can be reached and kept only by a continuous performance of efficiency, and he warns you to beware of the cheers of yesteryear.

J. A. Moore, a typical "5-figure" Real Silk District Manager who started just as YOU can start, today

## J. A.'s income now runs into five figures

"J. A." never had a chance—until he came to us. He made good at everything from clerk to sales manager, but somehow the jobs weren't as big as the man. "J. A." started selling direct to the consumer for us—and increased his earnings right at the start.

And he didn't have advertising in The Saturday Evening Post, The American Magazine, Ladies' Home Journal and Good Housekeeping Magazine to help him, such as we give our men today. His success was made on the sheer merit of the product, which enabled him to build a permanent clientele of customers, giving him an assured income.

Moore couldn't make money until he became associated with our guaranteed product—our perfected selling method—our opportunity. Now he's a "5-figure man." That means \$10,000 a year or better—a lot better.

There are many men in America today who are making good but not making money. Real Silk is their opportunity. Our Representatives make from \$50 to \$100 a week. District Managers like "J. A." make \$10,000 to \$25,000 a year. Most of them grew up from the ranks in months, not years.

Our doubled production opens wide the door to the same kind of success for YOU—if you can qualify. We'll be glad to talk to the men who make good, and want to make money. Call on our District Manager in your city, or write to our General Sales Manager. We will lend you a copy of "The Real Silk System of Selling," which tells how Real Silk Representatives are assured incomes far in excess of average salesmen and how they can win independence, success and advancement, without traveling on the road.

### Let Your Boy and Girl Grow Up With Master Writers

The youthful mind greedily absorbs impressions, particularly from what is read. These impressions are permanent. Their cumulative effect sways the child's future. By controlling the child's reading, you can counterbalance the harmful impressions received elsewhere.

For fifty years, St. Nicholas magazine has been edited for boys and girls up to eighteen years of age. The most popular writers for young folks contribute regularly. Serials and short stories; articles on science, nature; tales of other lands; prize contests in drawing, photography, writing—these indicate the many ways in which St. Nicholas engarments helpful instruction.

In 1923, St. Nicholas will publish stories by Ralph Henry Barbour, Samuel Sewall, Jr., George Inness Hartley, Dr. and Mrs. Knipe, and articles by Hildegarde Hawthorne, Robert F. Wilson and many other writers who have the knack of interesting and inspiring young people. Let your boy and girl get acquainted with these helpful writers.

One year's subscription is only \$4—about half what you pay for your morning paper. Send check or money order to St. Nicholas Subscription Department, S-2, 353 Fourth Ave., New York.

## She Fell in Love with a Dream Man

For three long-drawn-out years Susan had been engaged to Andrew. Now it began to look as if they would be through with each other before the preacher had a chance to say the magic words. Susan was desperate!

So, to hurry matters up, she invented a dream man—Clarence, who of course existed only in her mind, and he served his purpose well in chiding the tardy Andrew. Too well, in fact. Into this "Clarence" she built her ideal husband. Strangely the dream man of her heart thrilled her. Heart and soul she worshiped him. Fervently, passionately, and divinely she loved him—he was *so real*. And then she lost her Andrew. But one day the dream Clarence appeared in actual flesh and blood—and then—but you will want to read for yourself "Dear Clarence," by Grace Sartwell Mason—a really delightful story. Don't miss it—it's in the January WOMAN'S HOME COMPANION.

## What Has Become of the Russian Nobility?

When the crowns in Russia tumbled and fell at the onslaught of Bolshevism, the crashing effect was so far-reaching that it scattered the noble scions of the "Little White Father" to the four winds and left them dangling all over Europe. Only a few years ago they were the blooded autocrats of all the Russias. To-day, their peaks leveled even below the plane of the proletariat, they are groveling with the masses for mere sustenance.

Can you imagine the poverty of circumstance that would make a titled Russian general become a bootblack—a daughter of a reigning house a seamstress by the day—or a countess with an entourage of servants being transformed into a chambermaid? But read these startling revelations of the faded Russian aristocracy—"The City of Exiles." It is only one of the many brilliant features of the January issue of WOMAN'S HOME COMPANION.

## Back Home—And Back

(Continued from page 33)

David. He was always a shy little boy. He isn't going round telling all about himself. His mother was that way. But, as well as they know him, these home-grown bumpkins of ours wouldn't even recognize the devil on Judgment Day! I only hope they haven't offended him—David, I mean. Authors are so sensitive. I'm going right over to the hotel and take him to my house. The idea of David Brown staying at the hotel, in his own home town!"

"I'm afraid you're too late, Mrs. Gardner,"—Frances couldn't keep the superiority out of her voice—"he's leaving on the four-ten."

"How do you know?" Mrs. Gardner arched her brows.

"Well," said Frances, "he said so when he was in here a while ago."

"Oh, my dear, why didn't you tell me? It'll be a blot on the fair name of Elk Bend that we failed to take to our hearts the most famous son that has ever gone out from our midst. I'm going to see about this."

And Frances Page just grabbed a good-looking hat, and jammed it on her head. She didn't give a whoop about the fair name of Elk Bend, but she *did* have a very decided flood of sympathy in her heart for David Brown. He had been there among them, the friends of his boyhood, and they had failed to recognize him for what he was. So nonchalantly he had stood there! Chatting with her whimsically, covering the hurt of their stupidity with that quizzical gentleness, talking to her about his book without letting her know.

IN TWO minutes the Carnegie Library of Elk Bend was closed, abandoned by its heretofore trustworthy keeper, who ran swiftly down the broad marble steps and swept indecorously around the corner toward Main Street.

In his shirt sleeves, Jerry Kramer was lounging in the door of his feed store when he saw her coming.

"Hello, Frances!" he said. "What's the big hurry?"

"Get your coat!" she ordered, as she opened the door of Jerry's much-bragged-about car, and slid into the front seat under the steering wheel.

"What's the big idea?" demanded Jerry.

"Never mind. Get your coat and come along; that's all."

"But I can't leave the store."

"Close the store. You'll only lose a few dollars. There's something in this world besides money!" she snapped.

In an instant Jerry emerged with his coat half on; and as he stepped on the running board Frances started with a suddenness that slammed him into his seat like a shot in the corner pocket.

"Where now?" he asked plaintively.

"Catching the four-ten."

"Can't!" said Jerry practically, looking at his watch. "She's due to leave this minute."

"I'll catch that train if I have to follow it to Buffalo," said Frances Page grimly.

spinning the big car around and up Main Street. In the next block she slid up to the curb in front of the Elk Valley bank, and stopped with a yank. "Go in and get Frank Lewis," she ordered, "dead or alive."

Under the hurried but determined ministrations of the obedient Jerry, Frank Lewis came out of the bank.

"Why all the excitement?" he asked.

"Catching the four-ten," called Frances over her shoulder, as she stepped on the gas.

"Is that all?" demanded Frank. "Well, I don't want to catch it."

But Frances slanted the fast-moving car back across the street, in violation of all of Elk Bend's traffic rules, to pick up Billy Barstow, who had come out of the "Times" office waving his arms frantically.

"What's up?" he said breathlessly, as he hopped on the running board.

Frances leaned over the wheel, and let her out: "David Brown's leaving town on the Express."

THE words were hardly out of her mouth, when the train thundered out of Elk Bend across Main Street, less than two blocks in front of the speeding car.

"Too late!" yelled Billy.

"Too late nothing!" Frances shot the car bumping across the tracks, just behind the Express and whirled to the left down a street that became the pike to Harvard Junction, sixteen miles away.

"We'll catch them at the Junction," she said, as the dial moved up past fifty.

"Good for you, Frances!" Billy was excited. Here was a real story for the "Times." "It'd never do to let Dave Brown get away like that," he explained jerkily to the other two. "Famous guy like him not to be recognized in his own home town makes all of us out a bunch of boobs. Besides, he'll probably go and write a story about it, and then the whole world will know what a lot of darn fools we've been."

Frances remained angrily silent and drove desperately on. That's all they thought of, saving their faces! Never thought about the hurt they'd done David Brown. It didn't occur to her to think that, if David was a real person, what they did, or did not do, would never faze him.

But it had. David slumped down in his seat in the Pullman and watched the fields of Indiana flow by—and he was sore. His vanity had been sadly hurt.

At the same time he had to laugh at himself for being such an unmitigated ass. He had got just what was coming to him, and he knew it. But, like most people, he didn't much relish what was coming to him. . . . He wondered idly what the train was slowing up for, and then realized they were at the junction, where they would change engines. They jolted to a swift, grumpy stop, and almost on the instant David got the surprise of his life.

"Here he is!" he heard someone yell.

And then he saw them, Billy Barstow in the van, followed by Frank Lewis and Jerry Kramer, all of them rushing down the aisle. They were upon him jovially, hoisterously, with all that village cut-up stuff which he scorned so thoroughly but to which he warmed in spite of himself.

"Why, Dave, what'ya trying to put over on us, beatin' it out of town like this?"

The chief factor in shaving comfort has been the most neglected. That factor is your *skin*. When your face smarts it's your *skin* that smarts. Williams' Shaving Cream also prepares the skin for the shave. The first feel of lather-luxury will show you how tremendously important that is.

**New~  
comfort while you shave**

Most lathers are made only to soften beards. But that is not enough.

When shaving hurts it's your *skin* that hurts, not the hair. And until you prepare your skin as well as your beard for the shave, you're missing shaving comfort. One shave with Williams' shows you how tremendously important that is.

Williams' Luxury Shaving Cream tones up your skin. Primes it. Limbers it up and makes it supple. As a result, the razor glides over your skin—smoothly, quickly. Instead of irritation—lather-luxury. Instead of razor-chafing—comfort. Instead of after-smart—after-comfort.

Hundreds of thousands of men have already discovered the new comfort of Williams' lather-luxury. You can discover it without cost. Fill out and mail the coupon below.

## BIG SAVING — FREE TRIAL

This beautiful machine is the only brand-new (unused), standard, full-size typewriter with a 4-row, 42-key, 84-character Universal keyboard that you can buy for less than \$100. It comes direct from factory to you at practically the wholesale price of other high-grade typewriters—a remarkable saving. Use Ansell on your work at our expense, put it to the test for ten days; then if it doesn't satisfy you in every way, return it to us and we will refund even the express charges. You take no risk. Could anything be fairer?

### Easy Terms

While you are enjoying the use of the machine, small monthly payments (much less than 20c per day) make it easy and convenient to own this full-size, brand-new (unused), 4-row, standard-keyboard typewriter.

### Mechanical Marvel

Strength and simplicity are the outstanding qualities of this machine. Every essential operating convenience is possessed by Ansell, including the 4-row, 42-key, 84-character Universal standard keyboard. This good Ansell is made so well and lasts so long that the cost—if spread over the machine's lifetime—is less per day than the price of a postage stamp. And remember, the Ansell is fully guaranteed.

# Paralyzed

## For 10 Years

Hazel Bliss was paralyzed by Paralysis when a baby. She was 11 when she came to McLean Sanatorium. Photos and mother's letter below, tell what 5 months' treatment did.

When we arrived at the Sanatorium Hazel had a badly deformed foot and walked on her toes. When we left 5 months later, she had a new straight foot and walked with her heel and ball of her foot flat on the floor. I shall gladly recommend your Sanatorium to any crippled person.

MRS. EDITH BLISS,  
Carpenters, New York.

## FOR CRIPPLED CHILDREN

The McLean Sanatorium is a thoroughly equipped private institution devoted exclusively to the treatment of Club Foot, Infantile Paralysis, Spinal Disease and Deformities, Wry Neck, Hip Disease, Diseases of the joints, especially as found in children and young adults. Our Book "Deformities and Paralysis" and "Book of References" sent free.

The L. C. McLean Orthopedic Sanatorium  
835 Aubert Avenue St. Louis, Mo.

"Didn't you know you couldn't get away with that?"

"Chased you all the way in Jerry's car."

"There she is, out there. You ought of seen us comin'! With little Frances drivin' like the devil's own chauffeur."

David looked through the window. Outside he saw the long black car, with the girl leaning wearily on the steering wheel. One of the men jammed Dave's hat on his head. The others grabbed up his bags and pushed him down the aisle.

"Here's where you get off, kid," Billy Barstow was saying, tugging at one of his arms. "Old Elk Bend's got something on ice for the honorable David Brown."

A second later, his feet were on the ground and he was looking into the gypsy eyes of Frances Page. A new Frances Page, with the tremor of excitement on her red mouth and exaltation in her soul. There he stood, David Brown! The god of her dreams. Her heart was thumping at sight of him, just as it had throbbed to his written words. And there he was before her. A man, human like herself. She could reach out and touch him. He was real!

"It was you who brought them," he was saying.

"Oh," she pleaded, "please, David Brown, don't feel hard toward them."

BUT he wasn't thinking of "them" as he sat in the back seat between Billy Barstow and Frank Lewis, and watched her there in the front seat with Jerry Kramer, who had taken the wheel. He was asking himself how a girl like Frances Page could possibly marry a man like Jerry! All their noisy plans for his entertainment could not obliterate the thought. How could she? Of course, Jerry was a good fellow and all that; but she—she was something outside Jerry Kramer's slightest conception. Life is certainly puzzling.

But it is good. It had been good to David Brown; there was no denying that. He was acutely conscious of that very

thing some six weeks later back in New York as he sat at his customary breakfast, while Pete Heyward and the rest quizzed him about his trip.

"Well, Dave," said Pete, "how does it seem to go back to the old home town a conquering hero?"

"Great!" said David.

"Some business, that conquering hero stuff," insinuated someone.

"Oh, it wasn't that. But everybody was so genuine and friendly. They're real people, the back-home folks."

And because every man of them secretly hoped to do the same thing some day they were interested in the experiment, especially when David told them about Frances Page and how she had talked about his work that day at the library without knowing who he was.

"Now what do you think of that?" said Heyward; "a professional romancer, and he doesn't know romance when he sees it. Now there's a story for you! Gypsy-eyed librarian talks to young author whose work she has long had a passion for."

At that the four of them laughed, while David's glance roved expectantly toward the entrance. If he had planned it all down to the very last detail he couldn't have timed it better. There she stood, framed in the doorway, her gypsy eyes searching the room for him. Then she smiled and started uncertainly toward them.

"You're right, Pete," said David Brown, as he got up and placed her in his chair. "There is romance in that back-home stuff. If you don't believe it, ask Frances Page Brown."

Frances was a little overwhelmed, her quivering, excited hands clasped in their eager, friendly ones.

"Would you believe it," said Pete Heyward softly, half to himself, "he married the girl!" His eyes traveled from Frances back to David.

"Some fellows have all the luck! You ought to see the librarian back in my home town!"

# Most Folks Can Be Fooled About Furs

(Continued from page 40)

through underneath. If these pelts are made up and worn the hairs will soon begin to fall out and the garment will look almost as if it were moth-eaten.

"The quality of fur depends, too, on the section from which it comes. Muskrat, for instance, is found in practically all parts of North America; but that which comes from the Southern states is inferior in quality. When it is dyed and made up it is a 'Hudson seal' coat; there is no deception in selling it as such. But you would be deceived if you bought it thinking it was the best Hudson seal.

"A coat made of Northern muskrat will cost more at the start, but it is more economical in the long run. If taken care of and kept in repair such a coat will last for years. One of inferior quality, even though it looks well when purchased, will be shabby inside of a year or two.

"Another thing which the average customer does not know is that there is a

great difference among animals of the same species, living in the same section, and under the very same conditions.

"Mink ranges from a light yellow to a dark, rich brown; and you will get all these shades from the same section of the country. Animals of the same family, living in the same locality, differ in coloring and in size, as human beings do. You find them all the way from blond to brunet, and from dwarf to giant.

"SOMETIMES the light-colored mink is just as good in wearing quality as the dark; but it is less beautiful and therefore less desirable. So, of course, it is less expensive, even when it is blended; that is, when the hairs are brushed with dye to make them darker.

"On the other hand, natural muskrat is less in demand than the dyed muskrat, or Hudson seal. So the latter is more expensive. But these two cases are differ-

*new and revised*

# OUTLINE OF HISTORY

P. F. COLLIER & SON COMPANY have acquired the subscription book rights to the most talked-of book of the age. It is now ready—in a new Four-Volume Handy Edition, containing 105 *more* illustrations, and over a thousand revisions and additions by H. G. Wells.

Thus the greatest modern writer of history joins hands with the greatest modern publishers of good books.

WHEN Peter Fenelon Collier started in 1875 to distribute good books, he found their ownership had been practically confined to the very rich.

Since that time, the house of Collier has put into American homes everywhere, at low prices and on easy terms, *Eighty Million Volumes* of great literature.

Among these famous works are Dr. Eliot's Five-Foot Shelf of Books; the Young Folk's Shelf of Books; the Popular

Science Library; the Complete Works of Mark Twain, of James Whitcomb Riley and of 75 other famous authors—including the celebrated Harper & Brothers subscription books now published and distributed by P. F. Collier & Son Company.

And now is added the great Outline of History by H. G. Wells. Every family can have it at last, at a popular price, and in a new and vastly more convenient and more up-to-date edition.

## H. G. Wells has added

An extensive story of Abraham Lincoln and the Civil War.

Nine new pages on Bolshevik history in Russia.

Several added pages on the Fascists in Italy, the Graeco-Turkish War, and the present French policy.

An extended survey of United States history, with revised allusions to George Washington, Woodrow Wilson, and others.

In all, more than twenty pages have been added, bringing the Outline of History down into 1922.

416 West 13th Street, New York City

## How I Made \$876 In One Month's Spare Time

My name is Rowe and I live in a small city in New York State.

Two years ago I was a baker—constantly hard up—living from hand to mouth.

And yet—to-day I am a successful business man. Last month I made \$876 during my spare time. I own our nine-room house, I have an automobile, I have money for books, the theater, or any other pleasures that I may want. I have the cash to-day to educate my son and send him through college.

## This Is How It Happened

One day in glancing through a magazine I read an advertisement. The advertisement said that any man could make from a hundred to three hundred dollars a month during his spare time.

I didn't believe it. I knew that I worked hard eight hours a day for \$50.00 a week, and I figured that no man could make that much during a couple of hours a day spare time.

But as I read that ad I found that it pointed to men who had made that much and more. In the last paragraph the advertiser offered to send a book without cost. I still doubted. But I thought it was worth a two-cent stamp, so I tore out the coupon and put it in my pocket, and the next day on my way home from work I mailed it.

When I look back to that day and realize how close I came to passing up that ad, it sends cold chills down my spine. If the book had cost me a thousand dollars instead of a two-cent stamp, it would still have been cheap. All that I have to-day—an automobile, my home, an established business, a contented family—all these are due to the things I learned by reading that little eight-page booklet.

All the work I have done has been pleasant and easy, and withal, amazingly simple. I am the representative in this territory for a raincoat manufacturer. The booklet I read was one issued by that company. It tells any man or woman just what it told me. It offers to anyone the same opportunity that was offered to me. It will give to anyone the same success that it has brought to me.

The Comer Manufacturing Company are one of the largest manufacturers of high-grade raincoats in America, but they do not sell through stores. They sell their coats through local representatives. The local representative does not have to buy a stock. All he does is take orders from Comer customers and he gets his profit the same day the order is taken. Fully half of my customers come to my house to give me their orders.

My business is growing bigger every month. I don't know how great it will grow, but there are very few business men in this city whose net profit is greater than mine, and I can see only unlimited opportunity in the future.

## You Can Do As Well

If you are interested in increasing your income from \$400 to \$1,000 a month and can devote all your time or only an hour or so a day to this same proposition in your territory, write at once to The Comer Manufacturing Company, Dayton, Ohio. This is their special offer: They will send you, without preliminary correspondence or red tape, a complete selling outfit with full instructions, samples, style book, order book and everything you need to get started. Sign and mail the coupon now and in less than a week you can be making more money than you ever believed possible.

## Mail This Coupon At Once

THE COMER MFG. CO.,  
Dept. 51-59, Dayton, Ohio.

I am ready to start as a Comer representative if you can show me how I can make from \$50.00 to \$200 a week. Please send me, without any expense or obligation to me, complete outfit and instructions.

Name \_\_\_\_\_

Address \_\_\_\_\_

ent. The mink is dyed in order to imitate a finer grade of the natural fur. But the muskrat is dyed to produce something different, with a recognized value of its own.

"Because of all these differences, raw mink skins, for instance, may range in price from sixty cents to twenty dollars apiece at the auction sales. When made up, they bring two or three times as much at retail. Of course the cheap skins are not used for coats; but if they were, you can see how easy it would be for one mink coat to cost more than twenty times as much as another. It takes an expert to recognize all the grades of difference, to know when and where the animals were killed, and just how the pelts have been treated.

"A whole book could be written, for instance, on the subject of fox furs, enormous quantities of which are sold every season. The commonest kind is the red fox, which is found in many countries. The rarest is the silver fox, which is now being raised on 'fox farms,' especially on Prince Edward's Island, off the coast of Nova Scotia.

"PEOPLE thought that these farms would glut the market and so bring down the price. But up to the present, at least, the demand is still so far ahead of the supply that the price has not been affected. Many of the best animals raised have been kept, or sold, for breeding purposes. Good breeders sell for \$12,000 to \$15,000 a pair. Some of them brought \$40,000 a pair when these farms were first started.

"Fur farming has become quite an industry in Canada and is being encouraged by our Government also; for the demand is so great that some of the best fur-bearing animals will become very scarce in time, unless they can be preserved by breeding under protection.

"Both blue and black foxes have been raised successfully in captivity. The blue fox is found chiefly in parts of Alaska, Greenland, and the islands off the Alaskan coast. It is blue all the year round; the blue being really a blue-gray. White foxes are dyed to imitate it, but the expert can always tell the difference. A good natural blue fox scarf will cost \$300 to \$500; while a dyed one costs \$100 to \$150.

"White foxes are found in great numbers in Alaska and other Arctic countries. They are white only in winter; a protective coloring to make them not easily visible against the snow. Black foxes are found in different parts of Canada and British Columbia; but the ones that come from the most northern parts have fur that is harsher in texture. As a rule, the finest specimens of any fur are from animals bred in a wild state. But these black foxes of the extreme north have so hard a struggle for existence that it seems to rob their fur of some of its beauty.

"Cross fox is a red species that has a dark cross more or less plainly marked on the back and shoulders. Kit fox is not, as many people think, a baby fox, but a separate species. It is much smaller than the red ones and of a lighter color, with white underneath.

"Fox has a very wide range in price, from a few dollars for a common red to many hundreds of dollars for a fine silver.

"But the real aristocrat among furs is the Russian sable. These animals, which are something like a ferret, are small, most

of them being about eighteen inches in length without the tail, which is six or seven inches long. But some skins are only about eight inches in length, while others may be twenty-five inches long.

"There are several reasons for the high cost of sable. Of course the animals must be taken in the winter, a difficult and even dangerous thing in Northern Russia and Siberia. It is hard to trap them, especially as the skin should not be injured. So the supply, especially of the finest specimens, is never large; and I do not think any attempt has been made to breed them in captivity.

"But even if Russian sable were far more plentiful, it would still be expensive because it is so desirable. It is a very beautiful fur; soft and thick, yet very light in weight, and so pliable that a garment made of sable will fall in graceful folds, almost as if it did not have a leather, or skin, foundation. Yet with all its grace and softness it has excellent wearing qualities. So, you see, it has every feature that could help to make it worth a high price.

"And it is high! There's no question about that. It costs about twenty-five thousand dollars to get a Russian sable coat that is not even of the finest skins, although they would be good ones. I can give you comparative figures which will help you to realize the preëminence of Russian sable. Of course these figures are only general; prices are affected by many things aside from the quality of the furs themselves. But speaking in a general way elaborate fur garments of the finest skins would compare about like this:

"Alaska seal, \$2,000; ermine, \$2,500; broadtail, \$4,000; mink, \$4,500; chinchilla, \$30,000; Russian sable, \$80,000.

"The extremely high price of the finest Russian sable coat is due to the fact that it is almost impossible to match up enough very high-grade skins to make the garment. The fur ranges from canary yellow to black. It really isn't black, although that is the technical description of it. It is very dark brown. And these very rich dark skins are scarcer than the traditional 'hen's teeth.' To get together enough of them for a coat the furrier must spend months scouring the markets, and must pay a competitive price.

"THE animal which most nearly resembles the sable is the marten, several species of which are found in western Europe and in the northern part of North America. One of these, the pine marten, is known as 'American sable,' or sometimes as 'Hudson Bay sable.' Its general characteristics are the same as those of Russian sable; but its fur is not equal to the Russian in depth, richness, and luster. There are several other varieties of marten—stone marten and Jap marten, for instance—which are much used as neckpieces. When these various kinds are offered for sale, it really takes an expert to discriminate accurately as to their real quality.

"There are, of course, some varieties of furs which are easily recognizable even by the most inexperienced persons. Persian lamb and baby lamb—or broadtail, as it is often called—are so entirely unlike any other furs that no one can be mistaken about them. The differences in quality are more evident to the average person, too.

Beauty and convenience, as incentives to exquisite cleanliness, receive due recognition in the design and finish of Crane kitchen equipment for modern homes. Stainless white porcelain—modified and adapted to household needs—provides a material of enduring character and finish, as easily cleaned as a china plate. Crane designers and craftsmen have made the

most of this remarkable material in producing appointments of quality for kitchen, bathroom and laundry. They have created dependable faucets and ingenious appliances to supplement its service.

Crane engineers complete the circle by supplying valves, fittings and piping of the same high character to insure uniform dependability in every Crane installation.

CIÉ CRANE, PARIS

*Crane Gate Valve No. 44935*

"Persian lamb has returned to favor within the past year or two, after having had quite a long period of what you might call retirement. Women took rather a dislike to it some years ago, because it was then made up into stiff, uninteresting coats with as little grace and distinction to them as an ordinary tailor-made suit coat would have. But the designing of fur garments has developed amazingly, even within a few years.

"As for broadtail, it always has had, and always will have, a secure place for those who can afford to wear it. The skins are lovely—and perishable. They are particularly beautiful in combination with chinchilla, which is also 'lovely—and perishable.' But the woman who can afford this combination will have a garment which is a delight to the eye. It may cost her around five thousand dollars; but if she has plenty of money and loves beautiful things that isn't a bad investment.

"**Y**OU asked if people can't learn enough about furs to become good judges, and so not have to depend on the reliability of the dealer. I never have known anyone, outside of the fur business, on whose judgment I should have been willing to depend. Even when it comes to color—and you would think a person *could* easily become a judge of that point—those customers who do know, theoretically, what are the most desirable colors, cannot always pick them out in actual practice. Many will fail to distinguish between a dyed or blended fur and a natural one.

"In almost all furs, color is highly important. It may have nothing to do with the wearing quality, but it has an enormous effect on the price; for there is always *one best shade* of any particular fur.

"In mink, it is a dark rich brown. In Russian sable, which varies from canary yellow to almost black, the value increases as the color grows darker. In ermine, it must be an absolutely pure white, with no trace of yellow. I have heard women *ask* for ermine with a tinge of yellow. They said they had seen some member of the European nobility wearing ermine of that kind, and they wanted something of the same sort. Probably the person they wanted to copy had inherited an ermine coat which had become yellow with age. I expect she wore it because she couldn't afford a new one.

"The best chinchilla is what we call 'blue.' It should have no tinge of yellow, nor a dirty, sooty look. The best squirrel also is 'blue.' If it has a rusty streak along the middle of the back it is not so desirable. Squirrel ranges in color from a very pale gray to a much darker shade. That which is pale in color is worth less than the dark. In fact, in most furs, the darker shades are considered the best.

"There is a great difference in the natural wearing qualities of different kinds of furs. They might be put into three groups:

Most Durable	Medium	Most Perishable
Mink	Russian Sable	Chinchilla
Alaska Seal	Hudson Seal	Baby Lamb
Skunk	Fox	Rabbit
Raccoon	Ermine	Mole
Fisher	Persian Lamb	
Beaver	Squirrel	
	Marten	
	Lynx	

"This does not begin to include all the

furs that are used, but will give you an idea of the comparative wearing qualities of some of them. Naturally, this doesn't mean that a *poor* fur of the first group would wear better than a *good* fur of the second group. It is a comparison of the *best* in all three groups.

"Chinchilla is very delicate; but is so beautiful that women find it irresistible—if they have the money to pay for it. The chinchilla is a little animal found in the mountains of South America. Fine specimens are rare and it takes eighty or one hundred skins to make a coat, or wrap, which will sell for from twenty to thirty thousand dollars.

"Ermine is a much smaller animal, a species of weasel, which lives in the northern part of Russia and Siberia. An ermine coat will contain from 250 to 350 skins and will cost from \$2,000 to \$2,500. This little creature changes its color according to the season. Nature protects it by making it pure white among the snows of winter and transforming it to a dull light brown in summer. This 'summer ermine' makes up quite attractively, but is, of course, less desirable than the pure white. A coat of summer ermine would cost about a thousand dollars.

"White rabbit is sometimes dyed and used under the name of 'bunny ermine.' Very soft and light capes for summer are made by cutting this fur into inch-wide strips and sewing them in rows on a georgette foundation. Rabbit, in fact, is used for many kinds of fur garments. It is sheared, to make the hairs shorter, and is dyed or blended to get the desired effect. 'French seal' and 'electric seal' are trade names for dyed coney or rabbit. Longer-haired rabbit is blended and used as 'bunny chinchilla.' These are not deceptions, for they do not claim to be what they are not.

"**T**HE demand for furs has increased so enormously that every kind of fur-bearing animal, from moles to monkeys and from a chipmunk to a chinchilla, has had to pay tribute. We have made up some stunning sports coats in which we used chipmunk. Monkey fur, the long black variety, has had a great vogue recently for trimmings. Even common cat fur is used for inexpensive sets for children. The skins of Chinese dogs are dyed and used to some extent for scarfs and muffs. Pony-skin coats were very popular a few years ago. In fact, there is scarcely an animal, except the common rats and mice, whose skin is not used in some way.

"Alaska seal is sometimes used in the natural color; but usually, of course, it is dyed. The whole process of dressing, shearing, and dyeing it is a very long and elaborate one. The skins average four or five feet long, although there are a good many, from young animals called 'pups,' that are about three feet in length. The skin of a big 'bull seal' is enormous, often six by eleven feet in size. But the fur is stiff and harsh, so that the skin is used only for leather.

"Alaska seal and beaver are the warmest of all furs. Under government protection the supply of Alaska seal is now assured.

"Of late years, mole has been an extremely popular fur, and almost incredible quantities of the tiny skins have been used. It is not unusual for a coat to con-

tain five hundred mole skins. This season we made coats containing seven hundred skins! The chief source of supply is Scotland, which exports hundreds of thousands of skins annually, the animals being raised for that purpose. Mole makes up very beautifully, but it is so delicate that it quickly shows wear if it receives hard usage.

"One of the features of the fur trade during the past few years has been the popularity of squirrel, not only in coats—thousands of which have been sold—but also as neckpieces and in combination with seal, or with Persian lamb and baby lamb. This is European squirrel, the American variety being good for nothing except the cheapest sets for children. Siberian squirrel is quite different from the other European varieties. It looks something like chinchilla and costs much more than the plain gray. The gray is often blended a rich brown, in which guise it is sometimes mistaken for kolinsky, another Russian fur. The kolinsky is a smaller animal than the squirrel, and the fur is softer and finer.

"The one fur in which the greatest number of women will be personally interested is undoubtedly Hudson seal. In recent years it has become perhaps the most important item in the general fur trade. Even ten years ago, it held a very different position from the one it has to-day. When furriers began to make coats of it the selection of skins was poor and the workmanship very indifferent. It was regarded as a cheap 'imitation' of Alaska seal.

"But all this has changed decidedly. We have learned how to dress the skins, how to improve them by shearing, how to dye them beautifully. Hudson seal is no longer an 'imitation.' It stands on its own merits, and they are very real ones, especially to the woman who wants an attractive and serviceable garment at a moderate price. It has become a staple fur with an assured position.

"Skunk is always in demand—sometimes more and sometimes less. It has splendid wearing qualities and is particularly useful for collars and cuffs on other fur garments, or for scarfs and capes. It hasn't the softness of the finer furs, but has what you might call a rugged charm of its own. Australian opossum is useful in the same ways, but is not so durable, having a tendency to mat. Badger is being used a great deal now for collars and cuffs with striking effect. Raccoon is a standby for motor coats, as well as for collars and cuffs. Caracul has been having a great vogue the past year or two, especially in the lighter shades.

"**B**UT one could go on almost indefinitely, naming the furs which you can see on any fashionable thoroughfare in any town on a winter afternoon, for the fur industry has grown enormously of recent years. Probably millions of dollars' worth of furs are worn, even in summer as scarfs and neckpieces. Millions of raw skins are marketed annually. The largest kind, of which the skin is used entire, is the seal. The smallest is the mole. The costliest is the Russian sable. The cheapest—well, say the chipmunk at perhaps ten cents apiece wholesale. And between these extremes there are all sizes and all prices."

# The Hand of Fate

(Continued from page 44)

you've been in love lots of times?" Malcolm's clean-cut lips twisted in an amused smile.

"Oh, I'm always in love—except between times when I come up for air. I suppose it isn't really love, but I get an awful thrill out of it just the same."

"Oh," said Mary. She did not need to ask him anything more. Somehow from his manner she knew that it was "between times." He was merely "up for air."

All through the week, she was strangely unhappy. She would not have admitted that she wanted Malcolm Bart to be in love with her; yet, because he obviously did not dream of it, she was incredibly hurt. Next week—and she looked forward to it with a tingling determination, though she had no very clear idea what she was going to do.

But when next week came a very small thing balked her. Malcolm was desperately sleepy. He had been to a very late dance the night before. Their dinner conversation was fragmentary, except once when Malcolm roused himself to give a glowing account of the dance. At the end of the meal he said: "Mary, I've got to go home and get some sleep. I'm terribly sorry."

They walked to the subway in silence. At the entrance, Mary said: "You needn't go home with me. I don't mind."

She thought she would be glad to be rid of him quickly, so she need not cover up the keenness of her disappointment at having everything go so wrong.

"I was just wondering if you'd mind," Malcolm was saying. "Of course, if it weren't so early—"

ON THE way home, Mary's feelings underwent a change. She was probably the only girl of Malcolm's acquaintance whom he would have allowed to go home alone. Those girls he had danced with the night before—would he have let any one of them? Or Mr. Marden's new secretary? Why, she would never have been left by any man to go home unescorted.

On reaching home she was still angry with Malcolm, and then her thoughts took a new direction. For the first time in her life she pondered seriously upon Eleanor's theories about men.

What Eleanor had said was as distasteful to her as ever, for Eleanor's ideas seemed to make friendship between men and women a game in which things were false and insincere. Yet, if it was a game every girl played she must play it too.

She decided that each week, when the time came, she would be airily plausible about it, and break her date with him. Then, if he cared at all, something was bound to happen! She wanted him—she knew it now—to *thrill* about her. And she resented it furiously that he did not.

So the next day, when Malcolm stopped to speak to her and say, "Oh, such a good sleep!" she glanced up with an air of abstraction. When he had passed on, looking a little puzzled, her eyes followed him. From his desk he flashed her one of his quick smiles as if to say, "There's nothing really the matter, is there?"

For three successive weeks Mary broke her dinner engagements with Malcolm. Each time he looked puzzled, then hurt. She herself went home to an abhorrently lonely evening. Her life was back on a dead level of monotony. When she saw him increase his attentions to Edith Noyes, she had a feeling of panic that she was losing him entirely. But Washington's Birthday put an end to this period of gloom.

MARY slept late to celebrate the holiday. About ten o'clock there was a knock and her door was opened cautiously. A square purple box was thrust through the aperture by the stolid Swedish maid. After throwing a kimono around her Mary untied the box with trembling fingers. It must be from him—yet how could it be? But there was no one else in New York to send her violets.

She searched frantically for the card, which read:

Dear Fifty-fifty Girl: Let's bury the hatchet in memory of George. To do this properly, we must go somewhere to eat and dance. I'll telephone you at noon, so be prepared to say "yes." Yours, thoroughly awake,

MALCOLM.

P. S. This is *not* one of your kind of parties.

She hugged the violets to her excitedly as she read the card again. A thrill of triumph surged through her. She had brought Malcolm to his senses.

Her attention swung from Malcolm to the problem of what to wear. Of course, in the end it would have to be her suit, her fluffiest waist, a new, close-fitting hat which even Eleanor said was becoming, and the pretty fur for which her mother had sent her the money at Christmas.

When Malcolm telephoned, he asked if he should call for her. Before she thought Mary said no, and they arranged to meet at the big hotel where they were to have dinner and dance. Afterward she realized that she should have let him call for her, as part of the new program. She had made a stupid mistake, when she particularly wanted to indicate to him that things were to be different from now on. For she went to meet Malcolm with every intention of impressing him with the fact that henceforth she, like other girls, would demand much and give little.

For that reason, Malcolm's comment on the late state of coolness between them was unfortunate—the first unfortunate occurrence of a remarkably unsuccessful evening. He met her in the big lobby and conducted her to the low-ceilinged grill-room, where they sat on the cushioned seat that ran the length of the room.

"Now, Mary, 'fess up you were peeved with me," he said, playing with a tail of her fur as it lay across her lap. "I suppose it was that night I was sleepy and rude. Most girls would have been sore, but I didn't think you would be, somehow."

Mary frowned. He was still assuming that she was different from other girls.

"Why not?" she demanded crisply.

"You're so dog-gone understanding. . . . I could tell you 'most anything. . . . Mary, I'm in the deuce of a fix. It's—a girl."

He shook the ice in his glass nervously, and then went on: "I've played around with her quite a lot. One night I rather—lost my head—and now—I'm dead sure she thinks we're as good as engaged. Gee, I've missed you, Mary. I knew you'd tell me what I ought to do."

"You have no idea of being engaged to her?"

He shook his head, frowning. "I don't know whether you know I have a mother who has to live out in Arizona. There's no one but me to support her. I can't dream of getting married yet."

"It's too bad you didn't think of that before," Mary said dryly.

"You're the deuce of a lot of help!" remonstrated Malcolm, the furrow still between his eyes. "Now look here, you don't mean to tell me that because a chap kisses a girl—a bit—he's in honor bound to marry her! . . . Especially—if she wanted him to?"

"The woman tempted me," mocked Mary. She looked steadily back into his troubled face. His eyes were dark blue. He had an almost whimsical mouth and a firm, clean-cut jaw. It was easy to see why people liked him.

"No," she said, "of course you aren't bound to marry her . . . only, the sooner you explain it to her the better."

Malcolm sighed heavily, as if he did not like the prospect. While they were dancing, he burst out—

"Girls, honestly, are the limit! They all think you want to marry them if you look at them sideways!"

Mary wriggled, and Malcolm looked down at her.

"Oh, not *you*," he explained reassuringly. "That's what I like about you. A chap doesn't have to be forever on his guard."

The worst of it was he thought he was paying her a compliment. Masculine and obtuse, he did not know he had put the finishing touch to Mary's evening. But he took her advice about the girl.

A MONTH later, Malcolm's mother died. Mary was shocked by the change in him when he came back from the West. He looked older and seemed shaken. Yet only once did he talk to Mary of what he was going through. He had hoped to bring his mother back East next year.

"I feel rudderless now," he said. "She gave me something to work for. A man needs someone besides himself. . . . I don't know why I tell you all this. Only, you understand things."

Mary liked the new Malcolm better than the one of abounding assurance.

The sequel to this conversation came a few weeks later. As they were leaving the restaurant, after Malcolm had had his French lesson, Malcolm said abruptly:

"I wish I were married."

Mary did not answer; her heart was pounding. Malcolm continued, "But you can't be married if you're not in love . . . and I've given up playing around with my old girls."

Mary experienced a shock. Suddenly she wanted to hurt him, and said, "Still,

## Would You Varnish Your Skin?

Of course you wouldn't, knowingly. But perhaps you're doing it just the same, unknowingly. What you call "cleanliness" may be something quite different. Without realizing it you may be clogging your pores with objectionable soap oils or solids just as effectively as if you actually varnished your skin.

Real cleanliness is a wonderfully simple thing. Yet so many people make it difficult, thinking that color and perfume are *always* evidence of soap quality. That is an old-world, old-time idea. The new idea—*American white cleanli-*

*ness*—is fast replacing it. The growing demand for Fairy, *the whitest soap in the world*, proves that.

Your skin must breathe. Your millions of pores must be free to perform their functions. And that demands a soap which will *cleanse* the pores without *clogging* them—a soap that will gently stimulate them without robbing them of their natural oils.

Such a soap should be thoroughly pure. It should also be free from harmful ingredients which may irritate the skin. Fairy Soap has that two-fold advantage. It is

a soap made especially for people who want to be *really clean*. It is soap in its purest form.

Fairy Soap makes absolute cleanliness easy. Its own clean appearance inspires your confidence. The rich, soothing lather it gives in any water is a revelation. It is *American white cleanliness* in whitest soap form, the choice of the foremost clubs, baths, and the thousands of homes where cleanliness is pore-deep instead of only-on-the-surface. Put it in your bathroom for the utmost in cleanly comfort.

THE H. K. FAIRBANK COMPANY

*It Cleanses the Pores and Invigorates the Skin*

COUNCIL ON ATHLETICS  
OF THE  
UNIVERSITY OF PENNSYLVANIA  
PHILADELPHIA  
OFFICE OF THE GRADUATE MANAGER

The H. K. Fairbank Company,  
65 Broadway, New York City, N. Y.  
Gentlemen:

Fairy Soap is used in the dressing rooms and baths of the University of Pennsylvania. The men like it for its free lathering quality, as well as for the invigorating feeling which follows its use—especially after strenuous exercise. They find that it thoroughly cleanses the skin and aids the pores in their natural functions.

Yours very truly,  
*Ernest A. De Ruel*  
Acting Graduate Manager

# FAIRY SOAP

## HELPS THE BODY BREATHE

that's no barrier. . . . You fall in love so easily."

They were on their way to the movies and the street was too dark for Malcolm to see her face.

"Are you making fun of me?" he demanded.

"Certainly not," Mary answered coolly.

But her remark bore unexpected fruit a few days later. Malcolm told her he had been thinking it over and he had decided two things: first, that a bachelor led the most futile life in the world, and, second, that it was only living if you formed a partnership and worked things out with someone else. He had hit upon a scheme, which, though it might sound strange and not over-romantic, he believed would work. With the utmost seriousness he showed Mary a list containing the names of seven girls.

"I've been keen about them all at one time or another," he explained. "Some of them I've kind of lost track of, but I'll look them up again and rush each one in order. It's perfectly possible that in that list is the right girl."

MARY agreed that it was a unique idea. Beyond that, she did not commit herself. But suddenly she was herself seized with a determination to control the course of Fate. She said to herself that Malcolm should *not* fall in love with any of those girls. She did not know how she was going to prevent it, but she was sure that she would.

The "trying out" went busily on for a month. Then, one Saturday afternoon, in a quiet corner of the woodsy "Ramble" in Central Park, Malcolm confessed that he was disheartened.

"Would you think it would be so hard to fall in love with girls you'd once been in love with?" he complained. He checked off each failure in order.

"One' and 'three' and 'four' were impossible—no longer any thrill. 'Two' was cute and easy to look at, but nothing much above the eyebrows—probably bore you stiff before the honeymoon was over." He paused. "'Five' is an awful peach and she'd make the best wife of the bunch, good disposition and all, but, golly, I couldn't fall in love with her! 'Six' is already engaged, and 'seven,' well," he drew a long breath, "I could get lots of thrills over 'seven,' only—"

"Only what?" prompted Mary.

Malcolm did not answer this directly.

"Mary," he said thoughtfully, "I wonder if there is anything to this thrill business? The way I've ranted sounds as if I thought thrills were the only thing in the world, but I don't. They're surface stuff. Only—they *do* play their part. The point is to get them hitched up to something more solid—to the kind of girl you could spend your life with. But the best kind of headwork isn't going to produce any thrills over 'five.' . . . I guess it doesn't work, after all. I've just been disgustingly cold-blooded. I give it up."

Mary's temper had been rising. Her eyes were bright and the color glowed in her face. Suddenly she exclaimed: "I know one thing. I'd never in the world marry a man I didn't thrill about or who didn't thrill about me!"

Malcolm looked at her in surprised silence. Her face, vivid with the light of her conviction, held his attention.

"Wouldn't you?" he asked with interest. He got up and joined her, then laughed teasingly, "I never knew you were so . . . sentimental!"

She refused his invitation to dinner that night, for she wanted to be by herself to think. The most surprising thing had suddenly flashed upon her:

"Malcolm really likes me better than anyone else he knows."

Well, didn't he? It was she to whom he always turned for advice and comfort. They had the best times together. Malcolm said so himself.

"He likes me better than anyone else he knows," she repeated firmly. "What am I going to do to make him realize it?"

She thought over what he had said about thrills being only surface stuff, though they did play their part. She stood leaning her arms on the high chiffonier, inspecting her reflection in the mirror. She had on a mannish tailored waist, collar and tie; her auburn hair was combed smoothly back from her low forehead and fastened in a simple knot at her neck. She frowned at herself.

"Of course Malcolm doesn't thrill about me," she thought. "I don't look a bit—feminine."

She took the hairpins out of her hair and used a comb to "rough" it. Then she tried various elaborate arrangements. The effect was surprising.

"I need some good-looking clothes," she decided. "It doesn't do any good for Malcolm to like me if he doesn't *see* me!" She held her face nearer to the mirror. "I'm not so bad-looking, if I can make him see that I'm a *girl*!"

She decided to enlist Eleanor as an accomplice. Eleanor could invite Malcolm to dinner. That would supply the necessary "home atmosphere."

THE next day she arranged it with Eleanor by telephone. She did more than that. She sank one month's pay in a marvelous green and gold gown. The gown had disturbed her peace for two weeks from the window of a Fifth Avenue shop. But she groaned at the course she was taking. It was dreadfully old stuff.

Eleanor was kindness itself, and forbore to put her triumph into words. Magnanimously she offered to arrange Mary's hair. Eleanor had a special knack for that kind of thing. And Mary, with her hair brushed until it was lustrous and coiled high upon her head, felt a new power tingling through her veins when she entered the living-room that evening. She knew that for once in her life she was devastatingly charming. The very coolness of her shimmering green and gold gown set off the warmth of her coloring, especially the lights in her brown eyes.

When they entered the living-room, Eleanor's husband, Tom, struck an attitude of admiration and demanded an introduction. But it was the spontaneity of Malcolm's admiration a few minutes later that amused them all. For when he first turned to Mary there wasn't a trace of recognition in his eyes. Then he drew a breath and exclaimed, "Ye gods!"

They all laughed at that, and, after a surprised second, Malcolm joined them.

It was an unusually merry dinner. Afterward they played some very bad auction and had an enormous amount of fun over it. When it was time to go, Mal-

colm insisted on telephoning for a taxi.

From the moment she got into the taxi, Mary knew that something had come over Malcolm. The very silence was dangerous. In a strained tone he exclaimed, "Mary!"

She tried to steel herself against the beating of her heart. She had not been prepared for such instantaneous success, nor for Malcolm's humility.

"Mary, I've been an awful fool. I wish you'd tell me what's been the matter. I can't understand why I never got a good look at you until to-night! *Why* did you let me flounder around with 'fives' and 'sevens,' when it was you all the time!"

Mary looked back into his eloquent face and felt a glow of happiness. In the next moment she became conscious of another emotion, not of shame exactly but of something surprisingly like it. It had all been so easy—this "feminine" stuff. Men had no defense, and yet, even though it had worked as Mary hoped it would, she knew it for what it was—the most unfair weapon a girl could use. Deliberately to charm a man was to create an illusion of love that frequently had nothing real behind it.

"Wait a minute, Malcolm, I'm going to tell you something. I—I meant you to say what you've just said. It made me furious to have you think I was so different from other girls. I'm not. That's the reason I fluffed my hair and bought the best-looking dress I could, and invited you to Eleanor's to—admire me. I'm like any other girl, only if I hadn't *made* you thrill about me, I believe you'd never have found it out."

Malcolm stared, incredulous. Then, to Mary's surprise, he laughed.

"Just like every other girl!" he repeated. "You were never so wrong in your life. You're so darned square! Not a girl in a million would have told a man that—kind of showed him how she pulled the ropes." Then his face grew serious, and he felt for her hand. "Mary, I'll tell you something. I'm humiliated as the devil to think I didn't know how I felt without your having to help me. But as for your thinking I never would have known, you're wrong. Men may be built so they fall for thrills; but if they're worth anything, squareness and companionableness register biggest in the long run. . . . Don't you believe that?"

MARY, looking into his serious face, believed it.

Later, in her room, as she struggled to unfasten the intricacies of the gold-green dress, she relived the ride home. Malcolm himself had suggested that he go on probation, as he put it, and "live down his frivolous past."

She turned out the light and lay in bed with a mind and heart too full for sleep. Once she had imagined that Love came, the gift of Fate. How she had resented it because Eleanor said one must work for it! Yet there seemed to be something in what Eleanor had said. Perhaps the truth lay between extremes—truth very often did. She was glad she had been square, but now from her new vantage point, she was glad of another thing . . . that she herself had taken a hand. After all, no girl could afford to leave her future happiness entirely in the capricious hands of Fate.

*The Standard Comparison*

## Distinguished on Trail or Boulevard

### *The Four-Cylinder Five Passenger Touring Sedan \$1325*

In this strikingly handsome four-cylinder, five passenger touring Sedan, Buick has provided a beauty, refinement and complete touring comfort, extraordinary at so modest a price.

It is a trim motor car; distinguishable at a glance for its ability to travel the longest trail or to fit perfectly in the smart company of the city boulevards.

With comfortable and finely upholstered seats for five full grown persons in its roomy and well appointed interior, and with ample luggage space in the sturdy trunk carried on the rear, the Buick touring sedan makes city and country motoring equally pleasurable.

The staunch, dependable Buick chassis and the famous Buick valve-in-head engine insure the characteristic performance which has made the name of Buick a synonym for motor car dependability, economy and enjoyment.

## THE FAMILY'S MONEY

# Are You Teaching Your Children How to Spend?

**W**HEN little John and Mary—our two children—grew old enough to earn some money of their own by running errands and doing odd jobs about the neighborhood, my husband gave them a lecture on the subject of saving money. He explained that we would buy for them the things they actually needed; but that they must learn not to spend every cent they earned for candy, soda water, motion pictures, and other passing pleasures.

I agreed thoroughly with my husband that this was the proper thing to do; but we learned during the next few months that there was more than one angle to the problem of teaching children to save. Our first trouble lay in failing to make the habit of thrift attractive to our children by showing them how they would benefit from it. They felt that we were depriving them of pleasures that other people enjoyed. They resented this.

I got a cue to Johnnie's frame of mind when a woman carrying a heavy suit case stopped to rest for a moment in front of our house. I noticed that she glanced longingly at the boy's coaster by the porch steps, and I said, "There, Johnnie, is a chance for you to make some money. I'll bet that woman would like to have you haul her suit case." The boy jumped up, eager and alert. Then, suddenly, the interest died out of his face, and he said, disgustedly, "Aw, what's the use of making any money? Dad won't let me spend it, anyway!"

That same day I got another shock when Mary came in fairly dancing with happiness. "Oh, Mama," she exclaimed, "Mrs. Anderson gave me a quarter for taking care of the baby while she went down-street, and I'm going to buy a new hair ribbon! But don't you tell Dad, because he wouldn't let me spend my quarter." And she skipped off before I could recover my wits.

**H**ERE was food for thought. I felt sure that neither of the children meant to be impudent or disobedient. These trifling incidents showed plainly that they didn't like the way their money matters were being handled. Somewhere there must be a flaw in our ambitious plans.

The loving care that was bestowed upon that hair ribbon was a revelation to me. I never found it tossed on the floor, full of unsightly wrinkles, showing that Mary had worn it to bed or used it for a doll's sash. She acquired habits of neatness that I had been trying to teach her for months. When she took it off she folded it in a drawer with her most cherished possessions, and it far outlasted any other ribbon she ever had.

John and I talked over the episode of the hair ribbon, and decided to give the boy a test and see how he would react to it. He wanted a new cap badly, and when we told him if he wished to use his own money he could pick one out for himself,

he was delighted. Johnnie, too, guarded his new cap with jealous care. When he came in he hung it on the rack—an act without precedent in the history of his long string of caps. He never risked being late for school searching for it in forgotten corners when he was ready to start. Nor did I have to remind him not to use it for a football in his rough-and-rumble games. It was self-evident that buying and paying for these things had added greatly to their sentimental value.

So we came to the conclusion that it is not good policy to go to one extreme or the other. My neighbor, Mrs. Porter, allows her son Bobbie to spend all of his money for any indigestible that happens to strike his fancy; John was going to extremes in asking the children to save all of theirs. Now, we've hit upon a happy medium. We insist on the children putting part of their money in bank; the balance they are free to spend as they wish. But because they are permitted to decide for themselves, they are far more interested in saving than spending it.

**C**HILDREN are not as strong to resist temptation as older folks, and if they do not have some pocket money to buy the little odds and ends so dear to the childish heart it is not at all unlikely they will resort to questionable means of getting them. I'll never forget the heart-to-heart talk I had with Johnnie that day he told me in his confiding way how little Willie McClure had "swiped" a ball in Smith's store. I could see that Johnnie considered it a shocking thing to do; but he couldn't help thinking how easily Willie had got away with that ball. At the same time, Mrs. McClure prides herself on her discipline. She never had any money of her own to spend when she was a child, she says, and she can't "for the life of her" see why her children should have any.

We take the children with us on many shopping trips, and explain that it is more economical to buy one thing than another, and tell them why. We send them often on shopping tours alone and try to anticipate their mistakes.

If the purchase is exactly right, we don't hesitate to say so, and if it is not just the right thing we tell them "it will do this time, but you must be more careful in the future." It is not well to scold, for fear they will lose confidence in themselves. Nor do we send them back to exchange anything, except in very rare cases. If we did, they might get careless and think, "Oh, well, if it isn't right I can exchange it."

I never have to coax my children to go to the store for me as some mothers do. They are eager and interested. Instead of a task to be finished as quickly as possible, it appeals to them as a game in which they are anxious to excel. Although very young, they are already quite efficient shoppers.

MRS. L. M. P.

THE extraordinary increase of Hupmobiles in your own locality this year was not peculiar to that locality alone.

Everywhere in America, Hupmobiles were being bought at a rate never before recorded.

By mid-October, our domestic market—without special inducement or special stimulation—had absorbed twice as many cars as in any previous entire year.

This growth is sound and substantial. It is rooted deep in the satisfaction of thousands who ask nothing finer than the Hupmobile in the way of a motor car.

## Its choice bespeaks the discriminating hostess

When you serve a Premium Ham you enhance your reputation as a hostess. For, in the tenderness and exquisite flavor of this ham, your guests perceive that you have chosen for them with most considerate care

## Swift's Premium Hams and Bacon

It is  
not necessary  
to parboil  
Swift's Premium  
Ham

### *A distinctive way to serve it*

Cover the butt end of a Premium Ham with cold water, bring to boil and simmer gently, allowing 20 minutes for each pound. Then remove the rind and—here's the special touch—spread mustard over the ham fat and sprinkle generously with brown sugar. Stud the top with cloves and bake for an hour in a moderate oven.

## On the family breakfast table since 1879

Sit down to breakfast with a steaming-hot dish of Wheatena to start the day! Every spoonful of this old-time favorite, with its nut-brown flavor, invites another.

That's why Wheatena, for nearly a half century, has been the one supreme breakfast food of America—why it is eaten regularly, year in and year out, in thousands upon thousands of homes—by millions of children and grown-ups.

The plump golden grains of finest winter wheat are crushed and roasted to a rich golden brown, which brings the delightful flavor to its fullest perfection.

Wheatena contains the whole of the wheat kernel—the vital, life-giving element—the wholesome bran—the nourishing gluten, starch and phosphates—everything needed for building and sustaining a strong, vigorous and healthy body.

Serve Wheatena for breakfast. It's ready for the table in three minutes. Use it also for muffins, cookies and desserts—for thickening soups, chowders and gravies. You'll be delighted with the many delicious ways it may be used in varying your daily menus.

Your grocer has Wheatena, or will get it for you. Served in leading hotels, restaurants and dining cars.

The Wheatena Company, Wheatenville, Rahway, New Jersey

Write at once for a free package of Wheatena—enough for a family breakfast. Also for a book of recipes showing the many delicious and economical ways in which Wheatena may be served.

# The finest complexion treatment is the simplest

## Here it is:

Most women have, and take great pride in having, normal skin—differing, perhaps, in texture and in ability to resist various conditions of life and weather, but normally healthy.

For such skin, the highest authorities agree that the finest complexion treatment available is the simplest—*soap-and-water cleansing*.

This old-fashioned, but authoritative, fact may save you trouble, and pain, and even the loss of

the good complexion you now have.

To million of women, "soap-and-water cleanliness" means "Ivory-Soap and-water cleanliness."

*As any reputable physician will tell you, soap, whatever claims may be made for it, can do for your skin only one good thing—cleanse it safely.*

*That is the duty, the privilege and the destiny of Ivory Soap—to cleanse safely. Through forty-four years it has made no other claim.*

Ivory Soap *must cleanse*, because it lathers abundantly and rinses off completely and promptly.

It must cleanse *safely*, because it is made of the very finest of pure ingredients, blended to produce a pure, mild, white and delightfully fragrant soap—which floats.

When you buy Ivory, you are asked to pay only for *pure soap*, which contains no "mysteries" and offers no "magic" except the soothing magic of cleanliness.

PROCTER & GAMBLE

## IVORY SOAP

99 44/100% PURE IT FLOATS

Julia, maid of maids, is as concerned as if the blouse were her own, instead of Sally Jollyco's. Its delicate crepe is faded and torn. Sally washed it *herself*, with soap of her own choosing.

"Oh, and I warned her, Mrs. Jollyco. But she wouldn't listen."

"I know, Julia," says Mrs. Jollyco. "Miss Sally is one of those who learn only by experience. Perhaps next time she will use Ivory. Then she won't have to rub, and there will be no fading or tearing."

*Side out on a triple play!* The professor notes this thought: "Clean bodies make keen minds." Well, if Bobby keeps on resisting soap, we don't know how he is going to be a famous shortstop—even with the help of his canine friend, *Ulysses*.

"Why, Sally Jollyco!" cries Miss Tippet, the family nurse. "What's that Mrs. Prowl doing in here?"

"Now, Tippet, you go right away!" says Sally. "Mrs. Prowl says this new soap will keep me beautiful."

"Oh dear, oh dear! And after I brought you up so careful on Ivory Soap, too!"

Poor Sally! She has a terrible time, doesn't she? but Miss Tippet is right—soap keeps one *pretty* only by keeping one *clean*. Ivory does that, and gently, too!

## I Know 8,750 People— How Many Do You Know?

Stories from the experiences of one whose business it has been to travel up and down and across the country for years

*By Hugh S. Fullerton*

ONE evening, during a meeting of baseball club owners, managers and officials in New York, Cal Ewing, from Oakland, California, introduced me to two men, one of whom was from Asheville, North Carolina. After shaking hands, I said to the Asheville man, "How are Homer and George Cathey getting along?"

We talked for a time about Judge Adams and Broun, then of some of the fellows around Asheville and Skyland. I recalled that Ham Hyatt, the old ball player, came from out Deever way, on Hominy Creek, beyond Penlands, and remarked that Hyatt and I had had some good quail shooting there and had spent some time on the Hays estate. The other man I had just met began telling about the quail that swarmed around his home town, Waycross, Georgia, and I said to him, "How is Old Man Obadiah Barber? Is he still killing bear down in the Okefenokee?"

The Georgia man was saying that Obadiah still was a great bear hunter, when an old acquaintance came up. I shook hands with him and said:

"Did Amman Carter come up with you from Fort Worth?"

The Georgian stared for an instant, and then, unable to hold in any longer, he said, "Say, mister, do you know everyone in this whole world?"

Not quite. There are 110,000,000 people in the United States, and I know only 8,750 of them well enough to recognize them and call their names, or at least to remember that I ought to know their names. During the last thirty or forty years I have met at least 25,000 persons, and by the closest calculation possible remember one third of them.

Instead of being proud of knowing as many people as I do, I am ashamed not to remember more. For more than thirty years my stock in trade has been meeting and knowing people, and I count every day lost unless I meet at least one person who tells me something new and interesting enough to fix him in mind.

It is not difficult to recall men and women with whom you have worked, with whom you have gone through some excit-

ing experience, or even those who have told you a new story. These are the persons you will probably recall first, if you have occasion, as I did the other day, to send out an announcement. I sat down and wrote the names, addresses, and the familiar name of more than four hundred persons. Not till then did I have to consult my address book, which contains the names and addresses of more than two thousand persons well enough known to make me want to keep posted regarding their fate.

Remembering people is natural to some of us. It never has been a conscious effort with me. I find that my mind associates every person with some scene or with some other person. Many times it is impossible to remember a man's name until the scene of previous meeting is recalled; then he takes his place in the mental picture as plainly as in a photograph.

SOME readers may get the idea that I am writing a boast about my good memory, but the fact is I know my memory is freaky. The family has many laughs about it. Once, when I was going to California, my wife asked me to be certain to hunt up Laura, who lived at San Mateo, and gave me the name of the man Laura had married. A week or so later I wrote that, having searched San Mateo from end to end, it was necessary to report that no person named Heintz ever lived there, to which she replied, "Look up Snyder. You picked the wrong pickles." This was a case of unconscious association, of course, and it gives a clue to how a memory works.

So this is not boastful at all; merely a story about people. I am writing it because the Editor happened one day to ask what struck me as most interesting in life, and my answer was, "The number of people I have known."

"How many do you know?" he demanded.

It seemed a foolish question then, but that evening I started to calculate and found it worth while, because in just thinking over the list a fellow recalls many names he has almost forgotten, and the chances are that, before he gets through, he'll sit down and write letters

and cards, and bring back into his life a lot of persons who are worth-while. Instead of being a foolish employment it became the most pleasant of tasks.

FIRST, I took the atlas and started with Maine—Kennebunk, Rangeley, Meddybemps, Aroostook, Crawford. I ran over in my mind the people I knew who lived in that state—Jack Coombs, Bill Allen, and Big Tucker from Bangor; McQuade at Aroostook—a score or more. It was two o'clock when the missus wanted to know whether I was going to sit up all night, and I had just reached Memphis and was wondering how Mooney, Scarborough, Clemons and Gene Demont, and the good fellows around the Chickasaw Guards and all the others were. I was two nights getting to California, and adding up.

Not being entirely satisfied that the estimate was accurate, I started listing how many baseball players, boxers, athletes, race-track people, gamblers, burglars, policemen, politicians, prominent people, theatrical folk, hotel people, old neighbors, and friends in a score of towns, I knew, and after checking both lists I said to my chum:

"Jake, I know 8,550 persons."

"You know more bartenders than that," he said; so, having forgotten to list them, I counted up two hundred bartenders, and in that way I reached my total—8,750.

That evening, with half a dozen persons present, an argument was precipitated and we started figuring. Ed Norwood knows close to ten thousand persons, and one of the fellows, after an hour of pencil work declared he knew fewer than two hundred persons. He has lived forty years in New York, and admitted that he never pays any attention to his fellow beings. He would recognize only one policeman, only two waiters at his club, fewer than half the office employees in his own firm, and he declared he would not recognize five tradesmen, including his druggist. He simply is not interested in his fellow beings.

I never have been in any town in America where I could not find someone I

HUGH S. FULLERTON

"Hughie" Fullerton is one of the most widely known and best loved sport writers in America. For thirty years he has traveled up and down and criss-cross in this country, getting an army of friends and acquaintances from every state, and in numberless towns and countrysides. At the age of fourteen he started working as a printer's devil in Hillsboro, Ohio, and from then until now he has been in newspaper work. He has resided, at one time or another, in at least eleven different cities, and has stopped temporarily in hundreds of others. Mr. Fullerton has made a reckoning of his friends and acquaintances. They include newspaper men, baseball players, boxers, politicians, gamblers, railroad men, hotel people, burglars, policemen, officers and enlisted men of the army and navy, theatrical folk of all classes, and so on through the list of occupations. When he showed his list to a chum, the remark came: "What about bartenders? You haven't listed them." So Fullerton added two hundred names from that vanishing vocation. In New York alone, where most residents know comparatively few people, Fullerton reckons twelve hundred acquaintances—and he lived there only a short time, at that. At present, Mr. Fullerton lives in Chicago, where he is connected with the Chicago "Tribune" as a sporting reporter at large. His duties still take him all about the country, covering the more important sporting events

knew, and if I had this life to do over again I'd start right in to save up ten thousand friends, and then retire.

It would be much more satisfactory than saving up a lot of dollars, and certainly a more paying investment if one ever needed to draw on them.

Not many persons have had the opportunities of meeting as many persons as I have. The average man in a large city knows very few men and women save by sight, and is far behind the small-town man in that respect. But I have lived in small towns, and have traveled steadily for thirty years, usually on errands requiring me to meet people. Most of this has been with baseball teams, but I have

also traveled with political parties and on political errands, reported all sorts of news in some of the largest cities in the country, lived in a dozen different sections and fished, hunted, and loafed in scores of others.

**N**OT all those 8,750 persons are friends, not by a long shot. In fact, I have a fine collection of enemies, and they are even more interesting than some of the friends, and better remembered. But of them all there are only two persons in the world that I hate and not half a dozen that I dislike actively.

Studying the estimates of acquaintances I find a funny thing: My worst enemies

are all fellows for whom I have done a great deal; the ones that once were enemies but now are friends are fellows I hurt either accidentally or purposely at some time. The fellow you injure forgives and forgets, but the one who injures you seems to get more bitter.

When I started out I was about as shy and sensitive as anyone could be. It was painful to be introduced or to introduce myself. To be sent out by a city editor with orders to interview some prominent person was like a sentence to be hanged, and I approached it in the same manner. But after a time it became evident that human beings are pretty much alike, and that the "big" man is far more likely to be friendly and sociable than the smaller one. Also it was forced upon my consciousness that men take other men at their own valuation. I was modest and self-effacing and it was hard to meet successful people. They seemed to look down on me.

There was a fellow in Chicago, a notorious reformer and publicity seeker, to whom I had been sent a dozen times and from whom it seemed impossible for me to extract any real information. However, he was giving others more news than he did me. So one day I walked into his office and said, "Well, you big four-flushing hypocrite, what line of bunk are you dishing out to-day?"

Thereupon he gave me an important and exclusive story, and taught me that public men especially take a man at his own valuation.

**A**FTER my terror of meeting strangers passed away I became more and more eager to get acquainted with new people. I have always been able to get more enjoyment, entertainment, and valuable information from people than from books or lectures. Consequently, I always have been ready to sit up all night in a hotel lobby or the smoking compartment of a car listening to the talkers. I claim to be an expert listener, and as an expert in this line I have yet to meet the man who was not more interesting than a book when he warmed up and talked of himself and of his affairs.

In spite of my painful shyness, I must have been a friendly sort of a kid down home, and yet I had not many friends in the town itself. Among the country folk throughout the whole county all sorts of people were my friends. There were a score of farmhouses at which I could stop at any time and bunk with the boys or the hired man, or join the family. Later, when working as a political aid for Mark Hanna, I was able to name every county, county seat, and the chairman of the county committees of every one of the eighty-eight counties, and without effort. Twenty-five years later, on revisiting the old home I stood on a corner and called the name of almost every man who passed. At church that day I recognized more than half the congregation.

If you have ever doubted the value of neighborliness, you ought to live for a time in a big city, New York, for instance. After a year and a half in one apartment house I knew only two persons out of seventy families, and they were little children. Probably the awful homesickness of so many New York residents is due to the longing for neighborliness. Down home,

for instance, I could go swimming out at High Bank, cut up through the bottom land, get a cold drumstick or a slab of bread with cow butter and tree molasses on it at Larkins', wade the creek, go up to Arthur's, where "Aunt Becky" always had doughnuts ready; cut across the fields to Evans's and get a slab of apple pie; drop in at Rockholds' and help Ches drive the cows home and eat a half-dozen apples; stop at Asa Haynes's (that was the granddaddy of Roy, the prohibition enforcement head) for a light snack; maybe hook a watermelon at Peter Vanderneyn-den's; hesitate at Barker to see whether the girls were making cookies; then stop at Scotts' and help Charlie raid the pantry. By the time I got home for supper the edge would be off my appetite.

New York is the hardest place in the world to get acquainted. The people seem suspicious of every friendly advance. In New York I know about twelve hundred people, chiefly through newspaper work among the sporting fraternity or the theatrical crowd, but a stranger in the city

certainly misses the old Hillsboro spirit of neighborliness. It is odd, too, because so many persons feel just the same way. Sit with a crowd in a hotel lobby some night, when a dozen fellows are talking and postponing the time when they must go to the loneliness of their rooms, and you can feel the longing for human companionship.

IT HAS been an advantage and privilege to meet many of our "big" men of politics and business, but it must be confessed that the great majority of them dwindle quickly on closer acquaintance, while few ever enlarge. I remember the shock it was to get well acquainted with one of my boyhood idols and then find he was rated as a thickheaded old ass. One of the few men who expanded was Mark Hanna, who had more influence over me than anyone else ever has had, not excepting my sponsor and friend, George Ade.

I was a kid when I first met Mr. Hanna. My brother and I had been trying to run a newspaper; and you know southern Ohio lives on politics. Joseph Benson

Foraker was the idol of our community, having come from our county. My brother was a worshiper of Foraker, while I, having heard Hanna once, had fallen in love with him. We disagreed about which to support, so my brother took one page and I another. We lambasted each other, called names, and fought out our political battle in the paper. Mr. Hanna heard of the peculiar situation and sent for me to come to Columbus and give him some data regarding the district. After we had been together an hour he told me to give him my expense record. I figured the railroad fare and dinner at three dollars and fifty cents, having come on an excursion. He offered me more money, but I refused. He inquired why.

"I want to do something for the party," I said, "and cannot take pay for it." At that he roared with laughter. It was the first time he had ever heard such a thing. Then, growing serious, he added, "Stick to that. This country needs a million fellows with that idea."

Years later I was (Continued on page 182)

## Sid Says:

### *Forget others and they will forget you*

"HUGHIE" FULLERTON, famous reporter, estimates that he knows 8,750 people, and asks how many you know.

It is an interesting question. Probably the average man knows only a few hundred. Fullerton is far above the average in this respect, but undoubtedly there are other remarkable men whose acquaintance is still wider. Roosevelt knew tens of thousands by face and name. So did Roscoe Conkling and the late Tom L. Johnson. Ex-Senator Theodore E. Burton of Cleveland does—for few men in the world have ever equaled him as a memory prodigy.

Ability to remember faces and names is a decided advantage in almost any line of work. Don't leave it to the politicians to do all the remembering. Get it well into your head that we are *all* in politics—salesmen, teachers, preachers, journalists, lawyers, doctors, and the various kinds of business men that abound everywhere. I say that we are *all* in politics. By that I mean that we all have to deal with other people. We are all trying to get other people to do what we want them to do. In other words, we are trying to get a following. We are trying to sell something. We are looking for customers. And we are all human. We like to be remembered. The man who remembers us by face and name makes a bigger hit with us than the man who forgets us. It is never pleasant to be utterly forgotten by people we have previously met and talked with. So, if you are not interested in other people and in trying to remember them, stay out of most lines of endeavor. Go lock yourself down cellar and try to discover a cure for cancer. Choose some line where contact with other human beings is not necessary. It will be hard to find such a line—but find it if you can.

"But how can I learn to remember people?" you ask. That, of course, is the big question. Here is the best

answer I can give: I don't pretend to be a memory teacher, but I have observed that most of us can remember what we are interested in. If I bring Jeremiah Gazoop around to see you, and if Mr. Gazoop says that he will give you ten thousand dollars the next time you recognize him on the street, you won't have any trouble remembering him. You will look at his eyes, his ears, his nose, and his feet. You will scrutinize him from head to foot, and you will pronounce his name over and over to yourself until you have it letter-perfect. Then you will go out in the street and lay for him, and if he appears you will spot him and collect the ten thousand dollars.

In other words, you suddenly sit up and take a tremendous interest in Mr. Gazoop because you think that it will be to your advantage to do so.

And that is exactly why most of us forget most of the people we meet. We are so self-centered and egotistic that we take no interest in them. We get so interested in showing off ourselves that we neglect to observe the other person. Consequently, we forget, and at the next meeting suffer humiliation and sometimes punishment for our failure.

So here is the idea in a nutshell: The basis of a good memory is interest. (No young man ever forgets the street number or the telephone number of his sweetheart.) If you want to remember people, cultivate an interest in them. When you meet a man, get his name clearly in mind and say it over to yourself several times. Then look at him. Observe him carefully. Ask him questions. You will find that the answers he makes will help you to fix him in your mind. Try this and see whether it won't reduce the number of times you are compelled to mumble:

"Your face seems to be familiar to me, but I can't remember your name or where I met you."

# Hope Is a Liar!

"It tucks you up in bed when you ought to be out; it smooths over your acts of stupidity and tells you it'll be all right next time—The hopeful man is a weak man; the strong man stands alone and needs no hope"

*By W. L. George*

I AM an author; but it is a mistake to think that an author is a special kind of man. Authors are "just folks." Like other people, authors fall in love, enjoy success, and need money. Their difficulties are the same as other men's; like clerks, they must attract the notice of the boss; the boss in their case being you, the public; like manufacturers, they must deliver the goods you want, or you will not repeat orders; like salesmen, they must offer their manuscripts to editors, and must know how to sell.

So I contend that my problems are those of any sort of man, whether he be a miner in West Virginia, or a drug-store attendant in Los Angeles. And I contend that anything I may have achieved in the writing of books would have been achieved in much the same way in any other occupation.

If I were asked, "Which way do you take life?" I should reply, "I believe that hope is the enemy of success; I have no pride; yet I ask no favors of any man."

That is the sense of it, though I have more to say; but before developing this point of view I want to explain briefly how I began and how unfavorably placed I was to succeed.

I am wholly English on both sides, but I was born in France, educated there until I was twenty. I never joined up with the ways of France, though I served in her army; I remained a foreigner in the land of my birth.

My parents were not well off; the memories of my boyhood dwell about a home kept together on forty dollars a week. But I had one great asset, a devoted mother, who cared for nothing but me and my education. She had only one fault; she was so determined to discover my abilities that she caused my training to be altered several times. Thus I was half-trained, first as an analytical chemist, then as a mining engineer, and lastly as a lawyer. I knew a little of everything and not enough of anything. So when I needed to earn a living, I emigrated to London,

where I became a clerk at ten dollars a week.

It was not much of a start after such extensive educating, and may this be a lesson not to scatter energies! But it was the best I could find. I had not a penny behind me; I had not been to one of those English universities that give a man social position; I had no family influence beyond the one which got me my small job. And a great disappointment awaited me; here I was, returning to the land of

hardest school—the school of life—where we must all graduate whether we be car conductors or clergymen. I had to learn the ways of my own countrymen, to find out what sort of people they were. It was very difficult, for the English are more reserved than the Americans, and at the same time I had to learn the ordinary lessons of life.

I confess that for a moment I was afraid, and that within six months I was thinking of returning to the home of my boyhood.

I am not ashamed of it, for one can't help being afraid, but one can dominate one's fear, one's loneliness. At last I remembered Henry IV at the battle of Ivry. Finding that he was trembling, he said to himself, "Harry, you're frightened. I'll give you something to be frightened about. I'm going to take you into the thick of the fight." And he did.

So I decided to face my troubles, and—here is my first suggestion—asked myself what was my greatest difficulty. If you have a variety of troubles, get on to the biggest; the small ones will take care of themselves. My greatest trouble was that I spoke English badly and made myself ridiculous. Curiously enough, though I was not yet twenty-one, I did not think of classes and grammars; some instinct made me turn to living people as my educators.

What I did was simply this: In the office my fellow clerks were in the habit of laughing at my mistakes. I procured a large piece of cardboard, which I stuck

in front of my desk; every time I pronounced a word wrongly I asked how it should be spoken, and put that down phonetically upon the board. This made a sensation; the other clerks used to gather to jeer at "George's board," and in my absence wrote upon it objectionable remarks. But I went on, month after month, until little by little there were hardly any mistakes to write upon the board. At first the jeers were painful; then they ceased to hurt, for I was getting where I wanted.

## I Do Not Mean That One Should Expect Defeat

"IF YOU start hoping," says Mr. George, "you leave hope in charge of the job, and hope lets you down. If you hope, you don't try; if you do without hope, you tell yourself: 'This is a terrific proposition. My chance of pulling it off is small. Very well, then this means that every bit of my energy, all my suppleness, all my resourcefulness, my wits, must be used.' In other words, you fight best when you face odds."

"I do not mean that one should expect defeat. I mean that one should tell one's self: 'This may not come off, but I'll try again.' I mean that one should trust to nothing but one's self, be ready to toil, to analyze the buyer, to penetrate what he wants. One must ask one's self: 'If I do or say this, what will he say? What will he do? What will he conclude?' And especially: 'If I were in his place, what should I do?'"

"Finally, one must tell one's self always that one will leave nothing undone. Then, if one loses, one expected as much; if one wins, one knows the intense joy of surprise."

my blood, and I found myself a stranger there.

I was as badly situated as an immigrant in America, for I did not know the ways of my new country. I wore absurd French clothes; I did not even speak English properly. I was worse off perhaps than the immigrant in America, who at once finds a familiar circle among his countrymen. In England there was no one to receive me. I stood there alone, a sort of foreigner with ten dollars a week.

So I had to go to school again, to the

At the same time, I was learning from life. I am not a book-educated man; I am a life-educated man. What I mean is that I used my leisure to develop my interest in this lovely, this terrible world. From the age of twenty to the age of twenty-five, I hardly read a book; but I read newspapers, went to political meetings, to demonstrations of the new cash register, to dog shows, to model villages, to churches of various denominations, to watch football, the burial of royalty, and the suppression of suffrage riots. I met people, and people, always tasting life, amassing a store of impressions. I was not an educated man, but a man experienced in living. By the time I was twenty-five I could have built a bridge or have preached a sermon. It might have been a poor bridge or a bad sermon, but it would have somehow stood up.

Then, suddenly, I was twenty-six and found myself on the road to failure. Many a young man knows the sensation, which amounts more or less to realizing that in ten years he will have hardly advanced from where he now stands. I had earned a little promotion in the office—one of those respectable, old-fashioned firms where seniority alone counts. But I did not get on; nobody else got on; nobody *could* get on until the older men retired or died.

AT THE age of twenty-six I was only a twenty-dollar-a-week man; at forty-six, what should I be?

I told myself I must make a change, but I was afraid; it's hard to let the pay check go. Besides, I was swimming in a sea of difficulties. I had recently married into a family where my father-in-law was hostile to me; I had not five hundred dollars in the world; I was so hard put to it that I could not even pay cash for furniture for my new home; I had no credit; I had to begin my married life in a furnished apartment. The present was hopeless, and the future terrifying.

Then, in this despair, came the strange courage that saves a man. I told myself: "Call no man a failure until he is dead. This trade is no good to me. Well, I must find another." I knew what that other trade must be, as I had begun for pleasure to write in my spare time, just as another man may do fretwork and decide to start as a wood carver. As surely as an engineer may feel that he ought to be a farmer,

I felt that I must be a writing man.

But courage sometimes leads a man astray, unless he takes with him a little brother called caution. I shall show further on how I took my risk, but my first impulse was merely to write hard, to work. That is simple enough, but it is worth saying that if a man intends to change his job he must be ready to learn his new trade while he practices his old one. In my case, it meant that I worked in the office from ten to six, that I wrote before breakfast, at every meal, and every night—though coals cost ten cents a scuttle, so that it was cheaper to wrap a blanket around one's feet. I was working thirteen hours a day, Sundays included; some of my writings were being published

which just about paid for their type-writing. I was married and had a child. On the credit side was a legacy to my wife, fit to meet less than a third of our expenses. No publisher was ready to buy my next book. I was no longer offering my labor, I was competing with established authors. I was like a small grocer waiting for people to enter his little shop instead of going on to the big store. And nobody came to me. . . . So I went to them. . . . There probably lies the foundation of success. Whether you are selling poetry or hardware always be aggressive; that motto is good enough for one's early days. One has a hard time, for the world is accustomed to aggressive young men and knows how to drive them away.

I, personally, had a terrible time those first three years. Having a habit of hard work, I turned out a large quantity of matter—news-paper articles, stories, novels, etc.—and sent them out, generally to see them come back. I keep at home a file which I show to people who want to make a living out of literature; that file contains the slips which editors send when they reject a manuscript.

IN THE first three years of my career I collected 723 of these slips. In less than 1,000 mail delivery days, I suffered rejection 723 times! Almost every day someone was saying "No" to me. Now and then, of course, someone said "Yes," but the reader will realize how seldom that was when I tell him that at the age of thirty-one, I still had no capital. Indeed, I was in debt.

In the main, it was "No" and again "No." Continually the postman brought disappointment, a blow, day after day.

And yet I went on in various moods, sometimes grim, sometimes methodical and calm, sometimes in a gory rage. I did not know it then, but I know now what it was that kept the postman's knock from ever knocking me down. The world would not buy my goods, but the world has done so. It has done so because I forced it, because I had enough energy to stand out against public indifference. And by what was that energy sustained? By various points of view, notably one which may surprise the reader, and which I call, "Never hope."

I realize that those words conflict with the advice that is given to young men. They are told (*Continued on page 104*)

W. L. GEORGE

Mr. George is a brilliant novelist and journalist, author of much discussed works, such as "Ursula Trent," "The Second Blooming," "A Bed of Roses," "Caliban," and others. He is exceedingly versatile, as is shown by his contributions to the British, American, French, and German press, on subjects as opposed as art for art's sake and the financing of railways. He holds the view that certain definite demands are made upon a man if he is to succeed in his career, and that it does not matter whether he is an author, a salesman, the president of a bank, or the keeper of a peanut stand. He believes that success, for women as well as for men, depends less upon their knowledge than upon their courage, their energy, their resistance to pain and disappointment. In this article he tells the difficulties which he overcame, and shows how any kind of man may hope to succeed if he will keep his heart soft and his head hard. The cat shown in this picture played an important part in Mr. George's novel, "The Blind Alley"

—but, with it all, I was not getting on.

Then I understood. I had been looking before I leapt, which meant that I would never leap at all. If I went on like this I should make good neither at the office nor in authorship. The time had come to choose: either throw up the comfortable pay check and stand alone—or stay where I was, a rabbit in a hutch. After a moment's hesitation I chose. I resigned my post and set out as an author.

I remember telling myself then, "If I fail at this, I'm going to buy a stock of goods, and with my pack upon my shoulders go around selling at back doors, but never again shall I take orders from any man."

The proposition was tough. I was twenty-nine and had published four books

Evans had not moved from where he had fallen. Squarely over his body stood Arctic, making

ILLUSTRATIONS BY W. H. D. KOERNER

**T**HE pensioner stretched out before the stove, blinked his eyes and yawned; a canine patriarch who had almost lived his span of life and now in his declining years hovered nearer the fire than his old-time team-mates.

Not many years ago, the Malamute's powerful jaws had snapped an attacking wolf's paw clean off, and a second snap had stretched out another wolf with its throat gaping. Then, as the pack was about to tear the Malamute apart by weight of numbers, Evans had rushed to the rescue with a few well-placed shots from his thirty-thirty rifle.

Like an old man with memories, the pensioner enjoyed reliving the colorful days of his youth. Evans had saved his life that time, but then, to offset that, the old Malamute had saved Evans from death on several occasions. A wonderful man was Evans in the pensioner's eyes. He rarely laid the lash across a dog's back; always thought of his team first and himself last. He was big, rangy, masterful, and the pensioner's observing eyes had noted the approving glances of more than one pretty girl; but Evans did not seem to care for them.

The pensioner did not care for women, either. There was one exception—a beau-

tiful creature, with soft hands that thrilled him to the core when they stroked his ears or back. She lived in Seattle, a distant place of many noises, where the trail beneath a dog's pads is hard and where strange odors assail a dog's nostrils at every turn. He had spent a whole winter at Seattle and only once saw snow. It was a poor country for a Malamute.

His master liked this girl, too; he looked upon her with a wonderful light in his eyes, and often opened his arms to hold her close. In all his experiences the Malamute had never before witnessed such a foolish performance. When they had sailed from Seattle in the spring the girl

a final stand, his faithful body and loyal old heart a shield for the helpless master he loved

had come to the dock to see them off. The next winter had been different.

Evans, his partner Grady, and the dogs had wintered high in the mountains that year. They had staked claims on different forks of a small river, but were sharing the same cabin for companionship. It was a time when food was low, and the men quarreled bitterly.

"Rot!" Grady had exclaimed; "you can't let sentiment rule your heart in this game. Arctic was a great dog in his day, but he's through. His teeth are gone except for a few snags, and you're feeding him boiled rice which we'll need ourselves before spring. The other dogs are getting lean, but there's lots of meat on Arctic's frame."

The light of murder had leaped into Evans's eyes. He had leaned across the table, his eyes blazing with hate for the man he had once called his dearest friend. "God knows, I've got a sense of gratitude. Old Arctic and I have been in too many tight situations together for me not to see him through now."

"He's through!" Grady had said evenly. "He's outlived his usefulness. You can't make a pensioner out of him with

my grub, and that's final. If you're so chicken-hearted you can't do the sensible thing and shoot him, I'll do it for you." Grady had grasped Arctic by the scruff of the neck and started for the door.

"Let go, Grady!" Evans's face was ashen in the stress of his terrible rage. "Let go! Or—or—I'll kill you!" Grady was no coward, yet he shrank from the awful expression in the other's face. "Kill him!" Evans snarled, "kill the best pal, man or beast, I ever had, bar none? Toss that faithful body that has stood between me and death to the dogs for food? Curse you, Grady, for suggesting it! There's not room in this cabin for both of us—I'll clear out!"

THEY had divided their food to the last pound, and Evans, with half the dogs and equipment, had mushed a mile down the frozen North Fork of the river, then back up the South Fork another mile to an old cabin. In the midst of an Arctic winter he had cleared out rotting debris and turned it into a respectable abode. The next summer he reached bedrock and pay dirt. He toiled early and late, but when the salmon came to spawn and die he

spent many a precious hour away from the sluice boxes while he caught and dried fish for the dogs.

During winter nights when the storms howled without and the draft sighed up the stove pipe, Arctic permitted himself the luxury of resting his eyes affectionately on his master. The corner shelf was the master's shrine for a photograph of the wonderful girl, and for several moosehide pokes stiff with gold. Of late, Arctic noticed Evans was restless and frequently looked upon the photograph several minutes at a time. Once he had exclaimed, "Only ten more days, little girl!" Then he whooped with joy.

"She's coming, old boy!" Evans told the dog one day. "Our Edith is coming to brighten this old place. She's a brave little girl to come 'way up here alone to marry a scrub like me, and we'll make it as nice for her as we can."

Evans overhauled the sled, loaded it down with heavy warm robes, a small tent, and provisions sufficient for the trip to the little settlement where narrow bands of steel connected the interior with the ice-free port of Seward on the coast.

Jennings, the settlement storekeeper,

greeted them as old friends. "Brought old Arctic along, too, huh? You're a blamed sentimental young fool, Evans, keeping an old pensioner on your pay roll. He'll never be any more use to you."

"You infernal old hypocrite," retorted Evans, grinning; "if I didn't know you had a pensioner of your own in your kennels I'd take a healthy punch at you. Arctic's through; but he's earned his rest. I felt kind of sorry for the old boy, coming in."

"You've got half an hour till train time," said Jennings, "so you'd better fix up. I'll take care of the dogs; soft stuff for Arctic and fish for the rest."

"Thanks, Jennings; and if it's not too much trouble, you might ask Mrs. Jennings to pack up a special box of grub a bride's likely to need when she starts up housekeeping. I got plenty of staples, but Edith will want to make some cakes, pies, and things, I suppose."

"Another good man gone!" muttered Jennings facetiously.

"What's that!" interrupted Mrs. Jennings unexpectedly.

"The right way!" added Jennings hastily.

**IT WAS** the Alaska of song and story Edith Densmore faced as the "Victoria" made way up Resurrection Bay to Seward. The bay is perhaps twelve miles long and very narrow, walled in on either side by a mighty row of mountains, and the snow came down to the rocky shore.

The girl, warmly clothed, paced the deck, a picture of radiance, beauty, and health, eagerly watching the scene. The wildness delighted, yet at the same time filled her with a strange dread, as if this rugged country intended to put her to the test.

"Oh, I love it!" she whispered, "love it and yet fear it."

As Evans gathered her into his arms, a considerable portion of Seward's male population looked on with hearty approval. Attentive ears heard a muffled "Archie!" in reply to his "Edith!" Then he gave instructions for the disposal of her grips.

"Thank heavens, the ship wasn't late," he said, getting back to earth. "The train leaves in a few minutes for Anchorage."

"And Arctic?" she queried. "How is the dear old fellow?"

"Fine as a fiddle, getting younger every day, except for his teeth. He's up the line, waiting for you at Jennings's."

Two days later, after the wedding, when the train pulled out from Anchorage and headed into the vast land called the "interior," a score of newly-made old friends were on hand to bid them farewell. The train carried freight of all kinds—mail, passengers, and dogs. There were men in parkas, others in overcoats; some dressed for the trail, others dressed as though for a conventional business conference. They smoked cigars, cigarettes, and pipes, swapped trail experiences, and looked upon Malemutes and huskies with critical eyes.

"Now," Edith told Evans, "I know why dogs mean so much in this land. Do the thrilling adventures they tell of really happen, or do they tell me these things because I am a tenderfoot?"

He laughed. "No, they're not telling yarns. When a man leaves the last road-

house behind, he's on his own hind legs, relying on himself and dogs."

"And when a woman—?"

"The same unrelenting rule; but this little woman needn't worry about that—she'll always have a man to do that for her, when worry is in order. But I've mushed all over this land and, thanks to my dogs, a strong back, and a weak mind; I've always come out on top."

"The next stop is ours!" Evans gathered up their bags, while Edith peered curiously through the window. The expanse of snow was unbroken, except for a little cluster of buildings from which smoke was trailing. A little sigh of homesickness escaped her, a strange lump filled her throat. She bit her trembling lips lest he see and perhaps not understand, then a cry of delight escaped her, and the lump and dread vanished. "There's old Arctic, Archie. You get off first and I'll follow and see if he remembers me."

The dog came trotting slowly toward the train ahead of Jennings and his wife. Evans set the bags down upon the snow as the dog came to him. Then the dog stopped abruptly, his nose sniffing the air. Like a flash he rushed toward the girl. "Brace yourself, Edith," warned Evans, "he's coming."

The great paws leaped upward until they quite touched her shoulders, and, while a paw rested on either shoulder, she was kept busy ducking her head to avoid enthusiastic osculations.

"Just the way I felt when I saw her, Old Man!" said Evans.

Mrs. Jennings did not wait for an introduction. "I'm right glad to see you, Edith!" she exclaimed. "I've had dinner waiting an hour. You're a brave little lady to come up here alone—even for Archie." And her beaming smile seemed to lighten everything with its radiance. Then she placed a motherly arm about the girl's waist and led her to the house.

**LONG** before daylight the following day, they were under way. Nine big Malemutes handled the heavy sled with ease. Edith, nestling within the warm robes, was snugly comfortable. By a method known only to the skilled freighter, Evans had stowed her steamer trunks and bags on the sled, making a formidable load.

"In this country we start early, so we can make the next camp by daylight," he explained; "the dogs are fresh and strong, so all you have to do is to sit here and enjoy life. Arctic's the only old one in the bunch, and he's running free."

Edith had been fitted out with moccasins and a light parka. To vary the ride, or to lighten the load when the going was rough, she frequently ran behind with Arctic, and marveled at the skill displayed by both Evans and the dogs in handling the sled.

A cloud of steam constantly hovered over the laboring team. With each mile the country about grew wilder. The girl saw not the slightest sign of a trail, yet both dogs and man proceeded with confidence.

"The trail's here all right," Evans explained later. "When we get off it, I can feel the difference immediately. Up here we have educated feet. It won't take you long to educate yours; just try running to either side, and you'll notice the difference." She experimented, and was de-

lighted to find that even her inexperienced feet noted the difference.

They camped that night in a sheltered spot. There was little for Edith to do. She marveled at the skill with which Evans mixed up a batch of sour-dough biscuits. With the aid of a small tree he erected the tent and prepared the sleeping bags. Edith crawled into her bag; then Evans leaned down and kissed her. "Don't forget to wind the clock and put out the cat, dear!" she laughed.

Old Arctic poked his nose through the flap, looked around with approval, then lay down at her feet. "It's comfy," she told herself softly, "and Archie's good to me. Some day I'll know more of this life, then I'll not lean upon him so much."

Some time later she felt him shake her gently. "It's morning," he whispered. "You want to get up and look about?"

"Oh!" she exclaimed delightedly, "the dears!" They were surrounded by the heads of nine dogs, each head thrust beneath the bottom of the tent, the remainder of the dog being outside. Arctic alone was entirely within.

"They always do that," said Evans, "the air is warmer inside the tent. Now, you stay here and I'll have some hot tea ready in a minute."

So the days passed, each bringing them into wilder country. Noon of the last day found Evans bending over the fire, stirring up a beef concoction.

"How far is our nearest neighbor?" she queried suddenly.

"I'm taking you to a mighty lonely place," he replied, straightening up. "There's only one man inside of fifty miles of our cabin—Grady. He's only about a mile off; but he's an enemy."

"Oh, that's too bad for both of you," she said with quick sympathy.

"It is," he admitted; "when men quarrel up here it's tragic. But you know about our quarrel. Converting old Arctic into dog food was the one thing Grady should never have suggested to me."

"Perhaps he has thought it over and is sorry," she suggested.

"Not Grady!" he replied. "I would have things different if I could, but we cannot make men to suit ourselves. Well, dinner—oh, pardon me—luncheon is served. We'll eat the next meal at home. We should make it by dark."

"Ah!" exclaimed Evans a moment later, "you don't like my mulligan!"

She flushed. "The mulligan is all right but the meat tastes old. I'll fill up on something else. Anyway, I don't require much meat, I'm not doing heavy work."

"Sometimes the grub does become a bit stale up here," he explained; "but as a class we are tough customers and thrive on stale meat and ancient, if not too ancient, eggs."

Evans's appetite, whetted by the fresh air and plenty of hard work, was equal to the occasion, and he consumed the stew to the last spoonful. "Now, let's go; we'll wash the dishes at home."

**"PTOMAIN!"**

The single word was forced from Evans's set lips. Edith was right, the meat was not only stale but was unfit for even his strong constitution. Ever since eating he had been conscious of pain. Occasional twinges at first, then sharper with alarming frequency, until now he staggered

"Let go, Grady!" Evans's face was ashen in the stress of his terrible rage. "Let go! Or—or—I'll kill you!"

along at the sled handles on sheer nerve. The same magnificent fighting spirit that had always carried him through was again serving loyally.

"I GOT to make it to the cabin!" he snarled to himself, "I got to, for her sake. If anything should happen to me out here, good heavens! what would she do, alone? What could she do? I got to make it." He looked down upon all he held dear, as if seeking strength from sight of her. In the warmth of the robes and gently gliding sled, she was dozing. Again came the agonizing cramps, filling his body with their deathly warning. His face twisted

with pain, yet he urged the dogs onward in a normal voice. She must not know.

"Twelve miles more!" he muttered: "two more, then seven across the lake, then three over the ridge and into the next valley . . . valley . . . up riv . . . river . . . home!" The world seemed to whirl madly; his hands relaxed their grip and he pitched forward into the trail. With pathetic desperation he strove to cry out, but in the stress of his great pain he barely whispered, then lay silent in the trail, behind the sled, which continued on its way. . . .

A swift-moving figure of gray that had followed like a shadow for the past two

miles peered cautiously down upon the fallen man, then from upraised muzzle came the doleful wail of the wolf; almost a death cry, that violated the peace of the land and disturbed the echoes in the lofty crags. From the timber a second figure cautiously emerged, then together they warily approached the fallen figure, sniffing the air, muscles tense, ready to flee, yet drawing nearer.

A quarter of a mile beyond, the team settled down for the stiff up-grade pull. Half way up, the lead dog missed the trail, something struck the runner, a violent lurch and the sled overturned. Edith found herself face (Continued on page 124)

# The Secret of Sound Sleep

Boris Sidis, the famous psychopathologist, explains what he declares to be the only road to a real cure of sleeplessness—He says that the popular devices for going to sleep are mere “trick plays” which do not get at the root of the trouble

By Keene Sumner

**I**F YOU want to get an eager response out of the average man or woman, just say solicitously, “How did you sleep last night?”

You can then devote yourself to your own thoughts, merely emitting an occasional murmur of sympathy, for few indeed are the persons who do not know what it is to wrestle with the Angel of Sleep, and to find him—or is it her?—a very refractory sort of angel.

Some years ago, Boris Sidis—who is a neurologist, psychologist, and various other kinds of scientific “ologist”—made an elaborate study of sleep. He conducted a long series of experiments with animals, as well as with human beings, and evolved what may be called “a theory and practice of sleep.”

Even a theory would be welcome to the victims of insomnia. But if you add to it a practice that *gets results*, the sleepless themselves would be glad to stay awake to listen.

In what he says here, Doctor Sidis begins with the theory, since that naturally comes first. But I will encourage you by saying, in advance, that he found he could put himself to sleep at almost any time by a practice based on certain facts and principles.

“People always have been interested in sleep,” he said to me; “and there have been many scientific theories about it. One was that it was due to the venous congestion of the brain. That is, the blood which was sent to the brain was not sufficiently carried away again. Some scientists claim that sleep is due to not enough blood in the brain; others claim it is due to too much.

“People are advised to sleep with the head high; or with it low; to take a hot bath, or a cold bath, or no bath at all, before retiring; to eat or to drink, or else to avoid eating or drinking; to exercise, or not to exercise. All these contradictory directions are prompted by the belief that sleep is due to some phase of the circulation of the blood.

“Then there is the theory that sleep is the result of an accumulation of toxins, poisonous matters, in the blood, due to the tissue-waste going on during our active waking hours. It is true that auto-intoxi-

cation does produce sleep. So do other forms of intoxication. Opiates and bromides induce sleep.

“But sleep that is due to any of these toxins, whether generated within the body, or taken as narcotics, is not *normal*. Therefore I cannot accept the theory as an explanation of natural sleep.

“I am more inclined to agree with the Swiss scientist, Claperède, who said: ‘We do not sleep’ (meaning sleep under the ordinary conditions) *because* we are poisoned or exhausted; but in order *not* to be.’

“I became interested in natural sleep through my use of hypnosis in the treatment of psychopathic patients. Certain conditions are necessary to bring about the hypnotic state. But in the course of my work I sometimes found that these conditions, instead of bringing a hypnotic state, brought ordinary sleep instead.

“Evidently the conditions favorable to inducing the hypnotic state were favorable to inducing ordinary sleep. So I began to experiment on myself. I found there were three conditions favorable to sleep:

They were the limitation of voluntary movement, the limitation of the field of consciousness, and monotony.

“The first two sound very scientific. We professional men are inclined to use long words because we like to show off our vocabulary. But the limitation of voluntary movement really means *keeping perfectly still*; not turning and tossing about. And the limitation of the field of consciousness means shutting the mind against outside impressions.

“I found that by observing the three conditions mentioned I could put myself into a state of deep natural sleep at almost any time. I have used the same methods in the treatment of many cases of insomnia and with good results.

“People do not realize that *natural* sleep is a voluntary act. We go to sleep because we *decide* to do it. Deciding is very different from wanting! The very persons who are most eager to go to sleep are the ones who willfully discourage sleep.

“Let me explain the three conditions I spoke of. The one essential to sleep is *relaxation* of mind and body. All external

stimulations should be cut off, so far as is possible.

“Closing the eyes shuts off one very important group of stimuli. And if we lie perfectly still a whole mass of muscular sensations, as well as of what are called kinæsthetic sensations, are kept from pouring into the consciousness. If you restlessly toss and turn and twist you are constantly sending stimuli to your brain cells. Every movement of any part of your body causes a reaction of the brain cells. You give them no chance to rest.

Dr. Boris Sidis was born in Russia and came to the United States when twenty years old. He won four degrees at Harvard, the A. B., A. M., Ph. D., and M. D. He is a widely known writer on psychopathology and kindred subjects. “Experimental Study of Sleep,” “The Psychology of Laughter,” “The Causation and Treatment of Psychopathic Diseases,” and “The Source and Aim of Human Progress,” are among his books. He has been associated with various institutions, including the Pathological Institute of N. Y. State. He is fifty-three years old and resides at Portsmouth, N. H.

"As for monotony, it is perhaps the most important condition favorable to sleep. In bringing about the hypnotic state, we tell the subject to try not to think of anything. That is, we try to make his mental state monotonous by having him dismiss thoughts that interest him.

"It is a well-known fact that people easily fall asleep to the monotonous accompaniment of the rain. The droning sound of an uninteresting speaker's voice will soothe his hearers to slumber. Go to bed, have someone read aloud from a dull book, and you will soon be asleep. The buzzing of insects—if we know they are not going to attack us; the steady rumble of the train when we are in a sleeping car; the subdued but incessant noises peculiar to a city at night—all these, by their monotonous repetition, often help to induce sleep. There is a physiological explanation for this fact, which I will give later.

"IN ORDER to test my theory I made many experiments. First, with frogs; then successively with guinea pigs, cats, dogs, and finally with human beings. I used a great number of subjects in these different groups.

"Sometimes I merely put a frog on its back, held it quiet a few minutes, and drew up its lower eyelids to close its eyes. The frog, you know, has only one eyelid, the lower one. It would soon become quiet and be apparently in a very deep sleep. Sometimes I put a cloth over the frog's head, to exclude all light. It would quickly sink into a state of rest. I tried holding the eyelids closed by painting them with collodion. At first the frog struggled; but it soon became quiet and went to sleep.

"The results were the same with guinea pigs. If I took them in my hands to prevent their moving, and put a blind over their eyes, they would struggle at first, then become quiet and go to sleep.

"When it came to cats, I found it advisable to wrap the animal in a cloth to keep it from scratching and clawing. For instance, I took a six-weeks-old kitten as one subject. It struggled and fought when I wrapped the cloth around it. And that, by the way, was not a condition favorable to the experiment, for it was a state of excitement and activity.

"However, as in practically every single instance, the kitten soon ceased to struggle when I held it as still as possible. Then I closed its eyes, holding them shut with my fingers. In a little while it was asleep. It remained asleep more than twenty minutes, and would not have awakened then if I had not roused it.

"I need not continue to give specific examples. Over and over again, I demonstrated with kittens and puppies that they would go to sleep if kept perfectly quiet with their eyes closed. Later they would wake up, yawning as if they had been having a fine rest. Moreover, they seemed to form the *habit* of going to sleep under those conditions; for they would do it more quickly and easily after the experiment had been repeated a number of times.

"When it came to children, I began with very young infants and carried the experiments on up to children of fourteen. With the older ones, I would have them lie down, or perhaps merely sit in a chair

In fact, it is essential. But we do not have to be absolutely unconscious (as we are in the sleep state) in order to rest. The lower animals do not sleep as human beings do. They literally sleep with one eye open; sometimes with both eyes partially open. They prick up their ears at sounds which, in our own sleep state, we would not hear. In them, sleep is only a pronounced rest state.

"Therefore, the first thing for you to realize, if you are more or less wakeful, is that it is nothing you have cause to worry about. Moreover this realization that sleep is not all-important will be a great factor in helping you to sleep. Nine tenths of your difficulty in going to sleep is due to your fear that you *won't* go to sleep. And nine tenths of the bad effects of a sleepless night are not the result of your loss of sleep, but of your *worry* over it.

"I do not say this in order to delude you into a better frame of mind, one that is favorable to sleep; but because it is physiologically, as well as psychologically, true! People make a sort of fetish of sleep. They fix upon a certain number of hours which they think they must have in order to be well. Then they measure each night's sleep; and if it is short of the sacred number of hours they are full of worry and fear.

"IT IS the worry and fear that hurt them, not the few hours of unconsciousness they have missed. Even if you pass an absolutely sleepless night occasionally, it isn't going to affect your health. If you rest and don't worry, you won't know the difference two days later. Think of it as a matter of small consequence, a discomfort, perhaps, but nothing that need have an effect on your health or happiness; and if you take that mental attitude nature will see to it that you get an extra portion of sleep later on—if you really need it."

"But just wait a minute!" I interrupted. "I can understand that the *body* will rest,

if we lie quietly in bed, even though we do not sleep. But it's the *mind* that craves the unconsciousness of sleep! So long as you are awake, you keep on *thinking*. It is this unceasing mental activity that wears one out."

"Oh, no, it isn't!" said Doctor Sidis. "It is the *kind* of mental activity! Your thoughts are accompanied by *emotions* of anxiety and fear. And these *emotions* are the trouble makers. If you believed, *really* believed, that all you needed was, say, two hours of sleep, with the remainder of the night devoted to rest, I haven't a doubt that you would get along all right on such a schedule. Because if you believed it to be a (Continued on page 98)

## When You Lie Awake— Think About This

"SLEEP is not as important as people think it is," says Doctor Sidis. "Rest is important! In fact, it is essential. But we do not have to be absolutely unconscious (as we are in the sleep state) in order to rest. The lower animals do not sleep as human beings do. They literally sleep with one eye open, sometimes with both eyes partially open. They prick up their ears at sounds which, in our own sleep state, we would not hear. In them, sleep is only a pronounced rest state.

"Therefore, the first thing for you to realize, if you are more or less wakeful, is that it is nothing you have cause to worry about. Moreover, this realization that sleep is not all-important will be a great factor in helping you to sleep. Nine tenths of your difficulty in going to sleep is due to your fear that you *won't* go to sleep. And nine tenths of the bad effects of a sleepless night are not the result of your loss of sleep, but of your *worry* over it.

"I do not say this in order to delude you into a better frame of mind, one that is favorable to sleep; but because it is physiologically, as well as psychologically true! People make a sort of fetish of sleep. They fix upon a certain number of hours which they think they must have, in order to be well. Then they measure each night's sleep; and if it is short of the sacred number of hours, they are full of worry and fear.

"Don't be *impatient* for sleep to come. Let it take its time. Don't lie there, saying to yourself, 'It is two o'clock now! I have to get up at seven. If I don't go to sleep right away I won't get even five hours of sleep—and I ought to have eight!'

"If you do pay attention to the time, say to yourself, 'I have been in bed, resting, for several hours already. And I have five hours more in which I can rest. Eight hours of rest! It's wonderful to lie here quietly and to know that I am storing up energy all the time.'

in a darkened room. I asked them to keep perfectly quiet and to close their eyes. Sometimes I would set the metronome going with a slow beat; or I would start my electric battery, which would make a steady buzzing sound. In every instance, the children went to sleep.

"As I said before, I have had a great deal of experience with cases of insomnia. Most of my patients are psychopathic; that is, they are not normal in some of their mental reactions or habits. And almost all psychopathic people have insomnia. So I have had a good opportunity to study its causes and its cure.

"To begin with, *sleep is not as important* as people think it is. *Rest is important!*

# Is There Anything Here That Other Men Couldn't Do?

The simple but tremendously effective methods by which a \$10-a-week clerk worked his way up to the presidency of the biggest bank in America—The business philosophy of Charles E. Mitchell and the outstanding factors in his career

*By Bruce Barton*

**Y**OU could have luncheon with some men every day for a year, and in the end you would remember nothing about them except that they liked their meat well done, or preferred gray neckties to blue. Other men are so vital, so filled with the interest and satisfaction of their work that, at every meeting, they leave something with you which you don't forget. In this second group is Charles E. Mitchell, president of the National City Bank of New York, the largest financial institution in the land.

I had luncheon with Mr. Mitchell at the Bankers' Club in the early days of the war, before the United States had entered it. We stood for a minute at a window looking out over the tops of New York's skyscrapers. I made some commonplace remark about the eternal fascination of that view, the great shifting drama of success and disappointment that goes on forever underneath those roofs.

I am not sure that he heard me. The panorama was suggesting another thought to him.

"Every once in a while one of our bond men comes into my office and tells me he can't find any bond buyers," he said. "When that happens I don't argue with him. I say, 'Get your hat and come out to lunch.' Then I bring him up here and stand him in front of one of these windows. 'Look down there,' I say. 'There are six million people with incomes that aggregate thousands of millions of dollars. They are just waiting for someone to come and tell them what to do with their savings. Take a good look, eat a good lunch, and then go down and tell them.'

"If there is nothing in that picture which stirs a man's imagination he doesn't belong in New York," Mr. Mitchell continued. "He might do well enough taking

orders behind a counter somewhere, but he's not big-league stuff."

Another time I met him late at night. It was one of the hottest weeks of summer, when successful financiers are popularly supposed to be in the mountains or at the shore. He was walking from his office to his house up-town. When I asked him what financial problem could be im-

informal compact with himself to take up some one new subject every year, and learn what he can about it. At that particular time he was reading everything he could lay his hands on in regard to ships and shipping.

"I know something about the problems that industries will be facing after the war," he said, "because I worked in manufacturing plants; but shipping is a new proposition to me. So I'm reading all I can. The United States will have a tremendous investment on the ocean when the fighting stops. I want to be in a position to make a little better guess than the next fellow as to what is likely to happen to it."

As I watched him swing along up the deserted Avenue, I thought, "That's Mitchell in a nutshell; you don't need much more than that one incident to understand why he is where he is. He works at night when everybody else has gone; he walks, because he cares more for his health than he does for his comfort; and instead of thinking that he knows it all, he has a list of subjects as long as your arm about which he is willing to confess that he knows nothing—a list that will last him the rest of his life, if he takes up a new one each year!"

He was born in Chelsea, Massachusetts, forty-five years ago. His father was a Boston merchant and had been mayor of Chelsea; but he met with business reverses while his son was at Amherst College.

In the summer vacation following his junior year Mitchell clerked in a general store in Magnolia, Massachusetts, and in his senior year he had a job as special instructor in the Department of Public Speaking, which helped to pay his expenses. When college was over there was no place for him in the family business and no funds in the family purse to (Continued on page 128)

## Mr. Mitchell's Prescription for Keeping Fit

**"NO AMOUNT** of brilliance or personal charm," says Mr. Mitchell, "will carry a man to the top and keep him there unless he can come up smiling day after day." Mitchell takes no chances in this matter. There are just two immovable appointments in his schedule—his fifteen minutes with the "setting up" drill before breakfast and his walk down the Avenue. He may have been up late the night before; he may have a hundred matters waiting for him at the office; it makes no difference. The morning exercise takes precedence over everything else.

A friend of mine who suffered a nervous breakdown and went all over Europe consulting specialists told me that the man who helped him most was a wise old doctor in New York, who said, "Go home when you've finished up your day's work, take a warm bath, put on your pajamas, and get into bed for twenty minutes before dinner." Many other men have learned that there is tremendous recuperative value in that homely formula—Mitchell among them. Saturdays, during the summer, he plays golf; but the morning exercise and the few minutes of complete relaxation at the end of the day's work are what keep him in shape.

important enough to keep him alone in his office to such an hour he answered that he had been trying to catch up with his reading.

"Reading!" I exclaimed. "I didn't know that gentlemen who own houses on Fifth Avenue did any reading."

"Some do," he answered. And after a little prying I discovered that he has an

**MR. MITCHELL** was put at the helm of the National City Bank of New York, in May, 1921. Starting as a clerk in Chicago, he worked his way to the presidency of the biggest financial institution in America. His first job was with the Western Electric Company. Later he became the credit manager. His handling of

this position led to his selection as assistant to the president of the Trust Company of America, a big New York bank. In 1916 he became head of the National City Company, a subsidiary of the National City Bank. His success here led to his present post. Mr. Mitchell was born in Chelsea, Mass., forty-five years ago.

At the left, Hutchison is shown jumping from a window, more than thirty feet from the ground, to catch the lower limb of the tree. This was a very hazardous stunt. In the first place, he had to jump from a crouching position on the narrow window sill. And if he missed the branch, which was only a few inches thick, or if he caught it where it would break under his weight he would fall to the ground. The picture was made for his latest serial, "Speed."

Hutchison often rides a motorcycle across a railway trestle in front of a train going forty miles an hour, as in the picture below, taken at Au Sable Chasm, New York. The trestle here is about fifty feet high. He says it is safer to ride fast over rough ground, or over ties, because then the wheels touch only the high spots.

The picture below, taken in the gymnasium where Hutchison constantly practices, shows the extraordinary under-arm muscles, on which he depends when hanging by his hands. He will catch a rope ladder, trailing from an airplane, and hang by one hand as the plane goes up hundreds of feet. Hutchison leads a simple, wholesome life. He does not drink, smokes only one cigar a day, keeps early hours, and is careful about his diet. He married Edith Thornton, who used to play opposite him in the pictures, and they have a charming home in New York.

# The Stunt King of the Movies

Plenty of people would like to get Charles Hutchison's salary, but they wouldn't take his job for a million dollars a day—His life is a succession of thrilling adventures; but he does not gamble it blindly against chance, he tries to make sure of two things: the facts and himself—That, he declares, is the way to accomplish what seems to be impossible

*By Mary B. Mullett*

**D**OWN in the Tennessee mountains, a few years ago, a moving picture company was making the scenes for a serial production. Serial pictures are the continued stories of the screen: one "episode," or instalment, being shown each week.

In this particular case, the location of one scene was a mountain torrent rushing over a rocky bed to a point where it plunged from a cliff. Just above the falls, a tall tree trunk was laid across the stream; and the hero rode his horse over this log from one bank to the other.

A group of mountaineers had gathered to watch the strange doings; and when the hero had performed his stunt one of the natives remarked, "If a gol-durned movin' picture actor kin do that, I reckon I kin, too. It'll git me home quicker'n if I go 'round by the road, anyhow." Whereupon he started for the log.

He decided, however, to temper his courage with caution; so, instead of riding across he merely tried to lead his horse. When he was half way over, the animal slipped off—on the side toward the falls! It tried to get a footing, but its frantic struggles were powerless and it was swept over the brink.

It landed in a sitting position, apparently unhurt. But it was *facing* the falls; and in its terror it tried to swim forward, against the current which would have carried it down to safety. Its struggles simply kept it there in the seething water.

The mountaineer would not risk his own life by trying to rescue the animal; but the "gol-durned movin' picture actor" jumped into the torrent below the poor beast and tried to swim up to it. But he could make no headway against the stream, so he finally went in immediately under the falls. The current swept him against the rocks a few feet from the horse. Clinging to these rocks, he called and called until the animal heard him and turned in his direction. When it did this, the current swept it down-stream to quieter water, where it swam to shore. The man then let go his hold and followed the horse to safety.

The name of the man who risked his own life to save that of a poor dumb victim of another man's folly is Charles Hutchison. To countless movie audiences all over the world he is known as "Hutch, the Thrill-a-Minute Stunt King." Before I had seen the things he does I thought this title was merely a clever advertising slogan. Now that I know him, I admit his right to it.

For sheer daring, Charles Hutchison is

a world-beater. His life is a succession of hair-raising incidents. But his courage is not simply dare-deviltry. It is based on coolness, confidence, and a keen and calculating judgment. He is a living proof of the fact that we can do amazing things, almost superhuman things, if we know that they *can* be done, and if we have confidence that *we* can do them.

Hutchison is not a reckless fool, gambling his life against chance. His faith in himself is founded on facts. For instance, his nerves must be absolutely dependable. Therefore he lives a simple, wholesome life. He does not drink. He smokes one cigar a day—or none at all. He is careful about his diet. He keeps early hours. He has a delightful home, and would rather be there than any place else in the world.

In other words, he recognizes and obeys the law that you cannot get something for nothing! He doesn't try to escape paying the price of being the "stunt king" of the world. If he did, he would lose his throne, and probably lose his life too. He may lose it anyway. But if he does, it won't be because he threw it away by weak self-indulgence.

**H**IS muscles must be as dependable as his nerves. Therefore he keeps himself in perfect condition by constant work in the gymnasium. There is scarcely an hour of the day that he is not testing his muscles, giving them something to do, keeping them fit and ready for their work.

When he is at home, he will get up, go to an open doorway, and "sit" there a few minutes, with his back against one side of it, his feet braced against the other side—and only empty air beneath him. Or he will jump up, catch the ledge above a doorway and hang there by both hands, or by one, for five minutes at a stretch.

He has faith in himself because he takes mighty good care to know just how much he can do. But he does not stop there. He has learned through some very painful experiences that he must know, in advance, just *how* a thing can be done. If the rest of us realized this we should make fewer failures.

"The way to do seemingly impossible things," he said to me, "is to make sure, before you attempt them, that you understand the *principles* involved. Then, if you are certain of yourself and if you do not trust any of the vital details to other people, you are pretty sure to come through successfully.

"For instance, I have done a greater number of spectacular motor-cycle stunts than anyone else. But I had to learn to depend on facts, not on appearances. One

of my stunts is to ride a motor-cycle straight through a fence. The first time I did it, I was bruised and torn by the broken pieces of wood. I had tried to play safe by going at a speed of ten miles an hour.

"While I was nursing my injuries I did a lot of thinking. And when I was well again I tried the stunt once more. The other people in the company looked on in horror when they saw me head for that fence at sixty miles an hour! But I knew what I was about this time. The pieces of wood flew a hundred feet—but not one of them touched *me*. I was not trusting to what *looked* safe, but to the *principles* I had figured out.

**I**N ANOTHER case, I was to be in a buggy on a railroad track in front of an approaching train. The engine was to strike the buggy and I was to jump onto the front of the locomotive."

"Did you try it first with an empty buggy to see what would happen?" I asked.

"No; because I *knew* what would happen," he said. "I told the engineer to come on at a speed of thirty-five miles an hour. He refused at first, said that he wasn't going to be responsible for killing me, and that he would run at ten miles an hour.

"If you do," I told him, "you probably *will* kill me. The wreckage will be jammed on the front of the engine and I'll be caught in it." He finally consented to do as I wanted him to and came at me full tilt, making thirty-five miles an hour. At the instant the engine struck I leaped and caught the locomotive. And because the speed was so great the wreckage shot into the air, *clear* of the train. That was exactly what I had figured would happen."

"What if you had jumped a second too soon, or a second too late?" I asked.

"Well, in that case," he laughed, "I shouldn't be here to-day. But I felt sure of myself. Anyone who risks his all on a thing which he is afraid he can't do is a fool. Every one of my stunts is an expression of faith in myself and of my belief that I have figured out the correct principles.

"Here is an example: While I am speeding along on a motor-cycle, at forty miles an hour, an airplane swoops down over me. I stand up on the seat of the motor-cycle and catch, with one hand, a rope ladder hanging from the airplane. I climb the ladder and get into the plane.

"When I first did this, I never had been in an airplane, either on the ground or in the air. But I figured the whole thing out

At the left, Hutchison is riding his horse across a log over a mountain torrent just above a high waterfall. This was in the Tennessee mountains. A native tried to lead his own horse across. The animal slipped and went over the falls, but was rescued by Hutchison. At the right, the "stunt king" is leaping from a derrick into the stream. It was a difficult jump, because of the precarious footing on the derrick, and because he had to clear the barge in the foreground.

in my mind and believed I could do it. You probably have seen pictures of a person standing up on the back seat of an automobile, or on the top of a train, and catching a rope ladder. But *somebody else* was driving the car, or the train! I was alone on the motor-cycle, which is a very different proposition.

"I CAUGHT the rope all right and hung there by one hand, watching my motor-cycle. It had cost five hundred dollars; and as I saw it running wild down below me my chief concern was the fact that it was going to be wrecked. Suddenly I realized that I was about

two hundred feet in the air and going higher every second. I decided that instant to leave the motor-cycle to its fate and transferred my attention to what was above me. I guess we were about a thousand feet up when I climbed the ladder and crawled into the cockpit of the airplane.

"Everything depends on your attitude of mind. Suppose you knew you could jump up and hang by your hands from the ledge above that door there for five minutes. If I offered you a hundred dollars to do it, you wouldn't hesitate. But if I offered you a hundred dollars if you would

Above Hutchison swings back and forth clinging to a rope hanging from the top of a seven-story building, catches the edge of a window and climbs in. At the left. This is one of Hutch's most daring stunts. Braced between two buildings, he works his way up the bare walls. And he does not have a net below to catch him if he slips. He did slip once, but his hand caught on an iron hook by a window and stopped him when he had fallen six feet. At the right. In "The Great Gamble" Hutchison leaped across an eighteen-foot chasm between two seven-story buildings. The agent of a company which had insured the production happened to see him make this leap. The agent rushed to a telephone, told the company to cancel the policy immediately, and Hutchison has never since been able to get a company to insure his life for a single dollar.

(Left) In "Go Get 'Em, Hutch," he is hanging from a beam at the top of a grain elevator, when the beam gives away and Hutch falls. His friends (in the story) have seen his plight and hold a big piece of canvas into which he drops. But if their grasp was insecure, or if he had not fallen just right, he probably would have been badly hurt. (Right) This picture of Hutchison and his wife was made when she was playing with him in moving pictures. She crosses to a fire escape over a bridge made by his body

hang from this window ledge, seven stories above the street, would you do it? Certainly not! You wouldn't try it; because you haven't faith in yourself. I have faith, because I know what I can do.

"I must know, for the lives of other people depend on it. My wife used to play opposite me in the pictures, and we did one scene where I carried her across Au Sable Chasm by walking a log laid from one

cliff to the opposite one. The log was about fifty feet above the water; and the distance across the chasm was about the same. It would not have been serious, perhaps, if we had fallen into the rapids; but there were also jagged rocks below us. Nothing would have induced my wife to walk that log alone! But she was perfectly willing to have me carry her across, because she had faith that I could do it.

"SCORES of times the lives of other people have depended on my coolness and sureness. I've got to be certain of myself. I remember one time when a girl and I were to be in a canoe that was to upset in the middle of some rapids. She couldn't swim; and before we started she said to me: (Continued on page 44)

(Above) Hutchison is a wonderful swimmer—but so is a shark! In "Speed" Hutch is thrown into the water by his enemies. He has an encounter with a sure-enough shark and kills the animal with a knife. He has also tackled an alligator, and his only weapon was his bare hands

(Above) Standing on the wing of an airplane, Hutchison leaps and catches the sill of an open window in a train going at full speed. The villain, inside the car, closes the window and Hutch is forced to drop off. When he did it, he dislocated his hip and tore the ligaments of his leg. (Right) From the top of a moving train, Hutchison jumps through the open door of a box car in a train going in the opposite direction! In this, as in most of his stunts, he must not only have strength and nerve, but he must calculate every move with absolute precision

It was an exciting mental interim until she saw Bert next day. And then—  
and then she found that a lady can apologize by the simple act of smiling

**W**HEN old Doctor Major died he left his daughter Connie four thousand dollars in life insurance, the Major homestead, and the Major traditions.

Connie Major was a small grayish blonde, twenty-nine years old. She had kept house for her father fourteen years. There was a brother too, Carewe, who taught biology in a Western college.

Carewe came on for the funeral, and helped Connie invest the four thousand in safe real estate mortgages. Carewe was every inch a Major. He had a distinguished-looking hatchety face, impersonal blue eyes, and his clothes were shiny at the seams.

"I wish I might add to your resources, Connie," he told his sister on the day of his departure. "But with five growing children—" His lips closed grimly.

Connie was sitting on the frayed brocade edge of the parlor sofa. She blinked her light gray eyes earnestly. "I couldn't think of accepting help from you, anyway, Carewe. Father left all there was to me, and it is only fair that I should manage alone."

"Yes, yes, theoretically, of course," Carewe muttered. "But—but you, Connie!" He shook his head worriedly.

A patch of red sprang into each of Connie's cheeks. The implication hurt. "I know I'm not equipped with education," she said; "I know that!"

"My dear Connie!" The professor looked distressed. "No one regrets it more than I. Sometimes I feel, I really feel, that I—ah—cheated you in that respect."

"No," said Connie sharply. "You were the boy. Your schooling came first. It was no one's fault that there wasn't money enough when my turn came. It's quite all right, Carewe. I didn't mean to speak bitterly."

Carewe looked relieved. "But just how will you—ah—manage?" he asked uneasily.

Connie took a breath and squared her narrow shoulders. "I am going to rent part of the house."

The professor's lips snapped over an escaped sigh. He was in no position to protest.

"Our next-door neighbor, the Jewish contractor, you know, tells me I won't have any trouble renting. I—I asked him this morning while you were out." The red stayed in Connie's cheeks. It was hard to say these things to Carewe.

"I trust that you—ah—don't have any unnecessary dealings with such persons, Connie."

"No, of course not. But I can't help noticing that such persons, as you call them, get rich, while we—we fray out. Mr. Goldstein's son is in the university, and his daughter is abroad, and they have subscription seats at the opera."

Carewe frowned. "I dare say," he muttered. "It's deplorable, deplorable, indeed, that such people should—" He lifted a gaunt hand to dismiss the subject. "But, to resume, Connie, I cannot deny that it is painful to me to think of your renting the old home."

"It's painful to me, too!" Tears rose to Connie's eyes. "But what else can I do? I'm not trained to teach. I could clerk in a store, I suppose."

"That would be unthinkable. Unthinkable! I suppose you are right—about renting. But it is difficult to adjust myself to it." He walked stiffly to the window and stared through the ancient, carefully darned net curtains. When he spoke again his voice vibrated slightly. "Every house in this block used to be occupied by an American family of standing. Now, we are the only one left."

"I know. It broke Father's heart. But—it isn't going to break mine!" Connie spoke very low.

**C**AREWE swung around and looked at her hard. His expression begged her to remember that she was a Major.

Connie laughed a little, uncomfortably. "Don't look so shocked, Carewe. I'm not—forgetting anything, really."

"I trust not." The professor snapped his lips again. Then he looked at his watch. "I must leave shortly. I'll go up and see if I have everything packed."

But Connie continued, "I know what you're thinking—that I'm not as fine and proud as Father was. He wouldn't have asked advice from our neighbor. But you've been away all these years, Carewe. You didn't see the heartbreak under the pride, as I did, and— Well, I'm not going to suffer as he did!"

Carewe paused with one foot on the stairs. "As a Major, you cannot compromise," he said, then proceeded on up.

Connie sat still. Why did she ever raise her puny strength against Carewe? She always came to grief. She remembered similar disastrous occasions when she had opposed her father; and he had made her feel so ashamed and unworthy!

When her brother reappeared with his bag and umbrella, she jumped up and clung to his arm. "Oh, Carewe, I won't have anyone now!"

He patted her shoulder. "There, there, my dear Connie." He placed a pecking

kiss upon her cheek. "There—you'll manage, I'm sure. A Major always manages. I'll write you often. There, don't cry!"

Connie watched forlornly out the window as his erect figure disappeared up the street. He did not stride, although his legs were long. He stepped as if each step were measured. Her father had walked that same meticulous way. . . .

She turned back drearily to the shabby room. There were some sprigs of asparagus fern and ragged white flower petals scattered on the threadbare Brussels carpet. "I must bring in the carpet sweeper," she said.

She was utterly alone, for the first time in her life.

But as she swept up the sprigs of greenery she was conscious of a sensation other than grief. She was utterly alone—and her own mistress.

She had always lived in dread of her father's disapproval. While Carewe had remained under the roof, she had feared his opinions. Her father and her brother had always been so strong, so self-sufficient, in their mighty pride. They had never seemed to realize that her scant schooling deprived her of many of their compensations. Not that she wanted to live under a lower standard, not that! But—well, it would be a relief to relax a little.

The sense of depression that wrapped her gave and lifted slightly, like a loosened cloak.

**M**R. GOLDSTEIN made it easy for Connie to rent her house. He said that his partner was seeking living quarters in the vicinity; a nice Italian gentleman, with only three children.

"But I understood that you and your partner were building bungalows," Connie was bewildered. "Why should he care to rent?"

The contractor laughed. "We are building bungalows, miss. Sixty-four under construction. But there's too much profit selling them for us to live in them. I guess you don't understand the real estate business."

"Oh, no," proudly said the heir of the house of Major.

Mr. Goldstein looked puzzled; and a little as if he felt sorry for her. Connie was amused at the idea of his feeling sorry for a Major.

"I could get you a quiet young couple with two children for those five rooms on the side, too. You don't need them," continued Mr. Goldstein.

"Oh, that would be very nice. I really

can do without them." Connie wondered if he would think it queer for her to keep only two rooms for herself. She realized now that he would think it queer if she should keep more than two.

"My nephew, I have in mind. Same name as mine. They want to get the kids out of the city. He teaches in a business college."

"That sounds desirable," considered Connie. "Ah—what rent do you think I ought to receive?"

THE contractor cocked his head. He had already, at his own suggestion, inspected Connie's property. It had hurt her to see him peering about the rooms where the Majors had lived and died—judging them in terms of real estate. "Your house ain't got many conveniences," he said. "But the rooms are big and light. If you let them go too cheap, other people will hear about it, and come and offer you more money. The thing to do is to set the price right in the first place. I say, ask Mr. Salvatore seventy for the six front, and my nephew fifty-five for the five side."

"That seems a great deal. I don't want to profiteer."

Mr. Goldstein eyed her unbelievably. "You won't be, miss."

And so, in the course of a few weeks, the rambling gray house came to know deep uprootings. It had held four generations of Majors: Connie thought it must suffer. She herself suffered as she established herself in two small rear rooms and stored unnecessary furniture in the attic; she couldn't sell it. But she did not suffer as her father would have, or Carewe. For when the plumber bored strange, unaccustomed holes and inserted long veins of pipe through them, the pang she felt was partially pleasant; she, Connie Major, was stirring up things—and the process exhilarated her.

In Connie's childhood Hillsdale had not been the ugly manufacturing suburb it was now. It had been a dead, smug village, with a distinct social pattern. A half-dozen families had comprised the aristocracy. They had protested bitterly against factory stacks and commuting trains. When they had found that they could not dodge the wand of progress they had picked up their chaste heirlooms and fled to purer areas; all but the family of Major.

Doctor Major would have liked to flee,

but he couldn't afford it. His wife's fatal illness had been costly, and Carewe was graduating and marrying. The doctor knew that desirable residential towns are always too well supplied with physicians; and these detested Italian working people, who were already infesting the streets, would need a doctor's services.

THUS Connie's girlhood had been passed during the period of the town's transition. She had seen her father's mind become more and more embittered as the energetic foreigners crowded out the American families. He had taken pains to impress Connie with the idea that he had done a fine and martyrlike thing in remaining. He had dwelt upon the subject so long that he believed he *had* done a fine and martyrlike thing; Connie had seen the belief crystallize.

The girl had grown up almost friendless. There was no one in school or church quite good enough for her. College was out of

"I trust that you—ah—don't have any

the question. Carewe's increasing family needed occasional financial assistance from the doctor. You couldn't expect Carewe to turn his finely trained mind to money-making.

"You are a Major. You are better than anyone else in Hillsdale," had been the food that had fed Connie's mind. She believed it, as a matter of course. She believed it even now, while she prepared her rooms for alien tenants. . . . And yet, in and out and under and above that Major consciousness of caste, ran a bright, pricking thread of delight in tearing things to pieces! It was the nearest thing to real *fun* that Connie had ever known.

For twenty years the Majors had bought groceries from Herzog's. It used to be the best store in town. Now it was untidy and smelled musty. Old Herzog, in a soiled apron, took your order with a bitten stub of a pencil. You paid for the goods in a dignified manner, at the end of the month. Doctor Major would not have

unnecessary dealings with such persons, Connie

dreamed of trading anywhere else. Those new red-front stores were no place for ladies and gentlemen—exactings spot cash, as if you had no honor, and sending you out staggering under a load of paper bags. Connie continued in her father's steps, and allowed old Herzog to bully her.

It was her tenant, stout Mrs. Salvatore, who induced her to change. "You pay a third more, Miss Major. In two weeks, if you go to the cash-and-carry, you can save the price of a theatre ticket."

Connie opened her mouth to reply. The words died unuttered. How could she explain to Mrs. Salvatore that she traded with Herzog because he delivered, and because she could send him a check? What would such an argument mean to the thrifty Italian woman? What did such an argument mean, anyway?

"We've always been to Herzog's," she murmured. "But I dare say you're right."

The first time she ventured into the chain store she was frightened. The clean-

jacketed manager was so quick, and so smart at adding up a column of figures that her mind stood still. Her eyes widened as he slid a pound of butter along the counter to a portly matron of sixty, with the words, "Here you are, miss!"

**SUCH** impudence! Why, the manager was a mere boy! A saucy, impossible boy, with his starched jacket and apron and his curling brown hair. But the portly matron didn't resent his impudence. She smiled back at him. "Some women have no dignity," thought Connie.

"What's yours, young lady?"

Connie jumped. He was addressing her. She fumbled with her neatly written list, and stuttered something about tea and rice and starch. The things came sliding along the counter as she named them.

Then the manager made a few quick passes with paper and stout string, and said, "Eight, twenty-two, thirty-six, fifty-

one, seventy-four—seventy-four cents, miss. . . . Thank you—come again!"

Connie stumbled out. She was furious. Such impudence! Such indignity! She would go back to Herzog's.

When she got home she did some arithmetic. She had saved fourteen cents on her small order.

**AS SHE** made the tea for her supper (lunch was her main meal; she dispensed with dinner) her anger cooled. "I suppose it seems queer to me at that store, because I'm not used to it," she said.

The next day she went again to the chain grocery. She was braced for shock. She still thought it was unpardonably rude of the manager to address all women indiscriminately as "young lady." He should say "Madam." And the way he grinned at you when he tied up your parcel was dreadfully bad manners. But how quick he was! How accurate! Also, she was forced to admit, he was much neater than old Herzog. His boyish face had a fresh, scrubbed look, and his hair had endured careful brushing.

As the days went on she ceased to be shocked at all. That was where she differed from her father

and Carewe. They would never have relinquished that first poignant sense of outrage. "Of course," thought Connie, "I would never stoop to joke back with the manager the way I see women do. Still, they seem to be nice women."

One night, as she spread her three slices of bread with peanut butter, she caught herself re-creating the scene within the cash-and-carry store. She could hear Bert's high-pitched voice—Bert was what everyone called the manager—as he demanded. "What for you, young lady?" She could see his boyish, smiling face, and the crisp curls of his hard-brushed hair. . . . She pulled herself up sharply. She felt very much ashamed, picturing a man in her mind.

Weeks passed. The responsibilities of being a landlady filled life with interest. She found that she could live and pay the taxes without worrying. She was saving money, too, by carrying her groceries home.

# "There Is No Failure Save In Giving Up"

How Adolphus M. Shenk, who went to the Colorado Desert in 1900, succeeded in converting a desert claim into a profitable ranch—Fighting every kind of obstacle—floods, drought, heat, sand storms, and bandits—he has held on where many gave up—There's a big lesson for all of us in this remarkable record of endurance, faith, and pure grit

*By Neil M. Clark*

**T**HE wagons came to a creaking halt and the mules hung their heads from weariness. The two brothers driving the outfit were exhausted, but they looked ahead with eager eyes. At last they were through the mountains; the land of promise was in sight.

It had proved a terrible passage, won foot by foot through a gorge in which there was no road, nothing indeed, living or dead, but great boulders and hummocks of shifting sand, with a scant growth of sage and cactus, where every

they were alone. Even the coyotes scarcely ventured to cross that thirsty land.

In 1900, however, an engineer's dream was fulfilled. A man with money and vision found practicable the engineer's scheme to bring water from the Colorado River and irrigate the desert. Then settlers began to arrive.

**I**N THE twenty-odd years since, the desert has been converted into productive ranches. It has even lost its ominous name, for it is now known as the Imperial Valley. Thousands of people live on

it. The annual products of the Valley are worth dozens of millions of dollars.

This transformation was not effected easily. Indeed, the hardships that the pioneers endured can scarcely be imagined. Very few of these pioneers remain to-day. Some of them were not the kind who would stay; when civilization got too close they moved on. Others, who came hoping to find an easy success, were speedily disillusioned and went elsewhere. Still others stayed a few years and helped to build the country, and then, having been well repaid, left to escape the rigors of the life.

One who came at the very start was Adolphus Shenk. He has remained year after year. He has endured and come through every hardship the Valley has offered. He is to-day doing bigger and more important things in the reclaimed desert than have ever been done before. This is his story.

I met Mr. Shenk one morning in Calexico, a Valley town on the Mexican border. He did not expect me. At his ranch house they held out little hope of my seeing him. "He is with the governor this morning," they said; "and after that he is going to the ranch in Mexico. He will be at the office for a very few minutes; you might catch him there."

foot had to be conquered by constant lifting and pushing and urging.

A still more sinister journey lay ahead. For the brothers looked upon a land which stretched to the north and east and south as far as their eyes could see, a land in which no living creature was visible, save one slowly soaring buzzard. It was the Colorado Desert; the desert as it was twenty-two years ago, before men had transformed a great part of it into a garden. The brothers looking upon it now for the first time were Adolphus and John W. Shenk, Jr.

The conquest of the Colorado Desert is one of the wonder stories of recent years. Until as late as 1900 hardly a half-dozen people lived within sight of it. Three or four prospectors, destined by circumstances or ambition to a lonely existence on the fringes of civilization, had placed their shacks near the scattered water holes. But

These are "before and after" pictures. One shows a stretch of unreclaimed desert, the other reveals a luxuriant growth of cotton on a section of that same desert that has been reclaimed. Irrigation and intelligent farming brought about the change. Twenty-two years ago all this was the Colorado Desert; now it is the Imperial Valley of California. The right to the more inviting name was won when men transformed a blighted area into a garden spot

I tramped a dusty, hot mile to the town and to Mr. Shenk's office. Fifteen minutes later he came in. I found him a man of medium height, surprisingly young, and with eyes of light blue. After a few words in greeting, Mr. Shenk said incisively that he was going to start out in a few minutes to make a tour of his ranch, and asked me to spend the day with him.

**IT WAS** an illuminating day. In the man himself and in what he told me, I saw vividly a pioneer at work. Very soon I found that he does not talk easily about himself. Nevertheless, in intervals, while we drove about his twelve-thousand-acre ranch in Lower California, while he talked with his foremen and ditch riders and laborers, and allowed no detail, however minute, to escape him, his story gradually pieced itself together.

It is necessary to go back where we started, to the year 1900, and to the point where the mountains debouched on the desert.

"A prospector at Viacitas in the mountains told us," Mr. Shenk said, "that we would be able to reach the first water across the desert in a day and a half. We were heavily loaded and we carried enough water to last us about that long."

Picture this desert into which they were going. Nowhere for any distance did it rise above sea level; the northern end lay several hundred feet below sea level. On every side were brown, barren mountains, turning to purple and blue in the far distance. Overhead was a cloudless, burning sky, even though it was winter. Underfoot was white sand, thrown up by the wind into hummocks and dunes, and overgrown sparsely with sage and greasewood. Feet and wheels sunk deep at every yard. To travel a mile was an achievement.

"The first day out," Mr. Shenk continued, "we found the skeletons of twelve human beings. With them were the skeletons of their animals and some bits of equipment."

"The prospector had told us we would strike water in a day and a half; but three days passed and we did not find it. The water we carried gave out. The animals were exhausted. Their tongues

began to swell. So did ours. We could see water all over the place as long as the sun shone: nice cool water, with green trees on the banks. But it was only the mirage.

"At last we lost hope of finding water ourselves, so we gave the animals their

From Pelican Lake the brothers headed for Cameron Lake, their destination. This was forty miles across the desert, close to the Mexican border, and they reached it without mishap. At Cameron Lake their father had located claims. The elder Shenk had been a minister in

Omaha, Nebraska, and also the editor of a religious weekly there. He had saved a little money, and he had three sons. When he moved to Los Angeles, both facts were discovered by those who were going to build the irrigation ditches to reclaim the Colorado Desert.

They were eager for settlers. An eloquent gentleman succeeded in inducing the Reverend Mr. Shenk and his wife to visit the site of the proposed irrigation project. The minister was enthusiastic about the country. He

located one claim for his wife, another for himself, and one apiece for each of his three sons, making a total of sixteen hundred acres of sand hills and mesquite-bearing desert.

The land cost \$2.75 per acre; \$1.25 went to the Government, and the balance was paid for water rights. It was a good deal of money for the minister to put into a vision; and the enterprise was just that. No other settler had located a claim in that arid land.

It was to the land on which their father had located that Adolphus Shenk and his brother John were going in the year 1900. At the time, Adolphus was not of age.

"When we reached Cameron Lake," he told me, "we found the water so low that, what with mud and dead fish, it was putrid. Before we could drink it we made a filter. We burned green mesquite to make charcoal. Then we took a length of stove pipe and filled it from bottom to top with alternate layers of sand and charcoal. Then we put water in at the top. When it worked its way down and dripped through at the bottom, it was purified and fit to use."

**"THIS** one stagnant pool had to serve all our needs until the following spring. Then the Colorado River overflowed, and the annual flood furnished us a fresh supply. We got along the same way the following winter, too. After that there was water in the irrigation ditches."

The (Continued on page 146)

Here's a picture of an Imperial Valley artery. The very life of the Valley depends upon these irrigation ditches. This particular channel is on Mr. Shenk's ranch

heads. They smelled water and went straight for it. About midnight they brought us to Pelican Lake.

"It was a stagnant pool. The animals rushed for it, however. Fortunately a prospector had his shack there, and he helped us to get the animals out of the water before they killed themselves by drinking too much and too fast."

We stayed up in the attic while the rain pattered cheerily on the eaves, and talked a long time. It was then that we thought of the simple thing which would solve so much married unhappiness

# Dot Aldrich Has an Attack Of Conscience

The story of two young newly-weds

By Fannie Kilbourne

ILLUSTRATIONS BY T. K. HANNA

**A** PROPHEET is not without honor save in his own country," might just as well have been written about a married woman in her own home town.

From the utter lack of respect that I get in Montrose, nobody would believe that I am what the fashion magazines are always referring to as a Young Matron. Will and I have been married four months, and yet practically everybody still calls me Dot Aldrich.

"Well, I hate to be depressing," said Father, when I spoke to him about it, "but you know that Mrs. Jackson and Mrs. Kinkaid must be nearly sixty, and yet they're often called 'the Grove girls.'"

In Chicago, where Will and I went for our honeymoon—three days in a hotel, our breakfast served in our room, and a theatre every night—it was quite different. The hotel clerk spoke of me to Will as "your wife" right from the start, and when he handed me a letter from Mother, he said, "Good morning, Mrs. Horton."

I gummed things up, there, though, myself, the first time that Will introduced me to anybody. He met one of his college instructors and his wife as we were coming out of the hotel, and when the instructor had introduced his wife, and Will grinned and said, "This is Mrs. Horton," I got all flustered in the general confusion and smiled and said, "How do you do, Mrs. Horton?" which was about as silly a thing as I could have done.

When we got back to Montrose, I was so busy for the first three weeks that I didn't notice the utter lack of respect I was getting. We took the stucco bungalow put up on the old Owen corner, right next to Dulcie and Roger Lane, and what with buying furniture and moving over chairs and things that Will's mother or mine could let us use for a while, and getting wedding presents and what not, we hardly had time to think.

The first time that I noticed the truth about the prophet in his own country was when we were settled and I was going to have Mother and Father for dinner. I called up Mr. Libby in the morning and told him to send me a nice roast by two o'clock. I called him at four o'clock, because it hadn't come.

"I sent it, Mis' Horton, just as you said, at two o'clock," he said; "and there wasn't nobody home."

"Why, I've been right here ever since—" I began, and then the truth dawned on me. He had sent it to Will's mother.

"This is Mrs. W. E. Horton," I said icily. "Did you make a mistake?"

"Mrs. W. E. Horton?" he repeated, as though he'd never heard of such a person. "Mrs.— Oh, for the love of Pete! You're Dot Aldrich! Why didn't you say who you was?" Anyone would have thought, actually, from his tone of voice that I was using an assumed name!

Although I was irritated a little, I didn't lay it up against Mr. Libby really, because, of course, he's over fifty, and you've got to expect old people to be a little slow about catching on to things. However, it wasn't just Mr. Libby. Everybody else was just as bad. Mother kept right on telling me to wear my spats on damp days, just as she has since I was fourteen.

"Mother," I finally said gently, "you know I'm a married woman, now."

Father just laughed. "And has the weather," he asked, "no effect on a married constitution?"

**I**T'S an added drawback, of course, being nineteen, but I believe it would be about the same if I were ninety. I was talking to Mrs. Dunwoody one day, for instance, about Mrs. Henning's divorce, and I said how strange it was that some couples couldn't get along. It really does seem like sheer perverseness on their part.

"Why, here Will and I have been married for over a month," I said, "and we're getting along just as well as when we were newly-weds." I paused a moment, and then went on with just a shade more dignity. "Of course, Mr. Horton is quite easy to get along with, in the main, but there are times, when he has business worries on his mind and—" I paused, for Mrs. Dunwoody's chin had begun to shake as though she were going to cry. It kept shaking harder, and while I was wondering if I had said something to hurt her feelings, she lost control altogether. But she wasn't crying, she was laughing.

"Oh, excuse me, Dot," she said at last, after having laughed till she had to wipe her eyes, "but I just couldn't help it—it was your calling him Mr. Horton—and having business worries on his mind—"

"I don't see what's the matter," I said stiffly; "you call your husband Mr. Dunwoody."

"I know it," she said. "I apologize. But I swear I couldn't help it. I—I—" she was still breathless—"I got to thinking about one Easter when Will came trailing into Sunday-school, at the very end of the infant class, in a little white dress with all his little soft tow hair in one big curl running along the top of his head and—and— Oh, I just can't help it!" And she was off again.

I stood looking at her with cool, silent contempt. That's the trouble with your own home town. You can grow up to be the smartest person in the world, but people who remember you when you were in Miss Serwell's infant class will always think you don't know enough to pull in your head when you shut the window.

That is why I realize that it would do me not the slightest good in the world to pass on a discovery I have made. It is a discovery that has to do with married life, and would, I seriously and honestly believe, do away with thousands of divorces, to say nothing of millions of unhappy married couples who would not think of a divorce on account of what people would say.

But what good would there be in my telling it to anybody in Montrose? They would just look at me and giggle, and say would they ever forget that spring when I was three and had the mumps on both sides at once! People in this town actually believe that if they can remember you when you had the mumps, it proves you haven't any sense.

My discovery has to do with money matters. I have heard countless people say that the money question is probably the one greatest cause of married quarrels. Mother says so. When I first got back from Chicago, she said that I'd better have a good straightforward talk with Will, and get him to give me an allowance to run the house on. I did so, but Will did not care for the idea at all.

"I don't want to dole you out money as if it belonged to me and that it was a favor to you to buy a couple of lamb chops with it," he said manfully. "You know what salary Dad is paying me, and that after we pay for the new rug and the dining-room suite, I'll have around two hundred dollars in the bank. Everything I've got belongs to you just as much as me."

**"YES,"** I said rather faintly. Uncle Horace had sent me twenty-five dollars for a wedding present. It was the most money I had ever had all at once, and I had sort of figured that it would belong just to me. However, I could see that it wouldn't be fair to have everything that belonged to Will ours and everything that belonged to me mine. I therefore insisted that I would put that money in our bank account, though Will didn't want me to. I always try to be fair.

Then he suggested that, instead of the allowance idea, we should have a budget, and both keep accounts. Father said that was a fine idea and he gave us a book on "How to Stretch the Dollar," a big ac-

count book and the cutest little "budget box." The budget box was kind of like a box you pack eggs in, all little squares like the drawer of a cash register. As soon as I saw it I knew that having a budget would be fun.

SO EVERY Saturday night we took Will's salary and divided it up. The proportion the budget said to save, he put in the bank Monday morning. The rest we divided up in the little squares, so much for meat, so much for groceries, so much for dentist and doctor. That little box took care of everything. There was even one square for wear and tear on the house and furniture. It was a perfect circus to work it. The first three weeks I saved a little on the meat and groceries every time by buying just the right things. We took this saving and put it in the bank with our regular savings, and Will thought I was wonderful.

There was one square in the budget box marked "luxuries." This was beside the one for "Hospitality and Amusement," from which we bought tickets to the movies, an extra bottle of cream when we had company for dinner, and so on.

"Suppose we put a dollar a week in for luxuries," Will suggested. "If we don't spend it, all right; but we need a little leeway. There isn't any other square, for instance, where I could get the money for the basket-ball pool."

"Oh, Will!" I said reproachfully.

There is a basket-ball club in the five towns around here, and they play once a week. A lot of the young fellows in town have got up a pool—everybody puts in a half-dollar apiece, then draws lots to see which team he's betting on, and the whole amount is divided up among those who bet on the winner. That sort of thing is all right for bachelors, of course, but, for a married man, gambling does seem like a wicked extravagance.

"It isn't the money, Will," I said, "it's the principle of the thing. You're so *unlucky*. It isn't as if you might win once in a while." Will looked guilty and said, well, he supposed he ought to cut out all that sort of thing now that he was a married man.

The first week we bought a dish drainer with the Luxury Tax, as Will called that

part of the budget. That doesn't sound luxurious, but it was a special kind so that you don't have to wipe the dishes, which is certainly a luxury when you think of it that way. The next week Will bought a pencil-sharpening machine. He said he had hankered for one of them all his life, but that, some way, he'd never got around to having one before. That struck me as about the funniest thing I'd ever heard, but I had made up my mind to be a very tolerant, sympathetic wife to Will, so, while I may have looked a little surprised, naturally, I didn't say a word. And Will was just as sweet the next week when I spent the whole dollar on sachet. I felt it was really for both of us—Will would smell it just the same as I would, and I was perfectly willing to put some

little bags of it in his bureau drawers, too, but he didn't care to have me.

Things starting out as pleasantly as this, it never occurred to me the terrible worrying that that budget box would cost me. It came about partly on account of the way people in this town treat me. If I had been getting the respect that a young married woman is entitled to, right along, I might not have been so weak when Mr. Wellington Napp came into my life.

I OPENED the door one snowy morning to find him standing on the steps. I was surprised to find a stranger.

"Good morning," he said, with a very attractive smile. "Have I the pleasure of speaking to Mrs. Horton, Mrs. William Elbridge Horton?"

Things starting out as pleasantly as this, it never occurred to

me the terrible worrying that that budget box would cost me

"Yes," I said, wishing I had taken off my apron, although it was orchid—an unusual color for aprons and very becoming.

"Mr. Ayers was kind enough to suggest my coming to see you," he went on. Mr. Ayers is the high-school principal, and for a second I had the queer, guilty feeling a principal's name always gives you, long after you are out of his clutches.

"Won't you come in?" I asked, it being very cold.

"Thank you," he said, smiling again. "I feel very guilty taking up a moment of a busy matron's time but—"

"Oh, I'm not so very busy this morning," I said. You could tell at a glance that he was a very nice young man.

He sat down in our one over-stuffed chair, that we call our "spooner chair,"

because it's strong enough to hold us both. He told me that he was Mr. Wellington Napp.

"I'M CALLING on just a few of the younger matrons in Montrose," he said. "You young married women must be awfully conceited," he went on, with his nice smile, "when you know how all of us who are interested in the intellectual side of the nation's towns have to come to you first of all to get you to exercise your influence on our behalf."

"I'm afraid," I said, feeling that I must be honest with him, "that is, I'm not sure that I could be said to have a great deal of influence—"

"I knew you were going to say that," he interrupted me. "It's the people who

boast of their influence who haven't any, Mrs. Horton. It's the charming, intellectual woman, Mrs. Horton, who always tells me that she hasn't any influence." He shrugged his shoulders. While he hadn't exactly said that I was charming and intellectual, I couldn't help gathering that he thought I was. "You'll be telling me next, Mrs. Horton, that you don't like poetry!"

"Oh, no," I said. "I'm very fond of poetry."

"THERE!" he said triumphantly. "I knew the instant I saw you that I had made no mistake in coming to you among the very first here in Montrose. We have a perfectly marvelous opportunity, Mrs. Horton, to offer to a few of the matrons of Montrose. The only trouble is that we can't give it to every family in the town. But you know, Mrs. Horton, that Montrose is only one of thousands of towns through the country, and we can't do for one town what we aren't prepared to do in a thousand others."

"Of course not," I said understandingly.

"Now this, Mrs. Horton," he said, "is the opportunity I am offering to you in preference to some of the older women of the town. I guess I'm something of a sentimentalist, Mrs. Horton: I can't bear to see poetry go into a home where it isn't going to be loved."

Wasn't that sweet of him!

"Out of all the poetry of the world, Mrs. Horton, we have chosen only the finest and the best—ten volumes of it.

'Epics, Sonnets and Lyrics of the Ages,' we call our choice. The books are bound in—"he glanced around our living-room—"isn't it fate that red books should be the one touch your color scheme needs?"

"But ten books!" I faltered. "Wouldn't they be terribly expensive?" I was afraid there would be something that would keep me from taking advantage of such a chance. Mr. Napp smiled.

"Fifty cents a week," he said triumphantly. "Fifty cents a week for hyacinths to feed your soul, Mrs. Horton!"

"Why, I could afford that, all right!" I exclaimed.

Fifty cents a week seemed little enough to feed the soul. I signed where he told me to, on a dotted line, and gave him the first fifty cents. (Continued on page 100)

# Would You Be Happier If

Before making up your mind, read this extraordinary  
\$16,000,000 from

By Merle

IN THE summer of 1903, Horace Rackham, a Detroit lawyer, invested five thousand dollars of borrowed money in an automobile company that a Detroit mechanic was organizing. The mechanic was Henry Ford. In the summer of 1919, Mr. Rackham sold the stock that his five thousand dollars had bought. He received twelve and one-half million dollars for it.

Mr. Rackham was forty-five years old when he borrowed the five thousand dollars. He was sixty-one years old when he received the twelve and one-half millions.

In the meantime, the stock had been paying dividends. Quite considerable dividends, as a matter of fact. They had amounted to almost four million dollars. So Mr. Rackham's original investment of five thousand dollars had returned him nearly sixteen and one-half million dollars, or approximately thirty-three hundred dollars for every dollar invested.

I have mentioned these facts thus clearly and completely because I do not want to have to mention them again. Mr. Rackham would not want me to. Indeed, he would prefer that I did not mention them at all. He has just told me so. And I have countered by telling him that they are altogether necessary to an understanding of the extraordinary message that he has given me for the readers of this magazine.

I am a little hazy as to what the earmarks of a millionaire are. But of one thing I am quite certain: Mr. Rackham has none of them. This slender, alert man, with kind blue eyes, nicely molded head, and a voice whose sincerity no human being could question, might be any one of a million wholesome American citizens who have done their duty as they saw it, acquired a comfortable competence, and now look back on a well-filled life with the poise and penetration of age. The wealth that has come to him has left him curiously untouched.

Times without number you and I have thought: "If I had a million dollars I'd—" And then to finish the sentence we have

allowed our imaginations to run riot. *Just what would I do with it? How much happier would it make me? How would the world look to me? How would I look to the world?*

I believe that Horace Rackham, as we have talked together, has answered these questions in a normal way for normal hu-

"Probably Mrs. Rackham and I are pretty poor persons for this money to have come to. We couldn't live up to it if we wanted to—and we don't want to."

Before going further into Mr. Rackham's observations it is necessary to reveal their background. Otherwise their significance would be shrouded. That

takes us back to the little log house in Harrison township, near the shore of Lake St. Clair, Michigan, where he was born sixty-four years ago. A rough house it was, and pretty cramped for a father, mother, and four children. But it more than measured up to the seventy-one acres of poor farming land on which the family depended for a living.

THE elder Rackham, an Englishman by birth, had been a salt-sea sailor for twenty years, during which he had won his papers as first mate. Tiring of the ocean at last, he had decided to try his luck on the wind-stirred spaces of the Great Lakes. Later he left the sea altogether and settled down on a mortgaged farm within whiffing distance of Lake St. Clair.

Horace Rackham's boyhood was not easy. At four o'clock on winter mornings he would let himself down the ladder that led from the living-room to his garret bedroom. Then he would spend the next hour or so looking after the horses and pigs, while his father and an elder brother did the milking. Breakfast over, swinging his lunch box by a strap, he would trudge his copper-toed boots through the drifted snows to the district schoolhouse, nearly three miles away. It was necessary to get there an hour before "school time," and start a fire in the rusty box-stove, so that the room would be warm when the others came. For keeping the room clean and building the fires, young Rackham and a neighboring farm boy received a total recompense of seventy-five cents apiece for the four-months term.

It was a hard life, as a whole, but far from an unhappy one. Against its simplicity, little events stood out in sharp relief. Take, for example, the day when the

## Don't Draw Any Wrong Inferences From This Article

YOU can learn much from Horace Rackham's experiences and from his fine, wholesome philosophy. They are worth thinking over and talking over. There is one thing, however, that you cannot learn from this article. *You cannot learn how to make \$16,000,000 from a \$5,000 investment.*

Mr. Rackham was lucky. He admits frankly that he was lucky. Carefully following our own best judgment, just as Mr. Rackham followed his, you and I might borrow \$5,000 to invest in a newly organized company, and we would stand far less than one chance in a million of duplicating Mr. Rackham's amazing good fortune. Indeed, we would be luckier than the average amateur investor if we received a six per cent return on our money. You must bear in mind that the financial success of the Ford Motor Company is one of the marvels of modern industry. Nothing quite like it, on so big a scale, has happened in our generation.

This is not intended to subtract any just credit from Mr. Rackham, who hoped to make a fair profit on his investment. You will notice that he proceeded very carefully. . . . Mr. Rackham did not answer a circular letter from an unknown promoter in New York or Los Angeles or Kalamazoo. No one told him that he was "being let in on the ground floor of a sure-fire clean-up." Instead, he invested in a company that was being organized by a man who had been his near neighbor for a year, a man who he knew was intelligent, honest, and industrious. The new company was going to put on the market, within reach of the average purse, a product that was expected to satisfy a universal need. Furthermore, the product had been *proved*. In winning several speed races by wide margins, Mr. Ford had shown that he knew how to build a good automobile. In addition, the other backers of the project were reputable local business men.

But even all this was not sufficient to satisfy Mr. Rackham. He talked the matter over for several days with his wife and his friends—and he didn't invest a dollar until he had seen a fistful of *bona fide* orders for a machine that was not even yet being manufactured.

So don't draw any wrong inferences from this article! If you ever have an urge to invest in a new company, be just as careful as Mr. Rackham was. Move slowly. Get all the advice you can. And make up your mind to be satisfied with a fair return on your investment. That is all you have a right to expect. Fancy returns are few and far between.

THE EDITOR.

man beings. At least he has made a fine and frank effort to do so. Certainly no man ever spoke more fully out of his heart. I shall never forget, for instance, the wistfulness in his voice as he remarked:

"When I found that I no longer had to work for a living, something went out of my life. . . . And it has never come back."

A little later he added:

# You Were Worth Millions?

personal story of Horace Rackham, who received over a \$5,000 investment

*Crowell*

ten-year-old boy, having sold, for twenty cents, a dozen eggs laid by a hen his father had given him, visited a barber shop in Mt. Clemens, the nearest village, and had his first "reg'lar" hair-cut. Hitherto, his mother's big steel shears had done the job.

Two years after this event the family moved to Leslie, a better farming community, and here young Rackham finished grammar and high school. In 1879, when he was twenty-two, he came to Detroit, with an idea in the back of his head of becoming a lawyer.

**H**E WORKED at various business jobs for two or three years before he got a chance to enter a lawyer's office. In 1884, after much patient study, he passed the bar examinations. Shortly afterward he learned that eight acres of land were for sale, very reasonably, in the outskirts of the city. Borrowing thirty-two hundred dollars, he bought the tract. In 1886 he married, very happily.

At about this time Rackham found that hard study and indoor confinement had injured his health. So he decided that for a while, instead of tackling the law, he would raise garden truck on the eight acres and sell it in the city.

Aided in fundamental operations by a practical carpenter, he and his bride built a cottage on the land with their own hands. When the frame and roof were up, and it was boarded, clapboarded, and shingled, they felt very elated, and worked harder than ever. Rackham trimmed up the outside and puttied the window panes while his wife was painting the walls inside. The walls wouldn't be papered until the house was "set."

For the next two years Rackham raised his garden truck, and did very well at it. But it was hard work. On Tuesdays and Saturdays, during the summer and fall, he had to arise at two o'clock in the morning and take his produce into the city. Eventually, with his health restored, he decided to embark on his delayed law career.

From this time until he was forty-five, Horace Rackham lived a normal, happy life, paid cash as he went, won many friends, and had put something less than one thousand dollars in the savings bank. Long since, he had sold half the eight acres for a price that repaid the loan with

which he had bought the whole of them.

The couple, living very quietly, hoped that by the time old age came on they would have money enough to produce an income of twenty-five hundred dollars or three thousand dollars a year. Since they had no children, this would take care very nicely of their own modest personal wants.

MR. AND MRS. HORACE RACKHAM

For the first seventeen years of their married life Mr. and Mrs. Rackham lived, on a very moderate income, in two cottages, one of which they had built with their own hands. Then, in 1903, Mr. Rackham made the investment from which he has since received more than \$16,000,000. There has been little change, however, in this interesting couple's scale of living—for they have found that few things which make for permanent happiness can be bought with money

One day in 1903, a former client, Alex Y. Malcolmson, looked Rackham up. Malcolmson was an enterprising grocer who had branched out into the coal business and had made quite a success of it. In his coal yards was a long-headed, quick-thinking superintendent named James Couzens.

"This man Ford, who won the three-mile race at the Grosse Pointe track with his hand-made automobile, is trying to form a company of his own," Malcolmson explained. "I'm helping him organize it. Couzens and I are both putting in all we can afford, which isn't an awful lot, and I thought perhaps you'd like to do the same. I believe that Ford's got the right idea!"

Rackham asked many questions, and promised to think the matter over. It was a serious thing. Throughout his life

he had received the usual run of solicitations to invest in new companies, but never before had he been even tempted. In this case, however, there were exceptional circumstances.

"I didn't know Henry Ford," Rackham explained to me, "but I had seen him a good many times. Back about 1900, when he was with the Detroit Edison Company, he had lived for a year only two doors from our little home at 82 Alexandrine Avenue, East. Every night he'd rush home from work, and I'd hear him out in the shed, pounding away on the one-cylinder engine of his 'horseless carriage.' Sometimes, when the engine was coughing, the smell of gasoline would drift in through an open window.

"Frequently Mr. Ford would bring his queer little buggy out into the street to try it. Sometimes it would balk, or get stuck, and then the neighbors, sitting on their porches, would smile and nod to one another. Of course, it was all right if this slight stoop-shouldered man in the late thirties wanted to spend all his time monkeying with that contraption. After all, it was nobody's business but his own—and he might be doing worse!

**W**HAT I saw of Mr. Ford in those days convinced me that he was honest, hard-working, and intelligent. I never talked with him—because he was too busy tinkering away in the shed to talk with anyone. Mrs. Rackham, however, got to be on

good terms with Mrs. Ford, and all that she told me added to my favorable impression.

"But this was only one angle to the present problem. Mr. Ford might be the most energetic and high-minded man in the world, and yet if his new company couldn't sell enough motor cars at a fair enough profit, there'd be no money in it for anyone.

"I told Mrs. Rackham all about the offer, including the fact that Malcolmson wanted me to put in five thousand dollars.

"But we haven't got five thousand dollars!" she protested.

"No, but our four acres out on Van Ness Avenue are worth more than that; so we should have no great difficulty in borrowing the money," I said. "Of course, you may be sure that I won't go into it before I've (Continued on page 163)

# Robbed of His Sight He Still Has Done Great Work

Professor Edward D. Campbell's eyes were instantly destroyed during a laboratory experiment thirty years ago; yet he has achieved a high reputation as a scientist, has been a factor in the advance of two great industries, and has trained dozens of men and helped them to make their mark in the world

*By Allan Harding*

ONE April afternoon, back in 1892, three young men were conducting an experiment in the chemical laboratory of the University of Michigan at Ann Arbor. Two of the young men were students. The third, whose name was Edward D. Campbell, was assistant professor of metallurgy.

He was then only twenty-eight years old. For eight years he had been studying the chemical constitution of steel, four years of that time having been spent in iron and steel plants. On this particular afternoon he was experimenting with the gases obtained by dissolving steel in hydrochloric acid, gases which contain about 95 per cent of highly inflammable hydrogen.

He was attempting to get rid of the hydrogen by oxidizing it.

According to the literature on the subject the method he was using was practicable. But he knew there was an element of danger in the experiment; so while he himself was standing close beside the glass tube through which the gases were passing, he had directed his two assistants to stand behind him.

Suddenly there came one of those strange coincidences which fate sometimes seems to bring about. At the precise instant that Mr. Campbell bent over the apparatus to see whether the oxygen and hydrogen were combining and forming water, the gases exploded, blowing the tube to pieces.

If the explosion had come a few seconds sooner, or a few seconds later, no serious injury would have been done. The young men standing back of their instructor were only slightly cut by flying pieces of glass. If Mr. Campbell's face had been a few inches above or below where it was, he too would have escaped being badly hurt.

But at the very second of the explosion his face was in the one and only position where his eyes could receive the full charge of shattered glass! One eye was

instantly destroyed. A piece of glass three quarters of an inch long was driven into the other eye. The rest of his face had only slight cuts, of which not a single scar remains. Fate seemed to have ordained the tragic coincidence that he should make the one movement, at the one instant, that would cost him his sight for the remainder of his life.

"At first," some of his old friends told me, "he begged the physicians not to let him live. He said he preferred death to blindness. But before that night was over he had summoned a courage which, so far

search work in regard to Portland cement—work which has been of practical value to this great industry; and he has trained and sent out dozens of men who have made a name for themselves and have contributed to the advancement of science and to its practical application in chemical engineering.

That is a record of which any man might be proud. But when it has been made by a man with the handicap which Professor Campbell has had to overcome, it seems almost incredible.

"Didn't you think at first that you would have to give up your work?" I asked.

"No," he said; "I realized that I should have to devise new ways and means of doing some things; but so far as my teaching was concerned the loss of my sight did not offer any very great difficulty. In lecturing to classes I had not depended on notes, except perhaps to write down a few heads on which I intended to talk. Fortunately, I had done from choice what I now had to do from necessity: I had depended on knowledge and memory.

"I believed, even then, in *knowing facts*; especially the facts pertaining to one's work. If I am directing an experiment, I do not have to ask someone to tell me the basic principles involved. I already know them. I depend on my memory, not on constant reference to books or notes.

"Of late years, I have had many good-humored arguments with some of my friends on this subject. They say they think it is foolish to burden the memory with a mass of facts. They have card indexes which will tell them where to find information when they need it. But I think you should *know* the facts you want to use in your work. These facts may be recorded in books, and you may own the books. But you don't own the *knowledge*, unless you have mastered it with your understanding and possess it through your memory.

"When my eyes were gone, I could continue to teach (Continued on page 74)

## Why Men Don't Like to Smoke in the Dark

**A** CURIOUS example of dependence on sight is to be found in smoking," says Professor Campbell. "Men do not like to smoke in the dark. Yet they get all the sensations then that they would get if it were light, except that they can't see the smoke. Perhaps this accounts for the fact that I have no inclination to smoke. I should have to do it in the dark."

as we know, never has failed him. The next morning he began to rebuild his life.

"The accident happened at three o'clock on Tuesday afternoon. On Friday the spring vacation began. When the university reopened, a week from the following Monday, he was there ready to go on with his work. He lost only those three days from Tuesday to Friday."

In the thirty years that have passed since that April afternoon, Professor Campbell has become head of the Department of Chemistry at the University of Michigan; he has continued his scientific study of the structure of iron and steel; he has also carried on important re-

Photo by Randall Studios, Ann Arbor

### *Edward D. Campbell*

**THIRTY** years ago, during a laboratory experiment, there was an explosion which instantly destroyed Professor Campbell's eyes. Instead of thinking that this must end his career as a scientist and an instructor in chemistry, Professor Campbell went right on with both lines of work. He has conducted researches in regard to iron, steel and cement, and has published over sixty

scientific articles and books that have been of great practical use to the industries concerned. He also has become director of the Department of Chemistry at the University of Michigan, and is a member of various scientific societies elsewhere. He was born fifty-nine years ago, is married, and has six grown children; four of them he never has seen.

### *J. Waldo Smith*

**J. WALDO SMITH** was born in Lincoln, Mass., in 1861. When seventeen he was engineer of his home town waterworks. Later he studied at the Massachusetts Institute of Technology, the Stevens Institute of Technology, and Columbia University. He directed several water supply enterprises in New Jersey before he put through the titanic task of bringing water from the Catskill Mountains to the people of New York City. Lower left: Engineers measuring

cross-section of unlined tunnel under Fiftieth Street at Sixth Avenue, New York. Lower right: When the engineers found it impracticable to bore the tunnel through rock, or to build a reinforced concrete aqueduct on the surface, they resorted to splitting the main aqueduct into steel pipes. Three pipes are necessary, because it is not feasible to build a steel pipe as large as the main tunnel. The underground picture was taken sixteen miles north of New York.

# Always On Top of His Job— Not Underneath It

"If a man has his work so organized that he is on top of it, I know that he is ready for greater responsibilities," says J. Waldo Smith, builder of New York City's stupendous water supply system, a job which, according to General Goethals, involved more engineering difficulties than the construction of the Panama Canal

*By Michael Randall*

**T**HE city directory of New York lists more than six thousand Smiths. Of this number only thirty have done anything notable enough to be listed in the pages of "Who's Who." High up among these thirty, perhaps at the very top, stands the name of J. Waldo Smith.

If you were asked to pick a typical Mr. Smith—to represent the most common of all our good old English names—it is likely that J. Waldo Smith would be one of the first men on whom you would lay your hands. He is of average height, or a little under that; the only thing quieter than his clothing is the tone in which he speaks. In a crowd of Smiths he would not stand out by any commanding attribute of personal appearance. Moreover, he was born on a farm, which is as it should have been. He worked for years obscurely, progressing from small jobs to larger ones, with no self-advertisement, and very little idea of how big a thing Fate had in store for him. To understand just *how* big, you need only to talk to some of the men who know him well. Said one of them, himself a successful consulting engineer:

"If you were to ask all the engineers in the United States whose advice they would most like to have on a baffling engineering problem, nine out of ten of them would vote for Waldo Smith."

He has received the John Fritz Medal, the highest honor that American engineers can give to an engineer of any land. But he, himself, if you were to put it up to him, would deny that he is in any way unusual. He would say that he is just an ordinary man of sixty-one, who worked a little harder than the average, perhaps, and doesn't remember to have been much

afraid of anything, or to have paid much attention to popular criticism—just a plain man who had a job to do and did it very quietly. So quietly that, of the six million people whose lives from day to day and hour to hour are absolutely dependent upon the thing he did, prob-

In the successful accomplishment of this titanic undertaking Waldo Smith had so many obstacles to meet that one hardly knows where to begin the recital of them. The first of these had to do with engineering. It was the problem of overcoming human inertia. As human beings, we are lazy and optimistic beyond all proper bounds. It is said of the people who make their homes on the sides of Vesuvius that the eruptions are hardly over before they are back, rebuilding their houses, confident that what has just happened cannot possibly happen again.

The hardest thing in the world to sell us is the thing that is most for our good. We refuse to read bad news or believe that the unwelcome event can possibly occur. This has been the history of humanity. It was true in the days of Noah, who could persuade no one that there was about to be too much water; it has been true always of New York, which, from the beginning, has been menaced by a scarcity of water, and will shortly be facing that menace again.

The first settlement on Manhattan Island was made in 1608; and for fifty years thereafter the population was dependent for water upon a public well. Fire was a constant menace. In 1774 some pipes, made by boring holes in pine logs, were laid, and water began to flow to the city from Collect Pond, a shallow pool near what is now Franklin Street. But from 1800 almost to the present day New York's water history is one long story of debate and delay, with action only after the crisis had become acute.

In 1834 it was first proposed that water should be taken from the Croton River on the north. Public opinion was divided, the legislature hesitated, and when the necessary legislation was finally provided every farmer whose

## Are You Working on a "We" Job or an "I" Job?

"**T**HIS was a 'we' job," Mr. Smith told me. "There was glory enough for all. We encouraged everyone to take all of it he could possibly earn. I made it a rule to load on the responsibility and let the men climb up on top of it or get buried under it, according to their capacity. It was remarkable how few were buried. I'm inclined to think that you get pretty much from people what you expect. We expected a lot."

"Our motto was: 'Make men account for everything they do, but give them authority.' Unless somebody makes decisions no progress is possible, and you can't expect men to make decisions if you're constantly standing over them and telling them how they shall do their work. Every man of initiative works in his own way, and the test is not whether he is doing the thing as you would do it, but 'Is he getting the results.'"

"When the commissioners asked me how long it would take me to wind up the job I was on and get started in New York, I told them a week. I always made it a rule to start a new job by training someone to take my place. Well, that's the way we built the aqueduct. We got the best men we could, gave them more work than they had ever carried before, and responsibility commensurate with the work; told them to go ahead and unload onto someone else as fast as they could, and we would have something else ready for them when they unloaded."

"That's what I mean by saying it was a 'we' job and not an 'I' job all the way through."

ably not one in ten thousand ever heard his name, or was conscious that, eight hundred feet below their streets and basements, his men were fighting to bring water to New York in time.

To build an aqueduct from the reservoirs in the Catskill Mountains to New York City, a distance of more than 100 miles, it was necessary to dip under the Hudson River. A point 51 miles north of the city was selected, and here the gigantic engineering feat of boring a tunnel 3,022 feet long through solid granite at a depth of 1,114 feet was accomplished. The diagonal lines coming in from left and right show the course of borings to locate rock in which the tunnel had to be cut. The two sets of companion drills showed rock at a depth of 950 feet and 1,500 feet. The level for the tunnel lies between the two. The drawing shows the lower drill from the left coming to an end before meeting its corresponding drill from the right. These drills were set with black diamonds, and at the point where the left-hand drill stopped the metal setting for the diamonds melted, leaving \$1,800 worth of precious stones in the rock. The first quest for rockbed was made from a scow anchored in the middle of the river. A pipe drill was sent down 750 feet and then by accident a river boat bumped into the scow, broke off the drill, and made the diagonal borings necessary. The longest of these borings is 1,840 feet. After the definite location of rock, shafts were sunk from the base of Storm King Mountain on the west and Breakneck Mountain on the east bank, and from the bottom of these shafts the engineers set themselves to drill and blast their way under the river. A weekly progress of about 80 feet was possible. The shafts and tunnel are 14 feet in diameter and are concrete-lined to prevent bursting, lessen friction, and keep out "seepage" water and underground streams

land was to be crossed by the aqueduct threw his little selfish interest into the ring. So it was 1842, and the population had reached a total of three hundred and sixty thousand, before the first water from the Croton was delivered.

For its short-sightedness and delays New York paid a bitter price. There were epidemics of yellow fever in 1795, 1798, 1805, 1819, and 1822, and of cholera in 1832, 1834, 1849, and 1855. As the water supply became more abundant and sanitation improved, the epidemics disappeared. But even as late as 1881 thousands of people were on the point of leaving the city for fear of a water famine; and in 1917, when the first water was brought in from the reservoirs in the Catskills through the Catskill aqueduct—Waldo Smith's great project—the reservoirs that supply Brooklyn were almost exhausted.

A very small proportion of a city's water supply is consumed by drinking. Street cleaning, domestic washing, factory operations, fire protection—all these make vast demands, and year by year the per capita consumption goes up. In New York in 1842 it was only 20 gallons a day; in 1915, the average per capita consumption in 201 cities, was 139 gallons a day;

while the present average consumption in forty-six cities is 169 gallons—an increase of 30 gallons per person a day in less than seven years. New York, which now consumes about *seven hundred and fifty million gallons a day*, must add another one hundred million gallons a day every five years to keep even with the demand.

**WHERE** is this added supply to be found and how shall it be brought down to the city and distributed? It was a problem of this very sort that confronted the commissioners of the Board of Water Supply on their appointment in 1905. Their first move was to step across into Jersey and get J. Waldo Smith, who was supervising important water projects for cities over there. Time was short; at least ten years would be required to construct an adequate supply system, and ten years brings stupendous changes in a city that grows as fast as New York.

In four months after Mr. Smith's appointment, he had determined that the city must go to the Catskills, more than one hundred miles away, and build its reservoirs, and had so reported to the commissioners. Again public opinion was divided: great newspapers criticized the project from the day of Mr. Smith's

appointment to the day when water was actually flowing under Broadway. The city had plenty of water, they cried; there was no probability of a shortage; the whole scheme was framed up by politicians to get contracts and engineers to give themselves jobs.

To all this Waldo Smith was about as responsive as a turtle to a horsefly. He pushed along, picking his men, laying plans, and projecting surveys. More than three thousand miles of surveys were necessary in order to determine the best route for the one-hundred-mile aqueduct; when that was finally decided the fun began. These were the obstacles, or some of them at least:

First: The land where the reservoirs were to be was not vacant. Some notion of its extent may be gained from the statement that enough water is now impounded there to cover the whole of Manhattan Island to a depth of thirty feet; but when Waldo Smith and his engineers began operations, the future reservoir was supporting nine flourishing villages with private houses, boarding-houses, churches, schoolhouses and all other community essentials, including thirty-two cemeteries. Immediately caravans of lawyers (Continued on page 135)

# Getting Acquainted With Father

A confession

By W. O. Saunders

NONE of us ever paid much attention to Father. Nobody does. Fathers are a sorry, prosaic, unromantic, uninteresting lot, as a rule. They seldom take time to get acquainted with the family, and at such times as they do loosen up and try to be companionable they are awkward about it and leave everyone feeling a bit uncomfortable.

None of us ever paid much attention to Father. His clothes were always old and ill-fitting and he talked in a language we did not understand. He had lived joyfully once, when he was a boy, and was full of his own boyhood reminiscences; but they seemed to have absolutely no application to the life of us children. He laughed at jokes that were commonplace in the village smithy half a century ago.

Father was the first one up in the morning, and out of the house; and about his work before the rest of us stirred. He was usually a trifle late at the noonday meal, ate silently, with legs crossed and head close to his plate. Sometimes he forgot and came to the table with his hat on. Usually he would walk out on the porch after the meal, lean against a pillar, pick his teeth with a sharpened quill and stare off into space for a matter of five or ten minutes; then pull himself out of his reverie and trudge off to his little village shop.

He ate his supper the same way, read a newspaper half-heartedly for half an hour or such a matter, then got down a large-print Bible and pored over its pages with seeming satisfaction for as much as an hour. His Bible reading finished, he would putter around the house for a while, wind up the clock, pick up a lamp, and go to bed. Few words were ever exchanged between him and Mother, though they seemed to understand each other perfectly and to be about as happy as couples are outside of books.

None of us ever paid much attention to Father except to deplore the fact that he was altogether too unconcerned about his personal appearance, and rather out-of-date in his ideas about life and conduct. It never occurred to any of us to try to be companionable with him, and none of us ever gave a thought to what was in the heart of him. If he looked seedy, worn, and commonplace, it never occurred to us that it was because he neglected himself and sacrificed much so that the rest of us might have what we needed; that, to enable his family to keep up appearances and follow the pace set by neighbors, he

had become accustomed to foregoing much that he himself might have enjoyed. If he seemed preoccupied, sometimes taciturn, sometimes melancholy, it never occurred to any of us that the poor old fellow had troubles of his own, and that those troubles arose solely out of his problem of how to shelter, clothe, feed, and educate us children.

Father wasn't a good executive. He was the youngest of a large family and had been the family hack. All of his sisters

Father paid for the horse and wagon with which he carried on this business and, having prospered so far, he rented a stand in town and the stand grew into a store. But it was a picayune business at best. His profits were small and he did a credit business which kept him bothered for cash. He would trust anyone, and often he would let things go without even so much as putting them on his book, because he knew that he would never get his money. Every widow, every pauper,

every ne'er-do-well, and every sick and disabled person in town got credit at Father's store. He never had the heart to turn anyone away, and I suspect that he often grieved because he wasn't able to do better by all those who stood in need. Such was the great heart of Father. But none of us understood or cared except to scold him from time to time because he did not curb his charitable inclinations. When he cited the Biblical injunction to "give to him that asketh thee, and from him that would borrow of thee turn not thou away," we would come back at him with "Charity begins at home."

One thing about Father kept us all worried. He had a habit, as far back as any of us could remember, of giving Mother pieces of money to keep for him; and just about the time the little pile would grow to as much as a hundred dollars

he would invariably call on Mother for it all. He would give her five or ten dollars at a time, sometimes as often as twice a month and tell her to keep it "for a special purpose." He was always happy and full of enthusiasm when he brought Mother money in that way.

He called Mother "Dar," which was a piney-woods abbreviation of the pet word "darling." "Here, Dar," he would say, "here's a new five-dollar bill that I want you to put up for me. I didn't put it in the bank because I knew it would be checked out to-morrow; and this is for a special purpose."

Times when business was good he would add almost weekly to the little fund "for a special purpose." All the gold pieces that came into the till at the store went into Mother's keeping. And then something would go wrong in his business; debtors would fail him or creditors press him, and he would have to call on Mother to give up the little hoard. He always did this reluctantly. We had learned to know when to expect it. At such times he would come home in a state of noticeable depression. He would (Continued on page 173)

## Parents Who Are Unappreciated

"FOR years, as a boy," says Mr. Saunders, "I had eaten the food and worn the clothes provided by that humble, slaving, threadbare man, without giving a thought to the weary toil he had endured to provide them. I had seen him mend his own shoes and toil for an hour drawing rusty nails out of old boards to get nails to patch up the woodshed or the garden fence, without having once realized that he practiced these economies that I might wear better shoes than he, and have leisure that was never his."

"And I thought that he was an uninteresting, unsocial father because he did not understand us and enjoy more of life with us; when all the while he was denied the leisure time to cultivate anything else save the business out of which we were fed."

had married and his brothers had gone from the old home place when his father died. Upon Father, the only child left at home, devolved the responsibility of taking care of his mother. It was a hard struggle. And then he married Mother and took her to the old home place. She helped him wonderfully and his marriage was economically sound until the family began to grow. The little farm soon became all too small to support himself, his mother, and a growing family.

Father, seeking to improve his lot, moved to town when he was still a young man. But all he could get to do in town was some sort of manual labor for which he was poorly paid. He realized early in life, but still nearly too late for him, that more than bread and butter and homespun for his brood must be found in business, and not in a day laborer's job. And so he got into business, buying and selling poultry and eggs and other country produce. This required no capital. Farmers who knew him would trust him with their produce to sell, and he would fetch their money back from his sales in town when he made the next trip to the farms.

# The Nicest House in Town

A story of Nell Cutter's close call

By Bess Streeter Aldrich

ILLUSTRATIONS BY W. B. KING

EVERY normal woman has some overwhelming desire hidden in the secret chamber of her heart. It may be the dream of a three-years sojourn in foreign countries, or the vision of a new kitchen sink. But the wish is always there, quite definite, often unspoken. She firmly believes that with its attainment will come complete happiness.

Nell Cutter's consuming desire was not an unvoiced one. On the other hand, she spoke of it so frequently that it seemed as much a part of her as her wedding ring. It was a *new house*.

For fourteen years the Cutters had lived in a rambling white house set well back in a big yard. A heterogeneous collection of maple, elm, and apple trees surrounded it, lilac bushes and snow-balls bloomed with friendly perennial interest, and a winding path led to a little plum thicket in the rear. The yard was pretty enough, but the house had never satisfied Nell Cutter. As it had been added to year by year, it had taken upon itself many pleasant features. But, architecturally speaking, it was a nonentity. Nell had to wrap her dust cloth about the broom and then stand on a table in order to wipe the ceiling in one part of the house. In other rooms she could quite deftly kill a fly on the ceiling with the slapper by merely jumping up on her toes. But the thing which sustained her in the face of these discrepancies was the thought of the new house which they would one day build.

"What do we want a new house for?" Ed would ask. "This one is as convenient and comfortable as can be." That was the "Cutter" of it, thought Nell. "Convenient and comfortable!"

"And about as artistic as an old shoe," she would retort.

She accumulated a

perfect swarm of plan books. Never did an architect casually insert an advertisement in a magazine but that the name of Mrs. Edward E. Cutter, of Meadows, would promptly appear on his mailing list.

For a long time the array of house plans confused her. With knit brows she pored over them by the hour. "Ed," she would say, "I can't for the life of me make up my mind which is most pleasing: Early English, Colonial, or Modern Dutch."

Ed would wink at the children: "Then there's Modern Fiji-Islander and Early Eskimo."

She would ignore this. "But whatever else it has, it's going to have a lovely sun-parlor."

"What in thunder's a sun-parlor good for?" Ed would be frankly puzzled. "If you want to sit in the parlor, you're welcome to, and if you want to sit in the sun, there's loads of it in Meadows."

But the day came when she definitely

Nell showed them around. "How nice it is," Mrs. Johnson expressed herself. "So

chose it. It was Modern Colonial. The exterior in its rigid simplicity, the interior in its width of space, satisfied the very soul of her.

IT NOW becomes necessary to lead out, with a great clanking of chains, the Cutters' family skeleton and let the world look it over. Some families are born with skeletons already in their closets. Some achieve them. The Cutters' had been thrust upon them. It was nine years now since it had arrived in a perfect cataclysm of stunned surprise. Its name was Debt. Ed had an old friend. They had been boys together and room-mates at college. The friend had needed a bondsman for an estate of which he was made guardian. Ed had signed the bond—had signed it as readily and freely as he would have written his name in his friend's autograph album. Well—for trust in his fellow man, he had given his pound of flesh. For nine years now he had paid the price and the family had paid it with him. When the

friend's finances crashed, and the tampered guardianship money crashed with them, Ed had borrowed the whole, huge, sickening amount, and paid interest on it. "What's interest?" Josephine had asked once when she was smaller.

"It's an animal that eats the trimming off your dress and the paint off the house," Nell had retorted acridly. But Ed had explained it in child language. Ed Cutter was a good father.

It was true. Interest, so far as the Cutter family was concerned, was an omnivorous creature. It had eaten a new set of travel books and the overcoat which Ed needed. It had swallowed a vacation trip and a set of dining-room chairs. Once it would have taken Josephine's music lessons if Nell had not appeasingly thrown it the new dressing-table which she had planned to buy. And every year Ed gave his fattest fees, like fishes to a trained seal, to satisfy the appetite of the principal.

Nell was bitter about it. Ed's attitude

was more philosophical. "It's happened, and it's a terrible jolt. I could let it change my entire outlook on life. But, by George, it's not going to."

So back and forth unceasingly went Ed Cutter to his work, never wavering in energy or courage.

With the arrival of the debt, the hope for a new house was shattered into a thousand fragments. But never did Nell Cutter give up the thought of it. There were long periods when, forgetting her longing, she would sing about the old place, thrilled at the thought of repapering a bedroom or buying new curtains for the living-room. Then, like the breaking forth of an old cankerous disease, would come her bitterness and her desire.

Comes now the time when the Brisbanes moved to Meadows. Mrs. Tom Brisbane was a strainer. She strained at gnats and camels with equal avidity. She believed in putting her best foot forward; and if the other one had no shoe on it, at least the public would not know. She was of the type which would rather put its children to bed while their only suits of underclothes were being washed, than give up having a card party with a cut-glass pickle dish for a prize. But Mrs. Brisbane had wonderful taste, which was more than some of the good souls in Meadows possessed.

"You're the only one who understands my temperament," she confided to Nell. Later she said, "When we build, I'm going to show Meadows a *real* house. There isn't one here that is up to my ideal."

NELL looked about her. It was quite true. Across the street stood the Horners' old-fashioned upright-and-ell, with a picket fence of ancient cut. On the corner was Charlotte Gray-Cooper's cottage remodeled into a bungalow, like a made-over dress. Farther down stood the Ramseys' square house, white and shining, but stiff as a dry-goods box, with a porch across the front. Hitherto she had thought of them as so many homes. Now, with the eyes of the artistic Mrs. Brisbane, she saw them only as hodge-podge affairs, homely and unattractive.

And when Tom Brisbane came to Ed confidentially with a chance to get in on the ground floor of a good money-making proposition, she began to feel that the realization of her hope for a picturesque house might come true.

Ed went into the subject thoughtfully and painstakingly. "No," he decided. "It listens well, Nell. But it's a gamble, and therefore shaky."

Nell was so disappointed that it made her sharp: "You wouldn't pick up money you saw lying in the road."

"No," said Ed soberly, "I wouldn't . . . not if it didn't belong to me."

But the deal did not turn out to be shaky. The Brisbanes began to get dividends—big ones. That in itself made Nell Cutter cross about Ed's conservatism. But when the Brisbanes started their new house her heart was full. She shed tears of salt. It seemed so thoroughly the one thing worth-while.

From the time the foundation was in, Nell Cutter haunted the Brisbanes' building spot. When the studding partitioning off the rooms was in place, it dawned upon her: it *was* her house. No materialized dream, no crystallized vision was ever

comfortable and convenient!" The words had a familiar sound

At sight of Nell, she burst into hysterical tears and broken sentences.  
 "I never was so treated in my life. . . . I wish I was dead! . . . It's awful!"

more identical with her ideal than this. There it stood in all its potential promise; the dining-room to the left, the living-room to the right, the sun-parlor beyond, and in the center the wide, spacious hall, from which the stairs would sweep upward with beautiful proportions.

**TO** BE sure, there were scores of finer homes in Dale City, but for Meadows it was the acme of beauty. The last finishing touches were a small Colonial entrance porch, dwarf evergreens in dull antique jars on either side the door, and a dragon-head knocker, which Mrs. Brisbane said was copied from the Brisbane coat-of-arms. And who was there in Meadows to deny it?

As though fortune were not favoring the Brisbanes enough, just as the house was completed Mrs. Brisbane's uncle died

and left her some money. Some said it was about twenty thousand; others, with less energetic imaginations, believed it to be about half that sum. With it Mrs. Brisbane bought furnishings for the house. The things began coming from Dale City: softly-blended rugs, overstuffed tapestry-covered furniture, dainty reed things for the sun-parlor, brown mahogany for young Fred's room, and ivory for Mayme's.

The finished product was perfect. The Brisbanes gave a party. On the way home Nell talked of nothing else. "Yes, it's pretty fine, all right," Ed admitted. And the little green god made himself quite thoroughly at home . . . settled himself cozily in the heart of Nell Cutter.

It was a Saturday in October when Nell Cutter, having worked all day to get the old home shining, dressed in the late

afternoon and walked down-town to meet Ed. As she turned into the office, three men came out. Two were strangers. One was Tom Brisbane. In the inner office, she found Ed with a queer expression on his face.

"Well, Nellie, Brisbane's invested once too often. That last stock . . . those big dividends were paid out of other investors' money. Those men were two of his creditors. He'll have to sell the house. . . . Private sale if it goes soon, under the hammer, if later."

"Oh, Ed!" Nell managed. "The stock I wanted you to buy?" The news was like an avalanche crashing by, an avalanche which threw debris in her face but did not hit her. Then, as the dust cleared away and she felt herself safe, her thought was all about the house:

"Oh, Ed, can't we get it?"

Ed's face was (Continued on page 94)

# You Can't Live On Your Reputation

*By Edgar A. Guest*

**I**N ONE way or another each of us is seeking and striving to achieve that excellence of accomplishment which shall mark us with distinction. The emphasis is laid forcibly upon achievement.

"Once come home a winner and your fortune is made."

This is what was told to me by men of my profession when I was a struggling boy. It was repeated in various ways.

"Land your first article in a magazine, and anything you write thereafter will find a ready market."

"The first thousand dollars is the hardest to attain. Get that and fortune will follow with little effort."

"Win your first fight."

"Build your first house."

"Get your first book published."

"Paint your first picture."

"Do something well, and you will cease to worry."

It was the old familiar belief wherever the future was being discussed.

Get a reputation!

And I struggled to get one, believing that when it came to me there would be an end to work and trial and study and devotion to duty. No one, I believe, had said it out and out, in so many words, that I could settle back and live upon my reputation; but the inference was there, and I am sure that was the idea lurking in the back of my brain. One real success and I could quit.

But it isn't so! Reputation has been falsely advertised or grossly misrepresented. It is not an endowment, but an obligation. It is the most valuable asset which a man can possess, but it is not a lounge to lie back upon. A week-old reputation will take you nowhere. Uncared for and unnursed, it will die a speedy death and leave you sick at heart.

The first success has been fatal to many a promising youth. Every city is peopled with wrecks who once believed they had safely come to port. There is only one insurance for a reputation, and that is hard and ceaseless labor.

Napoleon said of the British that they never won anything except the last battle.

Germany is to-day a pitiful illustration of the fact that reputation wins no battles. The last failure wiped out a hundred victories. What was once a powerful nation is now a country in despair.

I try to have no illusions about myself.

I am here to play my little part in the game of life, and I am anxious that I shall play to the best of my ability. I think Time has taught me a little something about the game. The chief lesson I have learned is that yesterday's achievement will not do to-day's work. It may bring to me the job to do, but the performance of it must come from me.

Always, whenever I have been in-

## Beware of the Cheers of Yesterday

**"W**hen age has dulled the senses and weakened our strength we must drop out," says Mr. Guest. "Then if we drop out, after a full lifetime of good work done to the best of our ability and capacity, all is well. But to be forced out early in life by a little reputation, to let conceit and arrogance undermine the will to do our best, is utter folly."

"Yet that is what the cheers of yesterday will do—if you let them make a fool of you. He who listens to the voice of flattery is lost. One swallow does not make a summer, and one fine deed does not make success."

clined to grow proud and chesty over some past accomplishment, there has come along the humbling discovery that what I am to be depends not on what I have done but what I have still to do.

It came to me first when I was a young reporter on the Detroit "Free Press." A chance meeting with a friendly detective gave me an exclusive story. It was the first "big scoop" I ever turned in. It tickled me and it pleased my city editor.

"That was a great story you gave us yesterday," he said when I reported for duty the next day. "Fine work, Eddie. Keep it up!"

That little phrase "keep it up" didn't mean so much to me then, but I was later to learn that it was really the first and most important rule of the game.

I had arrived. I was a recognized reporter of ability. I had beaten older men in the profession. I had been praised by my editor and I was entitled to my little spree of conceit. Unconsciously I settled back to enjoy a few days of living on my reputation. Then life handed me a jolt.

I missed one of the big stories of the year. I know why I missed it, too, but I have never confessed it to anyone but myself until now. I neglected to visit one of the outlying police stations, according to custom and rule. It was my duty to go there at least once a day. I didn't go, because I was sure if anything worthwhile happened the officer would telephone to me. He knew me and my reputation.

"Say," said the city editor that noon, "where were you last night?"

"On the job," I replied.

"It doesn't look like it," he replied. "You fell down hopelessly on that big burglary story."

"What burglary story?"

He showed me the opposition paper, containing a front-page article of which I had not heard the slightest hint. My reputation had let me down. Three days before I had been filled with pride; to-day I was humbled and temporarily in disgrace.

But I had learned my lesson. No more sprees of conceit for me! I'd forget yesterday, no matter what happened, and face to-day's work as though I had no reputation. Since then I have always found it better to keep myself humble than have life come along and humble me. There is no place on any pay roll for a man who is living on his reputation. The man who has quit trying has quit producing.

An insurance friend of mine learned this lesson. He was young and ambitious and his friends were many. They gave him their fire insurance business and in this way helped him to become established. For a year or two he was alive and alert; watched very closely the renewal dates and made regular visits to his clients. Among the number was a manufacturer whose account was a large one.

For two years he obtained it all, without question. The third year he had a reputation, and with it the idea that that particular piece of business was his for all time. He no longer took time to keep in personal touch with his friends. He was using the telephone. He called the manufacturer one day and said:

"About those policies of yours, Harry: I suppose I shall renew them as usual."

"Yes," replied the manufacturer, "yes, that will be all right; but why haven't you dropped in lately?"

"Been tremendously busy. Anything in particular you want to see me about?"

(Continued on page 186)

# The Narrowest Escape I Ever Had

It was a thrilling experience in a leaky diving suit

By James B. Connolly

**T**HE most dangerous experience that ever came my way happened years ago when I was walking in a diver's suit on the bottom of the Savannah River, down in Georgia. I was under twenty at the time, and my regular work was an inside job with the United States Engineers Corps for the Southeast Atlantic Division.

One of the contracts for the removal of a wreck in the Savannah River had been let to a diver named Johnston, and the inspector on the job was an old friend of mine named Clayton. Clayton was a good, square kind of a fellow and well liked—an adventure seeker, who was always making something exciting turn up if nothing happened to come along of its own accord.

One afternoon, when I was in the engineer's office helping the head draftsman plot soundings, in blew Clayton. He was in wonderful form, and began enthusiastically:

"Do you want to know what I've been up to? Then I'll tell you, sure I will! I've just come three miles down-river from No. 5. Johnston's sunken wreck job."

That very morning, while Johnston had been laying off, he, Clayton, had gone down in the diving suit! He had stayed down twenty-nine minutes! "Twenty-nine minutes!" Clayton emphasized.

"Huh!" exclaimed the head draftsman, slewing around from his drawing board. "What's so wonderful about that? Doesn't Johnston stay down an hour, maybe longer if he wants to?"

"But how long did he stay down the first time he tried it?" growled Clayton. "He told me himself that 'most everybody going down the first time hurries right in and right out—nervous!'"

"Huh!" growled the draftsman, amiably, and Clayton responded with the same friendly sign.

The rest of that day Clayton kept on talking about the sunken wreck operations, and I made up my mind I was going down-river to have a look for myself, and maybe get a try at that diving suit. The next afternoon, Clayton and I both knocked off an hour early and

went down the river to wreck No. 5. When we got there Johnston was under water.

The plant for this job consisted of a little old schooner, the "Mary Jane," on which were living quarters for Johnston and his crew, and a clumsy old barge of an open boat which held the operating gear. This barge and the "Mary Jane" were lashed alongside each other.

Soon after our arrival we saw a negro in the barge begin to reel in the life line and air hose. By and by the metal helmet of a diving suit came breaking

"I've been three days on this job. Three more days, and I'll be blowing up wrecks myself, huh, Cap?"

"You'll probably be blowing up something," answered Johnston, who was then climbing up over the side of the "Mary Jane."

Just as Johnston disappeared into the cabin to clean up before going to the city, I called to him, "Mind, Captain, if I get into your suit and have a look at the wreck?"

Johnston paused in the cabin way. "Of course not. But could you come to-morrow or any other day, so I can stop to put you into it myself?"

"Oh, I can put him in," said Clayton.

Johnston eyed him: "Think you can all right?"

"I'd be a fine, intelligent *hombre* if I couldn't put a man in that suit by this time—after being down myself, too!"

Johnston liked Clayton, and a contractor is always glad to favor an inspector who is half-way decent to him on the work. Still, he scratched his head and eyed Clayton doubtfully: "Getting dark, don't you think?"

"Plenty time before dark yet." And without waiting for any further word, Clayton reached for the diving suit.

"All right," agreed Johnston. "But, Wash, you Wash"—this to the chief darky helper—"you keep an eye out that the life line and air pipe lead clear. No fouling—hear me?"

"Yes, suh—I looks out, suh."

Johnston disappeared into the cabin of the "Mary Jane."

"We'd better hurry," advised Clayton, and hurriedly I threw off my coat, vest, hat, collar, and tie, and slipped my feet into the legs and my arms into the sleeves, and pulled the collar of the diving suit around my neck as Clayton directed. I knew nothing of a diving suit; whatever Clayton said to do I did, both of us working fast.

While thus hurrying I was impressing one of the men from the office, Grundel, with the fact that he was to keep record of the time. I was to stay down longer than Clayton had stayed—more than twenty-nine minutes. And Grundel, getting out his watch and grinning,

## The Only Thing the Adventurer Asks When Facing Death

**"D**ANGEROUS? A close call? It certainly was," says Mr. Connolly. "I never again want to be face to face with death and have to depend on pure luck to come away with my life. Adventure? That's quite another thing. No man who likes adventure worries about the danger of it. The really great adventurers I have met have felt an exaltation on finding themselves facing death. All the adventurer asks is that he shall not die by a fluke—by some silly accident. Not even your adventurer wants to be put in a position such that, no matter what he does, he can do nothing to help himself. That is tough."

out of the river, and presently Johnston was standing on the diving ladder astern of the barge. It was the duty of the negro helper in the barge to unscrew the helmet from the diver's suit, but friend Clayton shooed the darky away and usurped that pleasure for himself.

As Johnston's head emerged from the suit, he drew in several breaths of fresh air and said he reckoned he had done enough for the day. Then he called a darky to help him off with his suit. Clayton, of course, had to help him off, too. He just naturally couldn't stand by and not mix in when there was anything to do.

answered, "I'll see that you bust his record! Telling us we're dead ones up in the office—huh! We'll show him!"

Wash, the ducky, started to help me into the suit, but Clayton shooed him away again, saying, "Remember what Captain Johnston said, Wash, about life line and air pipe? Well, that's your job. And you, Jeff, you stand by your air pump. Go away both of you, we got to hurry."

I was buckled into the diver's suit. "All right now, all but the helmet, and I don't pull that on till the last thing," said Clayton.

"Here—don't this thing go on somewhere?" This from Grundel, who had been given the lead belt to hold.

"Dog-gone, I 'most forgot that!" Clayton hooked on the lead belt, which made eighty pounds of lead I had on me.

Over the stern of the boat and onto the top rung of the ladder I stepped laboriously. "All ready for the helmet? It's no feather to hold up," said Clayton.

"What about signals?"

"Oh, yes. This rope here, that's your life line. One yank on the life line means that Wash is to pay it out a little faster. Two yanks means slower, and the air pipe—this hose; if you feel the air sort of crowding down on you inside the suit then you yank once and Jeff won't give you so much. If you find yourself gasping like you're not getting enough air, then you give two yanks and Jeff'll pump a little faster. All right now?"

"Suppose something goes wrong and I want to come up in a hurry?"

"Let's see. Say, Wash, what does Captain Johnston do when he wants to come up in a hurry?"

"Tree pulls, suh. Tree pow'ful pulls, very quick together, suh."

"All right now?"

"All right."

CLAYTON lowered the helmet onto my shoulders, screwed it to the metal neck-piece, gave the two resounding slaps on the helmet dome which meant that I could drop under any time then. The two slaps echoed like severe blows inside the helmet.

Through the little square of glass in the front of the helmet I could see that Jeff was already working the air pump and that Wash had life line and air pipe all ready to unreel. Grundel was staring hard at his watch. A group of people were looking curiously on from a nearby lumber wharf.

I let myself flop backward off the ladder, hoping that I did it like a regular diver, and catching a glimpse—twilight was shooting down—of the darkening sky as I flopped. I splashed into the water, and became immediately interested in the manner of my falling to the bottom

of the river. When I felt my feet touch bottom, I turned so as to face the wreck down-river.

My next thought was to look through the helmet glass to see what I could see. I could see very little, because the Savannah River is a muddy yellow. I doubt if I saw six inches from the helmet.

Clayton had explored the wreck when he went down, and of course I also wanted to explore the wreck, which was four hundred feet down-stream from the "Mary Jane," quite a little distance for a fellow to find his way straight. However, the feel of the river current ought to give me the general direction. It was ebb tide; the tide and natural flow of the river together made a strong current.

I started to step off down-river, and just then I heard a gurgling sound, which

that weight, added to the weight of the cumbrous diving suit, would hinder a man very much under water. Now I stepped out, and, lo and behold! it was all right. My feet came slowly but easily off the bottom of the river.

I went along with a sort of half-swimming and half-walking motion. Once when I gave myself an extra little push-up to hurry on, I felt myself sort of bounding up off the bottom. As I recall it now, my progress under water if reproduced by a motion camera would resemble the slow motion pictures of ball players and other athletes in action. There was no heavy work to it. The extra air space inside the suit offset the extra weight of the suit and all the metal which went with it. I ambled along delightedly. Twenty-nine minutes under?

It was nothing. Too bad it was almost twilight when I started down!

THERE I was, not yet a minute under water and already setting up for a diving expert! It was the gurgling noise again which probably brought me to. It had been there all the time coming from somewhere close to me. I revolved myself around, and then carefully reversed myself back, thinking of a possible fouling of the life line or air pipe. I reached up to feel them to make sure I had not fouled them by turning around.

And, as I raised my arms, the gurgling sound grew louder.

What was it? What could it be? I stopped to think it out. But no use; and not being able to discover what was wrong I began to wonder if this new experience was affecting my nervous system, causing me to imagine things. Conceit natural to a youngster would not allow me to believe that I was over-nervous.

For all my mental reassurance, uneasiness was certainly taking possession of me. There was something wrong. Why should a low, gurgling sound like that be heard above the noise of a rapid river current rushing by?

I walked slowly on, listening intently to the gurgling; and soon my hearing was not the only sense that told me something was wrong. I felt a chill inside my rubber suit, a damp chill. And Clayton had told me that it was nice and warm inside a diving suit, even on a cold winter's day.

But now I was not nice and warm. And—what? Yes! I wasn't even dry. I was damp—wet—very wet.

I tried to account for that. I could not. I was wet, and getting wetter; and how could that be—inside a diver's rubber suit?

I stood dead still for I do not know how long to settle that gurgling matter for good. . . . Then a louder gurgling than before. It was from a stream of (Continued on page 154)

James B. Connolly, writer of vigorous sea stories, was born in South Boston, Massachusetts. His life has been a succession of thrilling adventures. He won an Olympic championship in Athens, Greece, in 1896. He served with the Ninth Massachusetts Infantry in the Spanish-American War, distinguished himself at Santiago. After that war he spent a time with fishermen off the Grand Banks, and then went up into the Arctic regions with whalers. Next he is heard from in the tropics. He served an enlistment period in the U. S. Navy, and once when a passenger on a merchantman he was shipwrecked. The Mexican imbroglio in 1914 found him a correspondent in that country. He went out with our submarine chasers and destroyers in their quest for the German U-boats in 1917. In 1921 he went to Ireland to report the situation there. His home is in Boston.

puzzled me. Was that a minor sound from the river current? No, it couldn't be. But what was it? I gave it up. It was doubtless some little noise which had to do with being in a diving suit; besides, if I was to make that wreck before dark I'd better be getting along.

So I walked on; and that engaged all my faculties for a time. There was a twenty-pound lead sole to each foot, and a forty-pound belt of lead around my waist. Up above I had wondered if all

Every time the sound of the beating died low she ceased her work and invested him with a sternly steady eye. Sooner, rather than later, he felt that eye upon him and looked up. Instantly its message ignited him anew with blazing, raving rebellion against her

# They Never Grow Up

A story for fathers and sons

By Ceylon Hollingsworth

ILLUSTRATIONS BY PERC E. COWEN

IT WAS Friday night in the moonlight and at an ice-cream corner famed as a rendezvous for boys. Long vacation with its illimitable expanse of free and unexplored country was only two weeks away. At such time of year, a boy of thirteen like Saggy Borts is restless with the call of the horizon. The instinct to migrate over the rim and return to his savage state is in his blood like the measles, and breaks out at every pore. The civilizing labors of the preceding fall, winter, and spring seem to have been wasted upon him. He is misunderstood at every turn. Trouble shoots at him out of the blue sky, misfortune blows up under his feet, and he is living the happiest days of his life, if old fellows from eighteen to eighty can be believed.

And Saggy was exemplifying these truths, and also several others equally eternal. But he knew nothing about it. He only knew that a pedestrian, on hail, had just hideously announced that it was ten o'clock! Stunned by amazement and riddled with terror at the disastrous flight of time, he leaped away in a breathless race for home.

When he reached the wide white walk that led up to his dad's veranda and the courts of justice he halted face to face with his crimes and, hiding himself in the deep moon shadow of the Norway maples that bordered the sidewalk, stared in dread at the lamp shades that glowed through the front down-stairs windows.

Suddenly he shrank behind a tree trunk. The quick steps of some man were hastening down the street. Soon the man passed through a patch of moonlight, a stout youngish figure with a forbidding swing and energy in arms and legs—his dad! He was bareheaded like his son, a lock of thick sandy hair flopping over his forehead. It was a hot night. His collar was off, his shirt turned in at the neck, his sleeves rolled up. By the sound he was in his slippers. But, worst of all, Tippy, Saggy's Airedale, which had wearied of the night life and deserted the corner an hour ago, was trotting well ahead of him.

"Gwin the house! Gwan!" ordered Saggy in a furious whisper, giving the dog a vehement push. Tippy had trotted straight to him. The next moment his dad charged straight up to him also, and jerked him across the sidewalk and into the moonlight.

"What were you doing in there?" demanded his dad angrily. "This is a pretty time of night to show up! It was just six-thirty when you went down to Hick's to plan for that fishing trip, and your orders were to stay but half an hour, or die."

"Aw-w, Da-ad, I didn't know it was s'late—honest! I started home in time, but we had to see Rick Evans, 'bout to-morrow and we found him over at the corner. We got to talkin', and—"

"Ah, you 'got to talkin' '!" snorted his father, shaking him east and west in lieu of the language which had failed. "Here you've got your mother all worked up and ready to fly to pieces, and she's kept me up and out hunting you when I am bone-tired and wanted to go to bed two hours ago. Shut up!"

"But, Da-ad," he whimpered, "can't y'understand how a fella'll get all in-t'rested to death about goin' fishin', and not know how the time goes, talkin'? You like to go fishin', so y'do."

"Shut up, I tell you!" Mr. Borts aided him through another dance movement. "I can't understand—after that rank disobedience of your mother's orders about coming straight from school this afternoon and the panning she gave you—I can't! And yet with *that* burning your ears, you walk right out and do it again. No wonder she's almost crazy about what you're headed for. You've got me guessing, myself."

"I ain't headed nowhere, Da-ad," he blubbered pleadingly. "Can't y'understand how I never thought of doin' it a-purpose? I—I—you know how you sit up nights with Mr. Artsinger talkin' about that big game hunt this fall. Ow-w! Oh, Dad! I—Ow-w! Don't! Don't! Ow-w!"

To a continuance of such imploring music his dad rushed him up the walk and into the house, whence, after some dramatic moments of waiting, came the muffled yet full, rich sounds of the real thing in such cases. Then all subsided into silence. And a little later the lights went out and the premises were ready for burglars.

BUT not all were in bed. Up in a rear bedroom, Saggy, tear-stained and sniffling, was kneeling in his pajamas at the window and brooding over the moonlight on the tomato vines, on the slate roofs, on the trees, brooding over every object and floating away two miles up the river to the wilderness of the Kinsman riffles. Up there was boyhood's heaven. Deep woods on either bank, willow jungles, reaches of still brown water, a tongue of oily rapids where the stony bottom cropped to the surface; and then the riffles, hundreds of feet of them, and then the still brown water again and the rocks, on and on around another bend, and on and on into new glories forever!

And these, the happiest hunting and fishing grounds outside of dreams, were not to know him to-morrow. That had been the sentence imposed by his mother. More. He had not only to stay at home, but she had commissioned him to beat the hall rug in time for the company that was coming for luncheon. He was paying too many prices. His heart was broken in two, and each piece was hot with rebellion against such injustice.

He kneeled there for a long time until he found his arm and head on the sill with the land of Nod swimming around him. Then he crawled into bed. And as he did so, a shining hope, like an angel, suddenly bent over him and nestled him in its arms and sank with him into the deeps of sleep. Mebbe it would rain to-morrow.

But when his mother called him in the morning and he sat up and gazed at the outdoors, he saw there the most wonderful day that had ever been made. Instantly he sank like lead into the depths of despair. But a couple of hours later he discovered that despair has heights as well as depths, and ascended into their midst, which, in this instance, was located on a nine by twelve rug spread on the back lawn a rod from the kitchen porch. He was kneeling on the rug, and in erratic ebb and flow of energy swatting it with a kite-shaped utensil of wire.

HIS strong-armed, dark-haired mother sat on the porch steps, her pleasantly resolute and housewifely expression bent over a yellow bowl of pitted cherries in her lap. A pan of the unstemmed fruit was beside her. Every time the sound of the beating died low she ceased her work and invested him with a sternly steady eye. Sooner, rather than later, he felt that eye upon him and looked up. Instantly its message ignited him anew with blazing, raving rebellion against her, everybody, everything, and he snarled down at the rug and tried to destroy it with a passionate shower of whacks.

About an hour later, Mr. Borts, in his little private office at the Borts' General Insurance Agency, interrupted conversation with his man Graham, who worked the north part of the county, and began listening at the telephone. In a moment his good-natured business front exchanged itself for an astounded frown that almost closed one of the blue eyes. His jaw hung. He listened, borne helplessly along on some startling torrent of news and mind which Mr. Graham could hear pouring in the jangle of some woman's voice.

"Well, confound him!" gasped Mr. Borts, when the torrent had suddenly ceased and given him his first opening. "I've got to settle that kid for good. I'll be loose here in half an hour and I'm going up after him. What? Twelve-thirty sharp, and you'll skin me if I'm not there? Aw, I'll be back in time for that luncheon. The folks'll be late anyway. All women, and a forty-mile drive—they'll have motor trouble.... No, no! It's got to be stopped, or there'll be no living with him."

He clapped the receiver into its hook and glared at Graham. "What do you know about that boy of mine!" he exclaimed. "Believe me, he's got me worried. He's getting absolutely beyond us. Yesterday noon his mother ordered him

"Help! Help!" he cried frantically. "I can't hold him much longer." The turtle in its struggles came to the surface for a second

to come straight home from school to do some errands." And he continued through a narrative of everything, to the opening of the rug situation. "A caller came and she went in. Left the cherries on the porch. Back she comes in ten minutes and, by Gad, if he hadn't eaten almost all of them—the pitted ones. He begged as usual, and said he only meant to take a taste. She boxed him good and locked him up in the furnace-room and went up to her room for a good cry over him. And five minutes ago," he concluded with a ring of proud dismay, "darned if he didn't break jail—pried the window open with an ax—and skedaddled, he and the

dog, presumably for the riffles where the boys are fishing."

"Well! Huh!" ejaculated Graham, sympathetically blank and solemn, yet ambiguous. He was long, lean, and gray-eyed. "Them riffles are a terror on boys. When I was a kid I played hooky many a time to go fishin' up there. More'n one tannin' I got for it, too."

"WELL, believe me, that's what he'll get soon as I lay hands on him. I'm going up there soon as we fix up these policies, and get him. Want to go along? We'll be back around noon."

"I don't mind," grinned Graham. And

they engrossed themselves in the business in hand. But it was several times half an hour before they had finished and were entering Borts's car.

Down where the riffles had ceased their troubling and the high old woods and the lane of sky had a chance to reflect themselves, Saggy and four other boys stood advanced like skirmishers across the middle of the little river. With a dime gummed up with cherry juice Saggy had leased an extra pole from Hicky. A green minnow bucket attached to Hicky's belt was tugging for escape down the river. Corks were riding among the bubbles and flecks of foam.

On the shingly strip of the south bank in the deep shade, a camp fire was burning. Tippy was appearing from time to time as he hunted in the woods. Saggy's conscience, which had belabored him at every step, had grown tired of standing around with its finger in its mouth and had lain down in the woods for a doze. All was peace and the love of Nature. And the Spirit of America, in his moccasins, leggins, and eagle feathers, was standing somewhere close by, his arms outstretched in blessing.

"Giminykrauts! Who's those men?"

Hicky, happening to glance up the river, cried this out in alarm and remained transfixed in utter dejection. At all times the arrival of grown-ups was a moaning blight, but, now, with a fugitive from justice in their midst, the appearance of men might forecast disaster. At the first note of this tocin,

Nobody was able to give him any advice. The corks were forgotten.

"Oh, lordy! . . . Here! Take your pole!" Saggy, who was standing next to him, thrust the rod into Hicky's free hand. "Tell him—tell him—y'ain't seen me—tell him I've gone home—tell him I—"

"Aw, there your darn dog's seen him," hissed Hicky. "Look at him runnin' for him. He's give you away. Skip into the woods and hide, why don't yuh?"

"Aw," cried one of the boys, "how can he run 'thout his dad seein' him, and then his dad'll give it to us."

SAGGY was in a deplorable panic. His face was white. Even his freckles had faded. His eyes were round and wild. He turned this way and that. No refugel. And then, governed by the instinct of the hunted animal, he took to the one cover at hand. He crouched down in the water up to his nose.

"Well, y'can stand there between me and him till I sneak ashore and hide, can't yuh?" And while he was yet speaking Saggy began walking on his knees down-stream.

"Aw, y'poor lun'tic," suddenly cried Hicky, regardless of whether or not the men heard him, "what y'goin' down-river for? That ain't for shore. You're scarin' the fish. Hain't you got no sense? Look at'm! Look at'm!" The water rapidly deepening, Saggy had begun to swim. Walking seemed too slow. "Look out, y'poor nut," now howled Hicky, "you're goin' right into the corks and lines. Hey-y-y!"

"Aw, quit yellin' and givin' me away!" came in an angry splutter from Saggy.

"Well, keep out them lines, then."

Saggy let his feet touch bottom and stood a moment, his head whirling with bewilderment. Since the boys had bunched, their fishing tackle had done likewise. The five corks were riding the ripples not six feet ahead of him, one of the wet lines blowing against his neck.

"Gee," cried one of the boys in a palsied undertone, "here come the men runnin'!"

This news finished Saggy's indecision. He emitted a dying cry, hurled himself forward and swam down-stream with frantic breast strokes. His face was ghastly, his eyes wholly unintelligent. In his over-haste his feet came to the surface and churned the water like a stern-wheeler.

THE boys immediately broke into shouts of remonstrance and, scattering as best they could, tried to save their lines. They jerked them out of the water and threw them high overhead—all but one. The hook caught in the shoulder of Saggy's shirt and one of Hicky's reels began to unwind steadily.

"Hey, hey!" howled Hicky, "You're takin' out my line! Unhook yourself, unhook yourself! Dog-gone yuh!"

Saggy's conscience bounded wide awake out of the woods and leaped astride his neck, where it began to pound him over the head and howl exultantly, "Wha'd I tell yuh? Wha'd I tell yuh?"

There was a rigorous silence, each boy twisting about and staring up-stream beyond the ripples, where two men were picking their way along the stony bank.

"Oh-o, Lordy Moses," faltered Saggy in dizzy terror, "it's my dad—what'll I do? Gee, he'll kill me!"

"Stand in front of me, can't yuh? Hey?" he wailed in stormy reproach and supplication.

Animated by the instinct of the herd which protects the helpless the boys with a splashing rush crowded into a screen and stood staring down at him.

"Aw, what good'll that do?" expostulated Hicky. "We can't stand here and hide yuh till your dad's gone. He'll ketch yuh, sure as snakes, and then he'll give it to us for hidin' yuh."

But Saggy was now as little open to the influence of language and eloquence as any other land animal that has taken to water in its last desperate effort to escape men and dogs. To him, the cries and shoutings were only the deadly din of hot pursuit and but confused and crazed him the more. He plowed and churned wildly on, gasping, whimpering, with no thought, and less care, for other people's hooks.

And a few more strokes brought him literally to the end of his string. Hicky's hundred feet of line were all out. Every boy was yelling (Continued on page 178)

# Keep Your Promises— And Make Others Keep Theirs!

Frank C. Letts, a great organizer, declares that one of the best ways of making enemies is to be lax and indefinite in your dealings, whether in business or social matters—Remember that it takes a little backbone to be firm, but no one likes a jellyfish!—Lessons learned in the course of a remarkable business career, which apply to any phase of life

*By F. C. Letts*

President, Western Grocer Company

Photo by H. B. H. H.

Frank C. Letts, one of the country's largest wholesale grocers, was born sixty-one years ago at Magnolia, Illinois. His early training and experience were of the sternest variety. At the age of twelve, when he was going to school and working in a general store, his "office hours" were from 4 A. M. to 10 P. M. Mr. Letts went into the wholesale grocery business when he was just past twenty. To-day he is president of the National Grocer Company of Michigan and of the Western Grocer Company, and chairman of the Board of Directors of the Durand-McNeil-Horner Company, of Chicago. These companies have numerous branches throughout the Middle West and the Far West. Mr. Letts is noted for his ability as an organizer and the precision which characterizes his business dealings. During the war he served in Washington as head of the department of supplies for the International Red Cross

**N**OT long after I went into business for myself I had as a customer a farmer whom I had known for several years. He had made a success of farming; but he wanted to give his children a better education than they could get in the country. So he sold his farm, moved to town, and opened a retail store. I sold him his first stock.

Things went well with him for a while. At first his bills with us were discounted, but presently he did not meet them until maturity. Finally, he fell behind and we had to carry him.

I did not worry about that. The man was well-fixed, and we were selling him the bulk of his merchandise. But there came a crop failure. Our merchant was in a small town where he depended largely upon county trade. He failed.

When I went to see him—he owed us a lot of money—the first thing he said to me was:

"Frank Letts, you are the cause of my failure!"

"Why do you say that, Chris?" I asked in astonishment. "We've certainly been good to you, haven't we?"

"That is just the trouble," he replied. "I believed everybody was honest. I did business on that basis, trusting everybody. *You* did not force me to pay my bills, so I did not insist upon my customers paying *me*. Since the crop failure many tenants who owed me large bills have moved away. Others can't pay a cent. I'm getting along in years, and I'm bankrupt. I'll never forgive you for not teaching me proper business methods by forcing me to pay your bills when they came due."

That happened a good many years ago. It taught me a lesson which I have since come to regard as of fundamental importance—one which I have tried to apply persistently in business, and which applies to much besides business. That lesson is this: One of the best ways of serving your friends and others with whom you come in contact is to hold them to strict account for fulfilling their obligations.

Few things harm a man more than the reputation, if he deserves it, of being *easy*, and of not insisting upon the strict observance of obligations owed to him. You are apt to lose the respect of people

who think you are easy. They will acquire the habit of imposing on you in little things. Then, when important transactions come along, they will not want to deal with you at all. People realize, even if they do not often analyze the reason, that a man who is easy with others is likely to be easy with himself. The feeling is sure to spread that the easy-going man is not entirely trustworthy.

When I was twelve years old our family moved from a farm to Afton, Iowa, where my father ran a hotel. Besides going to high school, I held two jobs, one with my father and the other with a Mr. Allen, who ran a general country store. My work began at four o'clock in the morning, and I think I was busier in those days than I have ever been since.

I always went with a bus from the hotel to meet the early morning train. I was what they called a "train runner," and my job was to solicit traveling men to stop at our hotel. There was one other train, at ten o'clock at night, and I met that, too.

For doing this work my father gave me my board and a room, and I believe I earned it!

By five A. M. I was expected to be at Mr. Allen's store, where I swept, dusted, and got everything ready for the day's business. At six-thirty another clerk came on, and I was free to go to breakfast; but I had to get back between seven and seven-thirty, remaining on duty until eight-fifty, when I left for school.

AT THE noon hour, I went straight from school to the store for thirty minutes, relieving a clerk while he went to lunch. When he returned, I went to lunch, but I had to finish eating and be back at school by one o'clock.

When school was dismissed for the day, at four o'clock, I immediately went back to the store, where I weighed in butter, counted eggs, waited on customers, and performed many other duties. At six o'clock I had a half-hour for supper, after which I returned and worked until nine-thirty, when the store closed. On Saturdays I worked all day in the store. For these duties, Mr. Allen paid me ten dollars a month!

I do not regret that busy experience. On the contrary, I am inclined to pity any man who has not had a similar chance to do hard work while he was young. At this time, too, I had the first experience which showed me that a reputation for being easy is a very unenviable one to have.

My employer, though a good business man, was a hard taskmaster. He was paying me ten dollars a month, when another merchant offered to pay me twenty-five dollars if I would do the same work for him. I was eager to accept the offer, but Father argued against it.

"No!" he said emphatically, "you ought not to change jobs. Allen is a good

business man and he will teach you the fundamentals. The other fellow is a slipshod, easy-going chap. He won't teach you anything."

I have always felt deeply grateful for my father's sound judgment then. What I learned under Mr. Allen I certainly learned thoroughly. The training he gave me has helped me all my life, and any easy-going habits I may have acquired cannot be charged to him.

When I was eighteen years old I happened to see in one of the Chicago newspapers that A. T. Stewart and Company of New York City were opening a branch wholesale dry-goods house in Chicago. As I wanted to learn something about larger business, I prevailed on a stock-shipping friend to let me go to Chicago with a couple of his cars of cattle. On

uncle's surprise, I received a letter from Mr. Walker. He told me I was to go to work in the dress-goods department at twenty-five dollars a month.

I was elated. I arranged to board with my uncle and aunt for ten dollars a month. That left me fifteen dollars for car fare, luncheons, and clothes. Before the year was out, I was advanced to what I regarded as the munificent salary of fifty dollars a month.

One of our regular customers came from Iowa. His name was Jordan. He and I soon got acquainted and he fell into the habit of always asking me to wait on him. One day Mr. Jordan said to me:

"Frank, how would you like to go into business in Iowa?"

It was an offhand question. I replied, none too seriously:

"Well, I'm pretty young, Mr. Jordan. But, of course, I'm anxious to better my condition and succeed. If you can help me, I'll be delighted."

I thought he only meant to flatter me. But to my great surprise, some time later, I received a telegram from him. He said he had decided to put me in business in Marshalltown, Iowa. I was to meet him at his headquarters in Ottumwa.

THIS was very sudden. I went to Mr. Walker with the telegram and asked his advice.

"Don't go, Frank," he said. "I know the Jordans. They are good people. But you'll do better to stay where you are. You are bright, energetic, and a hard worker. Some day you'll have a good position here."

"How good?" I asked. I was curious.

"Some day," he replied, "you'll probably be getting five thousand dollars a year!"

That was a poser! Five thousand dollars sounded to me then like all the money in the world. I thought surely I had better stay, if my prospects were as good as all that, and I partially decided to do so. But first I thought I would consult the general salesman, who had had a lot of experience, and who handled the Jordan business. When he saw the telegram he said:

"You take the Jordan offer!"

Then he added some remarks which I never forgot, for the reason that I later found them to contain a great element of truth.

"When you are in business for yourself," he said, "you'll find it different from being on a salary. You won't know just what you are making. At the end of the year, when the profit is shown, you will have the money saved."

Upon that salesman's advice I accepted Mr. Jordan's offer. When I got to Marshalltown, Mr. Jordan showed me the room he had rented to house our dry-goods stock, and said:

"The name of the concern will be Jordan and Letts!"

Then he went (Continued on page 112)

## Are You Easy to Borrow From?

"WE ALL know people who are willing, upon almost any occasion, to borrow a few dollars, promising to return it in a few days," says Mr. Letts. "Among these easy borrowers, how many are equally willing to 'forget' the loan!"

"Do you think for one minute that such a borrower esteems the lender more highly if the latter fails to ask for the return of these easy lendings? I do not think so! The borrower sets down the lender as *easy*, and he will impose upon him again in the same way at the first opportunity. There is not much difference between holding a man *easy* and holding him *in contempt*."

arriving there, I discovered that I was not the only one who wanted a job with the new concern. I stood in line for a whole half-day before I could even make my application!

Mr. Walker was the manager and the man who did the hiring. When my turn came he asked me what I could do.

"I'm willing," I replied, "to tackle anything."

He asked me something about my experience. I gave him my name and address, and he said in parting that he liked the way I talked.

"You'll probably hear from me again," was the only promise he made.

I had stopped overnight with an uncle who lived on the west side of the city. When I went back to his house I told him I was sure I was going to get a position. He laughed.

"Don't think it!" he said. "Those people have hundreds of applications for every position. There are dozens of city boys whose fathers have influence. They are the ones who'll get the jobs. A country boy like you has no chance!"

I had my own opinion as to that, but kept it to myself. Two days later, to my

"Helen, I gave you up years ago, because I felt I could bring you nothing but shame. I must give you up again for the same reason"

"Thank heaven for lawyers! I'd never have thought myself of getting something on you, Stephen"

# Stella Dallas

The story of a great love

## Synopsis of Previous Instalments

THIS is the story of Stella and Stephen Dallas, a mismatched pair, and their lovely daughter, Laurel. Stephen, of fine old family, was torn from his postgraduate work by the suicide of his father, who had used trust funds in his charge. Stephen cut himself off from all former associations, and got a job in the factory at Milhampton. In his new character he gradually came into affectionate relations with the pretty and vulgar daughter of a workman, and married her. He soon found out his mistake. Later a daughter was born. Stephen threw himself into his work, advanced, studied law nights, and got into the legal department. He was taken up by his superiors, and for a time the pair kept up social relations with the best people in town. Finally, when the daughter, Laurel, was about six years old, Stephen had a chance to enter a law firm in New York. After returning a few times he wrote Stella that he had made up his mind that their marriage was a mistake, and that he would come no more. He said he would provide her an ample income.

As Laurel grew up, she visited her father yearly. They were devoted comrades, similar in tastes and in temperament. On one of these visits Laurel is left for a week with Mrs. Morrison, a charming widow whom Stephen had loved in early life. To her and her three boys he now gave a true and helpful friendship.

It was at this time that Mrs. Dallas met, at a cheap seaside resort, a former riding master of Milhampton, with whom she had had a vulgar flirtation. They were seen together by some Milhampton people under circumstances that were innocent enough, but suggested a scandalous intimacy. The spread of this story cut off the last social connections of Stella Dallas and her daughter, which were already much weakened. Laurel, who was the apple of her mother's eye, was snubbed by her girl friends.

After Laurel returned from the visit referred to, Stella went into Boston to see a New York lawyer, who had asked her to call at a certain office about a possible divorce. The lawyer suggested that she could secure a divorce quietly on the grounds of desertion. She refused. Then he hinted that Stephen could readily get one because of her conduct. Gradually the meaning of this dawned on Stella. She rose to fiery indignation, called the lawyer a nasty-minded man, and rushed away, leaving him confounded, but realizing her innocence.

---

WHEN Stephen Dallas started proceedings for a divorce, he was unaware of the scandal about Stella, spreading through Milhampton like a creeping grass-fire over dry hills in spring. It was his lawyer, Morley Smith, who first smelled the smoke of that fire. Myra Holland had started it after seeing Stella with Alfred Munn at Beaver's Beach.

That which spurred Stephen to action was as far removed from Beaver's Beach as were the stars. It was a look in Helen Morrison's eyes—a dear, precious, well-remembered look, a look that had not changed in all the years that lay between Stephen and his young manhood.

It carried him back across those years, to the time when he was a boy—full of promise, full of pride and self-confidence, the only son of Stephen Dallas, honored citizen of Reddington—to the time when Helen Morrison was a girl—beautiful, exquisite, the only daughter of another honored citizen of Reddington, Judge Frederick Dane.

The boy and the girl had known each other as children. Then their years at college and at boarding school had separated them. But they had met again, as

young prince and princess, at the ball Judge Dane gave for the coming out of his daughter. And it was the night after this ball that Stephen first saw, shining in Helen Dane's eyes, the starry look which years later he saw again in the eyes of Helen Morrison.

They had sat opposite each other, that long-ago evening, in Judge Dane's big, formal drawing-room and discussed such impersonal subjects as football and the boat race and the plays they had seen in New York. Helen had carried on conversations of the same sort with many a young man before, but never had her hands been cold and her face hot, as they were now with the sense of Stephen's nearness. The next day he sent her violets. There was no card, no message; but she knew from whom they came! He too, then, had been aware!

After that the world took on new interest and significance for Helen Dane. The very day after that call, Stephen had gone back to his law school in the East. But there were his letters and hers. They were as impersonal as the talk between them had been; but Helen understood. At least, she *thought* she understood. She knew that Stephen had still to spend a whole year and a half at the law school

before he could begin his career, but she liked prolonging the sweet adventure. She was sure it could end in but one way.

THEN came the event which shattered Stephen's world—his father's tragic suicide, which left his son to wear a tarnished name. When that awful thing happened, Helen's love for Stephen became a blinding desire to help and to comfort him. Her own father had died a few months before. She was alone in the world. If Stephen had need of her, she had need of him, too. She would tell him so, when his long, torturing journey home was over and he came to her, as she was sure he would. "But he did not come! Not even when, convinced that he was waiting for a sign from her, she left her card for him with a penciled message: "Please come over to-night." She already had sent him a note of sympathy, written at the first possible moment. But it was not until three weeks later that she received any word from him whatsoever.

In a formal, punctilious letter, he thanked her for her note and for asking him to call. He appreciated her generosity in offering to see him, but it was painful for him to talk to any of his friends. He had left Reddington forever, he said. He was going as far away as he could—possibly to Australia. He was glad he had formed no business alliances. He was glad their friendship was only in its infancy. He was thankful his father's act could cast no shadow on anyone outside his immediate family.

It was a letter written in the first bitterness, when youth suddenly finds its world in ruins. But to Helen Dane it meant but one thing: She read it until every word was graven on her heart. Then she put it away—and, with it, her belief that Stephen Dallas had loved her. She did not attempt to recall him. One cannot pursue that which does not exist. To him, she told herself, their relation had been only a "friendship in its infancy." She was just a girl he had fancied for a season. And so she, too, faced a world in ruins. A few months later, Helen Dane became Helen Morrison.

SHE had known Cornelius Morrison since her childhood. As her father's friend, he occasionally spent a night at Judge Dane's. And when the young girl was sent to a boarding-school in New York nothing was more natural than that her father should ask his old friend to look her up now and then, to see if she were happy among strangers.

This was the first time in all her

In spite of the social position of his family in New York, Cornelius Morrison always had been shy with women. Helen and her young boarding-school friends were an entirely new adventure to him. He became a sort of fairy godfather to them; and, to him, Helen herself became a sort of fairy princess.

At first, he believed he was fond of her as he might have been fond of a younger sister. Later, he believed he was fond of her as he might have been fond of a daughter. Then, suddenly, Cornelius Morrison knew that this was not true. He knew that he loved Helen Dane!

Loved her as a man loves the woman he wants to make his wife. And she was nineteen—and he was fifty-two!

**A**FEW weeks after he came to this realization he started for India. Three years went by before he returned. During his absence Judge Dane had died. And partly to pay respect to his old friend's memory, partly to see once more the girl he still loved, Cornelius Morrison went to Reddington.

He found a different Helen Dane from the happy girl he had known before. To him the explanation lay in the loss of her

father, whose death must have cut deep. He knew of no other cause for the change that had come over her. As he sat opposite her at dinner, she seemed to him like an abandoned kitten in a great empty house with only paid caretakers to see that she was fed.

"Helen," he said to her, "I believe you are lonely here."

Calmly, with no tears, with no emotion in her voice—it might have been a woman of forty who spoke—she replied: "I *am* lonely, Mr. Morrison. I wish I could leave Reddington forever. There's absolutely nothing to keep me here now."

life she had ever been one of a crowd

A wave of tenderness swept over Cornelius Morrison. A wild, delirious hope sprang alive in his heart. Could it be that he had anything to offer her that she wanted? He stayed on in Reddington for a week before he asked her that same question.

**I**N THE months that had followed Stephen's abrupt disappearance, there had been only one small light to relieve the darkness of Helen Dale's life. One of her aunts had a little girl, scarcely more than a baby, who loved to clamber into Helen's arms and to cuddle there as contentedly

as a kitten in the sun. It was with the thought of a little girl of her own, clambering into her arms and smiling up at her, that Helen gave her answer to the question Cornelius Morrison asked her. They were married a few weeks later.

Although Cornelius Morrison was always aware that he was not the perfect mate for Helen, and Helen observed her marriage with wide-open and seeing eyes, they each did much to enrich and beautify the life of the other. Not all happy marriages are made in heaven. Helen discovered. Some are the result of wise human effort and long, steady adaptation,

Cornelius Morrison was thirty years older than Helen. He was never free from the fear that some day a younger man, a more appropriate comrade for his wife, might supplant him in her affections. If a younger man devoted an evening to Helen, if she seemed to respond to his attentions with interest and vivacity, a deep melancholy would take possession of Cornelius Morrison—unreasonable perhaps, but uncontrollable and terribly painful.

Helen needed no explanation; through her intuition she saw, as clearly as through a microscope, the (Continued on page 66)

# The Day Always Comes— To Those Who Hang On Tight

Some extraordinary personal experiences that prove this truth

*By James Logan*

General Manager, United States Envelope Company

SOME sixty years ago—I was just past ten—I caught my arm in the machine at which I was working in a woolen mill. The arm broke in three places and my hand was all but torn off. Everyone thought I was a most unlucky youngster; I thought so myself. All the while I was growing up my left arm was weak. It was not strong enough to permit me to become a weaver; a weaver throws the shuttle with the right hand and pulls up the lathe with the left. My handicap forced me to do girl's work in the mill. Of course I could not keep on doing girl's work. And so I got out of the mill. That broken arm was really a well-disguised piece of luck, for it is hard to get out of the rut of a mill in time.

I believe there is a certain something, perhaps a sequence of happenings, which, for want of a better name, we call luck. But the "luck" is not more than a start, a jolt. The luck that counts comes from hard work. For instance, I got into the envelope business by what some might call luck. The firm I was then working for failed; the senior member asked a loan from a man who was then the leading envelope manufacturer of the country. I made up the statement of condition of the failed concern. The manufacturer liked it so much that he proposed I go to work for him. I had made the statement as well as I knew how. And there is no luck in a man, who is doing his best, attracting attention to himself. My Scotch disposition makes me unwilling to trust anything to luck until I have established control over everything that can be controlled. For trusting too much to luck often engenders bitterness when failure seems, without any reason at all, to follow failure.

When one does what he is doing as well as he knows how, he is getting ready to be lucky.

None of the members of our family was annoyed by being born with a silver spoon in his mouth. Logans have in the main

always been poor but respectable. They do lay claim to ancient lineage, and might well write of their history after the fashion of another Scotch family:

The Logan family is a vera, vera auld Scotch family.

The line rins away back into antiquity, we dinna ken hoo far back it rins, but it's a lang, lang way back, and the history o' the Logan family is recorded in five volumes, an'

And, in the Scotch fashion, the men would propound what they called "propositions" to argue, and altogether they picked up a surprising amount of information, and all of them learned reams and reams of poetry by heart. My father knew "Childe Harold" so well that you could start him anywhere in it and he would pick up the connection and go right on to the end of the poem.

My eldest brother was an explorer through Central and South America, Cuba, and Mexico, for a lumber company. In all his wanderings through the jungles he carried with him just two books, a Bible and a dictionary. I remember he told me that those were the only books that a man could never get tired reading. He could repeat much of the Bible from memory, and there were few words in the language that he could not spell and define. And he, too, had started to work before he was ten. But that is getting ahead of the story.

The power loom came into Scotland and the jobs for hand weavers left. My father had no work—and a wife and four children to provide for. David, the eldest, was twelve. I was the youngest, three months. He knew of only one thing to do—go to America, the land of promise.

He managed to borrow the money, and on the eighth of August, 1852, our ship slipped down the Clyde. The voyage took seven weeks, all but two days. In those days the ship gave only passage. The emigrants had to bring their bedding and food.

Landing at New York, we took another steamer for Norwich, Connecticut, and lodged with my father's brother-in-law. "They did everything for us that could be thought of, and I do assure you," my father wrote in a letter, "we had much need of it as we had all lost a good deal of flesh by the way. Even little James left Scotland with two chins, but when we came to New York he had lost one of them and a bit of the other."

My father got a place cleaning locomotives.

## Where Logan Got His Real Start

"IT WAS from my job in a book store that I got my real start," says Mr. Logan, "for after I had been there a while this thought struck me: 'I can keep books all my life, and I shall never get very far. A man can learn to keep books in about three months, so there will always be plenty of bookkeepers. I had better try to learn something that is not so easy.'"

"I asked the owner if I could spend half of my time out in the store, selling. I did not ask for more pay—only for more work. The head clerk kicked, but the owner backed me up. A little later I asked the owner to let me go out to sell books and office supplies one week in every three. That was a new idea. They had always waited for the trade to come to them. I proved to be a good salesman. I had two positions offered to me in banks; but I said no. The jobs were genteel but too easy, too little to do, with correspondingly low pay. I wanted a harder job with more pay, and I eventually got it."

about the middle of the third volume in a marginal note we read:

"About this time the world was created."

My father was a hand-loom weaver in Scotland. In those days a boy who was not working by the time he was ten was considered to be in a state of sinful idleness, for there was not much chance for education. My father worked in a little six-loom shop. The village schoolmaster used to come in and read books and newspapers aloud to the men as they worked.

tives in the Worcester terminal of the Norwich and Worcester railroad. The job paid him \$5.74 a week. My brother David found work in a cotton mill from 5 A. M. to 7 P. M. at \$1.24 a week, which gave a total family income of \$6.98 a week, which income so impressed my father that in the letter I quoted from he wrote:

"We have everything that poor people can wish for in the way of food, and if we be spared in health to this time next year we will have all the money paid back that we borrowed to take us out to America." And pay it back he did.

A year later we moved to Worcester, Massachusetts, and I have been in Worcester ever since. At first we lived in town, but then got a house and two acres of ground three and a half miles out of the city for two dollars a month. Father was now a night watchman on the railway, and he walked those three miles and a half night and morning so that he could bring us up in the country. From this smaller place we moved to a real farm of seven or eight acres, for which he paid sixty dollars a year. We managed to get some cows and chickens, and for eight dollars my father bought an old white horse named "Billy" to take him to and from work.

**T**HE big events of those days were going down to the city with my father to spend a night in the engine house. I still remember those old wood-burning locomotives: the "Uncas," the "Tecumseh," the "Colonel De Witt," and a lot more of them.

We were very happy for a while, but then things began to go against us. My father had farmed with the help of all of us. He was what we would now call a truck gardener, and his specialty was cabbages. His health broke down and he had to give up the railroad job, and then, in 1861, our landlord's cattle broke through the fence and ate up all the cabbage plants just as they were ready for transplanting. The landlord offered to do everything that he could—to furnish the money to buy other cabbage plants and all that. But my father would have his own cabbages or none. He was very stubborn and refused to pay the rent. We were sued and the sheriff attached our three cows. I shall never forget that terrible day when we four children followed those cows down the road. We had raised them from calves. They were a part of the family. They were our greatest, almost our only, worldly possessions, and it seemed as though the whole world were awry. Later the trouble was somehow adjusted and the cows were returned to us. But when the lease expired we left the farm.

Although we were very poor we were, as everyone was expected to be, hospitable. In those days liquors were cheap and nearly everyone drank rather freely. My father was practically a teetotaler but, following the old Scotch idea of hospitality, he always had a demijohn of rum or whisky in the cellar. On Sundays friends would walk out from town to see us, and it was considered essential that a tankard be filled and on the table after the Sunday dinner. One Sunday, when the tankard ran dry, a visitor rapped his glass on the table to call my father's attention to the fact, at the same time saying:

PHOTO BY SUMNER

JAMES LOGAN

James Logan was born in Scotland in 1852. While still an infant his parents brought him to the United States. The family settled in Massachusetts. At the age of nine James Logan began work in a textile mill. A year later an accident to one of his hands made him unable to do heavy manual labor. When fifteen he studied bookkeeping and thereafter held varied positions of a clerical nature, and for a time was a salesman. In 1878 he entered the envelope industry, and in 1898, when the U. S. Envelope Company, of Worcester, Massachusetts, was formed, he was made its general manager, a position he still holds. He has served as mayor of Worcester, which is still his home, and in other public capacities. He has also been a lecturer and writer on business topics. In 1904 he received the degree of Master of Arts from Dartmouth College.

"David, the tankard's out."

Maybe it was the tapping of the glass, but it struck my father all at once that he was running a free tap house. He went down into the cellar, brought up the demijohn, and walking outside the door, emptied its contents onto the ground, saying dryly:

"Yes, John, the tankard is out and it will remain out, for no more liquor will come into my house."

That was all there was to it. Our Sunday visitors dropped off.

My father was not strong enough to earn a living, and the money that David, the eldest, brought in from the mills was much too little to support the family. There was nothing to do but that we all go to work, and one month before I was ten years old I took my place in the card-room of the old "Red Mill." Three months later I gave my first wages,

amounting to twenty-six dollars, to my mother. Soon after this occurred the accident to my arm, making it necessary for me to change the type of work I was doing. We were paid quarterly—if the employer could raise the money. If he could not get the money, he gave orders on the village store. All of us gave our money to our mother. My father never carried a pocketbook; none of us did. She made all my clothes until I was well past fourteen. Naturally, she was a keen buyer and she picked up many a bargain. One of them I did not appreciate at all, a very special bargain in boots. The right boot was a close fit, of high grade, and rather dainty. The left boot was a rough cowhide affair about four sizes too large. It made a good deal of difference which side of me you saw first. If we absolutely needed money she gave it to us. When I was studying bookkeeping, she (Continued on page 159)

# Queer Tricks People Try To Play on the Circus

As the legal adjuster for one of the big shows, I have had some funny experiences. Most folks are honest, of course, but there are some who put their consciences in cold storage when the circus comes to town.

*By Frank A. Cook*

**I**F YOU are looking for trouble, allow me to recommend my job. You won't have to strain your eyes! Trouble will come hunting for you. All you will have to do will be to let it find you.

For fourteen years, as legal adjuster for the circus, I have been a sort of wholesale and retail dealer in trouble. I entered the business by chance; but I have stayed in it by choice. For it's a great life—if you don't weaken.

In 1908, while working with the Government Bureau of Corporations, I learned that an investigation of municipal affairs was to be undertaken; and as I thought I'd like to have a hand in it I tried to figure out how I could travel around the country, see a lot of cities and towns, and at the same time have a paying job.

It occurred to me that a circus did about as much traveling as anything I knew of. So I wrote to Ringling Brothers, stated my qualifications, and asked them for a position. I got it! They made me their "legal adjuster." I didn't know then what a legal adjuster was, but I soon found out.

We had been showing in Philadelphia for several days when an irate female appeared before me, bareheaded and clutching a strange object in her hand. She explained indignantly that one of our giraffes had reached over his enclosure and nibbled her new spring hat right off her head! She had recovered the hat, which she dramatically submitted in evidence; and I had to admit that the giraffe certainly had made a mess of the lady's spring millinery. She claimed that the hat had cost fifteen dollars; but we finally compromised on seven.

I might add here a word of warning to

other ladies: Keep your eye on the giraffes when you go near them, especially if you have something red on your hat. Giraffes will take a chance and browse on anything within reach. And they are particularly fond of red.

These claims for damages, however, are really the least of my troubles. In fact, I've had some I should hate to have missed, even if I'd had to pay the bills myself.

For instance, when we were showing in

Well, you never can do anything with an angry person by making him, or her, *more* angry, so I began by admiring the evidences of her talents as a laundress. I vowed that I never had seen such snow-white clothes.

"Why," I said, "there isn't a spot nor a speck on them."

"Isn't there!" she exclaimed. "Just come and look!"

Well, I came and I looked. And I could not deny that the flies had worked overtime on that wash! You had to see it to believe it could be possible.

"M a d a m," I said, "you certainly do raise industrious flies in your town. But the injury isn't permanent. You're such a wonderful laundress that you can easily wash these clothes again and remove all traces of this unfortunate invasion."

"That's all you know about house-work!" she exploded. "I'll show you."

And snatching a garment from the line she led the way to a tub near the house, applied soap liberally, scrubbed the garment good and hard, wrung it out, then triumphantly offered it for my examination. And, sure enough! not a fly

speck had vanished! She vowed they never would!

"But," I protested, "these are undergarments. No one will ever *see* the fly specks."

"We will see them!" she declared; and I couldn't deny that.

When I asked her how much she wanted to console her for having to wear fly-specked underclothes she fixed fifteen dollars as the price of her wounded pride. But I finally soothed her feelings with five dollars and three tickets for the evening performance.

This young lady posed with Mr. Cook to show one of the ways in which some women have tried to put something over on the circus. A young woman, for instance, claimed that she had torn her skirt on a tent stake. The tear was almost invisible but she demanded sixty-five dollars, the price of her suit. She finally accepted five dollars for the damage. A few days later another young woman appeared with a very badly torn skirt, due, as she, also, said, to a tent stake. She turned out to be a sister of the previous claimant and confessed that the whole thing was a trick. Mr. Cook says that a good many people have a double standard of honesty: one for ordinary affairs, the other for their dealings with a circus.

a certain Western town our cook tent was pitched close to a back yard in which a woman had hung out her washing. Late in the afternoon I was summoned to the lady's premises and found her in a great state of excitement.

She indignantly informed me that swarms of flies had been attracted to the neighborhood because of our cook-house; that they had then descended in battalions upon her nice clean clothes; and that her own lingerie, her husband's underwear, and the various other items of the wash had been liberally fly-specked.

I had an interesting case in St. Louis a few years ago. A young woman who claimed that she had torn her dress skirt on a tent stake exhibited a very small tear as the damage done. She said it was a new suit which she had "just had made at Barr's," that it had cost sixty-five dollars, and that it was "ruined."

Being a diplomat, I began by admiring the suit. "It certainly is pretty," I said. "So becoming, too! And I can see that it's in the very latest style."

She agreed enthusiastically to all this. "It's a plaited skirt," I said; "and as it is brand-new of course the color hasn't changed and it isn't soiled. You say you've just had it made; so all you need to do is to go to Barr's and get them to put in a new breadth in place of the one where the tear is."

OH, NO! she wanted the price of the whole suit! I pointed out that the coat was not injured and that the rest of the skirt was all right. Finally, after involving herself in so many contradictions that she realized she had practically convicted herself of attempting to cheat the circus management out of sixty-five dollars, she asked what I thought she ought to do.

"Well," I said, "if I were you, I'd go home, take a needle and thread, and show how nicely I could mend that little tear. Why, as clever a young lady as you are could fix it so that no one would ever notice it! And I will give you five dollars to pay you for the half-hour you will spend."

She took my advice—and the five dollars. But, a few days later, another young woman appeared before me with a torn skirt. And this one *was* torn! It looked as if she'd had a regular wrestling match with a tent stake. But as I glanced at the young lady herself I was struck by the fact that she bore a striking resemblance to the girl of the earlier skirt episode.

"Did your sister get her dress mended all right?" I suddenly inquired.

"Oh, yes—" she began, then caught herself.

I looked her straight in the eye. "So that's the game, is it?" I said. "Your sister got five dollars for something she claimed the circus was responsible for; and you thought it was an easy way for you to get some money too. So you put on an old torn skirt and came here to collect damages on a trumped-up claim. Officer!" I called to our detective, "arrest this woman for trying to obtain money under false pretenses!"

At that she broke down and confessed that she had planned the trick just as I said.

Of course we did not arrest the girl;

all I wanted was to teach her a lesson.

Another time, a woman declared that we had damaged a little cherry tree on her premises. I couldn't see the least sign of injury, except that a few leaves and twigs had been brushed off, but she insisted that it was seriously hurt and, furthermore, that she loved it so deeply that she was inconsolable. However, she estimated that thirty dollars would enable her to bear up under the tragic affliction.

I couldn't get her to reduce the figure, so I finally agreed to pay her thirty dollars for the tree. Then I called our men and

simply had thought, as so many people do think, that she could put something over on the circus.

It is a curious phase of human nature that folks who would not dream of cheating an individual seem to have an entirely different standard of honesty when they deal with a company, or an organization; especially if it does not belong in their own community. And the circus in particular is picked out as a target for the most amazing sharp practices.

There was the town of C—, where we never showed without having to pay the city government a big bill for manhole covers which were broken by the heavy wagons in our haul from the railroad yards to the lot. They charged us over fifteen dollars for each cover; and we always broke at least half a dozen. It seemed curious, for it was the only town where we had this trouble. But I couldn't deny that the damage was done; so, for years, we paid the bills.

Then something happened! An ex-employee of the city government, who had a grudge against it, told me the secret of those broken covers. Every time the circus was to show in C— certain of the town officials removed the manhole covers along the route and substituted others from a heap of old ones which had been discarded years before! They charged us for these rotten old covers which we broke. Then, when the circus had left, they put back the ones they had temporarily removed.

WE SHOWED again in C— a few years ago. And before the day of our arrival I told one of the town officials that I knew the trick they had played on us.

"I can take you to the junk pile from which you get the old covers you want us to break," I said. "And I know just where you store the covers that are removed before we arrive. Now," I said, "if you want this thing aired in public—all right! But I think there will be no bill this year for broken manhole covers."

Needless to say, there wasn't.

Another circus feature which some towns made an excuse for graft was our steam calliope. That poor little steam boiler was gone over pretty nearly every day of its life by some inspector or other, and of course he always collected a fee! One town presented a large bill for damages which they said had been done to their street paving by hot coals dropping out of the calliope's fire box. I have good eyes, and I couldn't see the slightest evidence of injury; but the city fathers were men of remarkable vision. Other towns tried to collect fines from us on the ground

## Why the Lady Thought She Deserved a Pass

"THE commonest form of graft," says Mr. Cook, "is the ticket graft. Here was one funny case: Late one afternoon a peppery little woman was brought to me to tell her tale of woe.

"I want four tickets for the show to-night!" was her opening shot.

"Yes, madam," I said. "The ticket wagon is right over there."

"Oh, I'm not going to *buy* them!" she retorted. "I expect you to *give* me the tickets."

"Really," I said; "on what ground?"

"Well," she tossed her head, "people have been streaking by my house all afternoon, going to this circus; and my dog was barking at them the whole time, so that he kept the baby awake and I lost my afternoon nap! The least you can do is to give me tickets for my family to come to the show to-night."

"But compared with the way *some* people try to graft tickets, that woman was modest in her demands. As I said before, the first thing I do when we reach a town is to go to the city hall for our licenses and permits. And, of course, we always 'fix up' the city officials with free tickets for the show. That's all right. We expect to do it. But it certainly is amazing what large families many of these city officials seem to have. I have come to the conclusion that an alderman with less than eleven children is almost a freak of nature."

told them to put a chain around the little sapling and get ready to pull it up. When she saw these preparations she demanded to know what I was going to do.

"Why, madam," I said, "I'm going to take the tree."

"But you can't do that!"

"Certainly I can," I replied. "I've paid thirty dollars for it. That was your price. Do you expect me to pay for a thing and not have it?"

"But I *want* that tree!"

Of course she wanted it; the tree wasn't damaged at all. So she accepted a few dollars and kept the cherry tree. She

that the calliope violated the smoke ordinance! Fortunately we have an electric calliope now, so that particular source of trouble no longer exists.

Towns sometimes try to charge exorbitantly for the water we use. In one case they turned off the water in the middle of the afternoon and said we couldn't have any more unless we paid a big extra charge for it. They claimed that we had used thousands of gallons, and that the town was almost dry. I made them put in a meter and turn the water on again. The meter told the true story; and they admitted then that they had simply tried to put over a scheme to get more money out of us.

**L**ATE one night, after the show was over and everything, as I supposed, had been hauled to the trains, I was told that eleven of our drivers and our assistant superintendent had been arrested. I hurried to the police station, where I was informed that the arrests had been made because the drivers had taken their wagons over streets for which we had no permit.

The first thing we do in a town is to get various permits, including one to take our wagons to and from the lot over a certain specified route. This route is marked at night by torches, so that the drivers will be able to follow it exactly.

The night captain of police said that the drivers had driven for two blocks on streets not included in the permit. I simply had to get the men down to the train, so I asked what he would accept to let them go.

"One hundred dollars each!" he declared.

Well, that took my breath away! It was an exorbitant sum and he knew it. But he also knew that he had us in a tight place. While we were discussing the matter, in walked George Black, our officer, all dressed up and looking like a million dollars. I introduced him very impressively. Then I said to the night captain:

"See here! Why do you hold those drivers? They're of no particular consequence; but here's Mr. Black. You can see for yourself that he is a person of importance. Why don't you let those no-account fellows go and hold Black instead?"

Naturally, when I said this, Black was as mad as a hatter; and as the captain wanted to be as mean as he could, he jumped at the chance of making more trouble—as he thought! So he agreed to take Black in exchange and the other twelve men were sent off to the train! As soon as they had gone, I took out one

hundred dollars, laid it down, and said cheerfully:

"There you are, Captain! That's for the release of Mr. Black."

"What!" he roared.

"Why, you said you wanted one hundred dollars for each man held, didn't you?" I said. "Well, you're holding one man. There's your hundred."

I never saw a more dazed human being—nor a madder one, when he realized what he had done. And, by the way, I found out how the whole thing happened. After our torches had been placed at the street corners where the wagons were to

noon, going to this circus; and my dog was barking at them the whole time, so that he kept the baby awake and I lost my afternoon nap! The least you can do is to give me tickets for my family to come to the show to-night."

But compared with the way some people try to graft tickets, that woman was modest in her demands. As I said before, the first thing I do when we reach a town is to go to the city hall for our licenses and permits. And of course we always "fix up" the city officials with free tickets for the show. That's all right. We expect to do it. But it certainly is amazing what large families many of these city officials seem to have! I have come to the conclusion that an alderman with less than eleven children is almost a freak of nature.

I encountered one city clerk, however, who reached the high water mark in this line. When I went to him for our licenses he announced that he wanted three hundred tickets for himself! I asked him if he hadn't said "hundred" by mistake, and if "three" wasn't what he had really meant. But he came back strong with his "three hundred," and added that if he didn't get that many tickets the circus wouldn't get any license. I took out the money for the license, offered it to him, and he refused it.

"Very well," I said, "you have been offered the regular fee and you have refused to take it. Now we will show *without* a license, if necessary."

**I** WENT across the hall to see the chief of police, who was a good friend of mine; and when I had told him the story he sent for the city clerk and asked him what he meant by holding us up

for three hundred tickets.

"Chief," said the clerk, "it's this way: I've been promising my friends that when the circus came to town I'd see that they got tickets. Election is coming on pretty soon, and if I don't keep my promise those people won't vote for me and they'll do everything they can to defeat me. I've just got to have those tickets!"

I couldn't see that it was up to the circus to contribute quite so largely to his campaign expenses, so he had to cut down his figure.

I ran across another policeman once who said he wanted one hundred and fifty tickets. But he explained that he was willing to pay for them; all he wanted was to have them *look* like complimentaries. He said his constituents would be more impressed by getting what seemed to be free passes than they would if they thought he bought (Continued on page 118)

FRANK A. COOK

Mr. Cook doesn't look as if he had a trouble in the world; yet as the legal adjuster for Ringling Brothers and Barnum and Bailey's circus, he handles more queer kinds of trouble every season than the average person meets in a lifetime. He was born in Albany, New York, forty-nine years ago. After leaving high school, he studied law two years; then went to work for the Bradstreet Mercantile Agency. He got more experience as claim adjuster for insurance companies and as an investigator for the Bureau of Corporations of the U. S. Department of Commerce and Labor. Fourteen years ago he became legal adjuster for the big circus. He says it's a great life if you don't weaken

turn, this night captain had sent his men to *move* the lanterns from one corner to another one, two blocks farther along. Our drivers were thus decoyed into going over two blocks which were not on the specified route. The slick captain had expected to collect twelve hundred dollars by that little trick.

But the commonest form of graft is the ticket graft. Here was one funny case. Late one afternoon a peppery little woman was brought to me to tell her tale of woe.

"I want four tickets for the show to-night!" was her opening shot.

"Yes, madam," I said. "The ticket wagon is right over there."

"Oh, I'm not going to *buy* them!" she retorted. "I expect you to *give* me the tickets."

"Really," I said; "on what ground?"

"Well!" she tossed her head, "people have been streaking by my house all after-

# Why I Stopped Being Too Hospitable

*By a Wife*

**F**OR the benefit of other husbands and wives I have decided to tell frankly the story of a bitter and expensive lesson that wrecked my health and almost wrecked my married happiness. When Tom and I came home from our honeymoon and settled in our first home, the idea of having our friends with us much of the time was taken as a matter of course. I had been reared in a Southern home that was renowned for its hospitality, and Tom was naturally jovial and open-hearted.

During our college years, just before our marriage, both Tom and I had visited a great deal. In the summers I went for protracted stays with friends, and Tom would join us for week-ends whenever he was near enough. As I usually managed to choose my stopping places near the town where he happened to be located, we made many visits together.

All this time I realized that I was becoming rather heavily involved in obligations, to be paid in the house of our dreams. These little tastes of domestic life, however, only served to intoxicate us with the desire for that home which we hoped to model after these where we were being entertained. We wanted our guests to feel as free when they came to see us as we had felt in the most hospitable household we knew.

In laying these plans we failed to make one very important observation. This was that none of these homes was maintained by young couples who were just starting out. All our hosts were on a comfortable financial footing. Tom and I omitted the very essential consideration that entertainment of any kind requires money.

By the time we were married such a number of obligations had piled up that several accepted invitations were already awaiting us when we returned from our honeymoon. We were to live in Baltimore and Tom had made the first payment on our bungalow in the suburbs. The other payments were to be made by the month in such small instalments that it would be many years before the debt was wiped out. We were not able to keep help; but we had taken the house in preference to an apartment, so that we might have more room for company.

My notes of thanks for wedding pres-

ents afforded an excellent opportunity for issuing such invitations as we had not already given. To every one who sent us a gift I wrote: "As we have a whole house we shall always have room for you when you are coming in the direction of Baltimore . . ." etc. Thus my invitations were scattered broadcast, even among our more casual acquaintances. As Baltimore was a kind of center about which our entire circle of friends and acquaintances revolved, our opportunities for having them with us were more than ordinary. The result was an endless chain of company in our home, each departing guest heralding

We were delighted to see Kate. We ourselves were so happy that we were fairly bubbling over, and her presence added to our good spirits. Tom brought out the other boys from his office, and they gave our guest such a good time that instead of staying a week, as had been her plan when she came, she yielded to our entreaties and remained three. Before she left, my college room-mate came. She had been invited months earlier to be our first visitor, but she forgave us for taking advantage of the opportunity to see Kate first by sandwiching her visit in.

Lelia stayed five weeks, and left with the understanding that our home was to be hers whenever she could come to it. There were others of my friends who formed a group of habitual visitors with us, staying each time from one to six weeks. Their visits as a rule were very happy occasions. I would have enjoyed them more, however, if I had had a maid to relieve me of the extra work which their presence in the home entailed. Although they were treated as members of the family, and were always willing to help, there was an added responsibility whenever they were there.

Moreover, during their visits some of Tom's friends were out for dinner almost every evening, thus making this meal more of a "company affair." Also, it was harder to keep the daily routine going smoothly. During the day there were always places to go. These extra diversions, after doing the housework, and knowing that I must hurry home to prepare dinner, made my life very strenuous. Yet it did not seem fair to guests to let them stay at home all

## We Had Lots of Visiting Relatives

**"O**UR largest class of visitors included relatives," says the author of this article. "Most of these, I may say, belonged to Tom. He came from a very large family—so large that I cannot yet give offhand the exact number of aunts, uncles, cousins, nieces, and nephews in the list, to say nothing of two brothers and four sisters. Most of them lived in small towns and doted on coming to Baltimore, so they used the slightest pretext as an excuse for visiting us at any and all times. Perchance, Aunt Susan would be seized with a desire to be in our presence and would write us to that effect, soon following up the message with her arrival for a stay of two or three weeks. Or some cousin might apprise us of the news that she was coming to town on a shopping tour, and would make our home her free hotel for the given time. The idea that we desired nothing so much as company had become current among the whole connection, so they never missed a chance to make us happy by gratifying this desire with unstinted generosity."

our hospitality among other friends, thus giving us a reputation to sustain.

Our first guest arrived when we had been housekeeping one week. In fact, our plans had been hurried on her account, as she was due at that time to pass through the city on her way from Philadelphia to her home in Virginia. She had written me of her itinerary some weeks before, mentioning that if we were in Baltimore by a given time she would stop between trains and see us. I had answered, urging her to stay for a visit. Thus we shortened our honeymoon by two days, to hasten back, get our furniture, and put the house in order by the time of her arrival.

day and do nothing, nor to let them go out alone, when they had come to be with me. The fact that they commended me for not having "settled down" after marriage added to my sense of responsibility for their kind of pleasure.

Among our other frequent visitors were those friends from small towns who made our home their stopping place when business, shopping, sight-seeing, pleasure-seeking, conventions, or railroad routes brought them to Baltimore. The habit of these people was to write that they were to be in town for a certain length of time, and they hoped to see us. We would answer with an (Continued on page 188)

# INTERESTING PEOPLE

## "Jug" McChesney, Dean of Traveling Men

"Jug" (John W.) McChesney is one of the world's greatest travelers. He has been at it for over forty years for the same line of goods, and is at it still when he is eighty-four years old. His associates and friends have awarded him every degree to be won in the University of Life for fairness, politeness, fidelity, philosophy—and humor. Read the veteran's remarkable story in the accompanying article

**S**TILL at work at eighty-four, traveling for the Redwing Union Stoneware Company, of Redwing, Minnesota, is the record of John W. McChesney, now of Kansas City, Missouri, but originally of Ohio and the western half of the American continent. For more than forty years, he has been covering the same territory for the same company. In his best days a round trip required seven months: into Canada, thence down the Northwest coast through Washington, Oregon, California, into Mexico, and on to Kansas, where he began thinking of heading for home to see his neglected family.

John W. McChesney was born in Ohio in 1838. His father was a journey-

man potter, looking constantly for clays suitable for making jugs, crocks, churns, and the like, and the son followed in his footsteps. The elder McChesney was a sound Abolitionist, and in 1855 moved to Kansas, where he "squatted" on a claim in Doniphan County.

A drought drove the McChesney family from Kansas into Missouri, and John was there with his father when Abraham Lincoln was nominated for President. They received the New York "Tribune" surreptitiously, and read it the same way, when not busy looking for a good clay with which to make jugs and crocks; this was their dream by night as well as by day, as men now dream of stocks, bonds, oil, and gold.

On one occasion young John attended a public speaking near St. Joseph. The speaker was some noted man of his time, and declared, in a burst of eloquence, he would wade in blood to his ears before the (oath) Yankees should force his daughters to marry negroes.

Young John was here guilty of an indiscretion; he swung his hat and yelled: "Hurrah for Abe Lincoln!"

Five men immediately jumped him, and it took that many to handle him; he was young, big, and powerful. But they finally overcame him, and he spent a few hours in jail. This made him angry—so he went to Ohio, his native state, and enlisted in the 64th Infantry.

His war record is as good as any man's. He went in a private, and came out a first lieutenant. His daughters say he was a captain, and they have his captain's sword; but John does not insist on this, although he does insist that he was in thirty-six battles; all the battles of the Army of the Cumberland, including bloody Chickamauga.

At the end of the war he turned again to looking for good clay with which to make jugs. This has been his passion so long that wherever he goes he is far better known as "Jug McChesney" than as Uncle John, or Mr. Mac.

The clays of Missouri and Kansas disappointed him, but he kept up the search. He "took up" a claim in Washington County, Kansas, and that, too, disappointed him. At last, compelled to make a living for his growing and neglected family, he went to work for the Redwing Union Stoneware Company. But only for a short time, he promised himself: he would make a grub stake, and again look for, and this time find, the good jug clay that was to make his fortune.

That "short" term of employment with a man who had actually found good jug clay, lasted forty years—until "Jug" was eighty-three years old. And that birthday found him still on the road, selling jugs for a rival.

His rival is a man he calls Elmer—E. S. Hoyt, president of the Redwing company. You may think Elmer is the head man of this company, but there is some evidence that he is not, and that the head man is actually John W. McChesney, assisted by a wonderful woman named Mabel Miller, employed many years in the offices of the company. By intelligent attention to the jug business, these two seem to have made a tolerably good man of Elmer; I heard Uncle John say within a month that Elmer is the best stoneware man in America.

When Uncle John lived in Redwing, he was always writing letters to his wife, suggesting how Elmer should conduct the jug business. These letters Mrs. McChesney couldn't read because her husband wrote so undecipherable a hand. But the wonderful Mabel Miller could

read John's letters, so his suggestions got to Elmer; the company prospered; and finally the president became quite a man.

Lately Elmer consulted with Uncle John's friends and children, and said:

"What will please Uncle John best? To travel as much and leisurely as he pleases and see his old friends, or remain at home? He can do whatever he likes, for Mabel Miller has ordered that his salary go on just the same, and continue as long as the good old veteran lives."

Of course Mabel Miller coaxed Elmer into the notion, but presidents of corpora-

tions are so notoriously grasping that I confess I rather like this man Elmer, for accepting so good an idea.

Not a hair is missing from the white head of the Jug McChesney of to-day. He hears as well as he ever did. Whisper a good word for Redwing, Elmer, or Mabel Miller, and he will hear it. He makes no complaint of physical defects, though I have heard him say that occasionally he "has fainting spells" in his legs. He is intelligent, kindly, and a hero, and second father to thousands of younger traveling men. Many of his customers to-day are grandsons of men

he called on long ago. He is able to eat a hearty meal, and knows the history of thousands of towns, and almost millions of people, most of whom he likes; he says that only once or twice a year does he run across a rogue, and he knows no job equal to that of traveling salesman for a training in fairness, politeness, efficiency—life.

I present to the readers of THE AMERICAN MAGAZINE my friend, Jug McChesney, still a traveler—and he will be eighty-four by the time this is read. I refer you to his picture herewith, with the assurance that he is as fine as he looks.

E. W. HOWE

## A Skillful Woman Locksmith

FIFTEEN years ago Josephine Duble Miller was a typical Southern bride, interested only in her home, her semi-tropical flower garden, and her young husband. To-day she is proprietor of a full-fledged locksmith's business, doing virtually all the lock work on steamships and sailing vessels which dock for repair at the port of New Orleans.

When Mrs. Miller was twenty-one years old, she found herself confronted with the problem of a home to manage and a husband who was rapidly failing in health. His little business, carefully fostered at its beginning, was suffering for want of his attention. The employees of his locksmith's establishment had grown slack without supervision, and contracts were going to competitors. Thereupon, the bride became locksmith's apprentice, manager, and bookkeeper combined. Although the name of her husband, C. C. Duble, still remains over the door, the business has been in the hands of the wife since that moment.

"I had always had a bent for tinkering," said Mrs. Miller. "I had made my own toys, constructing them out of clock springs and wheels. I cannot remember when I was unable to repair a phonograph or a sewing machine."

"When I took up my husband's work, I learned the simpler mechanics of key work and lock construction readily. Then intricate tasks began to fall to me. By the time my husband was no longer able to be in the shop I was making the estimates along with the actual mechanical work. After his death I had no thought of hiring a manager or selling the business, but made changes and additions as they were needed. The volume of business was sufficient to require the attention of myself and two apprentices. It has shown a steady increase every year, and now yields from five thousand dollars to seventy-five hundred dollars annually."

Although a specialist in marine key work, Mrs. Miller is also recognized as an

authority on master-key work, a phase of the trade which has developed noticeably during the past few years. In 1921 two large buildings, housing the Canal-Commercial and the Whitney-Central banks, were erected in New Orleans. Contract bids for locks for all doors were let. Mrs. Miller won both bids. She later master-keyed the office building annex of the Canal Bank building with separate keys for each of the hundreds of tenants, a master key for each floor, and a grand master key for the entire building.

She has found considerable evolution in lock and key work during the fifteen years she has been associated with the business. No longer do builders equip heavy doors with foot-long locks requiring

locks are safer, many times over, than the old.

"My first steamship job was a rush order. It came soon after I began making estimates, and I was considerably elated over winning the contract. I marched aboard, serene in the confidence that I had learned my trade thoroughly and was prepared for anything the new departure might offer. The ship was docked for a thorough overhauling. Every lock was rusty, and specifications required that the new locks be duplicates of the old.

"My self-confidence wavered alarmingly during that tour of inspection. I could not have been more completely nonplused had I been requested to duplicate a lock to conform with the styles used in Mars. Not one was of American design. They were not even distant relatives of any lock on which I had ever worked."

"I have learned since that the majority of all ships' locks are English in design. I had never before seen one. I made careful drawings of the designs, patterned the new locks from the drawings, and in that roundabout way fulfilled my contract. I still make all locks of difficult design in the same manner."

As a new field for women, Mrs. Miller believes her trade has many attractions. "Every success exacts its payment," she says. "Mine is no lace-collar job, and the average well-dressed clerk might shiver at the thought of handling the gritty things I have to. Competition in my field is light. Where every 'handy'

boy used to apprentice himself to a locksmith or a jeweler, now he goes into the automobile, aircraft, or radiograph trade.

"The locksmith can depend upon a steady flow of small work. Lost keys must be replaced, new locks are to be fitted to buildings, and there are always broken locks to repair. The trade is a fascinating one—and even romantic. I have had raps come on my door in the dark of night, pleas from seafaring men, calls to open a rusty safe wherein lies a will disposing of a fortune. HAZEL G. SULLIVAN

Mrs. Josephine Duble Miller and her two apprentice helpers in the famous locksmith shop in New Orleans, where she fits out ships and big office buildings with keys. Mrs. Miller's "trade," which she learned from her husband, brings her in between \$5,000 and \$7,000 a year

ponderous keys eight inches in length.

"Those ponderous affairs were too simple to give an enterprising burglar trouble," Mrs. Miller said. "They were a maze of zigzag intricacies at the keyway, but, that problem solved, the door was virtually opened. Inside there was only a gauge and bolt. New models are small, even for large doors. Where giant locks are now installed, the new style of construction has replaced the old. The keyway is simple. But inside there are three or four, possibly six or eight tumblers. The new

## Evangelist, Editor, and College President

**T**WENTY years ago a boy named John Brown was working in the lime kilns at Rogers, Arkansas, a little town in the northwestern corner of the state. One night, after ten hours of hard work had been finished, he walked into Rogers to see what free amusement he could find, and stopped before a window through which he could see a man on a platform addressing a small audience huddled around a stove. Upon entering, he found that the speaker was Ensign Olesen, who was a Salvation Army leader of the district.

Missouri, an Ozark institution financed by Kansas City people who wanted to give the children of the hill countries a chance to get the education they needed and, at the same time, work. He is now president of the largest organization of accredited evangelists in the world, president of the John E. Brown College at Siloam Springs, president of the Siloam Springs Bible Conference, editor of "The American Evangelist"—the most popular magazine for workers of this type; editor of "The Southwestern"—a school publication of twenty thousand

school, of building a place where they could come at any age and enroll either for a high school or a college education without having to scrape up in advance money to pay for it.

At two o'clock in the morning he stood up and pounded his fist on the table. "I'll do it," he said, and the morning of August 5th saw him in Siloam Springs.

First he deeded over to the John E. Brown College his home, its grounds, its herd of Jersey cattle, and the rest of the plant, the whole valued at sixty thousand dollars. Then he went down-town and explained his plan to a committee of Siloam Springs bankers and business men.

There were some who opposed his plan as impracticable, but the majority of the people got behind him and his college. On September 25th, the school was opened, just as Brown had said it would be. There were one hundred students and a faculty of ten teachers—all from the best colleges, and persons of experience in every line.

The year just finished saw an enrollment of two hundred students, and twenty-five members on the faculty, headed by H. W. Kellogg, eight years an important teacher at Occidental College, in California. Not one of the two hundred students paid a cent for tuition or for board and room. Each gave part of his day to work, and thus became at least partially self-supporting. Aside from Brown's contributions, the rest of the money to back the school came from voluntary subscriptions and from the free-will offerings obtained at his evangelical meetings.

The school was heavily in debt when it opened. To-day it has a quarter of a million dollars in assets and doesn't owe a cent. It has more applications for

John E. Brown is a noted evangelist, and also president of the unique college which he founded at Siloam Springs, Arkansas. His idea is enabling students who cannot pay their own expenses to get an education without waiting to earn the money in advance. The picture at the left shows the college's new dormitory, accommodating over 100 young men

John sat down in a vacant chair near the stove and listened to the man. Forgetting his fatigue, he returned to his camp that night with his mind on what he had just heard. He attended Olesen's meetings for several nights thereafter, and at the end of a week he went to the ensign.

"You've converted me, and I've been singing these nights with the people and I want to know if there isn't something else I can do," he explained.

Olesen took one look at the boy's arms, muscled through much pounding of hammer on rock.

"You can beat the drum," he said. "Do you want to do that?"

"Yes, I do," John answered, and his schedule from that day forward was one of breaking rocks by day and pounding the drum at night. Occasionally, when the crowds were unusually small or Olesen was very tired, he had the boy do the exhorting.

The time having arrived when Olesen decided that Rogers and its territory was sufficiently operated upon, John gave up his work in the lime kilns and went with him to Siloam Springs, some thirty miles distant.

In Siloam, they slept in their wagon, did odd jobs through the day for farmers, to earn the food they ate, and conducted their revivals at night in an empty shack. Soon Olesen was ordered onward and the little mission was left to John. He preached with sincerity and implanted himself firmly with the people. Soon a delegation of people from a neighboring town asked him to come there and hold meetings. He "went over" and he has been "going over" in response to similar calls ever since.

At twenty-one, Brown was elected president of Scarritt College, at Neosho,

circulation monthly and editor of "The Interstate American," a farm journal. Besides these duties he is probably the most widely-known evangelist in America aside from Billy Sunday.

The night of July 25th, 1919, Brown conducted a meeting at Long Beach, California, after which he went to his hotel and, sitting alone in his room, turned over and over in his mind an old plan he had of establishing a college for children who had absolutely not a cent with which to pay their way through

admission than it could possibly take care of, even if it were ten or twenty times its present size.

"Our students are required to send letters from one minister, one teacher, and one doctor as references," Mr. Brown explained. "Those people, being older, know the school's objects and will play absolutely fair with us as to whether the students would be able to pay their way anywhere else. Thus we know that we get no one here except those who most need our help."

LONDON LAIRD

The picture at the right shows the administration building of Brown College. It houses the offices, publishing department, general store, post office, basket factory, and sewing-rooms. The college, which was established with a gift of \$60,000 from the founder, now has assets of more than \$250,000. It is supported in the main by voluntary subscriptions

SOUP MAKES THE WHOLE MEAL TASTE BETTER

Campbell's chefs  
invite you—

—to this rich treat!

It's good to sit down to a steaming plateful of this smooth, hearty Ox Tail Soup. The very first spoonful tells you it has been made by chefs of highest skill. Tender sliced ox tail joints in a thick soup, in which are blended luscious tomatoes, plump barley, golden turnips, Chantenay carrots, choice celery, fresh parsley, a touch of leek, and tasty ox tail broth. Let it simmer a few minutes in the saucepan to bring out its full, delicious flavor. This is the strengthening, invigorating kind of soup that adds real nourishment to any meal. Enjoy Campbell's Ox Tail tonight!

# Stella Dallas

(Continued from page 55)

cause of her husband's occasional waves of depression. She did not love him in the romantic way she had loved Stephen. But there was something fine and untarnished to be preserved about their relations, beside which passing and personal pleasures were trivial and unimportant. She was very careful to spare her husband the secret ignominy of jealousy.

With gentle consideration, too, she abandoned all forms of pleasure that emphasized the difference in their ages and placed him at a disadvantage. Cornelius spoke no word of complaint on the several occasions when she danced half the night away on a ballroom floor while he waited for her in a smoky anteroom. But quietly, without comment, Helen gave up dancing after a little while. Cornelius liked to give dinners. Helen learned to like to give them. Cornelius liked to go to the opera. Helen learned to like to go to the opera. Cornelius liked to ride horseback. Helen learned to like to ride horseback.

**S**HE was alone one day, riding slowly along one of the bridle paths in Central Park, when she glanced up—and found herself face to face with Stephen Dallas. He had reined in his horse beside hers, and was smiling and saying, "Do you remember me?"

It had been fifteen years since she had seen him; but her heart jumped into her throat in the same old young way it always had at sight of him a lifetime ago. But there was no outward sign of this as she said, with a little puzzled look, as if she were not quite sure, "Why—you're Stephen Dallas, aren't you?"

"You *know* I'm Stephen Dallas," he exclaimed in the old sure way he used to have.

There was joy in his eyes. There was gladness in his voice. He had the queer sensation that the intervening years since last he saw this girl were a bad dream, and he had just waked up, as keenly responsive to her as the day he lost consciousness.

He leaned over. They shook hands and exchanged a commonplace or two—Helen sweetly but coolly; Stephen with an impetuosity he didn't try to conceal.

"I saw you, half a mile back," he confessed. "You passed me. I didn't think at first it could be really you. Chance isn't usually so kind to me. By the time I had decided it couldn't possibly be anybody else, you had gone too far ahead for me to overtake you, with proper decorum. So I've been contriving ever since, how I might head you off. Again chance favored me. You might have made half a dozen wrong turns. Or perhaps it wasn't chance at all, perhaps it was mental telepathy."

To this boyish outburst of Stephen's, Helen replied, still sweetly, still coolly (long practice had made her skillful), "I'm delighted we met, but I scarcely think it was due to mental telepathy. I let my horse choose the turns this morning. I usually ride with my husband, and we always come this way."

"Oh, I know you're married, Helen,"

laughed Stephen boldly, as much as to say, "I suppose you think I ought to be told, I seem so glad to see you."

Helen was not to be perturbed by boldness. She was not a young girl to betray a pounding heart which she had reason to wish to conceal.

Politely, calmly, she inquired, "Are you living in New York now?"

He nodded, smiling. (What a beautiful woman she had become!)

"If two rooms in bachelors' apartments is living—yes, I am," he said.

"Have you been here long?"

"Three years."

"Three years! Really!" She raised her lovely brows.

"Oh, people may say the world's a small place, Helen," Stephen exclaimed; "but New York isn't. I've been trying for three years to run across your path, and I haven't succeeded until to-day!"

Helen replied prosaically, "Well, I'm glad we've met at last, it's always a pleasure to see anyone from Reddington."

Stephen felt a pang of disappointment. The years since last he saw Helen had not been a dream. They were real—every one of them was real, and Helen was as far removed, as beyond recall, as his youth. He turned away from her tranquil face.

"You must come to dinner with us some day," he heard her saying in that cool, smooth, impersonal voice of hers.

"Thank you very much," he replied perfunctorily, not looking back at her. Oh, he, too, could be cool and smooth and impersonal, if that was what she really wanted.

It was what she really wanted. When he dined for the first time at the Cornelius Morrisons' there were half a dozen other guests present. He sat nowhere near his hostess, nor did she give him any chance for conversation after dinner. It was always like that. As time went on, Stephen was frequently in the same drawing-room with Helen and often one of the same party, but her insistence upon a purely impersonal basis of intercourse made anything but the merest superficialities impossible.

**W**HEN Cornelius Morrison met Stephen Dallas he took a liking to the younger man. Often Cornelius would bring him to dinner unannounced. After dinner the two men would play long games of chess in the library, while Helen read to her boys in a room above. Of course Stephen saw Helen alone sometimes, but never for longer than a passing moment or two. Helen always had something to call her away. And during those passing moments she was always clothed in her impervious armor.

When Cornelius Morrison died and Helen was released from all fear of hurting him, she did not immediately alter her attitude toward Stephen Dallas. Habit was so strong (or was it respect for Cornelius that was so strong?) that she contrived to maintain with Stephen for many months the same remote relations which

she had established when her husband was alive. Cornelius Morrison had named Stephen as one of his trustees, and Stephen and Helen were necessarily alone together frequently. At first Stephen treated Helen as she had indicated she wished to be treated. He was almost formal with her unless the children were present as a safeguard. It was difficult for Stephen to strike a happy medium after he had been alone in Helen's presence for longer than half an hour. For he loved her! He had always loved her!

Yet, when the time came that he surprised once more the same look in the eyes of Helen Morrison that he had seen years before shining in the eyes of Helen Dane, he gave no sign. He had no right to speak. But from that moment Stephen Dallas determined that he *would* have the right. The very next day he went to see his lawyer.

**I**T WAS in September, shortly before Laurel's first visit to Mrs. Morrison's, that Stephen called in his friend Morley Smith. It was in January when Stephen came to the definite conclusion that there was only one way that he could obtain a divorce, and that one way would defeat the object for it.

Stella was as firm as adamant. Every form of argument that Morley Smith could devise had been brought to bear upon her, but to no avail. Stella would not comply. "If Stephen wants a divorce he will have to fight for it," was her invariable answer.

Stephen's hands were tied. It was unthinkable to expose in court the tawdry and unbeautiful details of his life with Stella before he went to New York, to unbury for the delight of a greedy public her compromising relations with Alfred Munn. He might be granted a divorce, Morley Smith assured him that he would; but of what use would it be to him? Helen's position as Mrs. Cornelius Morrison must be considered. She had always looked upon it as a sort of trust. Besides, there were her boys. They should not be made victims of such a scandal. And there was Laurel. No, a divorce obtained in such a manner would be worse than none.

As a last resort Stephen himself had gone to see Stella. It was after that ordeal that he felt convinced he could never marry Helen Morrison. He went to her as soon as possible after he had left the Boston train, to tell her about his defeat.

It was nearly twelve o'clock at night before he arrived. As he sat down in the long room, two floors above the entrance, he felt a little faint. Helen was not in the room, but it was so peculiarly hers that he could hardly breathe the air without feeling her sweet presence.

To-night fresh logs were flaming in the open fireplace. There was a flame-colored porcelain bowl placed on each of the low chests on either side of the hearth. There was a piece of flame-colored satin brocade, brilliant as a bank of nasturtiums, thrown over one end of the long Sheraton sofa.

When Helen came into the room Stephen was aware that she was in pure white; but there was something as brilliant about her, as flame-colored, as the two bowls, as the satin, as the fire.

He gazed at her speechless a moment. Then went to meet her, put his arms around her, and kissed her.

Afterward he said quietly, "They're numbered, Helen."

**I**N SPITE of his high resolve to hold himself in restraint until a court had pronounced him free, he had not done so. As long as there had been hope that he might some day go to her unentangled, he had remained silent. But when hope had grown faint, had all but disappeared, brokenly, despairingly, one day he had confessed his love for her. That was a month ago. His confession had acted like a lighted match on paper. Once Stephen revealed himself to Helen, her love for him, long concealed but long realized, flashed into flame, like the combustion of a long-stifled fire, once it is given air.

As she sat beside him on the sofa tonight, her arm thrust through his, she observed with fierce pity his drooping shoulders, his hand lying limp and inert upon his knee. She placed her own on top of it and grasped it hard.

"Never mind, Stephen. Never mind."

"There's no hope."

"I know. We scarcely expected it so soon."

"Oh, it's final, Helen."

There was a pause.

"Do you care to tell me about it?" Helen asked.

Stephen shook his head. It seemed to him sacrilege to bring into this room even the image of Stella he had in his mind. So long as he remained in Helen's presence, he wished he might erase the memory of the unbeautiful interview he had just had with the woman who had once been his wife. Stephen closed his eyes an instant. Stella, powdered, painted, perfumed, coarsened in speech and manner as he did not suppose it possible, her fattened figure covered with cheap trappings from head to toe, flashed into his mind. He looked down at Helen's lovely hand. Stella and Helen were as unlike as a wax figure with highly colored cheeks, glass eyes, and blond hair is unlike a statue of a beautiful Diana carved in white marble.

"You saw her?"

"Yes, I saw her."

There was another pause.

"Tell me about it, Stephen."

"Tell her about it? Repeat to her the threats Stella had hurled at him? No! No! Helen must never surmise that her fair name had been mentioned, even by an unscrupulous lawyer, as a co-respondent in a divorce case. For such had been the nature of Stella's threat. It had been torture to Stephen to sit in Stella's presence and listen to her using Helen's name familiarly, daring to refer to her in the same breath that she referred to Alfred Munn. Stephen closed his eyes again an instant. He could hear Stella still. Her speech had grown terribly crude with the years:

"Thank heaven for lawyers, I say now. Gracious! I'd never have thought myself of getting something on you, Stephen, but my lawyer has been right onto his job. If you want a divorce, Stephen, go ahead

and dig up Ed Munn, and I'll dig up Helen Morrison, and we'll give the public something worth hearing. Of course, I, myself, don't want a divorce. There's nobody I want to marry. I'd see myself dead rather than tied up to Ed Munn. And I can't see that it's any advantage to a woman, with a daughter that she's got to bring out in society, to be a grass widow. I'd just rather have you in New York in business. I've taken an apartment in Boston now, and by the time Laurel's old enough to come out, it may strike me as a good idea to have her father in the background somewhere, when we give her a ball in one of the big hotels. Mr. Hinckley, my lawyer, says you'll probably want to do almost anything I want you to, just so I don't show up your little affair with that pretty widow down there in New York. My! But I think lawyers are clever. I certainly take off my hat to Mr. Hinckley!"

It was Helen's sweet voice saying, "You've had a difficult day, Stephen. I'm so sorry," that called Stephen back to a brief glimpse of heaven again.

He looked at her long and quietly. Then he said, "Helen, I gave you up years ago, because I felt I could bring you nothing but shame. I must give you up again for the same reason."

**A**NEW venture always acted upon Stella like fresh soil in a garden upon seeds. It brought out renewed effort and vigor. An experiment untried possessed all the possibilities of success. Stella never considered failure until it was demonstrated. Even then she would not accept it as such—invariably searching for some hidden advantage in her various disappointments and rebuffs.

"You can never tell," she said to Effie McDavitt. "It may be the best thing in the world that ever happened that there wasn't any room for Laurel at Miss Fillebrown's this year, and that I've got to get out of the King Arthur. I'd got into the way of thinking that the sun rose and set in Milhampton society. I'm going to take an apartment around Boston somewhere! A housekeeping apartment. Lollie is just crazy to have a home of our own, so she can entertain, and I guess it's high time. Mercy, I just wish I'd had sense enough to get out of Milhampton before."

Stella didn't know anything about apartments in Boston. She didn't know anything about where "the right place" was to live, nor who "the right people" were to know, nor which was the "right church," nor the "right school." Her knowledge of Boston was confined to the shopping district.

"But that's where this flare-up with Stephen comes in handy," she told Effie. "Before I had to dig up a lawyer to defend me against that Morley Smith creature, I didn't have a soul in Boston to ask about desirable locations, and desirable schools and things, that you have to know about to start right in any new place."

Mr. Joseph Hinckley of the firm of Hinckley, Jones and Hinckley became to Stella more than a legal advisor. His knowledge of Boston was somewhat confined, too (although not to the same district as Stella's). However, he never hesitated to give her an authoritative opinion on any subject if she asked for it. That was instinctive with him.

When Stella inquired, "Commonwealth Avenue's one of the best residential streets, isn't it?" he had assured her there was nothing to compare with it this side of Riverside Drive.

"Well, I've found an apartment on Commonwealth Avenue, way out beyond the thousands, and its front windows are just flooded with sunshine."

"Snap it up quick," exclaimed Mr. Hinckley. "The sunny side of Commonwealth Avenue! Great Scott! You can't do better than that."

Mr. Hinckley's advice to Stella was not as naïve as it appears. He was fully aware of the distance between one and one thousand, but he was also fully aware that his client might live in the very heart of the Back Bay, and barriers more forbidding than space would prevent her from ever crossing its thresholds.

Stella moved into her five-roomed furnished apartment just before Christmas. She put a great deal of time and energy into buying hangings and pictures, gay sofa pillows, and bright lamp shades for the apartment, to make it look homelike and cheery; but with no one to guide her, and the matter of expense a constant argument for the cheaper article, her results were not successful. As Laurel gazed upon the slowly-growing tawdriness of the apartment, the joy she had thought she would feel in inviting to it the vague new friends her mother told her she would make in her new environment, once they got settled, began to fade.

The living-room was furnished with mission chairs—big oak affairs with leather cushions, a rectangular couch, leather-cushioned also, and a table that was strong enough to be used for a carpenter's bench. And all in spite of the fact of a light-green satin-finished wall paper of the 1890 "parlor period" and an ivory-tinted mantel, which, mongrel though it was, showed more strain of Adams than of Elbert Hubbard. Stella put yellow-flowered cretonne at the windows. She told Laurel that she had seen a colored picture of a mission room in a magazine with yellow-flowered cretonne for hangings, and it was perfectly stunning! But the hangings did not make the room right. Laurel felt convinced at last that the room would never be right.

**L**AUREL didn't like Boston. She didn't know of a single winding river over which to glide upon skates, hidden among alder bushes, or of a single bare hillside white with the first snowfall, down which to fly into the sunset upon skis, nor of any rocky pasture land nor rough woodland, to steal away to all alone in April, in search of trailing arbutus. She hadn't minded so much having no companions of her own age in Milhampton, because there had been so many kind, familiar places to escape to, so many kind, familiar faces, too; the policeman who had known her in her baby carriage; the mail man who had brought her her first letter from her father; the humpback cobbler, at the corner of Main and Webster streets, who would bow and bob at her like a Rip Van Winkle dwarf every time she called at his little shop; Miss Thomas, the gentle, wrinkled-faced librarian at the Public Library, who helped her pick out books. There was no one to bow and bob, or smile, or help in Boston.

## 5,285 INSPECTIONS PER CAR

The faithfulness of performance so universally remarked in Dodge Brothers Motor Cars, is due, in no small part, to the thoroughness with which each unit is inspected during the process of manufacture and assembly.

A trained staff of 1100 experts is employed in this work alone, and approximately 5,285 inspections are made on each car.

So exacting and rigid are the standards applied to these inspections that the slightest variation either in workmanship or material is sufficient cause for immediate rejection.

Dodge Brothers are almost over-scrupulous in their constant aim to make each car as sound and perfect as is humanly possible.

### DODGE BROTHERS

Laurel spent many hours on the Boston street cars. Her mother decided it was too late to attempt to place her in any private school (of course public schools were no more to be considered in Boston than in Milhampton); but Mr. Hinckley said Boston was full of splendid institutions that specialized in about every living subject that existed, and he could arrange for Laurel to take up courses of instruction in almost any of them.

Therefore Laurel traveled from one side of Boston to another, pursuing music in one building, French and German in another, art in a third, current events in a fourth, filet-lace making in the top loft of a fifth. She chafed under the incoherent routine.

NIGHT after night Laurel cried softly into her pillow, after her mother had fallen safely to sleep. Day after day she struggled with tears that seemed always to be just beneath the thin surface of her smiles. She tried to reason with herself: She had been away from Milhampton before. Why, almost every summer since she could remember, she had been lonely in a new place. But she had never been quite so lonely. There had always been bell boys to speak to, elevator men, and chambermaids; there was no one here—absolutely no one.

Once, on the sidewalk outside the apartment, waiting for her mother to return from a shopping tour, Laurel fell into shy conversation with a dark little girl, a few years younger than herself, who lived in the apartment below. The possibility of a friendship with this gentle child filled Laurel with timid happiness for a whole afternoon.

But when she told her mother about the conversation, Stella had exclaimed, "Heavens, we can't know those people, Laurel! They're foreigners. I've discovered this apartment is riddled with queer people. Mr. Hinckley couldn't have known what he was talking about! We've simply got to move, sooner or later."

Until Stella had moved to Boston, Laurel had preferred a tramp in the country or a call on Jake, the cobbler, or on Tony, the beautiful young Greek who had a fruit stand outside the railroad station, to the movies; or a stolen pilgrimage to the little house that used to be red, where the mysterious old man, who was her grandfather—but she must never say so—lived, to a vaudeville or a play. But in her new solitude Laurel looked with interest upon the diverting interior of any amusement place. She went to the movies with her mother three times a week regularly. They climbed to gallery seats at Keith's every time the bill was changed. On Saturday nights, Stella and Laurel usually dressed in their best clothes and dined at a fashionable hotel, ordering the lowest-priced entrée on the bill, dawdling for hours over their bread and butter.

It was a bleak and forlorn existence for both Laurel and Stella. It was terribly shorn of human contacts. But it needn't have been quite so bleak and forlorn and shorn, Stella said, if Laurel hadn't taken such a dislike to Alfred Munn. Alfred tried to be awfully kind. He called at the apartment before they had been in it a week. He tried to be awfully kind to Laurel especially. But the child wouldn't let him.

"I can't bear that man, Mother," she had said as soon as the door had closed upon him after his first call. "Don't let him come again." There was a red spot in the center of each of her cheeks.

"Mercy, mercy, Lollie," laughed Stella. "Why, what's the matter with Ed?" she asked lightly.

"He's horrid."

"Horrid? How's he horrid?"

"He tickled me in the ribs and said I was pretty, and kissed me."

"Well, what of that? You're only a little girl. Why shouldn't he tell you you are pretty, and kiss you?"

"His lips were wet, and his breath smelled. Oh, Mother," shuddered Laurel, "don't let him kiss me again! Don't let him come here again!"

"Now, don't be silly, Laurel. I can't tell Ed Munn not to come here again. It would be awfully rude and bad-mannered."

"But he's rude; he's bad-mannered."

"Why, Laurel, how can you talk so about a gentleman who's trying to do so much for us?"

"He isn't a gentleman."

"He's more of a gentleman, I guess, than that dirty old cobbler you like so, who spits and swears, and that Dago who sells fruit, and came over steerage."

"Jake isn't dirty—only on the outside. And Tony is not a Dago. He's a Greek, and he comes from a place in Greece where the most beautiful things in the world come from. Besides, Jake and Tony don't kiss me; and Jake and Tony don't say horrid things to me about you."

"And what things did Ed say about me?"

"When you were out of the room he put his arm around me, and told me he thought you were pretty, too."

"Well?"

"He shouldn't have said that, should he? Not to me? The way he did?"

"Why not? I don't call that horrid."

"Don't you? Really?"

"Certainly not. Why shouldn't he say it, if he thought it?"

LAUREL stared at her mother, confused, perplexed. She didn't know how to answer, how to explain. She had never liked Ed Munn, but her dislike of him had never swept over her like this. It was frightening. Her sudden hatred of the man was like a big, dense cloud, that had rolled upon her unawares and enveloped her completely. She had turned toward her mother for help, for comprehension. She had groped for a steadying hand. But no hand had been held out. Suddenly Laurel turned and buried her face in the pillow on the couch and burst into violent weeping. Of late, many of her emotions were like enveloping clouds—love and worship, as well as hate and scorn. Her love for Mrs. Morrison was big, dense, un-understandable. As she lay with her face buried in the dark of the pillow, she could see great masses of red and purple light-dust, shapeless and conglomerate, rolling and shifting senselessly in the dark behind her closed lids. Life was like that. Oh, if only somebody would show her a straight, easy little path leading through the confusion!

"Oh, come, come, Lollie!" exclaimed Stella. "Don't do that way. Of course if you feel so bad as all that about poor Ed, why—he needn't come, I suppose. But, for the life of me, I don't see what he's done to you."

It was the first time for years Stella had seen Laurel cry like a little girl. It was the last time she ever saw her. After that one outburst, Laurel never again betrayed to her mother the fear of the shifting clouds of the twilight stratum of the dawning of her soul.

LAUREL sat on the end of the pier with her feet swinging over the edge. Four years had passed. She was seventeen now. A girl about her own age sat one on each side of her. Their arms were thrown lightly around her shoulders, and hers lightly around theirs. All three of the girls were in white, except for their sweaters—pale pink, pale yellow, and faintest lavender. The three girls made as pretty a display against the gray blue of the lake as a fragment of rainbow. Beneath their swinging feet floated several canoes, their bright red and green sides flashing in the sun. On the pier behind the girls was a collection of boxes, leather-encased thermos bottles and jars, and several tea-baskets.

The three girls were waiting for "the crowd" to assemble. "The crowd" was going on a picnic to Stag Island to-day. Laurel was one of "the crowd." This was the first time in all her life she had ever been one of a crowd. The thrilling experience had lasted for ten days. It would be three weeks, the day after to-morrow, since Laurel and her mother had arrived at this unexpected Paradise.

Now, down the long pier that stretched out into the lake from the lawn in front of the hotel drifted other fragments of rainbow, other groups of two and three girls with arms linked.

And among them occasionally a boy or two—tanned, lean, loose-knit, tough-muscled, dressed in light trousers and soft shirts—typical American college boys. There was a whole rollicking bunch of them behind the last trio of girls. By the time "the crowd" had all collected, the pier was as noisy as an ivy-covered wall full of sparrows on the first sunny day of spring.

Laurel and the two girls beside her jumped up and joined the general chatter. Mrs. Adams and Mrs. Grosvenor, the two chaperons for the day's festivities, leisurely approaching the bevy, could catch bits and snatches of characteristic conversation:

"Gorgeous day!" . . . "Good-looking sweater, my dear! . . . One exactly like it in henna."

Laurel didn't contribute much to the staccatoed exclamations, but her eyes shone and her cheeks were bright.

"Did you ever see anyone quite so lovely as Laurel Dallas this morning?" remarked Mrs. Adams to Mrs. Grosvenor.

"She's perfectly exquisite."

"How is your mother this morning, Laurel, my dear?" Mrs. Adams inquired a moment later.

"Oh, better, thank you, Mrs. Adams," Laurel replied, turning her flushed, pleased face toward the older woman. "The sweet peas you sent up to her were lovely. She told me to thank you ever and ever so much."

"I left another book at the desk, to be sent up to her later," remarked Mrs. Grosvenor.

*Letters by the tens  
of thousands*

# Men tell us we made shaving a delight

*Make this free test—See if you agree*

## GENTLEMEN:

By V. K. CASSADY, Chief Chemist

A new-type Shaving Cream has suddenly become a sensational success.

Men by the millions have tried it. Letters by the tens of thousands come to thank us for it. And men, you know, don't often write such letters.

### *The history of it*

We have a world-famed laboratory. For 60 years it has studied soap. The leading toilet soap of the world—Palmolive—is one of its creations.

Some years ago we decided to perfect a new-type Shaving Cream. We set down five ways in which it must excel.

Then we made up and tested 130 formulas to attain our ideals in all.

The result is a Shaving Cream which, in five respects, gives men new service, new delights. Now we urge that every man should test it. It is due to himself and to us.

*5 new qualities.* These are the five

new ways in which we met men's Shaving Cream desires:

*Abundance.* The soap multiplies itself in lather 250 times.

*Quickness.* It softens the beard in one minute.

*Durability.* The lather maintains its creamy fullness for ten minutes on the face.

*Strength.* The bubbles are strong. They support the hairs for cutting, while weak bubbles let them fall down.

*Skin effects.* The palm and olive oil blend acts like a balm to the skin.

### *Now your verdict*

Now we ask your verdict. You are using a soap you like. Kindly compare it with Palmolive Shaving Cream.

If our claims are true, you'll want it. If they are not, you'll find us out. Anyway, give us a hearing.

Cut out the coupon now.

*Multiplies itself  
in lather 250 times*

*10 Shaves  
FREE*

## Scot Tissue Towels encourage clean hands

They provide the pleasure of a perfectly fresh, clean towel for each person every time; a towel that's yours first and yours only; never touched by other hands; always soft, fresh, pure white.

Scot Tissue Towels are now preferred in organizations, large and small, which realize that clean hands are a factor in commercial good will—that clean hands mean hands perfectly and safely dry.

Millions of soft "thirsty" fibres in every Scot Tissue Towel, leap to their work of draining dry every drop of moisture from your skin and leave a refreshing sense of cleanliness.

Druggists, Department Stores and Stationers sell Scot Tissue Towels at 40c per carton of 150, and even less by the case (50c per carton in Canada). Or, we will send (prepaid) the towels or \$5 outfit, upon receipt of price. Try our new 10c pack of 25 towels.

Don't confuse Scot Tissue Towels with harsh, non-absorbent paper towels. Remember, it isn't Thirsty Fibre unless it bears the name Scot Tissue.

"Clean Hands  
in Business"

Scott Paper Company, Chester, Pa.  
New York Philadelphia Chicago San Francisco

"Oh, Mother will be so pleased!"

"I hope she likes Wells, and hasn't read his latest."

"I'm sure she hasn't. You're awfully kind, Mrs. Grosvenor."

"Not a bit! I've been ill in a hotel room myself, Laurel dear; I know what it is like."

"Oh, Miss Dallas!" suddenly somebody exclaimed, close beside Laurel's other shoulder.

Laurel turned and looked up into the eyes of Mrs. Grosvenor's son Richard—her elder son. She had two. Richard was a senior in college. He was one of the oldest boys who played with "the crowd." All the girls were "simply crazy" about Richard Grosvenor.

"But he can't see anybody but you, Laurel Dallas," one of the girls who had been sitting on the edge of the pier with Laurel had just told her.

"You're going with me, in my canoe, aren't you?" he now said to Laurel, smiling.

Any of the other girls would have known how to respond in the bluff, hearty, good-comradeship style of the day: "Thanks, Dick," or, "Crazy to," or, "Sure, I am!" But Laurel hadn't acquired all the ways yet.

"Am I?" she replied, in the same pleased, surprised manner with which she met all attentions shown her.

"Yes, you are," he assured her quietly. He turned away.

"There! What did I say, Laurel Dallas?"

"I'll bet he picks a single canoe."

"He was here all last summer, and never as much as looked at any of us younger girls."

ALL the boys were now busy among the canoes, loading them, rearranging the cushions and seat backs, shoving the dainty little crafts up against the pier, ready for the girls to step into.

"All ready, Miss Dallas."

Laurel turned. Yes, Deborah was right. He had selected a single canoe. He stood up in it now as Laurel approached him. He reached up both hands toward her, the canoe drifting away a little from the wharf as he did so. Laurel placed her hands in his and he swung her across the widening gap between them into the center of the luxurious nest of cushions he had arranged. She alighted in the frail little boat like a bird on a tender twig. There was something of the same birdlike adroitness in every motion that Laurel made.

She had lost none of the peculiar woodsy quality of her charm in the last four years. Her freckles had disappeared, however. (Stella always maintained it was white vinegar and salt.) Her long curls had disappeared, too. Laurel did her hair up now, rolled it into a simple knot behind. But the gray eyes with their changing moods from dark to light—like a lake beneath varying skies—were still the same. Their grave, listening manner—like trees on a windless night—was still the same. She was still slight and sleek in body, too—as un-undulating as a low bas-relief when you draw your hand across its surface, but as possessed of lovely curves, too, and as suggestive of softness and warmth.

"Won't you sit down?" Richard Gros-

# *It has won the friendship of a nation*

There has never been the slightest uncertainty about the position of the Jewett with the American public.

When it was first introduced last year it was greeted, not as a newcomer, but with all the confidence and respect accorded an old friend.

And the explanation is really quite simple. Motorists had long waited for just such a car as this stout-hearted six.

They had pictured it in their minds as the ideal expression of economical motoring — so the Jewett immediately came into its own.

Since that time an immense volume of good will has been created throughout the nation.

The Jewett has consolidated every one of its friendships. It has proven that it is not only spirited and good looking, but strong, sturdy, dependable.

As might be expected, the sales

chart has accurately reflected this appreciation.

Month by month the figures have climbed until now the Jewett is firmly established as one of the fastest selling and broadest selling cars on the market.

It has, we sincerely believe, done more than any other automobile in preaching the sound doctrine of six-cylinder ease, comfort and efficiency.

It has made men conscious of the elements they should expect in a practical car, and they have done the rest.

In 1923 the new and greatly improved Jewett will continue its march of triumph.

It is now a seasoned product—tried and proven.

In the year to come it will vastly increase its circle of enthusiastic friends and still more firmly establish itself as a safe, sound and profitable investment.

*A Thrifty Six Built by Paige*

## Every Day for Seven Years

Nestled in the picturesque hills of North Carolina, not far from Asheville, is Grove Park Inn.

A decade ago, the spacious lobby of this famous resort hotel was richly carpeted with ten "Aubusson" rugs, each twenty by twenty-two feet.

Although these rugs have been trod by thousands of transient feet, their beauty is as much admired today as ever.

Mr. F. L. Seeley, President of Grove Park Inn, recently sent us, voluntarily, the following interesting letter:

"Until we discovered The Hoover, it was impossible to keep these valuable rugs clean, although we had an expensive installed air-cleaning plant.

"Since then the rugs have been Hoovered *every day for seven years*. I wish I could cut a piece out of one of them to show you their splendid condition.

"They are fully fifty per cent better off today because of The Hoover.

"The way The Hoover erects the nap has enabled these rugs to resist wear far better than they did when the nap was left mashed down.

"Also, the regular and thorough removal of nap-cutting dirt by the electric beating, sweeping and suction cleaning of The Hoover, has prevented a great deal of damage."

Mr. Seeley adds that he has heard, lately, "the ridiculous statement that vacuum cleaners are hard on rugs." He continues:

"I am so incensed over the injustice of such remarks, after our long experience with our eighteen Hoovers, that you are welcome to use our testimony to contradict such an absurdity."

Keep your rugs beautiful for years longer, have them *always* clean, make housework a pleasure, by using a Hoover.

"Phone any Hoover Branch Office or write us for names of Authorized Dealers who will gladly demonstrate The Hoover in your home—without obligation. On the divided payment plan, 17c to 23c a day soon pays for a Hoover. There is a Hoover for every task or purse.

*More people clean their rugs with Hoovers  
than with any other kind of an electric cleaner*

THE HOOVER COMPANY, NORTH CANTON, OHIO  
The oldest and largest makers of electric cleaners  
The Hoover is also made in Canada, at Hamilton, Ontario

# The HOOVER

*It BEATS... as it Sweeps as it Cleans*

venor asked her, still holding her hands, though he knew she did not require steadying now. Richard had arranged the pillows so that Laurel would be facing him, all the way up to Stag Island.

"Couldn't I paddle, too?" she smiled.

"If you want to?" he smiled back.

They were off ten minutes before the others. Mrs. Adams and Mrs. Grosvenor watched the pretty canoe, with Laurel in the bow and Richard in the stern, disappear like a lazy bird around a clump of trees.

"Richard seems quite taken by her," remarked Mrs. Adams. "He certainly shows excellent taste. I think she is a lovely girl."

"Yes, Richard has always been very discerning. I've often told him he's really almost too critical about girls. This is his first serious affair since he has been in college, so far as I know."

"It really is, then, serious?"

"Oh, I couldn't say that. It is obvious, that's all. Laurel is only seventeen, you know—a mere child; though Richard, absurd boy, says she's more like twenty in many ways than most girls he knows of twenty-two. It's serious enough, you see, for him to talk about her to me. She was motoring with us yesterday afternoon, and we discovered some mutual friends. It seems she visits at Mrs. Cornelius Morrison's—you know, of New York and Long Island. I am on two charitable boards with Mrs. Morrison. She is a charming woman. Bob, my other son, is at St. Lee's with Mrs. Morrison's eldest boy, Cornelius. They're delightful people. I hope Mrs. Dallas will be able to come down-stairs within a few days. I am quite anticipating meeting the mother of such a sweet, gentle, wholly charming girl as Laurel is. I wonder how she's done it in this age of wild young creatures."

*(To be continued)*

## Robbed of His Sight He Still Has Done Great Work

*(Continued from page 34)*

because I possessed the knowledge of what was to be taught, and I could go on increasing my knowledge by having new books and technical journals read to me. My ears could be almost as good a door by which to admit facts to my mind as my eyes had been.

"Of course, I have been *forced* to train my memory; but anyone else could do the same thing. The memory can be made to carry a heavy burden, or it can be allowed to atrophy through lack of use.

"My color sense, or rather, my color memory, is not as strong as it used to be. When I think of objects, I naturally have a mental picture of them. But as the years have gone by I find that I am inclined to think of objects more as forms, without any special color.

"Psychologists will tell you that this is a common experience with people who have become blind. The color sense gets to be rather indistinct; but the idea of form remains in a blind person's mental 'visualization' of things."

## *Do you realize that health depends largely upon the condition of your nerves?*

**P**ERHAPS you know from bitter experience that when you drink a cup or two of coffee at evening you do not get very much sleep that night. Or else, the fitful sleep you get does not seem to refresh and rest you as it should.

Remember that the caffeine in coffee always works on the *nerves*, no matter when you drink this irritating beverage. Only you don't notice the effects during the day as much as you do when you are kept awake at night.

Why not be on the safe side? Stop coffee for awhile, and drink healthful Postum instead. Postum is the delightful cereal beverage with a rich flavor that many thousands of people prefer to coffee itself.

Your grocer sells Postum in two forms:—Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages) for those who prefer to make the drink while the meal is being prepared; made by boiling fully twenty minutes.

## Postum FOR HEALTH

*"There's a Reason"*

Made by  
Postum Cereal Company, Inc.  
Battle Creek, Mich.

"Suppose someone told you about the Woolworth building in New York," I said. "How would you see it in your mind, with its fifty-five stories—"

"Ah!" Professor Campbell interrupted. "There is the point! If I am told that it is fifty-five stories in height, I have a dimension to guide me. That's what I *must* have—dimensions! People can tell me that something is magnificent, or beautiful, or graceful. But that means nothing to me. I must know the height and breadth and length. If it is a building, I want to know the shape; the number and the arrangement of the windows; the structural peculiarities. Then I have a mental picture of it. The picture may not be just like the reality, but it is a definite one and is probably quite like the reality, in form at least.

"When we put up our new chemistry building at the university, I, as director of the department, had charge of its designing and construction. And I had to depend on my memory to keep me in possession of countless details. I knew the exact location of every wall, door, window, and stairway. There were seven systems of piping to be installed. I knew the location of every pipe. I *had* to know it, or I couldn't have talked with the plumbers and other contractors about the work.

"The building contains one hundred and twenty-five rooms. I planned the equipment for all these rooms, and knew, practically to an inch, the position of every desk, table, case, and every piece of apparatus that was in the building. I carried all these details in my mind, because it was up to me to know them. You see," he explained, "if I was the director, I certainly meant to be able to do the directing.

**"P**EOPLE often talk about the memory as if it were a roll-top desk, with just a certain number of pigeonholes. When they are full, the storage capacity is exhausted. But that is not true of the memory. Its capacity increases with the demands made on it.

"In one respect, however, my memory does not serve me well, and the reason will perhaps be interesting to you, because you can compare it with your own experience. Perhaps you do not realize how you unconsciously fix the period of an event by something you *saw* at the time it happened. I have none of these visual associations to help me and I therefore often find myself unable to remember when a certain thing occurred.

"For example, I may attend the funeral of a friend. I have no difficulty in remembering that I did go to his funeral. But after a few years have passed, I probably couldn't tell you whether my friend died in summer or in winter, in spring or in fall. You would remember the season, because you would associate the event with what you saw at the time: trees in full foliage, or perhaps with bare branches, or in brilliant autumn coloring."

"But didn't the loss of your sight result in a sharpening of your other senses?" I asked. "We are often told that this is one of the ways in which nature compensates us."

"Well," said Professor Campbell, "nature did not see fit to compensate *me* in that accommodating fashion. Quite the contrary, in fact. By heredity, I was predisposed to deafness; and, as you probably have noticed, I am following that

---

---

# A Year's Great Growth In Public Regard

The good Maxwell has wrought a revolution within its own sphere during the past year.

In general public regard it has risen to heights of approval probably never accorded to any other car in a similar period.

In the regard of its own public it has displaced all other claimants for first place.

It has established itself beyond question as a quality product, offering in that respect, value so superior that the most casual observer immediately recognizes it.

Wherever this conviction of greater value has thoroughly penetrated the public mind, it is outselling because it deserves to outsell.

It is being judged and being awarded preference on the three great evidences of motor car value—manufacturing superiority, better performance and greater beauty.

Thousands of owners have proven during these twelve months that in every essential of trustworthy construction, it surpasses the exterior excellence which makes everyone admit there is nothing on the market to compare with it.

We have waited a year before telling these truths—waited for that spontaneous public recognition we knew was bound to come, and which is being accorded now in unstinted measure.

You need not accept our assurances that the good Maxwell has come into its own.

Your own eyes and ears will bear witness that it has brought about a realignment in public regard which is redounding everywhere to its great advantage.

# MAXWELL

*Except the eyes,  
no factor in beauty  
counts for more  
than white teeth*

## No Excuse Now For dingy film on teeth

A way has been found to combat film on teeth, and millions of people now use it.

A few years ago, nearly all teeth were coated more or less. Today those dingy coats are inexcusable. You can prove this by a pleasant ten-day test.

### Film ruins teeth

Film is that viscous coat you feel. It clings to teeth, gets between the teeth and stays. Then it forms the basis of dingy coats which hide the teeth's natural luster.

Film also holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay. Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea.

Thus most tooth troubles are now traced to film. No ordinary tooth paste effectively combats it. So, despite all care, tooth troubles have been constantly increasing, and glistening teeth were rare.

### New methods now

Dental science has now found two effective film combatants. Their action is to curdle film and then harmlessly remove it. Years of careful tests have amply proved their efficiency.

A new-type tooth paste has been created, based on modern research. These two film combatants are embodied in it for daily application. The name of that tooth paste is Pepsodent.

Dental authorities the world over now endorse this method. Leading dentists everywhere are urging its adoption.

### Other new effects

Pepsodent also multiplies the starch digestant in the saliva. That is there to digest starch deposits which may otherwise cling and form acids.

It multiplies the alkalinity of the saliva. That is there to neutralize acids which cause tooth decay.

Old-time tooth pastes, based on soap and chalk, had just opposite effects.

It polishes the teeth, so film adheres less easily.

Thus Pepsodent does, in five great ways, what never before was so successfully done.

### Used the world over

Now careful people of fifty nations are using Pepsodent, largely by dental advice. You can see the results in lustrous teeth wherever you look today. To millions of people it has brought a new era in teeth cleaning.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

In one week you will realize that this method means new beauty, new protection for the teeth. Cut out the coupon now.

### The New-Day Dentifrice

A scientific film combatant, which whitens, cleans and protects the teeth without the use of harmful grit. Now advised by leading dentists the world over.

predisposition. I do not hear musical tones at all, if they are above a certain pitch. I cannot hear the buzzing of insects. That is no great loss, to be sure; but I also do not hear the high notes of birds, or the high notes of a voice, or a violin.

"This impairment of my hearing has cost me some pleasures I used to enjoy. I don't get a great deal of pleasure out of a concert now, for instance. As for the theatre, even when I could hear perfectly I didn't find very much satisfaction in a play. To me, of course, it was only spoken dialogue, without action or facial expression. It was a good deal as if a story were being read aloud to me by a number of persons instead of by a single one. Try it yourself. Keep your eyes closed throughout an entire play, and I think you will find that you get only a moderate amount of pleasure out of it."

"But in regard to voices in general," I said; "don't they mean more to you than to most of us?"

"I'm not sure that they do," he replied. "They doubtless signify more to you than you realize. Voices are individual in their characteristics; but we all know this. Perhaps I am more quick to recognize a voice because I have had only the voice as a guide to identity. But I don't think I have any extraordinary ability in this direction."

"THERE is one interesting thing, however, which is generally admitted: The voice does not change as much, or as quickly, as the face does when a person grows older. Occasionally my former students come to see me; and I can often recognize by his voice a man whom I have not met for twenty or twenty-five years. Sometimes I am told that the man, whose identity I have guessed by his voice, has so altered in appearance that his old friends could not recognize him. They were depending on the evidence of their eyes; and for some reason the evidence of the eyes seems to register more strongly than that of the ears."

"Even when the chief appeal is to some other sense, the eyes often distract the attention. For instance, if my hearing were perfect I think that I should enjoy a concert more without my eyes than with them."

"Nature has not compensated me for the loss of my sight by sharpening my other senses, but there has been one gain: I am sure that it is easier for me to carry on sustained and concentrated thought. Aside from my work, you see, there is little I can do, except to think. You remember the story of one of the Southern mountaineers who was asked how he and his neighbors spent their time."

"Well," he said, "sometimes we set an' think—an' sometimes we just set!"

"I'm inclined to believe that a good many people sometimes set an' think an' sometimes just set and look! People sit on their porches, or at their windows, and watch the passers-by, or the procession of automobiles; and their minds are occupied with what their eyes are seeing. Under those conditions, it is practically impossible to do any concentrated thinking."

"Then, too, they have constant temptations to do things for recreation; and most of these things depend on the possession of sight. They read, or play cards, or go to the theatre or the movies, or for a

To John Walter Gough, 5th American, is credited for the "Clippers" ships which carried the flag across all the seven seas, and wrote our period a chapter in our commercial history. Forgive us, at this time, the American "Clippers" is still a model for the full level of never again.

—Barnes, 1914

## The Spirit of Leadership

**N**OWHERE has the characteristic spirit of leadership in American industry shown itself more strikingly than in the development of automotive transportation.

Only the invincible determination of American manufacturers could have brought the automobile and the motor truck to their present high point of utility in so brief a time, and could have provided tires of corresponding excellence.

Imbued with this spirit from the beginning, Firestone set the pace in fine tire building by

pledging car owners the Most Miles per Dollar.

The Firestone Gum-Dipped Cord today is carrying on this high standard of worth and raising it to a level never before attained.

Into this tire's building has gone the full cumulative force of twenty-two years' experience and the efforts of an organization numbering thousands of workers.

The great and ever-widening popularity of Firestone Cords—their adoption for America's leading cars, is a gratifying and inspiring reward to the men who have made Most Miles per Dollar the objective of their life work.

*Most Miles per Dollar*

# Firestone

**A**chievements that endure are the milestones along the great highway of progress

In manufacturing there must be one standard by which every product of a similar nature is judged. World-wide recognition of Royal performance and endurance has established it as this standard among typewriters.

It is the result of an unyielding determination to produce a typewriter which, because of its perfection of detail, would be the accepted standard of value.

motor ride, or a walk. But in my case, while I undoubtedly miss a great many pleasures, I am also immune to many temptations which would interfere with my doing as much thinking as I have done."

"But don't you enjoy motoring and walking?" I asked.

"I like to take a short ride occasionally," said Professor Campbell; "but how much motoring would you do if you saw nothing along the way? The only sensations you would get would be those from the motion of the car and from the wind against your face. Those may be agreeable for a short time, but not for very long.

"As for walking—yes, I like that; but I walk on my porch. I wouldn't see any more if I walked ten miles in the country! I usually walk from my house to my office and back, several times a day. But I never go on the street alone. Even with a companion, there is the constant necessity of negotiating steps and crossings and uneven bits of pavement, of which you take no conscious notice.

"But on my porch, which is thirty feet long, I can walk without having someone literally at my elbow all the time. I trail my fingers along the swinging seat and various other objects, so that I won't stray out of my course. For no one can walk a straight line for any considerable distance without the aid of vision or of touch. That is another fact you can prove to yourself by trying the experiment.

"BEFORE I built the house where we now live, I had a plank walk constructed in the yard of our old place. It was seventy-five feet long, with a rail down the center. About three feet from each end of the rail I set in it a screw. The top, which was covered with rubber, projected about an inch above the surface of the rail. As I went down one side, keeping my hand on the rail, this projection warned me when I was approaching the end of the walk. Then I would be ready to go around the end of the rail and up the other side.

"But my present porch is long enough for me to take the exercise I need. Until a few years ago I went regularly to the gymnasium, where I did a great deal of heavy work with the apparatus. But when a man gets to be past fifty, he must be a bit careful about overtaxing his heart. So I have contented myself with walking as a means of keeping in condition."

"Do you try to picture to yourself how you and the people you knew intimately thirty years ago have changed?" I asked.

"I don't think about that as much as you imagine," was the smiling reply. "It probably interests you very keenly if you see yourself growing older in appearance. Of course I know that my hair is practically white, and that my center of gravity is a trifle lower in my body than it used to be. But I don't think much about how I appear. I am chiefly interested in how I feel.

"Perhaps this insensibility to change in appearance is one of the compensations of blindness. But, on the other hand, one misses many things. For instance I have three sons and three daughters. Four of my children I never have seen. Of the other two, one was nine months old, and the other a little past two years, when I last saw them. Of course I have been told about them: the color of their eyes and of their hair. I can put my hands on their faces, and I can know for myself how tall

# "But Why Aren't We Making Money?"

That's a question which should never puzzle any business, no matter how small.

Yet thousands of merchants fail every year because they can't answer that very question.

This is all the more astonishing when you know that to answer it you need only a few simple easy-to-get figure-facts. These are the figures which will tell you whether expenses are too high and where they should be cut; whether you are loaded with dead stock; whether you're carrying too much on your books and a hundred other things of prime importance.

The very first thing to put into a business is an economical way to get these figure-facts. Any

business which tries to struggle along without them is constantly at the mercy of its own costly mistakes and the sharp attacks of competition, and is headed straight for disaster.

Burroughs, out of its years of experience, has been able to develop just such an economical—and easy—way. It's called the Burroughs Simplified Accounting Plan.

More than a thousand businesses already testify to the value of this latest Burroughs contribution. Read below what a few of them say, then get the Burroughs man to show you just what it will do for you. Your phone book or banker will put you in touch with him—or mail the coupon.

## BETTER FIGURES *for* BIGGER PROFITS

# Burroughs

### ADDING • BOOKKEEPING • BILLING • CALCULATING MACHINES

**George E. Evans, Clothier, Hoopes-ton, Ill.**—"Facts gained through the Burroughs Plan changed my whole method of buying, and I saved enough the first year to pay for the equipment several times over. I find I can't afford to GUESS. For years I thought I could."

**Berryman Bakery, Champaign, Ill.**—"We never knew what accurate records were until we put in the Burroughs Plan."

Never had the time before. It's no trick now to have complete information about our business every day—just like a bank. It's one of the best investments we ever made."

**A. K. Gilbert, Gilbert's Department Store, Clinton, Ind.**—"If the average merchant knew what the Burroughs Plan would do for him, your factory would be flooded with orders."

## Like Snowflakes

In their texture—  
Like nut-meats in their taste

Puffed Grains—grains puffed to bubbles—are the most enticing grain foods in existence.

Thin, crisp, toasted—as flimsy as snowflakes, as flavory as nuts. They are food confections.

The grains are puffed to 8 times normal size.

### But a scientist's creation

But remember this. Puffed Wheat and Puffed Rice were invented by Prof. Anderson. And his object was to make whole grains wholly digestible.

The grains are fascinating tidbits, but they mean far more than that. Every food cell is exploded—over 125 million in every kernel.

That's the reason for this process, where the grains are shot from guns. Every granule is fitted to digest. Every atom feeds.

### The ideal foods

These are the ideal grain foods. Children revel in them. Every serving means whole-grain nutrition. Serve them morning, noon and night, in every way you can. You know of nothing else in wheat or rice food that compares with these.

## Puffed Wheat Puffed Rice

Puffed Wheat in milk is the ideal bedtime dish.

It is a practically complete food, supplying 16 needed elements. It is rich in minerals. It is easy to digest.

If you believe in whole-grain diet, serve Puffed Wheat in plenty. It makes whole grains delightful.

they are, and things of that sort. Still, I do of course miss a great deal.

"You asked whether my other senses have been keener because of the loss of my sight. The impairment of my hearing, of course, has nothing to do with the accident which destroyed my eyes. And the same conditions which have affected my ears have also impaired my senses of smell and taste. But even before this happened these senses were just about normal, I think. And the reason was that I did not try to develop them *beyond* normal.

"You see, it was like this: After my accident, I had to decide in my own mind on what basis I was going to work out my life. And I decided that I would try to live, just as nearly as possible, in the normal way I should have lived if I had not lost my sight.

"It seemed to me that the most important thing toward which I could strive was constructive work; work which would help in advancing the useful activities of others. Merely to cultivate my own senses might afford *me* some pleasures I should otherwise miss, but it certainly would not contribute to the progress of the world, would it? The course I chose to follow has had the effect of narrowing my life. Perhaps it has made it seem rather drab at times. But I think I may claim that I have accomplished, to a considerable degree, what I wanted to achieve.

"My research work in regard to steel has gone on without interruption. I have my own laboratory and two assistants to work with me. I have designed a good deal of the apparatus we use. I plan it in my mind, down to the smallest dimensions. I can tell exactly how the plans shall be drawn; or I can go to an instrument maker and give him precise specifications. When the apparatus is tried out, I direct changes if they are necessary.

"**E**VERY year I have a new assistant. My own work goes more slowly, because I must train every new man in my methods. But when he leaves me he is grounded in the fundamentals and is competent to contribute valuable service in applying scientific principles to industry.

"That is the reason why I do have to get a new assistant each year; for when I have trained them these men are in demand at much higher salaries than the university can pay them. But I feel that I have done a double service; I have helped to start them toward success and I have sent out men capable of contributing to our economic progress. That, it seems to me, is a constructive achievement.

"The research work has in itself been constructive. Perhaps I haven't accomplished as much in that direction as I should have if I had not been handicapped, but I have published about sixty articles in scientific journals giving the results of my studies.

"Almost twenty-five years ago, I began a study of Portland cement. I believed that it had a great future in industry and that there was an opportunity to do valuable work in standardizing its manufacture. I designed and had constructed various small furnaces, with which we made a great many experiments.

"The average person will not be interested in the details; but the work we did was a factor in standardizing manufacturing processes, which led to a great expan-

# "He has a pull"

**LET US FACE** frankly this question of "Pull."

It *does* exist in business. The President of a Company hires the son of a trusted friend. Why? Not merely because the young man is the son of a friend; but because the President believes *that good blood will tell.*

A Yale graduate, who is a general manager, hires a Yale graduate as an assistant. Why? Not merely because the younger man is a Yale man, but because the general manager believes *that training will tell.*

**I**N Cincinnati the Board of Directors of a financial institution were considering several men for the position of Vice President and General Manager. The successful applicant—the man who now holds that coveted position—has written an account of his interview with the Board of Directors.

"I stated my experience," he writes, "and added that I had completed the Modern Business Course of the Alexander Hamilton Institute.

"I then learned that several members of the Board were subscribers to the Institute. They evidently knew that the knowledge obtained from the Course and Service gives a man a thoro grasp of the controlling forces of business, and fits him to hold a responsible executive position. At any rate, I was selected . . ."

There are men in Cincinnati who say of this man: "He has a pull with the Directors." They are right. But the "pull" is a perfectly legitimate one. The Directors, who owe a part of their success to the training of the Alexander Hamilton Institute, picked him because they believed that the same training had made him a man whose judgment they could trust.

This does not mean that every man who completes the Institute Course is "taken care of" in business. Business does not "take care of" anybody. It does mean, however, that with the knowledge and self-confidence that this training gives, you have an

added asset—a favorable introduction to the 200,000 worth-while men who are enrolled with you.

The Alexander Hamilton Institute makes no exaggerated claims and attempts to exert no pressure. It asks simply for the privilege of laying the full facts before thoughtful men. The facts are contained in a 118-page booklet entitled "Forging Ahead in Business."

Reading it may be the means of bringing you in touch with men who will vastly widen your opportunities for success.

98 Quality Products that Serve and Save

sion of the industry. About 1895 this country was importing 2,000,000 barrels of cement annually and was making only 500,000 barrels. At present we are making almost 100,000,000 barrels a year! To have contributed something to that achievement is what I mean by constructive work.

"Two years ago, one of my papers was read before the Faraday Society in England. The title would not be even intelligible to the unscientific person; but to the expert, this paper—which was the logical conclusion of my years of research work in regard to iron and steel—would be not only theoretically interesting but also of practical value.

"You do not think of me as having any possible connection with the industrial development of this country. You feel a sort of half curious interest in me because, as you probably would say, I am 'a blind professor.' Yet the enormous advance in American industry during the past twenty-five years has come through the practical application of scientific principles. And these principles have been worked out," said Professor Campbell with a smile, "by the men who do a good deal of 'settin' and thinkin'."

"I VERY rarely sleep more than four or five hours a night. Usually I am awake from three until five in the morning; and it seems to me that the mind is at its best then. It is rested by the few hours of sleep one has had and it works clearly. I spend those two hours thinking over the problems I am studying at the time and in planning my work for the day.

"Of course I do a great deal of reading—by proxy. At home, the members of my family read aloud the daily papers and the new books on general subjects. At my office, I conduct what I call Course 34; I select five of the advanced students and have them read aloud to me from the scientific journals. Each of them spends two hours a week doing this. I have each one follow up with me the latest developments along some special line. I discuss the subject with them, making it really a seminar with one student. In this way, they benefit by what would otherwise be merely a service to me.

"My time is not broken into by the trips which most people take for recreation. I get no 'change of scene' by traveling about; so why travel? I don't think I have been in New York since I went there for a meeting of scientists ten years ago. I got nothing from the city itself, except an impression of noise and confusion. I was not as comfortable as I am at home. I couldn't do much thinking there. And thinking is not only my chief resource, it is my chief means of making my life something more than mere existence.

"You see, any circumstance has various handles by which we can take hold of it. Perhaps this is particularly true of what we call an affliction. There is usually some handle which will enable us to use the circumstance; possibly it may help us even to find some compensating gain."

"Yes," I admitted, "that is undoubtedly true in the big things—the real essentials. But if the circumstance happens to be a physical handicap, there must be minor difficulties which are very annoying. For instance, I don't think I could even dress myself properly if I couldn't see."

From the original etching by Earl Hutter

## Suppose LINCOLN lived to-day!

**SUPPOSE** Abraham Lincoln were still living in Washington.

And suppose that one eventful day you and I should set out together to pay him a friendly little visit.

We take the train—we arrive at the White House—our names are announced—and presently we are ushered into the President's office.

A tall, gaunt, awkward man rises from his chair in kindly greeting. Somehow the quaint simplicity of his manner makes us feel at ease. And we sit down, you and I, and we talk to this great man.

The shadow of a smile lights up that homely face as he tells some little anecdote or story. We marvel at the kindness in those eyes—the strength of that familiar mouth. And we begin to understand his power over men.

**AS** he talks we can picture the scene of his humble birthplace in Kentucky—his reverence for his mother—his boyhood hopes and disappointments—his never-ending struggle for success.

And we can see him walking forty miles to borrow a book; we can see him reading it by the flickering light of that warm log fire. We can almost hear the taunts of his fellows as they tell him that he is wasting his time in "readin' and learnin'."

And then Lincoln's calm, prophetic answer—"I will study and get ready and some day my chance will come."

We see all this and more. And finally we rise to say good-bye to Abraham Lincoln.

But as we pass out the door—and for days afterward at our work—those simple words come back to us:

"I will study and get ready and some day my chance will come."

And ambition thrills our souls—we resolve that Opportunity is not dead—that there is still a chance for us if we, too, will but study and get ready.

**PERHAPS** it is not written in the stars that you will become another Lincoln. Yet one never knows! Few men saw the making of a great president in the humble rail-splitter. But Lincoln looked ahead. He made each day count.

You, too, can make something of yourself if you will but dedicate a little of your spare time to preparation for the future.

To-day—right now—wherever you live or whatever you are, you have opportunities for study which Lincoln never had. Don't let them slip by.

You can have the position you want in the work you like best. You can have a salary that will make possible a happy, prosperous home, and the comforts and little luxuries of life that you would like your family to have. All you need is preparation to do some one thing well—the kind of training you can get in an hour a day of easy, fascinating study at home.

For thirty years the International Correspondence Schools have been helping men in just your circumstances along the uproad to success. They will help you, too, if you will only make the start.

**NO** matter where you live, the I. C. S. will come to you. No matter what your handicaps, or how small your means, we have a plan to meet your circumstances. No matter how limited your previous education, the simply-written, wonderfully-illustrated I. C. S. lessons make it easy to learn. No matter what career you choose, some one of the 300 I. C. S. courses will surely suit your needs.

This is all we ask: Without cost, without obligating yourself in any way, put it up to us to prove how we can help you. Just mark and mail this coupon, and full particulars about the work of your choice will come to you by return mail.

### INTERNATIONAL CORRESPONDENCE SCHOOLS Box 7466-C, Scranton, Penna.

Without cost or obligation on my part, please send me a copy of your 18-page booklet "Who Wins and Why" and tell me how I can qualify for the position or in the subject before which I have marked an X:

Persons residing in Canada should send this coupon to the International Correspondence Schools Canadian, Limited, Montreal, Canada.

MONTREAL  
\$33.00 22 by 17 1/2 inches. Hand carved solid mahogany case, 6 inch porcelain dial, silver bezel and gold sunk, convex glass, 8 day. Strikes the hour on Ten Tone Chimes, half-hour in Harmony.

## The fourth member of the family

"SAND man's coming!", chimes the silvery voiced clock, "Small folks should be asleep!"

"Well! Well! Almost forgot the time!", exclaims Dad, looking up from his paper, as a heavy eyed youngster is bundled off to bed.

"Almost forgot!" But the clock never forgets. Day-in and day-out, year after year, it counts the fleeting hours and speaks their passing with its cheery chimes. Friendly clock! Honored member of the family!

You'll be so proud of your Sessions Clock; proud of its beauty, its accuracy, and fine workmanship. And—don't whisper this to a soul—you'll be astonished at its moderate price. The best in clocks at the fairest prices has been the product of this firm for over fifty years.

Your jeweler or department store will gladly show you Sessions values. Write today for the little book, Friendly Clocks.

**DEPENDABLE AS TIME ITSELF**

"Oh, yes, you could," said Professor Campbell. "You would find your sense of touch much more serviceable than you imagine it could be. For instance, I shave myself; and I use the same razor that my father gave me when I was a sophomore in college, thirty-nine years ago, a fine old-fashioned English razor."

"But you have a very smooth skin, without wrinkles or deep lines," I objected.

"One reason for that," he said, "is that I always shave with cold water. Most men think they must have hot water. But I think that cold water keeps the skin hard and smooth. On that trip to New York fifteen years ago," he added, with a laugh, "the Pullman porter saw me shaving myself with my old straight razor, while the train was swaying and jolting along. He knew I was blind; and my friends told me that he came to them, with his own eyes fairly popping out, to protest that I would certainly do myself some serious injury. But I never have cut myself. Perhaps, after all, my sense of touch is better than the average. Like the memory, it improves with use."

"For instance, you asked whether I get an impression of a person's character by hearing him speak. I don't think voices reveal much more to me than they do to you. But I do get a very strong impression of an individual's personality by shaking hands with him. When I meet strangers, I form a pretty strong opinion of them from their hand-shake. And I usually find that this opinion stands the test of longer acquaintance. There is an involuntary revelation of character in the way a person shakes hands, and even in the 'feel' of the hand itself."

"ONE of the most important things I have had to learn was deliberation in movement. If the telephone on my desk rings, I must put out my hand slowly until it touches the instrument. Otherwise, I may knock it over. If I want to cross the room, I must do it slowly. I had to school myself to do this. People, I think, get the idea that this slowness of movement implies a certain feebleness; but that is a mistake. It is a lesson learned through an experience filled with literal hard knocks."

"In what ways do we, who have our eyesight, make things harder for people who cannot see?" I asked.

"Well, occasionally someone upsets our calculations by moving things without telling us about it. If a piece of furniture is moved, and I don't know of the change, I have to learn it by getting a few bruises. All such things—the arrangement of furniture, of the articles on my desk, the apparatus in my laboratory—are diagrammed in my mind. If you wanted to cure a person of disorderliness," added Professor Campbell with a smile, "you could do it by compelling him to go blindfolded. He would soon learn to have a place for everything and to keep everything in its place."

I have quoted what Professor Campbell said about people feeling a half-curious interest in him as "just a blind professor." But he does not realize what people do think about him. I talked with his associates in the university; and I wondered how many human beings would have fought a great handicap and have won

### 3-Point Superiority

1. **The Famous Diamond-Grid**—the diagonally braced frame of a Philco plate. Built like a bridge. Can't buckle—can't warp—can't short-circuit. Double latticed to lock active material (power-producing chemical) on the plates. Longer life. Higher efficiency.

2. **The Philco Slotted Rubber Retainer**—a slotted sheet of hard rubber. Retains the solids on the plates but gives free passage to the current and electrolyte. Prevents plate disintegration. Prolongs battery life 41 per cent.

3. **The Quarter-Sawn Hardwood Separator**—made only from giant trees 1000 years old; quarter-sawn to produce alternating hard and soft grains. Hard grains for perfect insulation of plates. Soft grains for perfect circulation of acid and current—quick delivery of power. Another big reason why Philco is the battery for your car.

### LOOK FOR THIS SIGN

## Stop! Look! Think!

—and you'll get your *Philco now*

Safety demands the strongest, toughest, most powerful battery you can get—a battery that will stand by you in emergencies—that won't expose you to the embarrassments, humiliations and DANGERS of battery failure.

Thousands upon thousands of car owners today—in record-breaking numbers—are replacing their ordinary batteries with dependable, long-life, *super*-powered Philco Batteries.

They know the Philco Battery—with its tremendous power and staunch, rugged, shock-resisting strength—will whirl the stiffest engine—give them quick, sure-fire ignition—*get them off at a touch of the starter.*

The Philco Battery is guaranteed for two years—the longest and strongest guarantee ever placed on a battery of national reputation. But with its famous Diamond-Grid Plates, Slotted-Rubber Retainers, Quarter-Sawn Hardwood Separators and other time-tested features, the Philco Battery *long outlasts its two-year guarantee.*

Why continue taking chances on ordinary batteries? Why wait for an emergency to show you the absolute need for a dependable, power-packed Philco? Install a Philco NOW and be safe. It will cost you no more than just an ordinary battery.

**RADIO DEALERS**—Philco Dynamic Radio Storage Batteries are shipped to you charged but absolutely DRY. No acid sloppage. No charging equipment. No batteries going bad in stock. Wire or write for details.

## A little-known cause of Baldness

A very common cause of baldness is the thoughtless practice of daily soaking the hair with water. This fact is not generally known, but is one which doctors recognize.

Water applied to the scalp and undried, is apt to combine with the scalp's natural oil and form a paste which clogs the follicles and prevents their natural activity.

If your hair is unruly through lack of natural oil, we recommend the occasional application of a few drops of fresh Sweet Almond Oil.

PACKER'S TAR SOAP, through its health giving pine-tar, used systematically for the shampoo, frees the pores of all clogging material and stimulates the scalp to produce its normal supply of natural oil and encourages the growth of healthy attractive hair.

such respect and admiration as he has won, not only for himself personally, but also for the work he has accomplished.

"Don't take our opinion of him," said one of the faculty. "Here is something that was written by two of the most eminent British scientists. Referring to Professor Campbell's experiments on the diffusion of sulphur in hot iron, they say:

"Some of his data, and the conclusions he deduced therefrom, were of such a startling and improbable nature that his work was hardly deemed worthy of serious discussion by theoretical metallurgists." But they go on to say that they have "the utmost pleasure in directly confirming the accuracy of his general conclusion, and congratulate him upon an important discovery, so remarkable and unexpected as to have been received with general incredulity."

"That is high praise, is it not? But the most important thing in relation to his work is the *amount* of valuable research which he has carried on. He has recently evolved a new theory about steel. And while it is not yet universally accepted none of his claims has been disproved.

"His memory and his power of concentrated thought are extraordinary. And they are the direct result, the splendid by-product, of a handicap, which most men would have considered insuperable. His knowledge of technical apparatus is amazing. When he is working with students in the laboratory, he examines every piece of equipment they use, to make sure that they are doing things right.

**I**N MAKING experiments with steel, very high temperatures are often necessary. Professor Campbell has devised a remarkably sensitive galvanometer for measuring these temperatures. It is so delicate that the greatest care is required in its handling. Yet he never trusts anyone else to adjust it! Blind though he is, he himself takes off the glass covers which protect it; then, carefully feeling for the screw, he turns it, while someone gives him the reading on the scale, until he gets it exactly as he wants it. It is an example not of the blind leading the blind, but of the blind leading the seeing.

"And his personality is as remarkable as his scientific achievements. I have known him for many years; yet I never have seen him lose his temper. I never have seen him *show* any depression or gloom. In a certain sense, he seems to walk apart from the world. But while he has this sort of detachment, there is no morbid aloofness. Have you noticed him as he walks on the campus or along the street? His head is held high; he is as erect as a boy; he never will carry a cane and go along, tapping the sidewalk! It is as if he said, 'I am blind—but I will not *act* blind!' I often walk on the street with him; and he is so responsive that my slightest pressure on his arm is enough to enable us to move about with no indication of the fact that he does not see.

"I was a student in his classes when the accident happened that robbed him of his sight. It *might* have robbed him of his usefulness and of his happiness, if he had been a 'quitter.' But he wasn't! He has done a man's work in the world. He has helped other men to do *their* work. He couldn't do anything better and finer than that, if he had a hundred pairs of eyes."

# March—The Danger Month

May June July August September October November December January February March April

Below is a photograph of a Year. It pictures graphically for you, month by month, the death rate from Pneumonia, from May 1921 to April 1922.

Study the picture. Travel over the Year. At each station or month, note carefully the Pneumonia figures.

When you reach the dizzy pinnacle—the March Peak—you will note that the danger of death from all forms of pneumonia is more than six times as great as in midsummer.

Pasteur was the world's greatest conqueror. His conquests were not of men or cities but of Disease. His discovery that germs cause disease not only gave him thousands of victories over death, but left for all mankind the weapon of Knowledge with which to drive disease from the earth.

The germs that cause colds and pneumonia begin their work long before March. That windy month is, in reality, the reaping of the whirlwind—of the wind sown from November on.

Dr. Oliver Wendell Holmes said:

"Most diseases can be cured if taken in time, but some of them should be taken three hundred years before the patient is born."

Thus Dr. Holmes anticipated the great Pasteur and sounded the keynote of modern medicine—Prevention.

Looking backward down March Hill, note that the up-grade for pneumonia began when the windows went down and the steam was turned on. And that is the time to begin the work of Prevention—the building up of the body from within to fortify it against the germs that cause colds, influenza and pneumonia.

And remember, even though March comes in like a lamb—she is a wolf in sheep's clothing—ready to devour the body not strengthened throughout the year to resist her blustery winds, icy breath and the flattery of her occasional sunny smile.

The heavy zigzag line which stretches across this page is a facsimile of a portion of one of the health graphs regularly kept by the Metropolitan Life Insurance Company. It is printed to bring home to millions the fact that the danger from pneumonia is more than six times greater in March than in midsummer.

The things to be guarded against are over-fatigue, exposure, contagion and neglect. A first hint of danger is often indigestion or cold. Avoid clogging the body with heavy, indigestible foods. Most important, avoid consti-

pation. Wear light, warm clothing. Wear stout, warm shoes. Sleep with windows open.

If you get your feet wet, change to warm, dry things as soon as possible and restore the circulation. Keep the hands out of the mouth and keep the mouth and teeth clean.

Use a handkerchief as a screen for a cough or a sneeze.

As soon as nature warns you that something is wrong, consult your doctor; go to bed, get warm and keep covered up. Cut down your diet to

the last possible mouth. Drink plenty of water—hot preferably.

Mothers should specially guard children suffering from measles, whooping cough and the other contagious diseases—pneumonia frequently follows these diseases.

In the interests of community welfare, the Metropolitan gladly authorizes any individual, organization or periodical to reprint either the chart or information on this page.

HALEY FISKE, President

METROPOLITAN LIFE INSURANCE COMPANY — NEW YORK

## When your Apron is off for the Day—what then?

After the last dish has been dried and put away and your apron hung in its customary place—what then? Are you too tired to enjoy the evening—to go to the movies—to have company?

This is to tell you how other women have overcome this condition. The remedy is simple. It lies in doing your kitchen work the modern way—in having up-to-date kitchen appliances—especially a Sellers Kitchen Cabinet. By making the kitchen work easy it often acts far better than any tonic from the drug store.

This is true largely because the Sellers has so many exclusive improvements and conveniences. Altogether there are Fifteen Famous Features which are combined in no other cabinet.

Remember, too, that even with its many unusual conveniences, the Sellers costs no more than any good cabinet. You may have the white enamel or golden oak finish. Most dealers will gladly arrange terms to suit your income.

## The Greatest Regret of My Life

### FIRST PRIZE

### Regrets Not Hard Work, But Wasted Self-Pity

**A**T THE time I was seven years old there were no child-labor laws in my native state, and it was customary to place very young children in the spinning mills, where they worked eleven to twelve hours a day, earning ten to fifty cents.

My father, who could earn only six dollars a week, placed me with my older sister, aged nine, in the mill where he worked. We stood on boxes to reach the top row of spools. It took us several weeks to learn to run one frame—and earn ten cents a day between us.

In all the thirteen years I worked in the mills I never earned as much as ten dollars a week.

I grew up stoop-shouldered, hollow-chested, and flat-footed, with broken arches. I seldom played, but I did read—everything I could get my hands on. This reading and the knowledge that others had a better chance than I, caused me to form the habit of self-pity. How I did pity myself! I cannot count the hours I wasted in vain regret.

The only relief I had from the misery of those days was in day-dreaming.

After thirteen years I read one day that Lincoln said: "I will study and get ready, and maybe my chance will come." Those words inspired me, and I went to work in earnest. My chance did come.

To-day many of my day-dreams have come true. My name is well known to hundreds of people. I am an authority in my particular department of a big corporation. My salary compares favorably with the salaries of college-trained women, and I no longer pity myself.

My greatest regret, then, is not that I had to work so hard but that I spent so much valuable time in regretting the chances I never had, for I have proved to myself that it is never too late, and that "we always may be what we might have been."

F. M. B. V.

### SECOND PRIZE

### Gave Up for Big City Opportunities Afforded by Small Town

**O**F MY many regrets, the greatest is that I gave up the position of assistant cashier of a country bank to become a cog in one of the many wheels that operate one of the country's largest banks.

Tired of the monotonous life of a small town, I could not recognize any of the many opportunities that existed there, disregarding the fact that good board and a good room cost only twelve dollars per week, that I paid not one cent for car fare, and that if every inhabitant of the

FRANKLIN  
NEW BODY STYLES  
NOW ON DISPLAY

## Is Your Life Story Worth \$500 or \$2000?

**M**OTION picture producers often pay \$500 to \$2000 for acceptable screen stories. Yet their demands for stories can not be supplied.

In the last few months newspapers and film companies have offered more than \$50,000 in scenario contest prizes, all to secure new stories and encourage new screen writers.

And your life probably holds many incidents which would form the basis for stories worth telling—and selling.

A California school teacher; a Chicago society matron; a Pennsylvania newspaper reporter; an underpaid office man in Utah, are a few who have sold their stories at handsome prices, become studio staff writers or won big sums in scenario contests.

They studied screen writing to get away from routine work. Not one was a renowned author. Not one was a master of literary skill.

### The Palmer Test No Cost—No Obligation

**A**LL were discovered through the novel Palmer Creative Test by which phenomenal results have been obtained.

The first prize of \$10,000 and eight others in the Chicago Daily News contest, and all three prizes, amounting to \$5,000, in the J. Parker Read, Jr. contest, were awarded to new writers, discovered and trained by the Palmer Photoplay Corporation which is conducting this search.

These facts have been conclusively proved (1) many people who do not at all suspect their ability, can write scenarios, and (2) this free Test does prove to the man or woman who sends for it whether he or she has ability enough to warrant development.

Highly useful, this self-examination is intensely interesting as well. You apply it in your own home. We hold your record absolutely confidential. Tell us frankly what your test shows, and give reasons for our opinion.

### We Offer \$1,000 and Royalties

**T**HE Palmer Photoplay Corporation now produces photoplays as well as instructs, through a thoroughly tested home-study course, in the writing of them.

And under our new plan we offer to new writers trained in our Educational Department whose stories are acceptable for our productions a minimum of \$1000 cash and royalties on the profits of the pictures.

So, for the first time, photoplaywrights will share in the success of the screen stories of their own creation.

In addition, one hundred sixty companies in Los Angeles alone are searching for better screen stories for which they will pay generously. We act as the greatest sales outlet for screen stories of all kinds.

### Is It You?

**I**T is for you to answer whether or not you will fit yourself for these rewards, providing of course, you have the inherent ability.

And money rewards are not all. For hundreds of Palmer students are using this stimulating course, not with a view to becoming professional screen writers, but to develop that invaluable asset, *Creative Imagination*, which lifts men and women to lofty heights, whatever their field may be.

Send the coupon for the Palmer Creative Test. Answer now, to your own satisfaction, that question which relates so vitally to your future course in life. Also receive our interesting booklet, "How a \$10,000 Imagination Was Discovered."

All correspondence strictly confidential.

town was not my friend they were at least acquaintances.

This life I gave up for one consisting of strap-hanging, clock-punching, dairy-lunching, taxi-dodging, tag-buying, sometimes savings-banking, sometimes pawn-shopping, working, wondering, and regretting.

Although I have a good education, and through constant study and close application to my work know much more about banking than my position requires, I am rapidly developing into a perfectly reliable human "machine."

Should I happen to retain my present connection for the next five years, I have no doubt that my ambitions will compare with those of my older fellow employees, which are invariably the same; i. e., at the age of sixty, to own a bungalow in — Manor (only forty minutes from downtown), one or two thousand in six per cent bonds, an insurance policy, a garden, possibly five feet square, and the "old job."

My successor with the country bank in three years has acquired a home, a small farm, an interest in the bank, some "Liberties," a car, and a wife who can cook, sew, look pretty, and raise babies.

As I look at my pitiful Christmas Savings Club Book, and think of the opportunity that was mine, I feel that I am justified in this big regret. C. L. H.

### THIRD PRIZE

### Threw Away Good Health

**T**HE greatest regret of my life is that I did not take care of the wonderful good health I had when I was a young girl.

As a young girl I had rosy cheeks, thick, bright hair, was strong and husky. But when I went through high school, besides studying hard, I began to go to parties and dances, eat all kinds of sodas and candy. I thought it "silly" to go to bed early, to wear rubbers or do any of the things my mother advised me to do. At college I continued to burn the candle at both ends.

At the end of my second year at college suddenly my health broke; and at the same time I met a splendid man who asked me to marry him.

Now, when my thoughts turned to marriage I had lost weight and energy, and developed a nervous heart. Finally I said to my doctor: "Why has this come to me when I have always been so well and strong?" And he answered, in his kindly old way: "When we break the rules of health during adolescence not one escapes—not one."

I have been married six years now but am still paying for my folly. I have to lead the simplest kind of life, follow the most strict diet. In other words, health once undermined takes years to regain.

If only I could say to all the young folks of to-day: "Don't neglect the simple rules of hygiene, especially during your school days. Build up for yourselves strong, healthy bodies, and you will find you have treasured up riches more precious than gold, and untold happiness for the future." M. B.

Seek out the Goodyear Service Station Dealer near you. He sells and recommends Goodyear Tires and backs them up with standard Goodyear Service.

## Not all Dealers sell Goodyear Tires

The privilege of selling Goodyear Tires carries with it certain definite responsibilities on the part of the dealer.

He pledges himself, for example, to give you service that will help you get from Goodyear Tires all the mileage built into them at the factory.

He accepts a smaller profit than he might get from certain other brands, in order that we may put extra quality into the tires themselves.

Not all dealers see the wisdom of doing business on this basis; consequently not all dealers sell Goodyear Tires.

But Goodyear Dealers implicitly believe, as we do, that the foundation of a permanent and successful business is satisfied customers.

They prefer to sell Goodyear Tires because they know they can sell them to more people, and thus be compensated for lower profits on each sale.

They have learned by experience that every Goodyear Tire they sell will win them the good will of a motorist.

Dealing with them, you are sure of a quality product of exceptional and demonstrated value, supported by a service that will save you money.

Because Goodyear Dealers in their own interest think first of your interest, they are good men with whom to trade.

Because Goodyear Tires and Goodyear Dealer Service insure maximum economy, more people ride on Goodyear Tires than on any other kind.

*Goodyear Means Good Wear*

# Jim Henry's Column

## "Babbitt"

I am not running a book review column, but Sinclair Lewis made sort of a veiled reference in "Babbitt" to Mennen Shaving Cream, which I want to discuss. No names mentioned, of course, but it is obvious to me that he meant Mennen's.

He was complaining about the standardized lives and habits of millions of American men and one of his serious accusations was that they all use the same shaving cream—presumably meaning Mennen's.

Now in the first place, not over two million and a half men in this country use Mennen's. Of course they are the better class of men but there are still twenty million sticking to unstandardized shaving habits.

But is it a serious weakness in a man that he recognizes and appreciates the same superiorities of which millions of other men think highly?

After all, most men have tough beards and experience the same sense of amazed gratification the first time a sharp blade leans against Mennen-softened bristles.

Most men have tender skin and the gentle, soothing, healing influence of Boro-glycerine (the secret of the delightful after effect) appeals to them all equally.

All men hate rubbing in the lather with fingers because it is messy and irritates the skin. They esteem Mennen's because it doesn't have to be rubbed in with the fingers.

There never was a skin that wouldn't suffer from free caustic. Why shouldn't all men approve the absence of free caustic in Mennen's?

And isn't any man likely to be without hot or soft water now and then? Mennen's works perfectly with hard or soft water—hot or cold.

It's really perfectly simple—American men want the best, that is why shaving with Mennen's has become the standardized practice.

If you don't object to starting the way thousands of other men have, send to cents for my demonstrator tube. Or buy a full size tube for fifty cents.

# The Nicest House in Town

(Continued from page 42)

grave. "I've been thinking of it. I'd like you to have it, Nellie. If the other debt were just cleared up! But maybe we could manage. If we could sell our place this week, I could borrow the rest and give a mortgage on the house."

They talked of their finances for a time, and then Ed began putting away his books and records. Ed Cutter was one of those men who have a few favorite sayings which they bring out with regularity. One of his choice bits was to quote at the close of every week from Burns' "Cort's Saturday Night." Only he changed the word "Cort" to "Cutter." For the first few months of her married life Nell had thought it quite clever. But when you have been married to a man for fifteen years and he says the same thing every week, it becomes an old friend, but without humor. You no longer laugh at it, but you would miss it. So Ed, gathering up his outgoing mail, said as blithely as though it were the original time: "Well, it's Saturday night and so,

"The toil-worn Cutter frays his labor goes.  
This night his weekly mail is at an end.  
He gathers up his mattocks and his hoes  
And weary o'er the moor his homeward course  
does bend."

ALL through the week Nell walked on air. Her heart kept up a continual anthem of joy. Try as she might, her sympathy for Mrs. Brisbane was not as great as her personal happiness. "It's going to be ours," she would say in wonderment. "Those lovely rooms . . . that exquisite sun-parlor. I'm going to have new furniture, too. I won't move in without nice things. We'll just add it to the debt. We might as well be hung for a sheep as a lamb."

So Ed brought Mr. and Mrs. William Johnson up to look at the old place. The children were in school when they came. Even Gramma was away. "Yes, we've worked hard, and we're comin' in to town now to rest," Mr. Johnson told them.

Nell showed them around. "How nice it is," Mrs. Johnson expressed herself. "So comfortable and convenient!" The words had a familiar sound.

For the rest of the week Nell Cutter moved in a realm of joyous anticipation. She kept it from the children. All they knew was that on Saturday night *perhaps* they were going to have the happiest surprise of their lives.

They moved along slowly, those twenty-four-hour days, until the last one came—Saturday. By noon, Nell was anxious beyond words. They were at the supper table when Mr. Johnson telephoned. Nell jumped like a shot to get the message. When she came back her face was beaming, her breath coming fast. "All right, children. This is it! . . ." There was dramatic suspense. Forks were poised. Every eye questioned her. "We're going to sell the old house and buy Brisbanes."

No one spoke. They all seemed dazed. Extreme happiness would do that, she knew. It was Josephine whose mind worked fastest. "Sell our house," she repeated in a little awed whisper, "and move away?"

At this, Nicky, whose brain had finally registered, threw back his head and belated to the moon.

Craig did not cry. He was mad. "That old stiff, shiny house? Why, there ain't even a porch . . . just a little peaked chicken-coop in front and two feather dusters stuck up in butter crocks."

"There's a sun-parlor," Nell protested.

"I don't want to sit in no sun-parlor. I want to go outdoors where the sun is."

"There are no trees," Josephine mourned. "The birds don't come there."

"Oh, my good old room," Gramma lamented, "where I can see the hills. Every day I say, 'I will lift up mine eyes unto the hills.'"

"Where'd I keep my guinea pigs?" Craig cross-questioned.

"Where'd T-toby stay?" Nick bawled.

"Good land, what ails this family?" Nell exploded. "I thought you'd be crazy anxious to live in the nicest house in town."

"This is the nicest house in town," Josephine said distinctly, "ain't it, boys?"

For the only time in their argumentative lives the boys agreed unconditionally with their sister. Nell looked at them in amazement. No, they were not joking. They meant it. They thought the old thing *was* the nicest house in town.

Plainly, Ed was sympathetic with them. "I know how they feel, Nell. It's home to them."

"I think it's nicer to have just one home," Gramma put in mildly. "You sort of weave your dreams and desires into the very walls."

There were more disparaging comments from the children. "Now, now!" Ed stopped them. "That'll do. Mama wants to, and we'll do what pleases Mama."

LIKE a back-stage call, the telephone sounded again. "It's Mrs. Brisbane," Nell announced. "She wants me to come right over. She sounded awfully upset."

When she arrived, Mrs. Brisbane called to her to come right up-stairs. As she responded, Nell caught again that wonderful satisfying picture—that sweep of living-room, French doors and sun-parlor beyond. Her hand lingered lovingly over the dull mahogany rail which swept up the enameled stairs. Mrs. Brisbane was in a big chair by the bed. She had a cloth on her head. At sight of Nell, she burst into hysterical tears and broken sentences. "I never was so treated in my life! . . . I wish I was dead! . . . It's awful! . . . Tom just talked awful to me! . . . He accuses me of getting him into this—me! My whole family's deserted me . . . Fred . . . I don't know where he is half the time. . . . Mayme . . . she never tells me a thing. I heard to-day, from another source that she—she's going to marry him anyway—that Ray Blake. . . . Well, she don't need to bring any youngster of his here. . . . I wouldn't touch it. Oh, it's awful. I wanted you to come. You're the only one in this town who understands me."

Nell had a sudden revolting thought that this well-meant compliment might not be greatly to her credit.

## Save Fuel Keep Warm End Draughts

You will be surprised at the small cost of equipping your home or business building with Chamberlin Metal Weather Strips.

And they add so much to comfort, cleanliness and good household economy. They save 25% to 40% of fuel costs. Keep dirt, dust, soot and smoke from sifting in. That ends one of the most tedious tasks of housework.

### Why Heat Your Building 36 Times Every Day?

Tests show the rush of cold air at unprotected windows and doors fills the average building 36 times daily. Why fight this with fuel?

How much more simple to bar it out as thousands of good home managers do, with Chamberlin Metal Weather Strips.

At 12,000,000 windows and doors Chamberlin Metal Weather Strips permanently end fuel waste and discomforts resulting from draughts. They make homes dust-proof. Protect hangings, furnishings and decorations. End rattling doors and windows.

Healthier homes result. Children are safe from cold

air currents. No cold spots. You are not driven from the bright, cheerful window by chill draughts.

**Free** Chamberlin Strips are used on 85% of all weather stripped buildings, including homes, banks, schools, office buildings, churches, stores, hotels and apartments.

They are guaranteed to last as long as the building. Any need for service or attention, no matter how many years hence, is cheerfully done free, by Chamberlin experts. An estimate by our engineering department, on the cost of your equipment, is free. Just send the coupon.

"I've schemed and schemed for my children," the woman went on, "and worked their father time and again to gratify their wants . . . planned this house as nice as I could for them . . . and *this* is what I get for it . . . They go off every evening and leave me alone . . . and their father takes his hard luck out on me!" There were more random complaints and then: "What I really sent for you for was about the furniture. I'm in an awful pinch. . . . Tom says you folks are going to get the house. I wanted to ask if you'd buy most of the furniture just as it stands. . . . We'll move away, of course; we wouldn't stay *here*, now, the way we've been treated. It's only about half paid for, and Tom don't know it . . . and after to-night I'd kill myself before I'd tell him. Schmidt and Mills keep *dinging* at me, just *hound* me, when I haven't a cent more to pay. I thought if you'd pay me cash, I'd let you have it for about three fourths of its actual cost—then—I could make another payment."

NELL'S amazement was greater than her sense of propriety. "But we heard . . . your uncle?"

"Oh, that *fortune*? That was only a hundred dollars, but people thought it was more and I just let them." Back she went to her grievances: "He's so *mean*, Tom is . . . about money . . . swears about the bills. What can I do? I can't help things being high. How'd he like to have us going around looking like gypsies?" There was much more. It was disgraceful, the whole tirade concerning the family and its financial status. The air was stifling. Nell wanted to get away, outdoors, under the stars, on home to her own.

She managed to escape with no definite promises. Once out in the open, the house she had just left no longer seemed the most beautiful one in town. It seemed the House of Sham. The luxurious chairs were upholstered in falseness, stuffed with lies. The shining enamel was as slippery as deceit. Looking back as she turned the corner it appeared in the moonlight a whited sepulcher with dead men's bones within. As she hurried on, she was mentally confused.

There was with her the vision of people everywhere: men and women, young and old, who were feeding the animals to keep up appearances: Debts. Interest. Principal. Instalments. Mortgages. Loans-on-life-insurance—all the snarling, menacing animals which padded softly forever just back of the crowd. She seemed to see the people continually casting furtive glances over their shoulders, constantly throwing money to them—always trying to cover them so no one would know they were there. With two of them, the house of Cutter had long contended. These were bad enough. And now Mortgage would slip, leopard-like, into the procession. Interest and Principal had been bad enough. But Mortgage—that ate homes. Lumber, stucco, brick, Modern Dutch, Colonial, Early English—they were all the same to the hydra-headed monster. Constantly, he watched and if you slipped—he ate your home.

She was at home now. The low, rambling house lay still and peaceful under the warm October moon. The swaying elms dipped and beckoned hospitably. The lights shone through freshly-laundered

curtains. In the living-room she could see Ed in his big shabby chair with the boys perched on the arms, the boys who could scarcely be driven away from their father's side. Gramma was holding the baby in her comfortable lap, Gramma, who welcomed each grandchild as if it were her own. Josephine was at the piano—Josephine, who told her every thought, who fairly turned her mind inside out for her mother to see. The tasteful arrangement of the old furniture with its good lines, the warm glow of the shaded lights, made the room look softly mellow. Why, it looked *artistic*! Nell Cutter had eaten of the fruit of the tree of knowledge!

As Nell went in a man got out of a car and came up to the door. It was Mr. Johnson. Ed was both cordial and businesslike. He took a folded paper from his pocket. "I brought a blank deed home."

Nell went pale. She steadied herself at the back of a chair. Nick, pulling at her sleeve, kept hissing something through his teeth. It sounded like "Can't have it . . . Can't have it!" By the side of his father stood Craig, fists doubled, glaring at the intruder as though he were armored and entering a baronial castle. Josephine had gone kitchenward, and Nell was vaguely aware that somewhere along the route she had burst into tears. Gramma got up and went into her own room, as though she did not want to be in at the killing. Only Ed remained cool and unperturbed. Suddenly, Nell Cutter felt that she was selling many things of which she had not taken cognizance. She was selling big feathery lilacs, the odor of apple-blossoms, the songs of birds, the hills from whence came her help. She was disposing of her children's birthplace, the shrine of memories, Ed's energy, her own peace of mind. She was feeding the animals—to keep up appearances.

"Mr. Johnson," she broke in, "I'm awfully sorry to disappoint you after all I said . . . but I don't want to sell now. There's another house, though . . . the Brisbanes' lovely new one. Scarcely anyone knows it's for sale. Mrs. Johnson would love it, I know, she's such a good housekeeper. It has as many rooms as this one . . . and a *sun-parlor* . . ." she added feebly, carefully avoiding Ed's eye.

GRAMMA and the children had gone to bed. Ed and Nell were in the kitchen attending to all those little duties which come under the jurisdiction of house-holders. "Well, Nellie," Ed said cheerfully, "you certainly showed your good sense."

"Princes and lords are but the breath of kings, An honest man's the noblest work of God. The cottage leaves the palace far behind. What is a lordling's pomp? A cumbrous load Disguising oft the wretch of humankind."

He wound the clock. It had been Gramma's. He could remember seeing the little speckled church on it when he was a tiny boy. He put the key behind the steeple. "Well, it's Saturday night again and so,

"The toil-worn Cutter frae his labor goes. This night his weekly moil is at an end, He gathers up his mattocks . . ."

He broke off. "What's all this stuff piled up in the kindling-box?"

Nell's answer embodied all the elements of curtness, conciseness, and simplicity. "House plans," she said. "Burn 'em up."

## How about your Home— are you wearing out the Floors or walking on the Finish?

A NEW floor costs approximately fifty times more than a new finish. Paint and Varnish save more than the surface—they save money.

Paint and Varnish save labor, too. Women who have to look after unfinished floors complain that no matter how hard they scrub, they can not make them *look* clean.

A South Dakota woman unburdens herself as follows:

"But alas the floors! The farmers' hurrying feet, the hired men's heavy shoes, the babies pushing chairs and toys about, and the never ceasing march of the busy housewife, soon told their story. By the first spring we knew the floors needed help. *If they had received it then, perhaps all would have been well.* But they did not get their needed varnish. . . .

By this time they were so worn, I had to scrub them twice a week to remove the stains that would now sink in. . . ."

The woman who lives with varnished floors tells a different story. Her mop glides quickly and easily over smoothly finished surfaces.

And listen to the woman who uses linoleum:

"The linoleum on our kitchen floor is soon to celebrate its *quintcenth* birthday anniversary in our home. It is well protected by frequent coats of varnish."

Take a look at the floors you walk on every day. Do they need protection? Save the surface and you save the floors. The same with every surface of all property you possess. Save the surface and you save all.

IT costs more not to paint than to paint. Rust and rot go on till you check them. Paint and Varnish NOW, or you'll pay far more, later, for repairs and replacements. Don't put it off—put it on.

SAVE THE SURFACE CAMPAIGN—507 The Bourse, Philadelphia.  
A co-operative movement by Paint, Varnish and Allied Interests whose products and services conserve, protect and beautify practically every kind of property.

## Build up your strength and energy

Deprive your body of one vital element, which many common foods are known to lack, and no matter how much you eat you will inevitably exhaust your vitality and tear down your health.

Be on the safe side; eat Yeast Foam Tablets and you will get in abundance a substance you need in order to build up and maintain vigorous health.

These tablets are a tonic food, made of selected, whole, dehydrated yeast. They stimulate the appetite, improve digestion and help the body change food into healthy tissues.

Yeast Foam Tablets are easy to take; they keep and, unlike baking yeast, they don't cause gas. Sold by druggists and made by the makers of the famous baking yeasts, Yeast Foam and Magic Yeast.

# The Secret of Sound Sleep

(Continued from page 15)

perfectly normal arrangement your mind would be calm and unworried.

"Of course," he smiled, "with that mental attitude you would sleep more than two hours, when you needed to. But that is not the point. The point is that the after-effects of a bad night are not caused by lack of sleep but are chiefly due to your emotions of anxiety and fear.

"I say 'chiefly,' because there may be another factor. What are the thoughts that occupy the mind of a person who lies awake at night? Much of the time, of course, he is thinking about going to sleep; fearing he won't, and worrying because he doesn't. The rest of the time he is thinking about the *same things* that have occupied his thoughts during the day.

"The man keeps on thinking about his business problems. The woman thinks about her domestic cares. If people are not well, or believe they are not well, they think about their health. If they have any sorrow, they think about that. College students, who have been working over their books, think about their studies. People have an idea that men who work at physical labor are not troubled with sleeplessness. But they very often are; because they spend the night, or a part of it, thinking about their own special worries; fear of losing their jobs, worry over expenses, or over family complications.

"**N**OW, here is a very important fact: When we use a nerve cell, we exhaust some of its stored-up energy. When we allow it to rest, it stores up new energy in place of what has been used. Mental fatigue comes through a *continuous* use of the same group of cells without giving them a chance to renew their store of energy.

"The mental exhaustion which is felt after a bad night is due not only to the anxious emotions we have had but also to the fact that we have gone right on working the *same nerve cells* which we have been using during the day. If we had allowed them to recuperate, while we used other cells, which were not already tired, we should not feel exhausted.

"Everyone ought to realize the importance of *resting* the nerve cells. We should do it a number of times during the day. Stop your work once in a while. If you are a brain worker, either lie down a few moments, or sit back in your chair with closed eyes, and completely relax. Stop thinking about what you have been working on. Make your mind as blank as possible.

"I have told some of my patients who are business men to have a couch in their office and to lie down occasionally for a few moments of complete relaxation. If you don't want to have a couch—there, again, we have the fear instinct, the fear of what others will say—you can lean back in your chair and stop thinking about your immediate problems. I do this myself. I know of many cases of other men who do it. We all *need* to do it.

"This is especially advisable for anyone troubled with sleeplessness. For it not only prevents the nerve cells from becoming exhausted but it helps a person to ac-

quire the ability to relax at will. We *must* relax at night, in order to sleep. Practice it in the daytime. It is easier then, if you are a beginner, because you are not obsessed with the fear of not going to sleep. In this way you will 'get the habit,' and will be able to do it at night.

"You probably are disappointed because I don't tell you things to do about eating and bathing and exercise, or give you a lot of schemes for counting, or tell you to count sheep jumping over a fence, or something like that. Most people want to use 'trick plays' of this sort. But they are *fundamentally valueless*, because they do not get at the root of the matter.

"Indeed, they are more likely to prevent sleep than to induce it. The trouble is that they demand *concentration* of the attention, whereas it should be dissipated instead. You may get some purely temporary benefit from them, because they keep you from thinking about the worries of the day, and so let the brain cells which are fatigued have a chance to rest. But you can accomplish the same result in a better way by relaxing the mind and body. And this will give *permanent* benefit, as well as better temporary results.

"Of course the common protest to this is the impatient exclamation, 'But I *can't* relax!' My own answer to that is, 'It isn't true. You can—but you won't!' People have said to me, when I have told them to lie perfectly quiet when they go to bed, 'I can't! I am so nervous I can't lie still an instant!' Again I say, 'It is not true!'

"At first, you will have to compel yourself to keep still. You will think that you simply must move your head, if only an inch or two. You will have to restrain yourself, by an effort of the will, for several minutes. But then you will find that your inclination to make that particular movement has passed. If you are sincere and earnest in your wish to give the thing a fair trial you will tell yourself that it really is working. A moment later you probably will want to move your head some *other way*! And again you will have to restrain yourself. Then you may feel that you simply must move your arm, or your foot.

"**B**UT these inclinations *will pass*, if you do not yield to them. I had one case, a woman who used to keep her head in almost constant motion for some time after going to bed. Every few seconds she would shift it a little on the pillow. She would turn her whole body, again and again. She would move one foot, then the other, and so on. But chiefly it was her head that she kept shifting about. She thought she couldn't keep still. But the very first night that she *made* herself keep still, she did so quite easily; and she very soon went to sleep.

"As I said before, we go to sleep because we *decide* that we will. And we 'decide' this by deliberately trying to put ourselves in a condition favorable to sleep.

"Do you have trouble in going to sleep?" Doctor Sidis suddenly asked me.

"Yes," I admitted.

"Well, then," he went on, "when you

## Pickles in Patterns

*Just one example  
of uniformity  
in food preparation*

**E**XAMINE closely a jar of Heinz pickles. They look good to eat, yes—but note the arrangement of the contents. Everything placed just so.

Now look at another jar. It shows the same uniform pattern. You can't tell them apart. And any number of jars, each packed by a different girl, show the same orderly, tasteful arrangement.

The neat, prim, white-capped "Heinz girls" do this very skillfully and rapidly. Visitors to the Heinz spotless kitchens marvel at their deftness.

This uniformity in packing is proof of a still greater thing—the uniformity of the products which are packed. It speaks volumes for the care in sorting and selecting.

And the Heinz principle of uniformity goes still further. It is uniformity of grade and quality as well as of size—uniformity in every phase of preparation. Any one jar of pickles or any one can of beans is exactly as good as any other jar or can. The uniform quality and taste of each of the 57 Varieties is something which can always be depended upon.

The reason is not only high standards of food preparation—but cheerful loyalty to these standards by the men and women who do the preparing.

# Make Words Work for You

**A remarkable new invention that automatically gives you greater command of English in 15 minutes a day; finds and corrects your mistakes; increases your vocabulary.**

Words are the greatest weapons at your command; upon your use of them depends your success or failure. Words are the weapons you use every minute of every day to fight your battles, no matter what you are striving for. Words tell *what you are*. Your language reveals you. If your words are sharp, crisp, convincing, and correct you can overcome every obstacle in your pathway to great achievement. Yet most persons use flat, ordinary, lifeless words which roll off the mind like water off a duck's back; and most persons are only 61% efficient in the essential points of correct English.

Sherwin Cody

## Masterly English Now Easy

You can gain a better position, bigger pay, a higher social standing among old friends and new acquaintances; you can make a better impression on everyone you meet, by making your words work and win for you. No longer is it necessary for you to be the slave of a few commonplace words, no longer need you be shackled and held down by unconscious mistakes in spelling, grammar, pronunciation, punctuation. After twenty years' research and study, Sherwin Cody, America's greatest teacher of practical English, has at last perfected a simple device (patented), which automatically improves your English in only 15 minutes of fascinating study a day.

## 100% Self-Correcting Method

Sherwin Cody's new invention first finds out just where you stand in English. Then you concentrate only on your mistakes. And instead of learning by rules, definitions and exercises you acquire perfect mastery of English by HABIT. You learn to use the right word and the right spelling, punctuation, and pronunciation as unconsciously as you lace your shoes! You do not have to think WHY this is wrong or that is right—you do it right because Mr. Cody's remarkable invention makes it a *habit*.

## FREE Ten Minute Test and New Book

If you want to write better, stronger letters, if you want your speech to be more convincing and more interesting, if you want to make your language a powerful factor in your life, you must increase your command of words and make your English flawless. Perhaps your English is good—but are you sure? Perhaps you know it is not all it should be—but do you know exactly how far short it falls? It is easy to find out. Simply mail the coupon below, or a post card and we will gladly send you the Sherwin Cody Fifteen-Minute Test. See just where you stand. It is so interesting it is like playing a game. Every member of the family will want to take this simple test. Along with the test we will send the correct answers to the questions. We will also mail you our new book "How to Speak and Write Masterly English"—a book that thousands are thankful they have read. Do not turn this page until you have written for the test and free book. Mail coupon or postal this very minute.

**SHERWIN CODY SCHOOL OF ENGLISH**

go to bed, say to yourself, 'I don't care whether I go to sleep or not.'

"But I *do* care!" I protested.

"I know you do," he said, smiling; "but it is important for you to tell yourself that you *don't*. It is a well-known fact that mere affirmation has an influence on the mind. We really help ourselves not to care by telling ourselves that we don't care. Have you ever wanted to go some place, have been prevented from going, and have said with a shrug of your shoulders, 'Oh, well, I don't care!' Didn't it help to give you a really don't-care frame of mind? When you want to relax it helps if you say to yourself, 'I am utterly relaxed.' Because you instinctively react to the suggestion.

"MY PATIENTS, as I said before, are people we call psychopathic; that is, they have fallen into abnormal mental habits. But we can learn a great deal from them. The psychopathic person makes himself believe in utter absurdities by following the simple process of telling himself that they are true. But the normal person can use the same method to control his sane and reasonable ideas.

"You tell yourself that you don't care if you do not go to sleep. And you can believe it; for you have *reason* on your side. You have had it explained to you by scientists, for they all will tell you this: that a prolonged sleep state of unconsciousness is not essential to your health! You know, because they have told you, that what you do need is relaxation and rest. So you tell yourself that you will relax, be quiet, and think idly of something remote from your personal interests. You can do this. Of course, these being the conditions favorable to sleep, you probably will go to sleep anyway. The point is, not to *care* whether you do, because you realize that it is not vitally important whether you go to sleep or not.

"Did you ever hear the story of the peasant who went to a magician and wanted to be told the secret of how to find a hidden treasure of gold? The magician assured the man that it would be perfectly simple.

"All you need to do," he said, 'is not to think of foxes' tails for three days.'

"Well," laughed Doctor Sidis, "you can imagine the rest of the story. Of course the peasant couldn't keep from thinking of foxes' tails for three minutes, let alone three days. It was so tremendously important for him *not* to think of them that he was afraid he would; and his fear made him think of them constantly.

"It is the same with sleep. You have a mistaken idea that it is vitally important for you to sleep a certain number of hours every night. Because you think it is so important you are afraid that you won't. And your fear brings about the very result you dread.

"I spoke of shutting out sensory stimuli, such as the impressions which come through the eyes. I advise you always to close the eyes when you first go to bed. They themselves need rest. So do the brain cells to which they have been sending impressions. However, if you stay awake for some time, especially if it is hard for you to keep your mind from thoughts which excite and interest you, I suggest that you try this:

"Open your eyes. Perhaps, as you lie

in bed, you can see a star in the sky. Fix your eyes on that star; not intently with rigid purpose, but quietly and easily, because the star really is nothing that concerns you. Let yourself think idly about it. You will find that, if you do not *try* to think, your mind will wander on and on, bringing up a lot of impressions and ideas that are scarcely held together by a thread of thought. They come and go without effort on your part, mere fleeting pictures, most of them. After a while your eyes will close of themselves. And the chances are that you will go to sleep. But it *does not matter* if you don't! You are resting, both in body and in mind.

"If you cannot see a star, you can perhaps look at the dim shape of a tree; or you can look at some object, half visible in the room itself. You can look at it idly and let your mind drift, while you rest. It is a well-known fact that prisoners in solitary confinement have a tendency to sleep, unless there are external stimulations which cause mental activity. And so, with ourselves, if the body is quiet, the attention relaxed, drowsiness naturally follows.

"I said that I would explain the effect of monotony in inducing sleep. Our nerve cells have what is called a 'threshold of stimulation.' That is, the stimulus coming from outside must be of a certain intensity in order to get over this threshold and cause the nerve to react. Sounds, for instance, must reach a certain intensity for us to hear them, and so on.

"But science has discovered that if a stimulation is repeated *over and over*, this threshold of sensation rises. Or, to put it another way, the nerve grows fatigued and the stimulus must be made stronger and stronger in order to affect the nerve. If the strength of the stimulation remains the same the effect on the nerve constantly *diminishes*.

"That explains why a monotonous repetition of sound helps to induce sleep. The nerve cells which are affected by the sound grow tired, the threshold of sensation rises, and they cease to react to sounds, unless they are much louder or of a different character. So by monotonous repetition of sound we actually succeed in *shutting it out* of our consciousness entirely. And, by just that much, we limit the field of consciousness—which, you remember, is one of the conditions favorable to sleep."

"THAT sounds all right as a theory," I admitted; "but I know people who can't sleep if there is a clock in the room and they can hear it tick."

"You mean that they *say* they can't sleep," objected Doctor Sidis. "It isn't the clock that keeps them awake. It is their fear of the clock. I mean, their fear that it will disturb them. I could prove to you that almost no sound in the world keeps a person awake. It is only what we feel about the sound."

"But that's it," I said. "People think they can't control their feelings."

"Yet they do it, if they want to," was the patient reply. "I have had cases of people who thought they couldn't sleep with a clock in the room; and others who thought they *must* have a clock in order to sleep."

"Did you try to prove to each one that he was mistaken?" I asked.

"As a physician, I am governed by various factors in deciding on treatment,"

## Circulate ~ don't Hibernate

**W**INTER stay-at-homes who never dreamed it possible to enjoy so much comfort, at such low cost are finding freedom through the extraordinary economy of this beautiful New Overland Sedan.

Scientific ventilating and roomy seating make this the ideal practical family car for all year. Many refinements and improvements now are added to those qualities which have caused nearly a

million people to buy Overland Cars. The greater Overland value includes Triplex Springs (Patented) which create unequalled riding comfort and retain the economy of light weight, and sturdy axles with standard Timken bearings which insure durability under hard usage. Tires are oversize. Operating cost is low.

"Drive an Overland and realize the difference"

*PARRACOMBE HILL\**

*"Oh, Larry, do you think we can get down this wet hill without a smash?"*

*"Of course we can, dear; I've put her in second, and with Kelly Cords under us we can't slip."*

**T**HERE is no more sickening sensation than to feel your car sliding after you have applied the brakes. The driver who rides on Kelly-Springfield Kant-Slip Cord tires does so with the comfortable assurance that he can depend not only upon their mileage but upon their surefootedness. It costs *no more* to buy a Kelly.

\*Drawing by Laurence Fellows, Devon-Pier, England

said Doctor Sidis. "But the normal person should say to himself: 'I can go to sleep, either with or without a clock. I hear it only when I listen for it, anyway. The real point is whether it is a convenience for me, regardless of sleep, to have a clock in my bedroom. If it is, I naturally want one there. It has nothing to do with my sleeping. It is really favorable to sleep.'

"Of course the greatest trouble people have is in controlling the thoughts, in *letting alone* the things they have been thinking of during the day. You cannot acquire this ability as quickly as you can acquire the ability to keep your *body* quiet. It takes practice, cultivation, to be able to relax the mind. The reason why I object to the use of the countless formulas for going to sleep is that I think they defeat their object.

"I have read directions for hundreds of these 'trick plays.' But the flaw in all of them is the fact that they require you to concentrate the mind on some definite thought, even though it is a trivial one. I do not see, therefore, how these things can effect a cure. For we cannot overcome the result of mental concentration in one direction by mental concentration in another direction. Not when inability to sleep is the result we want to overcome. In that case we must substitute mental relaxation. I cannot see *any other road* to a permanent escape from the condition.

"DO YOU realize what constitutes our chief mental activity? It is *making selections* from a vast number of impressions and ideas. That is what we are doing, all day long; *selecting* the impressions received from outside, putting them together to make thoughts. And we are constantly selecting memory impressions and associating them with new ones as they come to us through our senses.

"Now, when your thoughts keep you awake, it is because you are going right on with this *selecting and arranging* of ideas. If you didn't, you wouldn't have consecutive thought.

"Well, then, this is the very thing we must *stop* doing if we want to have mental rest. Sometimes you are conscious that you are going to sleep. You know vaguely that you are 'dropping off.' And haven't you noticed, at such times, that your thoughts are broken and disconnected? Half-formed ideas, fleeting and unrelated impressions, pass through your mind. It is because you no longer are selecting your thoughts and fitting them together.

"If you let your mind alone and don't direct your thoughts they will wander from one thing to another. They are not thoughts, in fact; they are merely a train of disconnected ideas and impressions. This is the *normal state* of the mind as it approaches sleep. And since this is true you can see clearly that the way to go to sleep is to put the mind in the normal state *for sleep*."

"I wish you would sum it up as concisely and as definitely as you can," I said.

"All right!" agreed Doctor Sidis. "The first step is to lie still—keep quiet, close your eyes, and relax physically. If you were merely an animal, you would go to sleep under those conditions almost immediately. Remember that I proved this over and over again, even with animals that were so excited and nervous that I had to keep them still by main force.

## What is his energy built of?

OF COURSE only good strength-building food will do for an active, growing lad.

For breakfast you should give him oatmeal, since oats are the most nourishing of all cereals. But there is a great *difference* in rolled oats.

The safe way is to specify H-O (Hornby's Oats)—the only oats thoroughly steam-cooked and pan-toasted in the old fashioned way.

We steam-cook H-O for hours at a heat of 250 degrees. This dextrinizes the starch and makes H-O digestible, nourishing and *different*.

H-O is also pan-toasted for four hours over live coal fires. This gives H-O its brown color and delicious flavor.

## are you going to EUROPE?

**ARE** you going to Europe this year? Now is the time to make your plans. Naturally you will prefer to sail under the American flag and before making a decision you will investigate American ships.

In their various classes they are among the *finest and fastest the world has ever seen*. This is a positive statement made by the United States Shipping Board. As an American you will not accept any statement to the contrary until you have investigated.

### Investigate Today

Your Government invites you to do so now. Simply fill in the information blank below and mail it to the United States Shipping Board. Americans who have traveled on U. S. Government ships are unanimous in their praise of the splendid service, wonderful meals, smooth sailing, and luxurious accommodations. Rates have recently been reduced drastically but not one jot of luxury or service has been sacrificed.

### What you will receive—

A handsomely bound booklet showing actual photographs of the luxurious interiors of *your* ships: A full description of the Government Ships operated to Europe by the United States Lines. Information about the chief events of interest in Europe in Spring and the low prices that now prevail. Send the blank today—now. You will be under no obligation whatever.

"But you are not merely an animal. You are a thinking human being. You want to have your mind in a state of unconsciousness. That is what sleep means to you."

"Well, first remember that you can rest without unconsciousness; and that rest is the chief essential to your well-being. The state of unconsciousness, therefore, is not of supreme importance to your health."

"However, your mind is tired too. The brain cells you have been using all day are fatigued. They need to store up new energy. If you go on thinking and planning—planning is particularly bad because it is especially devoted to selecting ideas—the brain cells are kept at work. Their energy is still further exhausted, and you will get up in the morning more fagged mentally than when you went to bed. Therefore you must relax mentally. You can do this by not thinking consecutively on any subject. You can let your mind wander. This is the normal state of approaching sleep. A quiet body and an 'unthinking mind' will almost inevitably result in sleep. It is the only right method. It is fundamentally sound. The popular devices are mere trick plays. They have no lasting value."

## Hope Is a Liar!

(Continued from page 9)

that robust optimism will keep them up; that hope is a faithful friend, a tireless comforter. But I say, "Nonsense! Hope tells a flattering tale; hope is a liar; hope tucks you up in a bed when you ought to be out; hope smooths over your acts of stupidity and tells you it'll be all right next time. The hopeful man is a weak man; the strong man stands alone and needs no hope."

Although, in those days, I never hoped that an editor would take my manuscript, I was never beaten when he refused. I had schooled myself too hard to feel refusal much; I had attained another point of view, which may be summarized as "Be dull."

Here again I go against the usual counsels, which tell you to be bright. I say to you, be dull, be stoical. Are you a janitor, asked a hundred times a day the same silly question? Are you a telephone operator, and is the public rude? If so, you are the same as I was, and you can stand it if you say: "I am what I am, and the world does not know it; let it try to hurt me if it will. I am serene. I am above this battle." Through such an armor nothing can touch you. Your energy remains; and in your obstinacy you may adopt another motto: "Never Resign!"

That motto I drew from one of my bad habits. All those who play chess know that at a certain point of the game the situation of one player grows so hopeless that custom suggests he should resign. I played chess in those days, but I never resigned; I played on until my pieces were taken, until my king was not only cornered, but mated. And why? In virtue of this saying: "Never resign! The other man may have a fit."

When I wanted to sell a manuscript, I might have to wait; I might have to reconstruct it; I might have to look for another customer, but I'd go on offering

## THE GENERAL CORD TIRE

it until it grew so old that it dropped to pieces. Then I had it retyped. On looking through my register, I find that I had articles refused eleven times, thirteen, sixteen times—yet, in the end, I sold them! I should have gone on offering them till the skies fell, improving them as I gained experience, rewriting them, but always offering them. Ten years ago I wanted to see Spain. I offered myself as correspondent to nineteen newspapers in succession, and nineteen rejected me. Then one accepted me; but I should have gone on so long as there were newspapers to approach, until my decease or that of the editors.

It was not easy, this battle. To plan, to adapt himself to other people, to face adverse criticism, to fail to achieve his best work, all that takes the courage out of a man. But, as Mr. Kipling says:

If you can force your heart and nerve and sinew

To serve your turn long after they are gone,  
And so hold on when there is nothing in you,  
Except the Will which says to them:  
"Hold On!"

then indeed you are the master of your fate. To be the master of your fate you need to *have* pride, and *not* to have it. You need the pride that tells you you are human, that you carry in your breast an atom of eternity; but you must cast away the pride that makes you flush when your master calls you a fool, or your customer cheapens your goods. I came to that.

I CAN illustrate this simply by recording that in 1910 I waited for an interview on the staircase of the London "Daily News;" in 1911 I was shown into the waiting-room; in 1912 I shook hands with the editor. It was not the merits of my work did this for me, equal and better work was available; but I was there, always there, seeing whom I could, taking a snub and coming back for another; never hoping, always bearing; until, by degrees, the work that was printed made my task easier; until there were no more barriers.

I attribute all success to courage in action and fortitude in defeat. That is so; but an author must have the goods to deliver, and he must deliver them in the right way. I realized early that details matter; that the presentation of my work had much to do with success. So I took endless pains over details: the paper, the typing, the binding, the fasteners—all this I made as perfect as I could, and one day I received my reward. I was introduced to a publisher who had rejected my work.

"Oh," he said, "you're the man who sends in the beautiful manuscripts."

By that little thing I had become known, as a workman by the finish of his product, as a salesman by his "selling" manners! In other words, I had made an impression on this man's mind; the acquaintance had good results, and we later did business—which we should not have done if his mind had not been interested, prepared in advance. A man's pains may yield him nothing at the time, but his pains are observed, and mark him out for further notice.

In another sense, too, nothing was too small. After a few years, the peril approached me that threatens every young

## JOHNSON'S *Paste - Liquid - Powdered* POLISHING WAX

EVERY room needs the brightening touch of Johnson's Polishing Wax. It will rejuvenate your furniture, woodwork, floors and linoleum, and give your home that fine air of immaculate cleanliness.

*Your Linoleum* will last longer and look better if you polish it occasionally with Johnson's Prepared Wax. Johnson's Wax prevents cracking and blistering—brings out the pattern and color—protects linoleum from wear and makes cleaning easy.

in book form) In Your

## Woman's Home Companion—for only \$1.50

And they are by the very foremost of present-day novelists—Juliet Wilbor Tompkins, Arthur Somers Roche, Grace S. Richmond, Margaret Widemer, J. S. Fletcher, and Edna Ferber. Each one of these novels when published later in book form would cost you at least \$1.50. You get them all (together with a wealth of delightful short stories, special articles, and departmental helps) for the price of but a single bound book—\$1.50.

### It Was a Contest for Millions!

A wealthy uncle, uncertain as to how he shall bequeath his fortune, asks his two nieces to keep a diary for a year. "State briefly the most important thing that happens to you each day," he specifies. It is literally a contest for millions! Who will get the fortune? Will it be the fly-away, irresponsible niece, or the hardworking, businesslike, dependable one? But no, it certainly doesn't turn out in any such well-mannered way. "A Line a Day," by Juliet Wilbor Tompkins, is really a gripping, delightful story such as you would expect from the pen of this favorite author. And it is only one of the six big novels which are in store for you. Begin it in—

man who has achieved a little success: I might become conceited. We all know that state of mind; we have been made foreman of the shop, or promoted over other clerks. We are rather full of ourselves, when one day our employer requests us to take on a job that should go to one of our subordinates. We are insulted; we may be foolish enough to protest; we try to "pass the buck," and thus we leave upon the mind of the employer the impression that we have become too big for our boots.

That difficulty confronted me after I published my first successful novel; I felt like a demigod lost among mere mankind. I had a vision of future big successes, leisure, fame—when a newspaper asked if I would write paragraphs. That gave me a shock! It was like asking a movie star, who had once been a stenographer, to take down letters at a dollar an hour. Evidently that editor did not know how much I had got on. Fortunately, instinct whispered to me, "Nothing is too small. You are a young writer yet. If you refuse, you antagonize a customer who later may give you better work to do. If you accept, you open a new market, you make yourself known."

So I accepted; on the top of public success, I wrote paragraphs at seventy-five cents each. A few years later that editor was glad to order from me articles for his middle page. Nothing is too small. If I were a salesman in a steel works and a customer refused to buy a battleship, I should willingly sell him a packet of pins if I had them.

I SUPPOSE that many men and women consider themselves too sensitive to bear such an education. They should not be proud of this, for sensitiveness is not a charming quality; it is a mental disease of which we should cure ourselves. Most of their sensitiveness is due to vanity. They "cannot bear" refusals, rough answers, delay. If that is so, then must they remain under-dogs. Nietzsche was right in saying: "He who can bear all things can dare all things." And the thing which is so hard to bear, which must be borne, is the contempt of one's fellows. I wonder if my readers quite realize what it cost a young man at the sensitive age of twenty to put up before his desk a board filled with his errors in pronunciation, for the office boys to guffaw at! I made myself callous to contempt, as I made myself callous to the rejections of my work.

It was this that enabled me to stand alone and to find strength in my solitude. The boy or the girl who starts in business, as I started in literature, is too much inclined to seek introductions, hoping to obtain a job as a favor. The good jobs do not come that way. The editor, the storekeeper, the bank president, are famished for young talent; real talent needs no introduction from the lady the editor took in to dinner. Indeed, an introduction makes him suspect that the applicant cannot rely on his ability alone. I have had a few introductions; none ever did me much good. The best results have come from:

1. Making the goods by hard work.
2. Selling the goods by finding out what was wanted, in what shape it was wanted, when it was wanted, by whom it was wanted;

## Did Closed Cars Cost Too Much?

Thousands thought so. And prior to the Coach, they stuck to open cars.

That simply meant they wanted to put their investment in chassis quality and dependability, rather than accept lesser mechanical value in a closed car.

Yet closed car advantages are too obvious to need comment. Everyone wants them provided they do not sacrifice chassis value.

### *So a Great Welcome Awaited the Coach*

Essex invented the Coach to meet this plain demand of thousands. It gives every essential comfort of the costliest closed cars. It is solid, quiet, durable and attractive in looks. Yet of course its greatest value is in the famous Essex

chassis which world experts have called the finest of its size built. It fully has confirmed that verdict by official proof.

### *Insist on Lasting Value*

Open car cost shows the mechanical value you get in any closed car. And the difference shows what the closed body costs. So consider well the two types of closed cars that sell around \$1300.

The Essex Coach at \$1145 gives all practical closed car advantages on a chassis that costs \$1045 in the open model.

In no car can you get more than you pay for. It is for you to decide whether your money shall go for a costly body or for real automobile performance and lasting quality.

Touring - \$1045

Cabriolet - \$1145

by remembering that the buyer had a heart like mine, and should be analyzed as a human problem.

3. Delivering the goods to the hour and the minute, through peace and war, snow-storm and flood, in sickness and in health. If I promise an article for Tuesday and the railroad breaks down, I'll walk.

In the foregoing I seem to have suggested that I took pains to give the public what it wants. That is not the case. The man who writes only "what the public wants" is as low a man as the druggist who supplies cocaine to the "public" that wants it. I have never written a line which I cannot justify to-day; I might have had an easier time if I had been less idealistic about it. I may have changed my views; at thirty-nine I do not think as I did at twenty-five; but what I said at twenty-five I honestly believed then. There is no other way to keep one's heart clean and one's pocket filled; a man can no more prosper through writings which he despises than a salesman can sell stoves unless he believes that they are good stoves. For a while the fraud may stand, but in the end the writings and the stoves find liars out.

**WHAT** I mean applies to the trade of any man or woman: Just as one must not offer canned beef in a vegetarian colony, one does not send an article on flying to the "Boxing News." I studied my markets as I studied my men; you may have in your head plays fit to set beside Shakespeare's; but you will not sell them unless you discover the theatre that wants them. If nobody wants them, and yet you must write them, then write them; you will have been true to your impulse, and your faith may yet be justified. If you want to go to sea and your friends suggest that you accept a shore job, go to sea; for if you do anything that you think unworthy you will not keep a clean heart; when misfortune finds you out you will go down because you will deserve to go down.

Misfortune must come. There are some things which ability, energy, resource cannot hold back. I have worked hard, and I have been rewarded; but I have had to face the loss by death of people much loved. Twice my life has been in ashes; but I did not leave it there. There comes a time to all of us when we believe that none other can give us what we received from the dear dead. Then indeed we must seek lofty fortitude; I am human and have not always shown the fortitude I should. But in the end I have rebuilt my life, because I realize that life goes on.

I have told myself: "One very dear lies in the grave; so will you by and by. The flowers will bloom after you have gone, and lovers will court in the churchyard. It is right so. You have but a little time here, and much to do. You live. You intend to live. Then live well, live bravely, fully. Do not pretend to yourself that you cannot love again, strive again, achieve again. To do that would be morbid. Rather, set your face forward, forgetting nothing of the past, determined to make a fine thing of the future. And hold to this: 'There is in man something that is more than man.' Courage to act, courage to refuse, courage to endure, until we are dismissed."

## It's great after shaving

**I**f you've never doused clear Listerine on your face after shaving, you've missed something good.

Just try it tomorrow morning. See what a delightful, exhilarating feeling it brings to your face—how it "sets you up" for breakfast and the day's work.

You'll find you will want it after your shave every morning.

Listerine provides the ideally safe antiseptic lotion. It is composed of a pure, saturated solu-

tion of boric acid, skillfully and always uniformly blended with healing, fragrant oils.

Thus it allays irritation and guards against in-

fection that might come from any abrasion or nick your razor may leave.

Read the circular that comes packed with each bottle. It describes dozens of other

uses for this excellent antiseptic—uses that have kept Listerine ever growing in popularity for the past half century.

*Fresh, clean, cool and safely antiseptic*

LAMBERT PHARMACAL COMPANY  
SAINT LOUIS, U.S.A.

## It Protects the Skin From Wind and Chaps

This is what winter weather does to the skin if not suitably protected—first, the wind dries out the moisture, then the cold brings chaps. The result is that the skin soon grows rough and coarse.

If you protect your skin against wind and cold, it will retain its natural softness and freshness. Your skin needs Frostilla Fragrant Lotion every day to keep it at its best. This lotion is quickly absorbed by the skin and contains no grease or oil to make it sticky. The fragrance is the delightful perfume of many rare flowers.

Frostilla Fragrant Lotion is useful for many things. In manicuring it softens the cuticle and prevents soreness around the nails. It keeps the hands white and smooth in spite of adverse household duties. Men find it soothing after the shave. It prevents and relieves chapped ankles.

Use Frostilla Fragrant Lotion before powdering. After rubbing it into the skin wipe off the surplus with a soft cloth, then powder. No shine can appear; the skin takes on a more natural appearance and the powder clings on much longer.

This year's Frostilla Fragrant Lotion is different from the last. Its popularity shows 1975 (proof) in its success. It can be purchased everywhere on the United States and Canada. Retail price, 15c. The Frostilla Company, Chicago, New York.

FRAGRANT LOTION

## Keep Your Promises —And Make Others Keep Theirs!

(Continued from page 51)

off to the East to buy merchandise, and left me to run the place. I was nineteen years old then. My share of the profits the first year was a little over ten thousand dollars. And Mr. Walker had held out the prospect that I might, sometime, earn five thousand!

That was my first venture for myself. It was a good business, and profitable, but some undesirable elements developed and I sold out. For a couple of years I engaged in the breeding of blooded stock. I held a great sale finally and cleared out all the stock at a handsome profit. That left me without a business.

Before leaving Afton for Chicago I had attended a business college in Dayton, Ohio. There, on my way to and from classes, I passed a wholesale grocery. I used to stand and watch the operations with great interest.

"Some day," I promised myself, "I'm going into the wholesale grocery business!"

It fascinated me. So, at this time, when I had no business, I recalled that resolution. I looked into the possibilities and it appeared to me there was an opening for such a business in Marshalltown. I succeeded in getting two other men to see it my way, and we three agreed to put ten thousand dollars apiece into the project.

**P**RESENTLY our plans got noised about town. Very soon I was called into a conference with some of the principal local wisecracks, among them the presidents of the two biggest banks.

"Frank," the spokesman at this conference said solemnly, "we understand you are figuring on going into the wholesale grocery business here?"

"That's right," I replied.

"Don't you know," he continued, "that a couple of concerns have already tried it?"

"Yes, I know it."

"Both of them failed. They had more money than you have. If they couldn't make a go of it, how can you expect to?"

I determined, however, to go ahead with my plans. At the start I called on all the retailers in town and told them what I was going to do. I explained that we expected to run a wholesale business, with all the frills.

"We anticipate no preferences as to price," I said; "but when you buy outside you have to have the goods shipped in and pay freight on small lots. We can save you something there, and we want your business."

They promised to try us, and kept the promise. Our company made a profit of only four hundred dollars the first year, but after that did better. There have been many changes and additions since, and to-day, instead of having just one house in one city, we have twenty-six houses in as many cities, with manufacturing plants in two other cities.

It was before we really began to ex-

# CURTIS WOODWORK

Woodwork by Curtis is proudly trade marked by the name "Curtis" and the year "1866", when this institution started with the intent to make the finest possible woodwork. This intent has made Curtis the standard of comparison. It will pay you to see the Curtis dealer—usually the best in the community. His Big Catalog illustrates and describes every item in this complete line of woodwork. If you do not know his name, write to Curtis Service Bureau, Clinton, Iowa.

Colonial Entrance No. C-101

This Curtis entrance will make vestibule or hall bright and cheerful. Many shown in Curtis Booklet, "Entrances and Exterior Doors," free on request.

## Good Woodwork Makes— Poor Woodwork Breaks— The Beauty of the Home

TO SEE your pet ideas built into a new house or rebuilt into an old one is like making dreams come true.

But these dreams do not come true unless you use woodwork of the finest quality—not necessarily more expensive, but recognized at once by all your friends as "quality."

The woodwork of a home is like the motor in a car—little noticed unless it is wrong—but all-important. Therefore it is of utmost importance to select Curtis woodwork—so well made that the maker is proud to place his trade mark on each piece.

Your assurance of Curtis quality and correct design comes from our experience of 57 years in the wood-working business—all that time with the intent to produce the very best. To this we add the knowledge and skill of our consulting architects.

That Curtis woodwork is made right, is easy to prove by talking with home owners in almost every community. They will tell you that Curtis woodwork, room for room, seems to improve with age. Like a good violin, Curtis woodwork continues to please, year after year, because it is made, piece by piece, out of good materials, in correct proportions, and with jealous inspection before it leaves the maker's shop.

Curtis does not sell rough lumber nor "ready cut" houses, but specializes in standardized woodwork, such as doors, windows, porch work, stair cases, trim and built-in-furniture, all of which is trademarked.

Just one example of Curtis quality: The solid pine 1 3/4 inch raised panel doors, have panels 1 1/2 inches thick instead of only 9/16 inch. This makes the door stronger and gives a "raise" which adds much to its appearance. A little thing—a detail—which illustrates Curtis intent in everything they make.

Curtis woodwork is equally important if you plan to build a house, or only to replace an old door.

Curtis standardization means a specialization on the finest designs, the highest quality at reasonable cost, prompt deliveries, and the constant intent to make woodwork good enough to pass the Curtis inspection of every piece.

No matter what you plan to do which requires woodwork, it will pay you to see the local Curtis dealer and study his Big Curtis Catalog. Or ask your architect or contractor to show you illustrations of Curtis woodwork.

Breakfast Nook No. C-742

A great space-work-and-step-saver. Includes table and seats. Full information from Curtis booklet, "Permanent Furniture," sent free for asking.

Dressing Table No. C-810

With ten swinging mirrors, numerous drawers and trays. Further information sent free—ask for booklet, "Permanent Furniture."

C-615, Colonial Mantel

# 1866 CURTIS

Look for this trade mark. It identifies every genuine piece of Curtis woodwork. You will find many that imitate Curtis design, and some that claim to be "just as good." But without this trade mark you do not receive Curtis quality! An intrinsic value that unites appearance, utility and Curtis intent.

Our 57 years' experience teaches us that prospective home builders need to see in advance a variety of house illustrations and floor plans—therefore we offer the authentic Plan Books listed below.

pand to any great extent that I had the experience with the farmer which I described at the beginning of this article. That man told me, you will remember, that I was responsible for his bankruptcy because I had not held him strictly to account for what he owed us. His statement set me to thinking very seriously. I concluded that if we were wrong in his case we must be wrong in *all* cases where we did not insist on prompt settlements from our customers. So I began then to put into effect a much stricter policy regarding terms of payment. To-day we go so far as to refuse to sell to any merchant who does not pay his bill at maturity. This may seem a little hard, but the fact is that this method of dealing accomplishes a great deal of good, and very seldom causes any real hardships.

In those early days we were so far behind in our collections that at the end of a month we had on our books accumulated unpaid accounts amounting to twice as much as the month's business. This was due to the fact that our customers took, on the average, sixty days to pay our bills.

We set out to reduce this, and aimed at first to have not more than one hundred and fifty per cent of a month's business on the books. Having reached that goal, we set a higher and a higher standard—and reached it.

**AT THIS** moment I have in front of me last month's report, summarizing the results in twelve houses. The sales amounted to, roughly, one million three hundred thousand dollars, while the amount owed to us by customers was less than a million; that is, we had only about seventy-three per cent of the month's business on the books. Some of our best houses regularly have as little as forty or fifty per cent.

One of our houses is located in an old lumber county in Michigan. It used to have a high percentage of outstandings, as the accounts not yet paid are called. Whenever I talked to the manager about cutting down the percentage, he always replied:

"It can't be done in this territory, Mr. Letts. The merchants have been educated for years and years to expect long credits. If we undertake to shorten the terms we will simply lose all our business."

This man's excuses were so good that we finally had to change managers! The new man was accompanied by a credit manager trained in the policy of educating customers to pay promptly. The two of them immediately set to work.

The result? Did we lose all our business? We did not. We more than doubled the volume, and the percentage of outstandings was reduced from two hundred to about forty!

I have seen similar results time after time in our own houses and in other companies whose officers have consulted me. These results are not due to chance. The merchant who is compelled to meet his obligations promptly simply has to collect promptly from those who owe him. That helps to make him a better business man. And the result is that he has more money with which to buy!

Mr. Harlow N. Higinbotham, a great credit man, and president of the World's Fair at Chicago in 1893, understood very well the importance of holding people to their obligations. Mr. Higinbotham at

# Old English Wax

## FREE!

A can of Old English Wax will be given free, for a short time, with every *Old English Waxer-Polisher*. The Waxer-Polisher is a new labor-saving device that does two things—it waxes, then polishes the floor. A great improvement over any weighted brush, which does not apply the wax but merely polishes. Lasts a lifetime. If your dealer can't supply you, mail the coupon below.

## Now is the time to get at your floors

Give them the rich, lustrous finish you have so often admired in other homes. You can do it quickly and easily.

Old English Wax brings out the hidden charm of the wood in a mellow, velvety lustre. Such a finish is hard, lasting, and proof against scratches and heel-marks. Once waxed, the floors will retain their beauty for a lifetime with only an occasional "touching up" of the places most used.

### Wax floors the new, easy way

Just as easily as you push a carpet-sweeper, so can you use the Old English Waxer-Polisher. It does two things—waxes, then polishes the floor. Of course, a soft cloth will always be a satisfactory way to apply wax and polish the floor. But the Waxer-Polisher is quicker, easier, and uses less wax.

### The cost is small

Old English waxed floors look expensive—but are not. Old English Wax is made with a large proportion of hard, high-grade, imported wax, so it goes farther, lasts longer, and therefore costs about one-third of other finishes.

THE A. S. BOYLE COMPANY, 1620 Dana Ave., Cincinnati, O.  
Canadian Factory: Toronto

Manufacturers of wax finishes exclusively for over 25 years

### Mail Coupon for Free book

Fill in your information about the proper treatment for floors, woodwork, furniture, linoleum, etc. Shows how simply and economically you can have permanently beautiful floors. All expert advice based on over 25 years' experience.

Get Old English products at your paint, hardware, drug, home-furniture, or department store. Or write us direct. At least mail the coupon now for the free book.

# The Correct type of Tooth Brush

*As evolved by modern experts and adopted  
by modern authorities*

A world-wide crusade is being conducted for better tooth protection. This new-type brush is a vital factor in it.

It is made to the specifications agreed on by leading dental authorities. Dentists in general, the world over, now advocate this type.

It does more than remove food debris. It attacks the coats, the cause of most tooth troubles. It is adapted to the rolling method, now generally advised. One should always brush from the gums toward the tooth points.

Its correct separations let the bristles penetrate between the teeth. Its correct shape adapts the brush to all tooth surfaces, to combat film, tartar and other deposits. Its use massages the gums—a great factor in dental hygiene.

Careful people everywhere, under dental advice, are adopting this type of brush. It is known as the Decoater.

## Pocket Style

The Decoater also comes in this pocket style. Thus travelers, motorists and others may always have a well-kept tooth brush with them. But the time is coming when all careful people will carry a pocket brush.

*Folds into a case like this*

Wherever you are, teeth should be brushed immediately after meals. With people who eat away from home, this is the only way.

With the pocket style the handle case is permanent. You simply buy refills as the brushes wear out. It fits the vest pocket or a woman's bag.

Decoater Brushes cost 50c; Pocket Style, 31c;  
Refills for Pocket Style, 50c.

Most druggists now sell them. If you fail to find them, remit to us.

1104 S. Wabash Ave. Chicago

Decoater  
The New Era Tooth Brush

one time was associated with us, and a prosperous merchant then told me the following story about him:

"All that I am worth," this merchant said, "is due to Mr. Higinbotham."

"How so?" I inquired.

"I came from the East," he replied, "and opened a store in Manchester, Iowa. I bought my first bill of goods from a well-known Chicago house with which Mr. Higinbotham was connected. I discounted that bill. I continued to discount for some little time; but as I was lenient in granting credit to my customers I reached the point where the best I could do was to meet my bills at maturity."

"One spring I bought a very large assortment of goods to be paid for in the fall. My sales were heavy, but I was trusting the goods out. Shortly before the bill came due I found it was going to be impossible to meet it. I sat down and wrote to this Chicago firm, explained the situation, and asked for an extension. I never dreamed it would not be granted."

"Presently, however, I heard from Mr. Higinbotham."

"I have noticed your career," he wrote, "ever since you went into business. You discounted your bills for a while; you then met them at maturity, and now you are seeking an extension. The reason for this is, I know, because you have not been collecting your accounts as you should. I am going to refuse to extend the time on your account for two reasons: First, because our firm expects its money when the bill falls due; secondly, I will be doing you a real service if I make you pay the bill, because it will mean you will have to go out and collect your accounts."

**T**HIS merchant told me that when he received Mr. Higinbotham's letter he was very angry. However, as he saw he would have to pay the bill, he got busy and collected enough to do it. Then for the first time he began to realize the great importance in business of completing each transaction—not only making the sale, but also getting the money for it!

At the time he told me about it, this merchant had retired with a snug fortune. He never again had to ask for an extension.

A harness manufacturer told me of the following experience: A farmer came to him to buy six sets of harness. He asked for sixty days in which to pay, and promised surely that he would pay then. The harness man agreed to the terms. But at the end of the sixty days the farmer said:

"My bill is due. I've got the money and I'll pay it if you say so. However, I have a chance to invest the money in some cattle, and I'd like to use it for that purpose."

The harness man was in no particular need of the money and wanted to please the farmer. So he granted an extension of sixty days. At the end of that time the farmer asked for another extension and offered a good excuse. The second extension was granted. At the end of *this* sixty days the farmer neglected to come in at all, so when the year was up the manufacturer sent a statement of the amount due. The farmer came in very promptly and he was thoroughly insulted.

"There's your money!" he said, paying it down. "But it's the last of *my* money you'll get!"

The terms, to start with, had been

## For LIBRARY WALLS

**Alabastine**  
*Instead of Kalsomine or Wall Paper*

## For Every Room in the House

Alabastine is a new and improved wall treatment. It is a white, non-toxic, and non-flammable material. It is easy to apply and dries quickly. It is suitable for use in all rooms of the house, including the kitchen and bathroom. It is a great alternative to wallpaper and kalsomine.

Alabastine is a new and improved wall treatment. It is a white, non-toxic, and non-flammable material. It is easy to apply and dries quickly. It is suitable for use in all rooms of the house, including the kitchen and bathroom. It is a great alternative to wallpaper and kalsomine.

ALABASTINE COMPANY  
Baltimore, Md.

EVERY PACKAGE OF ALABASTINE HAS THE CROSS AND CIRCLE PRINTED IN RED

*The crate on the left was designed by a Weyerhaeuser engineer to replace the one shown on the right.*

*The diagonal bracing and 3-way corners make a strong, rigid crate that absorbs the bumps and keeps the strain off the contents.*

*Internal bracing holds the contents in place. Liberal use of resawed lumber for sheathing affords ample protection against damage from the outside. The dealer will receive unmarred merchandise.*

*Curiously enough the new crate shows a number of savings over the old one.*

*This new crate is made up in sections on jigs. It is delivered to the packer in sections. He is not required to do any cutting or fitting.*

*An instance of what Weyerhaeuser Crating Engineers are doing for shippers every day.*

## This Crating Service May Do as Much for You

**A**S an example of the kind of thing that is making business officials sit up and look to their packing, consider the crates pictured above.

The crate on the left was designed for a manufacturer of washing machines by a Weyerhaeuser Crating Engineer.

It takes the place of the crate on the right which used over 11 feet more of lumber. It is stronger in every way—a reliable protector of its contents.

It is 39 pounds lighter. A saving in freight alone that amounts to 3900 pounds per car shipment. No mean item in these days of high freight rates.

Furthermore it represents a saving in labor costs. This new crate is put together in half the time required to make the old crate.

**A**NY business man who looks into Weyerhaeuser scientific crating is liable to find himself dealing with *big-figure savings*. But the greatest thing this service does is to insure the delivery of merchandise in perfect condition.

As a result the shipper's customers are pleased. It is service that they recognize and appreciate. Dealers have tired of the damage claim nuisance. They want goods fit to go direct to the salesroom.

Shippers who have adopted scientific crating report other advantages and savings. It speeds up collections, decreases sales resistance and gives to their salesmen a new selling tool. Safe packing builds good will.

**T**HE services of the Weyerhaeuser Crating Engineers are offered to the executives of business concerns—by appointment on request.

There is no charge for this service. This organization feels that the position of lumber as the standard material for shipping containers imposes the obligation to deliver 100% value with every foot of lumber we sell.

For crating purposes, this organization supplies from its fifteen distributing points, ten different kinds of lumber, of uniform quality and in quantities ample for any shipper's needs.

A booklet, "Better Crating," which outlines the principles of crate construction and explains the personal service of Weyerhaeuser engineers, will be sent on request to any manufacturer who uses crating lumber.

Weyerhaeuser Forest Products are distributed through the established trade channels by the Weyerhaeuser Sales Company, Spokane, Washington, with branch offices at 208 South La Salle Street, Chicago; 220 Broadway, New York; Lexington Building, Baltimore; and 4th and Robert Streets, St. Paul; and with representatives throughout the country.

**WEYERHAEUSER FOREST PRODUCTS**

explicit. The customer was willing to abide by them if the manufacturer insisted on them. As time went on, it became harder and harder for the farmer to pay. Probably the six sets of harness were pretty well worn out by the time the statement came! And the seller, by being easy, too easy, merely in the hope of doing a favor, lost a customer!

I have spoken all along pretty much in terms of business. But the rule holds good everywhere. Not so long ago my daughter asked me to pay her allowance one month ahead of time.

"What do you want it for?" I inquired.

"For a dress," she replied.

"My dear," I said, "wait until your money is due, and then buy the dress."

She consented reluctantly. When thirty days later her allowance check was given to her, I remarked:

"Now you can buy that dress."

She laughed.

"Dad," she said, "I've made up my mind I can get along without it."

It was no doubt better for her that I lived up to our arrangements. It is just as simple to be strict as to be lax in meeting the obligations and in having them met. It's a matter of habit. But the difference between the man who has the habit and another who has somehow neglected to acquire it is very nearly the difference between success and failure.

"HUMAN Nature in a Hat Store" contains a lot of information that you will want to remember when you go out to buy your new spring hat. It is filled with curious facts and stories about hats and heads, men's tastes, and the shapes and styles of headgear that suit them—as revealed by the guiding genius of an important New York hat store. The article is by Merle Crowell.

## Queer Tricks People Try to Play on the Circus

(Continued from page 60)

the tickets. That was probably true, too. It seems a universal trait of human nature to like to flourish free-tickets before less fortunate friends.

One day I was puzzled by the news that all our "balloon boys"—those who sell pennants and balloons—had been arrested. I couldn't understand why, so I hurried to the police station to investigate. The sheriff, who was in charge, greeted me cordially.

"I hear you've got a bunch of our boys down here," I said. "What have they done?"

"Nothing," he replied genially. "That's the trouble. *Nobody's* done anything. Not for *me*! None of your fellows have showed up here with tickets for me, so I determined to make *somebody* come down here. I couldn't think of anything that would bring you quicker than to arrest some of your people. So I did it—and here you are!"

Many a time I find myself in a situation

# FOLKS

## with cold bed-rooms

## please write

**D**OWNSTAIRS, the home of Frank Vohs of St. Louis was fairly warm. Upstairs, the bed-rooms were cold.

Then came the heating Contractor who installed ARCOLA in the kitchen, connecting it by small pipes with an American Radiator in every room. At the end of the second winter Mrs. Vohs wrote:

"We actually use less fuel to heat the whole house than we formerly used to heat the first floor."

In other words, ARCOLA with American Radiators, has made the whole home livable,

and is paying back a part of its cost every year in the saving in fuel.

Life is very short. Too short for the agony of getting up in cold bed-rooms; too short for the discomfort of breakfast in cold dining rooms; too short for the unhappiness of huddling around a stove or hot-air register in the evening.

A book tells how any home—no matter how small—can have radiator warmth. And how the small initial cost is paid back in fuel saving year by year.

Send to either address below for your copy, *today*.

where only quick thinking will save me a peck of trouble. For instance, I was out on the lot one day when I saw two strangers having an argument with one of our employees. He was a man who never gave any trouble so I couldn't understand what was up. I went over to the group and found that the two strangers were local detectives and were threatening to arrest our man on a trumped-up charge. That was a time that called for quick thinking. Turning to our man, I said angrily:

"Haven't I told you that I won't stand for any more trouble from you? This settles it! I'm through with you. Get out!"

The chap stared at me in amazement. He looked like a nice dog that had been kicked by his best friend.

"Go on!" I said. "You're fired! Get your stuff and take it away."

Going close to him and shaking my fist in his face, I muttered, "It's all right, old fellow, I'm just bluffing. Slide out, while I'm talking." Then I turned back to the strangers.

"I've warned that fellow over and over again," I said; "but I'm through with him now!"

And so I went on, holding their attention until suddenly they looked around and said, "Why—he's gone!"

"Yes," I said, "he won't trouble us any more."

**A**NOTHER time, when a grouchy patron of the circus complained of one of our men who, I was perfectly sure, was not at all at fault, I "fired" him in the same manner. I actually made him leave on a regular passenger train, but tipped him off to wait for us at our next stop.

Just as I expected, the man who had made the complaint backed down and begged me to reconsider the dismissal. Later, he hunted me up again and said that if I wouldn't reinstate the discharged employee he himself would get a job for him. It simply proved what I had known all the time, that his complaint had been without just cause. But it would have been impossible to get him to admit this if I had attempted to argue with him.

Charles Thompson, a veteran "adjuster," was with the Sells show once when someone complained to him of a man whom they indignantly pointed out. The man complained of happened to be Sells himself! But Thompson did not mention this fact to the disgruntled stranger. Instead, he apparently flew into a rage, walked up to Mr. Sells—his employer and the boss of the whole show—and told him he was fired! The stranger protested that he didn't want the man discharged; so Thompson, with apparent reluctance, consented to reinstate him. No one appreciated the joke better than Sells himself. The stranger never knew it *was* a joke.

One of the favorite ways of trying to hold the circus up is to bring in some claim just as we are leaving. One night several of the sheriff's deputies appeared just as we were beginning to send the wagons to the train and said they had an attachment to serve. I examined their papers, then I said:

"Well, I suppose you want to attach something valuable. How about one of the elephants?"

That idea appealed to them, so we arranged it. When it was all agreed on, I

said, "You'll have to leave a man in charge of the elephant."

They were rather taken aback by this; but finally told one of their number to stay, and the rest went off. When they had left, I had one of the elephants brought out and fastened to a stake.

"There's your elephant!" I said. "I hope you won't have any *serious* trouble with him." And I walked off and left them together.

We proceeded with our work, loading the wagons and getting the stuff off the lot. Every little while, the deputy would call me over to where he was standing guard over his elephant and want to know what he was going to do.

"Don't bother me about it!" I said. "I'm busy. He's in *your* charge now."

Finally he called me again and demanded if I was going to leave him there alone with an elephant on his hands.

"Certainly," I said. "But I want to remind you of one thing: He is still the property of this circus. If anything happens to that elephant, or if he does any damage while he is in your charge, you will be held responsible for it."

"But I don't *want* to be responsible for it!" he protested.

"You are, whether you want to or not," I retorted. "And I advise you to be pretty careful; because if an elephant gets excited and goes on a rampage he will muss up a lot of property. So be careful how you treat him."

The man looked at the elephant, looming up in the darkness and weaving back and forth, as elephants do.

"He seems pretty nervous to me," I said. "He probably doesn't like you because you're a stranger. You'd better be careful." And I turned to go.

"Say! Wait a minute!" the deputy begged. "Don't leave me with that elephant! Take him away."

"But how about the attachment?" I asked.

"Never mind the attachment!" he said, "I'll take the responsibility of explaining to the sheriff; but I'm darned if I'll take the responsibility of playing nurse-girl to an elephant!"

**SO THAT** was the way I got out of that trouble. Another time we were just leaving the lot when they told me that a chariot and four horses were missing. They simply had vanished after the chariot races at the close of the evening performance.

Well, I hunted and hunted, but I couldn't find hide nor hoof of them. Finally, I came across one of the townspeople who said he had seen a chariot and four horses, apparently in full flight down a certain street. I thought perhaps they had run away; so I got on a horse and started after them.

I did a regular Paul Revere ride through the night, asking everyone I met whether they had seen a stray chariot anywhere. I finally traced the outfit to a stable on the outskirts of the town. The sheriff himself had climbed into the chariot as it stood outside the main tent, and had driven off without being observed. He said he had attached it, on some claim or other, and seemed very proud of his exploit. But when I told him he would have to feed the horses and deliver them and the vehicle in perfect condition wherever we

## "What to do?"— the question that makes men—or breaks them

**A**LMOST every day in any large business some unusual problem arises which is beyond the experience of even the best informed men in the organization. It is then that the right answer to the question "What to do?" will often make a man—the wrong one break him.

It is not unfair to say that an institution such as LaSalle—with its millions of dollars in financial resources—its staffs of highly specialized experts—its organized files of business data—its facilities for business research—is, because of the very nature of its work, in a position to give advice which no single individual could possibly attempt—no matter how important his work—no matter how wide the scope of his experience.

Daily we have cases arise where opportunity is knocking at the door of a LaSalle student—provided he answers correctly the "What to do?" of the immediate moment.

By means of a broad Consultation Service—open to all LaSalle members—law suits are averted—financing problems are solved—sales are increased, for individuals and corporations—thousands of dollars are saved in freight charges—factory costs are cut—production is increased—emergency situations are promptly and properly dealt with—all by our students, with the advisory facilities of LaSalle back of their actions.

These unusual resources are at the call of *every* LaSalle student. He is not limited to the department in which he is enrolled, but may avail himself of the full advisory resources of any or all of our highly specialized departments and staffs.

When a person enrolls with LaSalle, it is, in general, for the immediate purpose of increasing his earning power, by a training which will enable him to function successfully in the more liberally rewarded fields of business endeavor.

But LaSalle's interest does not rest with supplying specialized training.

On the contrary, it follows the man "on the job"—goes with him as he advances in position and responsibility—helps him make good, every step of the way. Thru all the years of his business activity

the entire educational and research facilities of LaSalle stand solidly behind him—ready to help him solve any new or unusual business problem with which he or his employer may be confronted.

It is this character of service that has been responsible for the growth of LaSalle—to proportions far beyond what any man would have dreamed a correspondence institution could reach in the field of business training.

As I look back over the decade past—consider the four hundred thousand men who have enrolled with LaSalle—everything we have done or tried to do—both in our business training courses and in our supplemental services—centers in the important work of helping ambitious men to answer with soundness and authority the "What to do's?" of business life.

The man who realizes what LaSalle training and LaSalle consultation service might mean to him and his future, but who fails to go further—to investigate—is answering his most vital "What to do?" with inaction—is deliberately turning away from Opportunity.

patent pending.

wanted them sent, he climbed in again and drove back to the lot.

Another time—it was Fourth of July—one of our boys, named Hathaway, was walking down to the train with some of the other young folks after the night show. The girls were in front; and Hathaway, who is a jolly young chap, would occasionally throw a torpedo on the sidewalk back of them. They would jump and squeal, as girls do, just for the fun of it.

The whole thing was mere play. But the small-town policeman knew that they were circus people; so, in spite of the girls' protests, he arrested Hathaway for disorderly conduct! I was sent for, and went to the police station, where I tried to explain that it had been only harmless fooling. But the policeman stuck to his charge. Hathaway, I was informed, would have to stay in the lock-up until morning, when he would appear before the mayor, who was also justice of the peace.

Perhaps you don't know what that means, but I did. When a prisoner is tried before a justice of the peace it is almost a foregone conclusion that he will be found guilty. The reason is that if he is convicted the magistrate collects the fine. Out of three hundred and fifty cases tried in a magistrate's court in Philadelphia, just *one* case went in favor of the defendant! As that is a fair sample of what generally happens, I was pretty sure Hathaway would be found "guilty."

The only thing I could do was to try to get the business over as soon as possible, so that we could rejoin the show. I called up the mayor by telephone and tried to show him that the charge was groundless, but he insisted that the case must be tried. To make a long story short, I finally succeeded in persuading him to let the prisoner appear before him at his house. We drove out there, he "held court" in his parlor, and fined Hathaway twenty-seven dollars and a half! The funny thing was that he consented to *remit* the fine. His dignity had been appeased. But it was two o'clock in the morning before we got away.

**YOU** would be amazed, I think, if you knew the absolutely unreasonable claims for damages that are brought against the circus. In one case, a man claimed that one of our tent stakes "encroached" on his property. The city engineer was called to examine the situation, and announced that the stake was *one inch* over the line. Whereupon the property owner got out an attachment in the sum of *five hundred dollars* against the circus.

During the influenza epidemic a few years ago, one of our workmen died on the first section of our train. They wired me—I was on the fourth section—and I telegraphed to have the body taken off at a certain town and sent to the local undertaker's. When my section reached the town I got off to attend to the matter. I hunted up the authorities and asked that the body be shipped to the man's friends. I gave them the address where I could be reached, and told them to let me know what the expense proved to be and I would send them the money.

"Not on your life!" they said. "You'll pay *none*!"

"Very well," I replied. "How much will it be?"

"*One thousand dollars!*" they declared.

"But how much is the undertaker's fee?" I asked.

"Two hundred dollars."

"What is the other eight hundred for?"

"Never mind what it's for! You'll pay it, or your train doesn't leave this town."

I stepped aside as if to discuss the matter with the circus men who were with me, and quietly told them to go back to the station and get our train on its way as quick as they could. Then I returned to my discussion. A little later one of my men came back and called me aside.

"We can't move the train!" he said. "They've chained the wheels to the track!"

Well, I paid the thousand dollars, and we left the town. We got back a good share of the money they tried to rob us of; but we were a long time doing it.

**I** COULD go on indefinitely, telling how people make trouble for me; I could tell of the man with a broken arm, who with the connivance of a dishonest lawyer claimed that the arm had been broken by his falling off the circus seats. I found that his arm had been broken before the circus even came to town!

I could tell how all our balloon boys were arrested one morning by a greedy chief of police. Going to the police station I had them all brought in; and as we conferred together I told them to slip me every cent they had in their pockets. Then I turned them over to the chief.

"They are not on the circus pay roll," I said. "You'll have to collect from them. They're not under my charge."

When he tried to collect the fines he imposed, of course they hadn't a penny among them.

"Too bad, Chief," I said. "You made one mistake: you arrested them too soon. They hadn't a chance to sell their balloons and get the money."

You understand that this arrest had been absolutely inexcusable. It was a plain case of extortion. I don't want to give the impression that we would attempt to evade justice. The trouble is that people seem to think the circus is legitimate prey for graft. Sometimes the graft is like that attempted by this particular chief of police. Sometimes it is harmless and amusing.

For instance, I was approached late one afternoon by a bevy of very charming ladies with a request for something like twenty tickets for the evening performance. Of course I politely asked just why we were expected to have them as our guests, and they informed me that they belonged to a Ladies' Auxiliary, and had been working all day in a booth, where they sold coffee and sandwiches to the people who came to town for the circus. They seemed to consider that their little money-making enterprise had in some mysterious way put us under about twenty tickets' worth of obligation to them.

And so it goes. We of the circus try to be fair and generous. For example, we often invite the children in the orphan asylums to come to the show as our guests. But we have learned to ask, not only how many *orphans* we are to expect, but also how many *grown-ups* will be in charge of them. It is an actual fact that on one occasion we had forty-five orphans accompanied by forty-seven attendants! I think anyone will admit that those orphans were well chaperoned.

## In the Nick of Time

(Continued from page 13)

downward in the snow. She was up instantly, laughing. "A nice trick to play on your unsuspecting bride," she cried gayly, then the smile faded; a nameless, horrible dread gripped her. "Archie!" Awakened suddenly from her sleep she was unable fully to comprehend her position. "Arctic! Arctic!" He, too, was gone. The team had been stopped by the overturned sled. The dogs were squatting on their haunches awaiting someone to put things right and mush on.

Then a breath of the Arctic whipped about her, the advance guard of an on-rushing storm. In another hour it would be snowing. Surmising the situation, Edith became strangely cool. She cut the lashings and dragged her trunk and bags clear, then righted the sled, pulled the dogs around and started back. A short distance beyond the lead dog came to a stop, hair bristling in rage, fangs bared in a snarl. The horror and magnificence of the scene ahead was never to fade from her memory.

EVANS had not moved from where he had fallen. Squared over his body stood Arctic, making a final stand, his faithful body and loyal old heart a shield for the helpless master he loved; a magnificent old pensioner, adding to the already overwhelming debt his master owed him; old, even feeble, yet ready to match his toothless gums against the murderous fangs of the two wolves circling slowly to attack.

For the first time in their experience, a team of Evans felt the bite of the lash. It rose and fell until the team was racing. From the ridge above two more wolves loped into view. Reinforced, the others stood their ground. "I'll never make it," she whispered, "Good old Arctic will be pulled down, and then—"

"Whoa!" The team halted, uneasily staring at the wolves. Edith blessed the big brother who had taught her to use a thirty-thirty, and Evans's rifle, which was lashed to the sled. She aimed carefully, fired, and one brute leaped stiff-legged into the air, and fell quivering to the snow; a second shot sent the other dragging its hind quarters into the brush. She brought down a third before it reached the woods. She replaced the rifle and urged the team onward.

"Oh, you poor dear! You are suffering so!" The tears sprang to her eyes unbidden as she touched his white, drawn face with her lips. Evans tried to smile, an attempt that wrenched her very soul.

"Ptomaine!" he whispered with an effort. "It's going to snow!" He paused to gather his strength. "Let me go. . . I'll . . . be . . . all right . . . Drive fast . . . before storm." Cramps twisted his body and features agonizingly, choking off his words. "Brave little wife," he faltered; "love . . . you . . . take . . . old . . . old Arctic . . . and . . ." The words died away to a whisper. She leaned closer.

"Oh, my darling, tell me what you want me to do! I'll never leave you here! Never! Never! Never! Archie! Archie! What of Arctic?" She shook him frantically to arouse him; to draw from the

silent lips the phrase that might mean the difference between life and death to both. A strange peace seemed to have settled over Evans; the face lost its agony.

Then she dragged his limp form to the sled and covered it with robes. The lead dog was gnawing at an iceball in one of his pads. "Ready now!" she cried: "Find the way home!" She took her place at the sled. "Mush on!" Beneath her moccasined feet she felt the trail. Arctic trotted contentedly at her heels.

The first flurry of snow greeted her as she bucked her way through a rough spot. She had taken the only apparent course, yet when she emerged to easier going she no longer felt the trail. A twinge of dread gripped her. She urged the dogs onward, allowing the leader his own judgment.

Presently he stopped, and she hurried ahead to find a way down the steep incline. The frozen lake, covered with snow, stretched out before her. Her frantic search to pick up the real trail was fruitless, but the silent figure on the sled goaded her to desperate measures, and she made a trail of her own. Once on the lake she permitted the leader to take his own course, urging the team on at a killing pace now that the going was good. The falling snow blotted out all landmarks.

With each footfall she hoped to feel the trail once more, to know they were not wandering aimlessly about, wasting precious moments. The suspense was maddening, and she lost all track of time, except that it was almost night. The lead dog swerved suddenly, the other followed, and a cry of joy burst from her lips. "A trail!" she sobbed, "A trail, and it's fresh. Oh, Archie, it means help for you."

Eagerly she stooped to examine the tracks. They were small for a man. "A woman!" she whispered. "Another woman here?" A dull, wounded look crept into her eyes, as if someone had lashed her across the face; her despair was tragic, terrible! The tracks were her own. She had made a complete circle without realizing it. And now the full realization of her dire straits swept through her. The lead dog was hopelessly lost; young, strong, and willing, yet he must be guided.

THE figure on the sled was mantled with snow. The sight chilled her. She brushed aside the snow that had sifted to his face and kissed his cold lips. "Oh, my darling!" she whispered, "if those precious lips could speak but a word of guidance, and not depend upon poor, ignorant me."

On! On! Ever pushing aside that swirling curtain, peering eagerly ahead, only to have it close behind swiftly, yet never lift ahead. Once it did lift for a brief moment, and she saw Arctic standing erect, some distance away, looking toward her. His presence gave her a measure of comfort; then the curtain fell. The storm gradually grew worse and at times even the lead dog was hidden. Again she stopped! Arctic, too, had forsaken her. His actions were strange. Content to trot with the others day after day, now, in her hour of need, he persisted in remaining aloof.

## How fast does your mind work?

At that moment, when her spirits were lowest, she suddenly realized that Arctic knew the way, was trying in his dumb way to lead. Age had not robbed him of his brave heart, magnificent spirit, or a sense of direction. Somewhere in the swirling cloud of flakes the old dog was pushing ahead. Was it too late? Was he even now beyond recall?

"Arctic! Arctic!" she cried. "Come, old fellow! Arctic! Arctic!" The very silence seemed to mock her; the shroud enveloping the silent figure on the sled was deeper now, she noticed. "Arctic! Arctic!"

And then the curtain parted a few feet away and Arctic bounded to her feet. Every inch of the old pensioner's body bespoke the joy that had filled his heart at her call. "Let me show you the way," he seemed to plead; "those other dogs are nice young fellows, but they lack experience. Nothing like an old head at a time like this." She removed the harness from the lead dog, and slipped it onto Arctic. The old fellow was trembling in his eagerness to be off. Patiently he waited her command.

"Mush on, Arctic!" she ordered in a low voice, and with bated breath awaited the result. He swung to the right with such speed as almost to upset the sled, taking a course almost opposite the one she had followed. Apparently the old fellow was in doubt, for he zigzagged uncertainly for several minutes, yet she did not interfere. At least, he could not make their situation any worse. The others, inspired by their former leader, seemed to take on new life. Tails that had been dragging, curled over woolly backs, and they speeded up to maintain a pace far too swift for the old pensioner—a pace he himself set.

And then, without preliminary warning, she suddenly felt a difference. It was almost too good to believe. Disappointed so many times, at first she refused to believe; yet there could be no doubt now. They were back on the old trail. With an angry cry she shook the shroud of snow from the robes covering Evans. "You sha'n't die! You sha'n't!"

WHEN the storm lifted some time later they had reached the opposite shore. New peaks reared abruptly about bewilderingly. A dozen routes were open apparently, but the wise old dog never even looked up. Twisting this way and that he tugged the sled to the top of a ridge, then over a level stretch and down into a valley. They reached an opening in the woods. Before them was a frozen river.

The pensioner had taxed his old body beyond the limit. Now he commenced to lag. A strained tendon caused him to limp pitifully at times. It was cruel to keep him at it now, yet she dare not change. At the forks of the river he headed up the south tributary. "No!" she ordered with quick decision, "we must take the other to Grady's—an enemy! This must be the trail to his cabin. Gee, Arctic, gee!" But Arctic knew. He had not taken the North Fork trail in a year and he continued stubbornly toward home. "Gee, Arctic, gee!" Her tone was sharper now, but he ignored her. Then she ran to his head and caught hold of the harness. "Don't resist, old fellow!" she pleaded; "we must have help if we can get it. He's dying on that cold sled, per-

haps we are too late, and I'm tired, so tired! Come on, Arctic!"

Obedience had been instilled from his puppy days. It was wrong to enter enemy territory, yet he obeyed. Followed a heartbreaking mile during which she staggered along, clinging desperately to the sled. It came at last—a faint yellow light shining through a cabin window. Unutterable thankfulness filled her heart a moment, then gave way to dread. What manner of man was this who hated Evans and all that was his; who could slay a tried and true friend like Arctic and feed him to the dogs? What sort of a bargain would he drive with a girl who came so suddenly from the night—the wife of his enemy? Then, as her lowered glance rested a moment on the still, snow-en-shrouded figure, she knew in her heart she would accept any terms if it meant life to him.

Two of Grady's fierce brutes darted from the door the instant their master opened it. She caught a brief glimpse of his burly form and bearded face outlined in the yellow light; then her indomitable will faltered; silently she fell to the trail, a blurred picture in her mind of Grady's sharp-fanged Malemutes tearing at Arctic's defenseless sides.

EDITH opened her tired eyes slowly. A rough hand was gently stroking her own; a bearded face was close to hers. "It's all right, little lady!" a heavy voice was saying; "it's all right. There! There! Now, don't be afraid of me. You've had a mighty tough time of it."

"Archie," she whispered, "Archie?"

"Oh, that old pirate will pull through; but you didn't get him here any too soon. I had to kick hell, pardon me, out of a couple of my brutes to keep 'em off old Arctic. Darn his old heart, anyway! He dropped in his tracks about the same time you did. Never had my hands so full before. Brought all three of you into the cabin, did what I could for Evans, then began on you."

Arctic limped across the room and placed his shaggy head in her lap, while she had a good cry over it. Grady found it convenient to cough at that moment; then he continued: "I knew the old fellow had pulled you through. He's too old to work like that, but he's not too old to enjoy a pension. Evans ought to have killed me that time. To-morrow I'll hook up my dogs and get your things. Might as well make your home here a couple of weeks until Evans gets well. It gets blame lonesome, and—" Grady managed to blush on that portion of his face not covered by his beard—"I've got a wife of my own coming up on the next boat, hope she don't have to face what you did; but if she does, then I'll pray that there's a toothless old Malemute lead dog around handy."

When Evans opened his eyes, he was brought to understand what had happened by a strong handclasp and a few broken words from the bearded man and the cry of happiness from the brave little wife who had stood the test.

The pensioner paused in his eating. "Humans are a queer lot," he observed sagely, then resumed his meal—a mixture of rice and soup, prepared specially by the bearded man for a loyal old Malemute who had lost all his teeth.

# New instrument shows for the first time what goes on in your mouth

With its use new facts are made known about the fluids which protect the precious, unreplaceable enamel of your teeth

A new instrument has just been devised, called the *sialometer*. With it, for the first time, the physician can watch with his own eyes the secretions from the glands in the mouth as they flow into a measuring flask, drop by drop from a tiny silver tube. Now he can measure them and study their properties at will.

Without the healing, germ-free fluids which these glands produce, we could not live. They soften and lubricate our food—actually *digesting* part of it; they help protect us from the germs of colds, tonsillitis, pneumonia, and many other infectious diseases.

This instrument teaches us also that it is their steady stream of fluids that protects the precious, unreplaceable enamel of your teeth against the deadly acids of decay.

## *A never ending fight*

In the warmth of the mouth minute food particles ferment just as milk turns sour when left in a warm, moist place. The acids thus formed immediately begin to attack the enamel, ultimately forming cavities.

Brushing the teeth, while absolutely essential to mouth cleanliness, will not keep the acids from forming.

Even if you brush your teeth after every meal (and not one person in a hundred does) enough food remains to feed myriads of acid-forming bacteria.

To provide protection against the acids, nature intended the salivary glands automatically to flush the mouth and teeth every moment in the day and night. The fluids with which they bathe your teeth and gums are *alkaline* in character. They neutralize and wash away the acids as fast as they form.

Although the glands are small they can win their fight against the acids if they can be made to function normally. In a healthy mouth they secrete more than a quart of fluid per day.

But the way we live today makes it difficult for our glands to work at anything like their normal rate. Nature expected us to stimulate and exercise them by long-continued chewing of hard, tough foods. When we are chewing they are 20 times more active than when the

*The sialometer—a new instrument for the study of the glands of the mouth*

jaws are at rest. The soft foods, quickly swallowed, that we eat today give them neither exercise nor stimulation.

## *Today these glands must have gentle stimulation*

Today the salivary glands of modern men and women need gentle stimulation. This is why for twenty years thoughtful, intelligent people have been using Pebeco to correct an acid mouth.

Pebeco is a dentifrice prepared especially to assist the natural processes causing these glands to work. It does for us what the chewing of hard food did for our primitive ancestors. Pebeco is neither acid nor alkaline. By its mere presence in the mouth it causes the glands to flow for a long period of time. It never exhausts them as do strong acids—it never checks their action as do soapy alkaline substances.

For washing the teeth and keeping the outside surfaces polished no better dentifrice than Pebeco can be made. It works quickly and efficiently without wearing away the enamel or injuring the edges of the gums. Its constant use gives you teeth as beautiful as nature intended you to have.

After a thorough cleansing with Pebeco—it has just enough tang to it to exhilarate—your mouth feels as refreshed as does your body after a bath—and you have the convincing feeling, too, that you have done for your teeth and mouth all that science can teach you to do.

Take home a tube tonight and note its pungent and refreshing taste. It will keep the glands of your mouth active and your teeth sound and beautiful. 50c at all druggists. Manufactured only by Lehn and Fink, Inc.

## *This simple test will show you*

Send us ten cents today for material for testing whether your own salivary glands are active enough to protect you against these deadly acids. We will include a junior size tube of Pebeco and our booklet—"How the Glands Protect the Teeth." Lehn & Fink, Inc., Dept. B-5, 635 Greenwich St., New York.

*Trying to keep the teeth clean by brushing alone is like trying to keep the bathroom mirror polished when hot water is running in the tub*

# Your Choice 75c a Week

No matter what your occupation, one of the home study sets listed below will quickly fit you for a better job and bigger pay. Any set you select will be sent for seven days' examination, and if you decide to buy you may pay the rock-bottom price at the rate of **only 75c a week**. But you must act now! We cannot guarantee these reduced prices for any great length of time.

These books are the work of recognized authorities. They are written in plain, easily understood language, by recognized authorities, and contain hundreds of photographs, diagrams, tables, etc., that make difficult points as simple as A-B-C. Handsomely and durably bound in half or full Morocco leather (except as noted), and stamped in gold.

# Is There Anything Here That Other Men Couldn't Do?

(Continued from page 16)

let him "look around." He heard that the Western Electric Company was taking on college men and giving them an apprenticeship course in the factories, so he headed for New York, where the jobs were being assigned. One of the officers looked him over and said that the company would be glad to avail itself of his services at a salary of ten dollars a week.

"Report to the superintendent in Chicago," he said.

Mitchell gulped a little, started to say something, thought better of it, and walked out. What he would have liked to say was, "Who pays my fare?" but at the moment he was in no position to take a chance of losing that ten-dollar job by reckless conversation.

The hundred dollars with which he had set out from Amherst was already shrunk; it had almost disappeared when he stepped out of the smudgy old Pennsylvania Station in Chicago late at night and looked up and down Madison Avenue. He had never been in Chicago before; he knew not one single person in the whole city. Walking across the street in the direction of an electric sign he entered a hotel and hired a room. The hotel happened to be a notorious hang-out for criminals and bums, one of the most unsavory spots in Chicago's unsavory west side; but its prices suited Mitchell's finances, and being blissfully unconscious of its reputation he slept soundly, and was fortunate enough to get away with his slender roll intact.

At eight o'clock the following morning he showed up in the offices of the Western Electric Company, and a half-hour later he was earning ten dollars a week at the lowest desk in the clerical department. There were no bookkeeping machines back in 1899; every order that came into the office had to be copied with a stub pen which would make a stroke heavy enough to produce several carbons. Mitchell was put to work at this copying.

SEVERAL months ago, after he had become president of the National City Bank, a mysterious stranger walked into his office on the plea of urgent personal business. Once safely inside he introduced himself as a handwriting expert.

"I should like to get several samples of your handwriting for analysis, Mr. Mitchell," he said. "I have studied your signature and find it very interesting indeed. The strong, upright strokes with which you form the letter 'M' are very revealing. They indicate a vigorous nature which brooks no compromise."

"Bosh!" said Mitchell. "Until I was twenty-two years old I signed my name in slanting letters with a sharp-pointed pen. Those strong, upright strokes you refer to are indicative of nothing but six months' hard labor, copying orders for the Western Electric Company."

He was in the order department of the Western Electric only a day or two when he realized that there was something

lacking in his equipment. College had given him certain decided advantages over his fellow clerks in habits of thought and general information; but in their knowledge of the use and meaning of figures his office associates had it all over him. It was the sort of handicap which many a college man would have taken lightly. He was in training for an executive office; why should he bother with the details of bookkeeping? He would be able later to hire men to attend to that. But he is the sort of man who is unhappy unless he knows all there is to know about the task he has in hand. At the end of the first week, he put his ten-dollar bill in his pocket and hunted up a business college.

"How much is a night course in bookkeeping?" he demanded.

"Two dollars a week," said the professor.

TWO dollars from ten dollars leaves eight dollars; and when one is paying six dollars a week for his meals and a back room on the top floor of a boarding-house, one has a problem in finance which is as difficult in its way as the problems that have to be solved by the president of the National City Bank. Mitchell's solution was to walk back and forth to his boarding-house for lunch, which was included in the six-dollar rate; the walk measured a mile and a half each way; but he made it every noon, and so, having paid his tuition at the night school and his board, he still had two dollars left for such incidentals as clothes, laundry, recreation, and entertainment. It was hard sledding, but at the end of six months he knew all that his competitors in the department knew about bookkeeping, and had his college training as an asset in addition.

After a time he was moved over into the credit department as an assistant to the credit manager, and having had a chance to size up the situation he went back to school a second time. He enrolled for a night course in commercial law and learned what constitutes a contract; and under what conditions a corporation is liable for its failure to deliver on time; and how the laws of indebtedness differ in different states. When the credit manager was transferred to Kansas City, it was natural enough that Mitchell should step up into his place. So at the end of three years he was out of the boarding-house and on his way.

Big businesses look very imposing from the outside; but they are nothing but an aggregation of human beings, with the shortcomings and weaknesses inherent in all of us. They outgrow the plans of their builders; they have departments which are tangled up with other departments, so that nobody knows just where one leaves off and the other begins; they develop bad situations, which everybody suspects and side-steps. The Western Electric Company was no exception.

# New Way to Keep Fit

Walter Camp Shows How to Build Health and Efficiency in 10 Minutes' Fun Every Day—His "Daily Dozen" Now on Phonograph Records

**N**OT so long ago, if you were to go up to an "old-school" physical culturist and tell him that his methods were all wrong—that a person can keep perfectly fit in only 10 minutes a day—he would very likely scoff at you.

Yet today there are somewhat over a million people in America who know it can be done. They not only keep themselves in perfect physical trim in ten minutes a day—but they get lots of genuine fun while they're doing it!

Credit for the discovery of this easy, short-cut method of body development goes to Walter Camp, perhaps the greatest authority on athletics and physical development in America today. Mr. Camp's whole system is embodied in twelve simple exercises which are known as the "Daily Dozen." Already these twelve exercises are completely revolutionizing present-day methods of physical culture.

The "Daily Dozen" made their first appearance during the war. A navy official claimed that the regular setting up drills and calisthenics left his men tired out. Instead of building up efficiency, they often tore down efficiency. So he came to Walter Camp for a solution of the difficulty. The famous Yale coach, after months of experimenting, had just perfected his "Daily Dozen." So he turned them over to the army and navy officers.

The success of the "Daily Dozen" in the training camps was soon apparent. The officers in charge of the camps had never seen anything like it. The exercises seemed to double the pep of the boys in training. Instead of leaving them tired out and exhausted, the "Daily Dozen" gave them a wonderful new enthusiasm and vigor. Even members of the Cabinet, recognizing the great value of Mr. Camp's method, became ardent "Daily Dozen" fans. As a guard against physical break-down, due to overwork, they practiced the "Daily Dozen" religiously.

The "Daily Dozen" works on an entirely new plan—there are no chest weights, no Indian clubs, no apparatus of any kind. All one needs to do is imitate the exercises of caged animals, who keep fit by stretching their stomach muscles!

As Mr. Camp said in his recent speech before Congress, which is printed in the Congressional Record:

"We are all wild animals in a state of captivity. When you stop to think of it, man was meant to earn his bread by the sweat of his brow, and in the early days he had to dig for what he was going to eat. He had to work hard to get it. Today, instead of that, your food is brought to you on a platter. You do not work for it. A great deal too much of it is brought and what is the result? The result is that you are being injured by civilization.

"Now, what do the wild animals in a state of captivity do? You do not see any lion or tiger kicking like this, to exercise his legs. He knows his legs are going to be good enough. But what is he doing all the time? He is stretching those big muscles of the body, bending and stretching his body muscles. That is an inherited instinct in those wild animals. The wild animals and the tame animals, too, know that it is the stretching of those body muscles that counts, and nothing else. Everything else takes care of itself."

It is on the principle of stretching that Mr. Camp has based his "Daily Dozen." These, as physical culture authorities now admit, pro-

vide all the exercise people really need to keep in proper physical condition.

And now, with the special permission and sanction of Mr. Camp, a wonderfully ingenious improvement has been made in the manner of doing the "Daily Dozen" which just doubles the enjoyment one usually gets from their practice.

Each one of the twelve exercises has been set to inspiring music on phonograph records that can be played on any disc machine. A book is included showing by actual photographs just how to execute the "commands" which are given by a voice speaking on the record.

This innovation has made a decided hit with "Daily Dozen" fans. Each exercise has been adapted to a tune particularly fitted for the movements. So that all a person has to do is put on a record, and let his movements keep time to the spirited tune being played.

In this way, one is literally carried through the whole "Daily Dozen"—in most cases without even realizing that he is taking exercise—exercise which incidentally is building up a splendid reserve of health, strength and energy.

Some of the results brought about by the "Daily Dozen" to music are nothing short of astonishing. The exercises seem to release an entirely unsuspected supply of energy, which is reflected in a marked increase in one's capacity for both mental and physical exertion. People of nervous tendencies have seen their nerves become strong and calm in a remarkably short time. Many, once troubled with insomnia, now enjoy eight hours of restful sleep regularly. Stout people have seen their excess fat disappear—often at a surprisingly rapid rate. Needless to state all these benefits have resulted in great increases in mental and physical efficiency.

Music was the one thing needed to make the "Daily Dozen" a 100 per cent. way of keeping fit. Music has a wonderful power to inspire action. A fine rousing tune, such as the great Sousa march, "The Stars and Stripes Forever," has a stimulating effect. It actually sweeps one along. That is why there is "no loafing on the job" when one does the "Daily Dozen" the new way.

No matter how "tired" one may be, all he needs to do is put one of the "Daily Dozen" records on the phonograph. The music will do the rest. You will not want to stop until you have gone through the whole twelve exercises. Then, very likely, you will want to do them all over again!—as many "fans" usually do.

Any man or woman who does the "Daily Dozen" to music regularly, even if it is only six or seven minutes a day, is certain to reap manifold rewards in increased health and efficiency. The "Daily Dozen" to music keeps one filled with a seemingly unending supply of vigor and endurance. They inspire an actual eagerness for hard work or play. Not only have they a wonderfully soothing effect on shattered nerves, but in many instances they have banished cases of stomach trouble which resisted all other forms of treatment.

But perhaps the greatest value of Walter Camp's "Daily Dozen" to music is that they add a greater joy to living. They inspire a new

Walter Camp,  
originator of  
the "Daily Dozen"

cheerfulness, a new optimism, a new confidence that is only possible when one is enjoying glorious health.

## Try the Complete System Free—For Five Days

You cannot fully appreciate the real joy of doing the "Daily Dozen" to music until you try it. So we want to send you, absolutely free for five days, the "Daily Dozen" on phonograph records and the book which illustrates the movements. These full-size, ten-inch, double-disc records, playable on any disc machine, contain the complete Daily Dozen Exercises, and the 60 actual photographs in the book show clearly every movement that will put renewed vigor and glowing health into your body—with only ten minutes' fun a day. A beautiful record album comes free with the set.

No need to send any money. Simply mail the coupon below and get Walter Camp's "Daily Dozen" on phonograph records. Enjoy the records for five days, and if for any reason you are not satisfied, return them and you owe nothing. But if you decide to keep the records, you can pay for them at the easy rate of only \$2.50 down, and \$2 a month for four months until the sum of \$10.50 is paid. Thousands of people have paid \$15 for the same system but you can now get it for only \$10.50 if you act at once.

Simply mail the coupon and see for yourself, at our expense, the new, easy, pleasant way to keep fit. You'll feel better, look better, and have more endurance and "pep" than you ever had in years—and you'll find it's fun to exercise to music! Don't put off getting this remarkable System that will add years to your life and make you happier by keeping you in glowing health. Mail the coupon today. Address Health Builders, Inc., Dept. 72, Garden City, N. Y.

### FIVE DAY TRIAL COUPON

HEALTH BUILDERS, Inc.,  
Dept. 72, Garden City, N. Y.  
Please send me for five days' Free Trial at your expense the Complete Health Builder Series containing Walter Camp's entire "Daily Dozen" on five double-disc ten-inch records; the book containing 60 actual photographs and the beautiful record album. If for any reason I am not satisfied with the system, I may return it to you and will owe you nothing. But if I decide to keep it, I will send you \$2.50 in five days (on the first payment) and agree to pay \$2 a month for four months until the total of \$10.50 is paid.

Most of its business consists in manufacturing instruments and supplies for the Telephone Company, and the enormous extension of the telephone system had caused it to grow by leaps and bounds. But it had also, a very large business in the manufacture and sale of heavy equipment—motors, switchboards, and the like. On its total business the company showed handsome profits; but Mitchell suspected that the equipment business was being conducted at a loss, and instead of side-stepping, he made himself a nuisance around the place until they told him in self-defense to go ahead and show what he could do. Almost at once his suspicions were confirmed. The manufacture of the heavy equipment was hopelessly intermingled with the manufacture of the telephone supplies; there was no adequate accounting system, no fair distribution of costs and overhead. Worst of all, practically every order for heavy equipment was a "special order;" and, according to the sales department, had to be so. The goods "could not be sold" on any other basis.

**G**OING after the thing in his vigorous fashion, Mitchell established a separate factory for the heavy equipment and installed a separate system of accounts. Then he called the salesmen together. Rumors of what he had in mind had already spread among them; they were loaded for him.

"We're making and selling this stuff at a loss," he explained to them, "and the only way we can change the loss into a profit is to standardize, and sell the customer what we make instead of what he thinks he would like to have us make. What do you say, therefore, to cutting out the special orders?"

What they said was plenty. The cry of protest rocked the factory. It couldn't be done; there were a hundred reasons why it couldn't be done. Other businesses might standardize, but this business was different. Only one voice from the sales department was raised in dissent. An alert, vigorous young man from St. Louis took Mitchell's side.

"We're pretty poor salesmen if the only stuff we can sell is stuff the company is losing money on," he said. "If the goods are standardized we can sell them at a lower price and make a profit besides. Go ahead and give us the product; we'll sell it in St. Louis."

I do not know the names of the salesmen who protested that the policy which would show a profit to the house would ruin their sales. But I do happen to know the name of the man who knew that the thing which ought to be done could be done. His name is Gerard Swope; a few months after Mitchell became president of the National City Bank he was elected president of the General Electric Company.

Big switchboards for power houses were among the items in which the Western Electric Company dealt. The company did not manufacture but only assembled them, buying the instruments from one concern, the circuit breakers from another, the fittings from another, and so on. It occurred to Mitchell that a very large advantage would result if these various concerns could be brought together and, with the approval of the

president, he set out to form a consolidation. When his plans had reached the proper point he took a train for New York and laid the scheme before Oakleigh Thorne, president of the Trust Company of America.

The plans looked good to Thorne, but the man who had made them looked even better.

"I'm up to my neck in consolidations of this kind," he said to Mitchell. "I know the financial problems involved, but you have had an industrial training that would be very helpful to me. Come down here and be my assistant."

Mitchell went back to Chicago and talked it over with Enos M. Barton, president of the Western Electric Company, who had been his business father.

"I think you should go," said the older man. "You are ambitious. Here you can travel only as fast as the company travels; there you will be able to set the pace to suit yourself. Go ahead, and good luck to you."

So Mitchell took another train from the smudgy old station that had been his introduction to Chicago. And, in a little more than seven years from the day when he had come to New York for a ten-dollar job, with less than a hundred dollars in his pocket, he was back again—this time in Wall Street.

For the next few months he lived most of the time in Pullman cars. He was here and there, visiting plants, making reports, holding conferences, reconciling conflicting points of view. There were days when he hardly had time to glance at the newspapers. The financial skies were clouding over in fearful fashion, but he was scarcely conscious of it. He was in Maine examining a plant when a telegram came from Mr. Thorne instructing him to return to New York by the earliest train. The following morning he tumbled out of a lower berth and read in a newspaper that the Knickerbocker Trust Company had closed its doors, and the fears of the financial world were concentrated on the Trust Company of America.

**I**N THE next few weeks I was given a five years' training in banking," he once remarked.

For two weeks there was a battling line of depositors in front of the bank. The men and women in that line came to know each other, as though they had grown up together, or spent four years in the same college. They would leave to snatch a few hours' sleep at night and return to claim their rightful places in the morning; and even in those tense hours the spirit of fairness prevailed. The whole crowd combined to resist the effort of anyone to usurp the place of another. Step by step the line moved forward as one after another the men and women came up to the cages to claim their deposits; and behind the gratings the tellers toiled, passing out the dollars.

Mitchell moved from cage to cage; at night he sat with Thorne and the directors laying the plans for the next day; and in the early morning hours he rolled up in a blanket and slept on the floor of Thorne's office. There are rats in Wall Street who run when the ship begins to leak; and there are men who stand four-square against the storm. Oakleigh

The three Cadillacs at the Brookland track, near London, where they won the Dewar Trophy by a dramatic demonstration of the perfect interchangeability of their parts.

## What Cadillac brought to General Motors

**S**AIID the Royal Automobile Club of London: "We will award the Dewar Trophy each year to the motor car demonstrating the greatest advance in the industry."

In 1909, three Cadillacs were taken from the dealer's storehouse in London to compete against the best that Europe could produce.

They were torn apart; the parts were tossed into a heap; it was impossible to tell from which of the cars any given part had come.

Then an amazing thing occurred. Mechanics, with only the most ordinary tools, stepped up to the pile, reassembled the three Cadillacs and sent them whirling around the track.

No other competing car could be rebuilt without filing and hand fitting. Cadillac had revealed to the world an unsuspected American achievement—perfect interchangeability of parts.

So the Dewar Trophy was won for American industry.

In 1912, Cadillac built the first car ever equipped with a complete electrical system of starting, lighting and ignition, and so won the Trophy a second time.

By a long succession of similar triumphs the leadership of Cadillac was gained. That leadership it kept and brought to General Motors.

• • • • •

General Motors has built for Cadillac a wonderful new plant. It has contributed the united experience of its seventy-one divisions and subsidiaries to Cadillac craftsmanship; it has put its research laboratories at the service of Cadillac engineers.

Thus, giving and receiving, the two have reinforced each other. From the strength of the parent company Cadillac draws increased strength. From twenty years of Cadillac fidelity General Motors inherits a splendid tradition and an enduring ideal.

THE DEWAR TROPHY which Cadillac twice won.

Thorne was a man. On the last day of the crisis he went down into the vaults of the bank, and bringing up his own safety deposit box dumped its contents on the table in the directors' room. Everything that he or his wife owned was there, and he offered it all to the committee in charge as the final sacrifice to save his bank.

There was a moment of silence in the big room; then the chairman of the committee reached in among the papers and drew out Thorne's insurance policies and passed them back to him.

"You have played square," he said. "We'll take everything else, but we can't take these. A man's family has some rights, even in a time like this; put the policies back into the box."

THE crisis passed and for the next three years Thorne and Mitchell worked side by side to rebuild the bank, and to transform a lot of worthless assets into assets of value. They succeeded. When the hard job was done, and Thorne retired, Mitchell went to Europe, partly for a rest and partly to learn what methods the European nations had developed for the distribution of securities to the public. Returning, he established the successful private banking business of C. E. Mitchell and Company; and it was while he was thus engaged that the directors of the National City Bank discovered him and asked him to become president of the National City Company.

Mitchell had never heard of the National City Company; few men in Wall street knew of its existence. Formed as a subsidiary of the bank, to buy and hold securities, it had paper assets of millions of dollars; but its entire organization consisted of four people, and its business was transacted in a single room. It was as nearly dormant as any organization could be. The very men who offered Mitchell the place had only a very vague idea of what the aims of the company were. They knew they had a concern which was inactive; they wanted it to become active. But how the transformation was to be made, or what the company would look like when the transformation should be complete, they did not know. They were willing to leave that to Mitchell.

With his background of industrial experience, convinced as he was that the money for the future development of American industries must come from the public, and that some machinery must be established for taking the securities of these industries to the people, he saw in that tiny office and staff of four employees the seeds of a great enterprise. He closed up his own office and walked down the street to develop an organization which has jarred the investment banking business out of the ruts in which it had traveled for a hundred years.

The making of the National City Company is a story in itself, too long by far to be told here. From an organization of four people, Mitchell built it, in six years, to an organization of more than fourteen hundred people, doing business with thousands of investors daily. He opened branch offices in over fifty cities; not dingy rooms on upper floors of office buildings, but stores on the street level where people pass by. Instead of waiting for investors to come, he took young men

and women, gave them a course of training in the sale of securities, and sent them out to find the investors. Such methods, pursued with such vigor and on such a scale, were revolutionary. To-day, in the amount of money which passes through its offices, the National City Company is the largest corporation in the United States. Its annual sales, I understand, run well over a billion and half dollars. Small wonder that when the National City Bank needed a president they should have offered the office to the man who, in six years, had worked such wonders with the National City Company.

In trying to analyze Mitchell's success one runs up against three characteristics so obvious that even the most casual acquaintance remarks about them. His is a physical success, first of all. You may pass him almost every morning on Fifth Avenue, for he walks from his house in the Seventies to his office in Wall Street, a distance of six miles; and he swings along at a pace that makes walking the best kind of exercise. Theodore Cuyler was a wise old man who preached in a church in Brooklyn for years, and saw many young men come to New York to succeed or fail. Somebody asked him once what his observations taught him, what is the first essential for winning out? He answered without hesitation, "Staying power."

**MITCHELL** has an unusual power of using men, of understanding them and holding their loyalty. This is the second impressive fact. One of his associates told me about hiring a chauffeur for him. "I suppose you don't want to pay more than the ordinary rate of wages," he said to Mitchell.

"Yes, I do," Mitchell responded promptly. "I always want to pay more than the going rate, because I want to be in a position to demand more than ordinary service. Get a good man and pay him more than he asks, but tell him that I'll expect him to keep my hours, and they're long hours."

The hard-hitting crowd of young men whom he gathered around him in the National City Company swear by him. One of them said to me:

"Mitchell runs the company, of course; there was never any doubt about that. But he never takes a single important step unless he can get a unanimous vote from the rest of us. He has his staff meetings every noon, and we sit around the table and take up the important questions: Shall we purchase this new issue of bonds that is offered? Shall we open a new office in this city? Shall we transfer such and such a man? Every one of us talks up just as frankly as though we owned the company. Sometimes we agree with Mitchell; sometimes we disagree. If he sees that we aren't with him one hundred per cent he never brings any pressure to bear. He drops the matter quickly; sometimes he will bring it up at a later meeting; sometimes it simply disappears. But in all the years I have worked with him I don't remember that he ever made a big decision unless he had us all behind him."

I asked Mitchell once how he picked men for high position. "Where do you look for them?"

"I don't look for them," he answered. "We never hire stars in the City Com-

## *The Message Every Morning Brings*

**THE** daily bath—with its stimulation of the skin to renewed activity—its suggested use of a pure and refreshing toilet soap.

It should not be necessary to urge the merits of Resinol Soap, nor is it necessary to people who have tried it. They know that it invigorates a sallow, sluggish skin, and helps to keep the complexion clear and fresh,—and the hair thick and lustrous.

The abundant lather, with its mild Resinol fragrance, makes Resinol Soap a delight to men. They like, too, the freshened feeling and glow of health it imparts. Used for baby's bath it tends to prevent chafing, and keep his skin clear and velvety.

Women who use Resinol Soap find their complexions automatically cared for. It's the ideal toilet and bath soap for every home. *It starts the day right.* May we send you a free trial size cake? Write Dept. 3-D, Resinol, Baltimore, Md.

pany; and I'm not hunting them for the bank. We don't keep looking over back fences to see what brilliant performers the other fellows may have concealed in their back yards. We prefer to develop our own.

"The selection of a personnel director is important because he furnishes the raw material—and it must be good. Then I try to see to it that department heads have some insight, some capacity for leading and teaching their men, and I want those chiefs of departments to have enough breadth and courage and generosity to advance their men as they deserve, and to let someone above know about it. If the personnel director does a good job and the department heads are sizable, and my fellow officers appreciate fully the need for help at the top, the problem is simplified. When I see a head stick out above the crowd I keep my eye on it. 'That's my man for an assistant officer some day.' And I don't forget him.

"If a president *deserves* to have big men around him he will have them," he continued. "I believe that thoroughly. I have said to our officers: 'Whenever you have a special desire to run over to Europe, or to visit the Middle West or the Coast, we'll usually be able to find some bank business for you to do which will justify your expenses.' Nobody can go out through the West, or to Europe, and *study*, without bringing back something that is valuable to a great city bank," he added. "By continuing to encourage that sort of study I expect some day to have around our executive table a group of men who have a sounder national and international banking knowledge than can be found anywhere else. In the long run no big institution can be bigger than its men."

He quoted to me once the remark of Enos M. Barton, the wise old president of the Western Electric Company who gave him his first business schooling. "The job of the president is to sit steady in his chair and keep the boys from making fools of themselves," Mr. Barton said. I imagine that Mitchell is building toward the day when the president of the National City Bank will be able to operate on that basis.

FINALLY, he has a most impressive fund of common sense. He does not fool himself about himself; his feet are on the ground. This is the third thing. When he was elected president of the bank, and moved his office down-stairs to the main floor he said to one of his friends on the board: "I know what I am up against. I'm like a chap that's going to learn to play the piano. I've got to begin picking out the simple tunes with one finger; then, after a while, I'll be able to use one hand, and then both hands. And some day I'll know enough to take it all apart, pull out the bad strings and put in good ones. But it's a long course of study, and I know it."

"How far along are you now?" I asked him after he'd been president about a year. "Can you play 'Home, Sweet Home' and 'Rock of Ages'?"

"Hardly," he answered, "but I'm practicing."

I have seen him at his practicing. I met him one evening after he had spent a couple of hours with some officials of

## Music Lessons UNDER MASTER TEACHERS At Home

### A Complete Conservatory Course By Mail

Wonderful home study music lessons under great American and European teachers. Endorsed by Patrons: Music teachers, guide and much more. Unique in method, simplicity and effectiveness.

The only recognized Conservatory of Music giving lessons by the UNIVERSITY EXTENSION METHOD.

The kind of a personal Conservatory of Music for home study based upon lessons containing the cream of the life's teaching experience of Master Musicians, reinforced by the individual instruction of specialists, is now attained.

The formation of a teacher—the individual work of an accomplished teacher—is given at intervals from the very moment you enroll.

The University Extension Conservatory, by applying the Personal Instruction Method, has placed home study study beyond question as to results. Advise this early at home.

Any Instrument With falling on course you are interested in—Piano, Harmony, Voice, Public School Music, Viola, Clarinet, Mandolin, Guitar, Banjo, or Reed (sax)—and we will send you Free Catalog with details of course you want. Send now.

UNIVERSITY EXTENSION CONSERVATORY  
735 Siegel-Myers Building Chicago, Illinois

a big steel company. I don't know what it was all about, but he seemed to have taken a five-years course in the steel business in those two hours. He was at a luncheon another day when a man who had studied Russia intimately made a talk to a group of bankers. The next day the man lunched with Mitchell alone; it was a chance to get the real facts about a great problem—too good a chance to be overlooked. The men who traveled with him through the sugar country of Cuba say that he averaged eighteen hours a day, visiting plantations, studying mills, analyzing statements, asking questions—always asking questions. But when he came back he *knew* about the sugar business; he could play that sweet melody on his piano pretty well.

One of the contagious diseases of Wall Street is directoritis—the habit of being a director. There are men whose whole lives are just one session after another in a padded chair, who can't put their fingers into the vest pocket of any suit of clothes without finding a ten-dollar gold piece. Mitchell is not a joiner of directorates. His job is big enough for all the energy and judgment he has; he refuses to scatter himself over a dozen enterprises; he sticks to his piano.

So at forty-five he occupies one of the great financial positions of the world, with every prospect of remaining in it for a long time to come. The three things which disqualify men for a permanency in such a place are: (1) ill-health, (2) the incapacity to inspire confidence in one's associates, and (3) the swelled head. Men who knew Mitchell at Amherst say that he is just as healthy, and just as willing to admit that there are things he does not know, as when he was entering orders for the Western Electric Company at ten dollars a week. And they still call him Charlie.

**"YOU Can Always Cash in on Your Experiences"** is the title of an unusual interview next month with a great New York financier and business man who has successfully operated in more than twenty different lines of activity. If you are thinking of changing from one business to another, you will be particularly impressed with this man's experiences.

## Always on Top of His Job— Not Underneath It

(Continued from page 38)

rushed out from New York and signed agreements with the entire country population; every step in the effort of the city to acquire the land was resolutely fought, in the interests of a larger price. But the land had to be acquired and quickly; and acquired it finally was. Eleven miles of railroad track and sixty-four miles of roads were relocated; the nine villages were razed to the ground and the dead from two thousand eight hundred graves moved elsewhere.

This last detail of the preparations

## ***"Controlled Heat" -considers the woman's side of it***

**S**TRANGE, isn't it, that Hoffman "Controlled Heat" is the first to consider the woman's side of it? All other heating systems are designed to be man-regulated. Yet fully half the time there isn't any man at home to shovel coal in a hurry, juggle dampers, or twist those back-straining obstinate radiator valves.

### ***Easy, accurate heat-control***

HOFFMAN "Controlled Heat" is designed so that a woman can easily and accurately regulate the heat in any room. Each radiator has a one-finger control valve. A touch on this valve gives as much or as little heat as you want, when you want it and where you want it.

Then there's the big advantage, which both you and your wife will appreciate, of being able

to have different temperatures in different rooms; the nursery warm as toast for baby's bath; your bedroom cool and fresh.

And you will be just as interested in the simplicity and remarkable economy of "Controlled Heat" as your wife is in its convenience and comfort.

### ***A booklet you should read***

BOTH of you should read the booklet, "Controlled Heat" which tells why it is "the greatest forward step in modern home-heating."

Surely you will want "Controlled Heat" in that new home you're planning.

Business executives, planning big buildings, should first investigate the remarkable advantages of "Controlled Heat" in large installations.

provided an unhappy reminder of the transitoriness of human life. Though these were little country villages where everybody is supposed to know everybody else, the relatives of many of those buried in the cemeteries could not be found or, if found, evinced no interest in the removal of the bodies. After two years had elapsed, therefore, the remaining bodies were transferred by contract; and the last of the dead gave up the fight which the living had waged with such persistence to delay the great work as long as possible.

Second. On each side of the Hudson River are valleys, the rock floors of which had been deeply eroded through the geologic ages. In order to cross these it was necessary to run many portions of the aqueduct underground, boring through solid rock at great depths.

**B**UT the greater problem was presented by the tunnel under the city. The thought of boring a fifteen-foot tube through solid rock, from two hundred to eight hundred feet beneath the basements of New York's skyscrapers, and of doing this without the slightest disturbance to the flow of life above—this seemed incredible to expert and lay minds alike. Nothing of the sort had ever been attempted before, and engineers and editors protested against it.

Suppose something should happen to the tunnel after the water was turned into it, how could it ever be repaired? Suppose one of the shafts, through which the water comes up to the street level for distribution into pipes, were to break—a fifteen-foot geyser would shoot into the air for a couple of hundred feet with force enough to blow a skyscraper into atoms. The whole thing was not only dangerous but impracticable, said the wise objectors. But Waldo Smith went quietly on his way. The only external evidence that the tunnel was being constructed was the erection of twenty-four little wooden buildings, about a mile apart, one over each shaft. As most New Yorkers live their whole lives inside a circle of less than a mile in diameter, few saw more than one of these little houses, and almost no one stopped to ask what they meant. Before New York suspected that a tunnel was being drilled under its feet, the tunnel was completed.

Third. The greatest engineering obstacle of all was in bringing the tunnel under the Hudson River. It came down to the Hudson under Storm King Mountain at a depth of two hundred and twenty-eight feet below sea level. But to go under the river the tunnel had to be cut through solid rock, and nobody knew how deep it would be necessary to go down in order to find rock. Scows were anchored in the middle of the channel and test holes were sunk through the water and the drift which formed the river bottom. Down and down they went, but even at a depth of seven hundred and fifty feet no solid rock was struck—only boulders and sand. For two years the borings continued, and finally a hole was sunk so deep that the engineers seemed on the very threshold of success, when down the river came floating an awkward, lazy barge, bumped comfortably against the scow from which the borings were being made, and tore it

from its moorings. The hole was lost, the work of two years gone for nothing.

Meanwhile the aqueduct was being pushed on toward the river banks from both directions. It took courage to push on. "How do you know you can get under the river?" demanded the newspapers. "Why throw away these millions on a ditch that may never cross the Hudson?" . . . "How can you be sure that you will ever strike solid rock under the river's bed?" Waldo Smith did not answer the criticisms and, if he was disturbed by the failure to strike rock, no one could see it in his face or manner. He went on in his quiet way, issuing orders in low tones and figuring out what to try next.

He set his men to digging a three-hundred-foot pit on each side of the river. At the bottom of each pit he constructed a big round working chamber and then, with long hollow drills tipped with diamonds, he started to bore under the river from each side, until the drills should meet in the middle. Almost at once another obstacle cropped up. The long, slender drills showed a tendency to turn upward, instead of following a straight line at the initial angle; it was evident that unless the engineers knew the amount of the departure or corrected the deflection they could not know the depth of their drills. To solve this problem a clever expedient was devised: In each drill was inserted a small bottle partly filled with hydrofluoric acid, which etches glass. When this was let down into the boring and allowed to remain long enough to etch the bottle, the angle between the horizontal etched line and the axis of the bottle enabled the engineers to calculate the true position of the drill, and to make corrections accordingly.

THE boring went on from both sides until finally, at a depth of one thousand five hundred feet, the two drills met in solid rock, one having bored two thousand feet and the other one thousand eight hundred and thirty-one feet. But even then the problem was not solved. The borings from the scow had found no rock at seven hundred and fifty feet, and these diagonal borings had found it at one thousand five hundred feet; somewhere between these depths was the top of the rock. But where? It was necessary to know the answer to that question in order to insure building the tunnel far enough below the top to enable it safely to resist the great bursting pressure of the water in the aqueduct at that depth. So another pair of diagonal borings at a lesser angle was made, and these met in rock under the river at a depth of nine hundred and fifty feet. The engineers, therefore, knew that they were safe in boring somewhere between the nine-hundred-and-fifty-foot and the one-thousand-five-hundred-foot levels, and they decided to put the tunnel through at a depth of one thousand one hundred and fourteen feet.

So New York's fifteen-foot river of water comes up to the banks of the Hudson, under a mountain, at a depth of two hundred and twenty-eight feet below sea level. There it drops vertically down a great shaft to an additional depth of eight hundred and eighty-six feet (one thousand one hundred and

## A good thing it did leak!

IF THE air valve on that radiator hadn't leaked, he might have gone on wondering, winter after winter, why his coal bills were so high and his steam heat so poor.

But, because it did leak and ruined the wall, he decided that it was time to try Hoffman Valves. And then he made the discovery that—

### Hoffman Valves save money!

Not only do they make radiators and pipes absolutely silent and prevent hissing and leaking, but Hoffman Valves actually give you *more* heat from *less* coal.

When the air valves on your radiators hiss and sputter, or the pipes rumble and bang, they are more than mere annoy-

ances. They are danger signals. They mean that those air valves are not doing their work properly. They mean that you are burning too much coal and getting too little heat.

### Heed those warning signals!

Don't wait until poor air valves completely ruin your comfort. At the first warning signal replace those valves with No. 1 Hoffman Valves, Watchmen of the Coal Pile. They'll give you maximum heat with minimum fuel consumption.

They'll pay for themselves the first winter in the coal they save, and they're guaranteed in writing to give you five full years of satisfactory service.

Your Heating Contractor can equip your radiators with Hoffman Valves in a very short time. Phone him today!

# 10 Keys for FASTER figure work

**B**ECAUSE it does figure work easier and faster—Standard Oil Company, Sears, Roebuck & Company, International Harvester Company, and many other leaders use 15 to 100 Sundstrands each.

Inspect the Sundstrand! See for yourself how its 10 keys increase speed and ease of operation. How even the "one-fingered" operator attains "expert's" speed.

Then lightly lift the Sundstrand. Note how easily you carry it to different desks and jobs. Think of the extra service you will get because of this feature alone.

There are many other new day ideas you will want to see. Sundstrand one-hand control will at once appeal to you—leaves left hand always free to follow figures or turn checks. Of equal advantage are automatic column selection—modernized correction features—a really practical and easy method of multiplying—and valuable protection features.

Back of today's Sundstrand is eight years of remarkable success. Today the machine is widely discussed. Today its unqualified success is conceded. "The re-orders tell the story."

Let us show you. Write for free catalog and leaflet—"Testimony."

fourteen in all), flows under the river, and rises through a similar shaft on the other side. There is nothing like this sub-river tunnel anywhere else in the world; it represents a new chapter in the conquest of engineering obstacles.

To make a complete catalogue of the obstacles would more than fill this magazine. It was necessary to assemble a force of more than one thousand three hundred engineers, and these dealt with contractors employing twenty-five thousand men. To nature's multitude of barriers human nature added its jealousies, its unreliability, and its unending ingenuity for doing the thing wrongly. And back of all this there were the newspapers and "the people." General Goethals has stated publicly that the task which J. Waldo Smith achieved presented more engineering difficulties than the construction of the Panama Canal. Suppose we let that sentence stand as a summary of the obstacles, and turn for a moment to the man.

The first thing that impressed me about Waldo Smith was the fact that he was chief engineer of the waterworks in his home town, Lincoln, Massachusetts, at the age of seventeen. It wasn't much of a waterworks, to be sure—a little one-lunged pump and a couple of miles of pipe—but it was the biggest thing of its kind in the town, and he was the boss of it while he was still a boy.

"Of course I very soon discovered that I would have to know a lot more if I was going to travel very far," he said to me. "After I had worked a while, I went to Andover and then to the Massachusetts Institute of Technology."

**B**UT one thing that interested me was that he got a good stiff taste of work before he went to college.

A friend of mine was having his shoes polished recently by an Italian bootblack. He asked the bootblack about the relative advantages of this country and Italy. "Surely your children have a far better chance here, Tony," said my friend.

Tony was not so sure.

"My son come out school when he eighteen," he said, with an expressive gesture. "And I donno. You can't teach a boy to work unless you begin before he's eighteen."

One could write several articles on that text. Henry Ford remarked to me that he always gave preference to boys from the farm because they had learned, early, how to work. The farm demands continuous effort every day, not once in a while; it presents new obstacles with every change of weather; it thrusts responsibility onto shoulders while they are still young. All this is a factor in the battle with the obstacles of later years.

One of the reasons why Waldo Smith was able to finish his big job a year ahead of time, and at a figure more than eight million dollars below the estimate, is found in the fact that he gave not only authority and praise with equal generosity; he gave himself. Napoleon said that a general always has men enough if he will bivouac with them in the field. There is a world of difference between working for a boss you admire and working for a man you like.

"I've always tried to be accommodat- ing," Waldo Smith says simply. "I like people; they're interesting. It's good fun to see them get along and to help them when you can."

## Wall Deep

The beauty of your new home should go deeper than a charming exterior. Build it of Natco Hollow Tile and its beauty will be wall-deep. Desk FAM-223 BUFFALO, N. Y., Peoria & Chicago, Ill.

Accommodating is the word he used; but it's hardly a big enough word. Human expresses it better. A young engineer on a section of the aqueduct far removed from New York made a long, careful report. It involved evening work and Sunday work, but it was part of the regular duty for which he was paid and he sent it in without supposing that it would attract any special attention. But it got to the chief, and the chief sat down, and in his own handwriting wrote the young engineer a note. It meant only five minutes in time, perhaps, but the young engineer never forgot it.

A totally unfit engineer got into one of the camps. He was a trouble-maker and, because he was too incompetent, he was slowing down the work. One night the other engineers pulled him out of bed, hazed him, ducked him in the watering trough and ran him out of camp. The incompetent scurried to New York and stirred up a political rumpus. It got to the commissioners, who, to avoid a storm, directed the chief to administer a reprimand to the engineer in charge of that division.

**WALDO SMITH** can take orders as well as deliver them. He journeyed out to that section and summoned the division engineer who, being one of the ablest men on the entire job, was almost heart-broken at the censure. Smith read the reprimand in full—every word, every letter, while the color mounted in the other's face. Finishing, he folded up the paper and slipped it into his coat pocket. His voice dropped almost to a whisper: "Was he slowing down the work?" he asked.

The division engineer nodded. "Did you duck him good?" Smith continued.

The engineer, showing plainly his surprise, nodded a second time.

"You ought to have drowned him," said Smith, and without another word turned on his heel and marched away.

Waldo Smith showed also that he had courage of the highest order. He showed it at the very beginning when he refused to award the big contract to the contractor whose bid was lowest. The newspapers descended upon his head with the force of the water descending into his tunnel at the Hudson. "What political jobbery is this?" they demanded. Waldo Smith explained simply that he had to have a contractor who could deliver the goods, and that it was false economy to deal with any other. And the event proved the wisdom of his choice; the contractor finished the work both inside the time limit and inside the amount of the estimate. "In this world an awful lot is forgiven," Waldo Smith remarked, "if something is accomplished." So he let the papers howl and quietly got the work done.

Indeed, I doubt if he ever read the papers. Certainly he never answered them. "It doesn't pay," he said with a smile; "besides, criticism doesn't hurt if you know you're right. It's part of the price of the job. It reminds me a little of the famous Muldoon," he continued. "I went up to his health farm one summer. Roosevelt used to go up there sometimes, and John Purroy Mitchel, our mayor. Muldoon is very exacting; as long as you remain in his camp he de-

## FREE 6 TRY-OUT LESSONS IN AD-WRITING

**Test Yourself Against \$100, \$200, \$300-a-Week Ad-Writers.** Yes, free to you—a full set of six Try-Out Lessons in Ad-writing! No cost now or later. Simply mail the coupon. This is our free offer to show more ambitious men that ad-writing is not a "gift," but a matter of common sense and some training. Write for these Try-Out Lessons today. See what **you** can do as an ad-writer. Try your skill at laying out ads, suggesting type and illustrations, headlines and reading matter. Compare your work with that of men who are making \$100 to \$200 a week and more.

## Learn to Write Advertisements

Ad-writing is the highest paid profession! Scores earn \$100—\$200—\$300 a week. Many never dreamed they could write ads until they tried. One ad-writer who makes over \$1,000 a week was a bookkeeper for years. Another high-priced man was a bench tailor. Always a position for the good ad-writer. Business always welcomes him because he brings business. Let Page-Davis experts teach you ad-writing—at home in your spare time. A Page-Davis man commands attention! Be one!

**Send No Money For Free Lesson**  
Test your latent ability on the 6 Try-Out Lessons. See how good an ad-man you really are. Write today for the lessons. Mail the coupon. Act quick as only 5,000 sets are to be given away. Full information on our course sent free and postpaid with the six lessons. Write today.

Without cost or obligation to me, send me your 6 Try-Out Lessons and information on your course in Ad-Writing.

Address \_\_\_\_\_

mands absolute obedience. He pulverizes the pride of the successful, soft New Yorkers who are so accustomed to giving orders on their own account, and about the second day some of the chaps who can't stand the hooks pack up their stuff and sneak home. He singled me out for personal attention one morning when I was apparently too slow in comprehending what he wanted the class to do. He shouted across the gymnasium:

"You haven't brains enough to come in out of the rain! You, a chief engineer! I don't see how such a fool as you can hold any job at all!"

Waldo Smith chuckled at the memory. "I loved it," he said. "The whole class was tickled to see me getting my medicine; but they didn't dare to smile or Muldoon would have descended on them. But he reminded me for all the world of the criticism of the newspapers—loud and hot for a little while, but soon over; and not at all important, provided you know you're right."

THE Jesuits have a saying to this effect: "A great deal of good can be accomplished if one is not too careful who gets the credit." I thought of that saying as we sat and talked. Smith's job was a bigger engineering feat than the building of the Canal. Goethals himself had said so. But Smith's job was eight hundred feet under the street; and even those who benefit most from it have only a vague idea of what a big thing it is. I thought of Harriman, who, like Smith, was a quiet little man who never took the trouble to answer his critics. In 1907, when the Colorado River overflowed its banks, Harriman jumped in and spent one million five hundred thousand dollars to stem the flood. He saved the Imperial Valley; and Roosevelt, thanking him for it, promised that Congress would reimburse him; but Congress never did.

Shortly before his death Harriman revisited Imperial Valley and was met by a reporter.

"Mr. Harriman, the Government hasn't paid you that money," said the reporter, "and your work doesn't seem to be duly appreciated. Do you not, under these circumstances, regret having made this large expenditure?"

"No," Harriman replied. "The Valley was worth saving, wasn't it?"

"Yes," said the reporter.

"Then we have the satisfaction of knowing that we saved it, haven't we?"

The job was worth doing. It was done. From Harriman's viewpoint there was nothing more to be said.

Waldo Smith's job was underground. The men of his own profession have recognized its enormous contribution and rewarded him with the highest honor they can give. But of the millions who drink the water that his tunnel brings to New York, few ever heard of him, or stop to think how the water comes, or what would happen if it stopped. From them he has as little credit as Harriman received; and apparently he worries over that just about as much as Harriman worried, and not one bit more.

Which is another reason, I take it, why he overcame his obstacles and why, out of all the Smiths in New York, he is one of thirty who outwitted Fate and broke into the pages of "Who's Who."

## The Stunt King of the Movies

(Continued from page 21)

"You'll take care of me, won't you?"

"I assured her that I would; and when the canoe upset I took pains to go down pretty deep, so that she would be above me. The current, of course, was fierce. I knew we would be through the worst of it in about a minute, and I can stay under water at least two minutes, so I didn't try to come to the surface. I just stayed under the girl and kept pushing her foot up with my hand. When we got out, below the rapids, she was terribly indignant.

"I thought you promised to take care of me!" she exclaimed.

"Well," I said, "didn't I do it?"

"No! I never even saw you!"

"But," I said, "you can't swim, and yet you were at the surface of the water all the time. How do you explain that?"

"Why, my foot kept hitting against something, and that was what kept me up," she declared.

"Well—I was that something," I told her.

"IN ONE play, I had to make a bridge of my body from the top-story window of one building to the fire escape of an adjoining building, and my wife was to cross by this human bridge, sixty or seventy feet above the ground. The distance across the gap was six feet.

"You can bet your life that I made sure of myself before I did a stunt like that, with my wife's safety at stake. We began training for it at home. I would take two chairs and stretch myself out, horizontally, between them. Then I had my wife sit on me, while I was in this position. Then she would stand on my back. And finally she would walk along my body, from one chair to the other. We kept this up for six weeks. We experimented until I had found just how to brace myself, just how many steps she should make, and where she should put her foot each time. Then, when I felt absolutely sure of the principles, and of our ability to carry them out, we did the real stunt.

"In one picture I walked a wire across Au Sable Chasm. It was one of the wires on which a big iron bucket, or scoop, travels back and forth. I had to step over the pulleys as the bucket passed under me. To prepare for this I spent weeks walking a wire in the gymnasium. I began with it a few inches from the floor and gradually raised it to a height of six feet.

"I never had been on a wire higher than that when I did the stunt for the camera. In that case, the wire was about fifty feet high. We had no rehearsal. I simply did it, and the camera man made the pictures. I knew I could walk a wire. The height was merely a detail that did not affect the main fact. If I laid a six-inch plank across this room, you could walk it all right. If I put it fifty feet in the air, you probably would fall off. Your fear would destroy your self-confidence. That's the whole explanation.

"The only serious accidents I have had were due either to the fact that I hadn't

## On maps has man recorded progress

To Columbus, whose voyages opened new visions of the world, America was forever India—the land of gold and rich eastern trade routes. Came Balboa, who discovered the Pacific. Came Magellan, whose expedition sailed way round the world. The map grew in consequence.

Other explorers and colonizers—Raleigh, Marquette, Drake, John Smith—devoted their fortunes and lives to gaining knowledge and putting it into maps. But the job was not done. Man pushed on and on through the centuries, ever penetrating the unknown. Lewis and Clark, Livingstone, Stanley, Roosevelt, all conquered danger and contributed to the document that is a map.

The map is still being perfected, changing and growing with the accomplishments and discoveries of man. It must show all that these pioneers of exploration found and all that has happened since—new cities, railroads, highways, canals, steamship routes.

A poor map is worse than useless, for it guides you and your thinking falsely. Make sure, therefore, that your map is up-to-date and scientifically exact. It will be if it is published by RAND McNALLY & COMPANY. Whether wall map or pocket map, globe, atlas, school or commercial map—the RAND McNALLY is standard. When you buy, look for this name. It is your guarantee of map perfection.

made sure of the principles involved or that I had depended on other people for some of the details. The worst smash I ever had came from relying on what others told me. It was a scene where I was to jump from a balcony running around a ballroom, catch a chandelier, which I could swing back and forth like a pendulum, go from that to another chandelier, and swing from that to the opposite balcony. The ballroom had very lofty ceilings, so that the chandeliers were about twenty-five feet from the floor.

"When we were ready to make the scene I protested that it wasn't safe. But if we had waited until the changes could be made, it would have meant paying five hundred people for an idle day; for there was a big crowd there all ready to go on with it. Finally, I allowed myself to be persuaded to try it, at any rate; and it went through successfully.

"You see," they said. "There's nothing wrong with it. Will you do it again?"

"I did it again—all right. Then they wanted me to do it a third time. And that time the chandelier hit the upper part of the balcony, shattered the globes, and a shower of glass flew into my face. Instinctively, I tried to shield my eyes with my arm, lost my hold, and fell to the floor.

"My left arm was broken at the elbow, the bones protruding through the flesh, and at the wrist. My right arm was broken and the elbow dislocated, so that the hand stood out backward, at right angles to the arm. As I looked down at it, I couldn't even see my hand. I thought it had gone through the floor.

"THE doctors said I would never have much use of my left arm again. It took me a good many months to show them their mistake—but I did it! Long before that arm was out of the cast, I was at work getting some life into it. I began by just holding a small object in my hand, opening and closing the fingers. Later, I got a small piece of lead and carried it in that hand. I kept adding flat pieces of lead, wrapping the whole thing in paper. This package I carried with me wherever I went.

"Once, when I had gone to the bank, I laid my package of lead on the desk while I signed a check. When I turned to pick it up, it was gone. The detective on duty, who thought he had spotted a crank carrying a bomb around, had taken it to the bank officials. They apologized profusely when they got my explanation.

"For months I worked almost incessantly, by exercise and rubbing and massage, to get strength into my arms. As far as I can tell, they are as sound now as they ever were. The doctors call it a miracle. If it is, I know that you have to work a miracle. It doesn't just 'happen.'

"Sometimes I have had an accident because, for perhaps only a few seconds, I did not keep my attention concentrated on what I was doing. One of these accidents happened only last year. I jumped from an airplane to a moving railway train—not to the top of the train, which would be comparatively easy, but to the side of the train, where I caught the sill of an open window and hung there by my hands.

"I made it all right, but my attention was diverted by the airplane. When I

**SCHOOL OF APPLIED ART**  
Amusements Bldg. No. 5 BATTLE CREEK MICH.

had jumped, it rose higher and went over some trees alongside the track. Then the sound of its motor suddenly stopped. And it was while I was wondering whether the plane was in trouble that I got into trouble myself. The train was to slow up and I was to drop off. But at the place where I did this there were several tracks branching from the one on which the train was running. There had been some rain not long before and these tracks were slippery. Because I was thinking about the airplane, I did not notice this. The consequence was that I fell, dislocated my hip, and tore the ligaments of my leg—and that is worse than an ordinary fracture of bones.

"I was back at work, however, even before I was able to walk. They would lift me onto my motor-cycle and I could ride that and do stunts—but there had to be someone waiting to lift me off.

"As I was living in New York when that accident happened I got eighteen dollars a week while I was laid up. That was my allowance under the industrial insurance laws of the state. My friends used to think it was a good joke on me, that eighteen dollars a week. But I was quite proud of it, because it was the only insurance I can get. No company will insure my life. They won't even insure a production in which I appear.

"SEVERAL years ago, when I was making 'The Great Gamble' under Joseph Golden's direction, he tried to get the members of the company insured. And he succeeded—for a while! Then, one day, the insurance agent came up to the studio and wanted to see me about something. They told him I was 'working on location,' as we call it when we are doing scenes away from the studio. But as we were in that neighborhood they told him where to find me.

"In the scene we were making that day, I was pursued by the villains, as usual; and in order to escape them was to jump from the roof of one seven-story building to the roof of the next building, across an eighteen-foot gap between the two. The insurance agent arrived just in time to see me make this leap. Two minutes later he was on his way to the nearest telephone booth he could find! He called up his company, told them to cancel our policy immediately, and I've never been able to get a dollar of insurance from a company since then."

"But, when you made that jump, of course there was a net below you, in case you missed, wasn't there?" I asked.

"No," said Hutchison; "because we had two cameras working all the time. One was on the roof, showing the jump from that point of view. The other was placed where it showed the gap between the two buildings, from the ground up, and me leaping from one to the other. In that way, the moving picture audiences could see there was no fake about it and that there was no net underneath.

"It was a running broad jump. I had practiced it in the gymnasium and had proved to myself that I could cover a distance of twenty feet. That gave me two feet as a margin of safety. I had everything measured exactly, and had a piece of canvas fastened on the roof at the point where I must take off. For as I ran up at full speed, I knew I wouldn't be

## Whatever else may fail

Linking city, village and farm, crossing mountain and wilderness, the telephone system challenges Nature in her strongholds and battles her fiercest moods.

Out on his lonely "beat" the telephone trouble-hunter braves the blizzard on snow-shoes, body bent against the wind, but eyes intent upon the wires.

North, south, east, west—in winter and summer, in forest and desert—the telephone workers guard the highways of communication. Traveling afoot where there are no roads, crawling sometimes on hands and knees, riding on burros, or motor-

cycles, or trucks, they "get there" as they can.

When Nature rages to that point where few things can stand against her, when property is destroyed and towns cut off, the telephone is needed more than ever. No cost is too much, no sacrifice too great, to keep the wires open. If telephone poles come down with the storm, no matter how distant they may be, no matter how difficult to reach, somehow a way is found, somehow—in blizzard, hurricane, or flood—the service is restored.

Whatever else may fail, the telephone service must not fail, if human effort can prevent it. This is the spirit of the Bell System.

## Why Good Dancers Are Popular

Everyone admires and wants to dance with the person who knows the latest steps. There is no need at being a wall-flower! Arthur Murray, America's foremost dancing teacher, has prepared a wonderful new method by which you can learn any of the newest step in a few lessons and after the dance in a sporty atmosphere.

Learn it from one of our new masters from America, they can teach it, and easily transfer any dance without music, and it is from this book you can get your own home.

**Yours success is guaranteed.** The 5 principles and secrets of step teaching, practically proven this book shows Mr. Murray as their dancing instructor. Americans takes people from "lowest" to the "best" people of America through the steps of the dance world.

## New Easy Way

**You now need only send two dollars**—your first lesson has been sent to you! A lesson from a master to help you stop all harmful fears, after a course of private study the lesson for only \$1 per day. An extraordinary offer so made to prove you will enjoy learning the newest steps in the privacy of your own home—without outsiders in embarrass you. **You need not send any money now.** When the postman hands you the 16 lesson course, just deposit \$1 with him, plus a few cents postage, in full payment. If within five days you are not delighted, return the lessons and your money will be promptly refunded.

This unusual offer may not be made again. Write today for the sixteen lesson course. If you prefer, send the dollar now and we will pay the postage. The lessons will be sent promptly, in plain cover. Learn at home and surprise your friends. Act now and be a good dancer soon.

Arthur Murray, Dept. 512, 801 Madison Ave., New York City

surface within two minutes. He rides a motor-cycle alongside a train at full speed, leaps from his machine and catches the rear platform of the train. If he missed— But he hasn't missed yet! He says that is an easy stunt, that the hard part is when he has to let himself slip off the steps, as he catches the railing, and be dragged along the track while he clings to the railing with his hands.

But in most of the things he does there is one lesson which can be useful to us all. It is the lesson of *careful preparation*, of trying to make sure how a thing can be done before attempting to do it. We do not pay as great a penalty for ignorance and haphazard carelessness as Charles Hutchison would. But we do pay! We trust to chance, to "muddling through" somehow or other. And when we do a thing that way it is certain to be muddled itself. Hutchison neither trusts blindly to chance nor trusts blindly in himself. In talking of the dangerous stunts he has done, he repeatedly said: "I knew I could depend on myself." He is constantly testing himself. And when he knows what his ability is, he has *faith* in it. He doesn't say: "Well, of course, I did it that time; but maybe I can't do it again." He says, instead: "Well, I did it once, so I can do it again." He does, as he said, seemingly impossible things because his courage is based on a knowledge of the facts and of his own capabilities.

## Invest in Bonds

—they are backed by actual values

**W**HEN a great industry with established earning power borrows money by issuing bonds, it pledges actual properties of known value as security for the amount borrowed.

Buyers of such bonds participate in a well secured loan for

a definite number of years at a definitely stated rate of interest.

The security back of every bond offered by The National City Company has been carefully studied and analyzed.

*The latest list of such issues will be sent on request.*

BONDS SHORT TERM NOTES ACCEPTANCES

"THE New Baby in Our House," by Edgar A. Guest, is one of those human and lovable pieces of personal experiences which no one else can write in quite the same vein as this popular newspaper columnist and homespun poet. You are pretty sure to laugh and cry when you read it next month.

## "There is No Failure Save in Giving Up"

(Continued from page 27)

first water for irrigation came through in June, 1901. In September of that year, Shenk, with his father and brothers, began to level, irrigate, and seed nine hundred acres. The leveling alone was no mean task. Every sand hill had to be smoothed evenly and slightly graded, so that water would flow between all the furrows and hit every spot.

There were a thousand times in the early years, and later too, when men of ordinary nerve became discouraged and quit. They convinced themselves that the prize to be gained in the Colorado Desert was not worth the price. Shenk, however, never became discouraged, and he never thought of quitting. Sheer grit made him, at every fresh obstacle, take a tighter grip and hold on all the harder.

"There aren't words in the English language," he said, to describe the hell men had to go through and the guts it took to stick. In 1902, among other little things that happened, the Government sent a crop expert to examine and report on the soil in the Valley."

### Bruns Famous "12Tribe" SWEET PEAS FREE

Yes, absolutely free a large packet of our Famous "12Tribe" Sweet Peas if you send your name and address NOW. A wonderful mixture of the earliest and largest flowering peas, ranging in colors from brilliant striking hues to charming tints and delicate shadings. You can have beautiful home-grown sweet peas all summer long. Everybody likes sweet peas. For your big packet of "12Tribe" sweet peas now. We will also send you our valuable new handsomely illustrated book on flowers and vegetables—ALL FREE.

## SEEDS 1923 Catalog now ready

Catalog is complete, descriptive, interesting. Free. A post card will bring it.

Get this carefully planned and practical aid to garden growing. Every flower and vegetable seed that you might want for your garden is listed. Hardy perennials and ornamental shrubs for foundation planting or other decorative purpose, and fruit and shade trees, are shown in unusual abundance. Our 1200 acres have supplied professional gardeners, orchardists and nurserymen the country over for 69 years.

THE STORRS & HARRISON CO.

Nurserymen and Seedsmen

Box 319

Painesville, Ohio

The report, which I looked up, said in one place: "One hundred and twenty-five thousand acres have already been taken up by prospective settlers, many of whom talk of planting crops which it will be impossible to grow. They must early find that it is useless to attempt their growth."

This report proved disastrous for the Valley, for it came at a time when capital and settlers were needed above all else. It turned away thousands of people and millions of dollars. As time proved, the report was largely unjustified.

"The young man who made that report for the Government," said Mr. Shenk, "stayed with me. I was busy with mules and scrapers, digging irrigation ditches and getting my land in shape.

"You're wasting your time," he said to me. "That land won't raise anything, and if it did it wouldn't be any good. There's too much alkali!"

"All right," I replied; "but I'm going to see!"

"I went ahead and planted and put the water on, and presently I had wonderful crops."

AT THE end of four years Mr. Shenk, Senior, received an offer of \$27.50 per acre for the sixteen hundred acres belonging to him and his sons. That land originally cost him \$2.75 per acre. The offer appeared too good to refuse, and without consulting his youngest son he contracted to sell the entire ranch, and signed his name to the papers. When Adolphus heard the news he shook his head.

"No, Father," he said. "I won't sell."

"But," the older man expostulated, "this is a lot of money. It's a big profit."

"You're right," the son replied; "but not big enough to satisfy me. This land is going to sell some day for one hundred dollars an acre. When it does, I'll sell—not before."

His father laughed at such a possibility. But he could not budge the young man from his determination to hold on to his land.

This refusal precipitated a lawsuit with the new purchaser. The authority of law in the country at that time was largely in the hands of men who could exercise it. Young Shenk ran the would-be buyer off his land and successfully retained possession until a deputy sheriff was brought across the mountains from the county seat, one hundred and fifty miles away. The sheriff compelled Shenk to give in for a little while; but presently the courts decided the land belonged to him.

Shenk's father, when he contracted to sell, agreed to accept five equal payments made at intervals of five years. Before he received the second payment, Adolphus had disposed of his section at one hundred dollars per acre.

"I was sorry later to have sold even at that price," he told me; "for afterward, as agent, I disposed of some of my own original land at two hundred and seventy-five dollars per acre. I have bought other land since, and some of that I now own is producing on a valuation of more than two thousand dollars an acre."

Sand storms and the intense heat of the Valley in summer were some of the special hardships that Shenk and others had to contend with.

## Do You Invest?

Use this booklet—and  
our investment facilities

OUR monthly booklet, Investment Recommendations, is used by many bond buyers as a guide in the selection of sound investments.

The booklet describes a large number of attractive bonds. If you desire additional information as to these issues; if you wish your present holdings reviewed by us; or if you wish assistance in making properly diversified selections, suited to your individual requirements, our complete facilities are available through any of our offices.

The current issue of Investment Recommendations will be sent on request to our nearest office.

### BECOME AN EXPERT STENOGRAPHER AND SPEED TYPIST

A profession that offers men and women rich rewards, fascinating work, big pay, and opens the way for promotion to high executive positions paying \$50 to \$100 a week and up. Many of America's big, great business men and women got their start because they mastered stenography. Demand for expert stenographers and typists always abounds. The Tulloss School of Stenography and Typing offers complete courses in shorthand and typewriting, new principles, theory, exceptional speed and accuracy. You can write shorthand the new way 125 to 150 words a minute. You can typewrite 80 to 100 words a minute and with this speed gain accuracy and ease of operation—no fatigues with the old way. Remarkable methods—remarkable results. You learn faster the Tulloss New Way. No previous stenographic schooling necessary. Train at home during your spare time. Only about half usual cost—you will become a far more efficient stenographer—worth more money than the average right from the start. If all this fascinates you nevertheless need New Way training in speed typewriting, for no matter how good you are in shorthand, you can never expect the high salaried position until you get speed, real speed and accuracy on a typewriter. Quickly acquired in ten easy lessons. Will send you free our amazing book, "How to Be a Big Man's Right Hand." It tells how business men choose their private secretaries, how they advance them to executive positions. Send postal or letter and indicate whether you are interested in the complete stenographic course or simply speed typewriting. No obligation—write today.

## Will Be Sent Without Cost

This booklet "How to Select Safe Bonds" has been prepared from the long and successful experience of Geo. M. Forman & Co. Every investor should know the facts it gives about getting a higher yield with positive safety.

## EIGHT WAYS to Test the Safety of Every Investment

- 1 **Is Your Investment Protected By Property of Permanent Value?** "How to Select Safe Bonds" tells why investments should be protected by property having a permanent value well in excess of the amount of the entire loan.
- 2 **Does Your Claim Command Payment Before Other Obligations?** "How to Select Safe Bonds" tells what securities come before all others in obligation to pay promptly and fully.
- 3 **Has The Property a Sufficient Earning Power?** "How to Select Safe Bonds" tells why a safe property must have an annual earning power of at least two and a half times the total annual interest on the loan.
- 4 **Is The Property Adequately Protected By Insurance?** An important consideration, as fire often wipes out overnight a valuable property.
- 5 **Is It Properly Managed?** "How to Select Safe Bonds" tells why proper management is essential to insure prompt payment of interest and principal upon maturity.
- 6 **Is The Title Clear?** "How to Select Safe Bonds" tells a sure way of insuring against loss through faulty title.
- 7 **What Is The Moral Character Of The Borrower?** As important as proper management—explained in this interesting booklet.
- 8 **Who Offers The Securities You Buy?** "How to Select Safe Bonds" tells why even the experienced investor must depend for safety entirely upon the reputation and length of service of the Banking House offering the investment. It tells of the conservative policy of painstaking investigation and selection which has made it possible for George M. Forman & Company to sell bonds for 37 years without loss to a customer, large or small.

### MAIL THIS REQUEST BLANK

Let "How to Select Safe Bonds" show you definitely how you can enjoy, with absolute safety, a larger income from your investment. Mail this request blank for your copy of this interesting booklet. No obligation.

"Many a night," he remarked with a smile, "I worked in the fields without a stitch of clothing, and I'd jump into the irrigation ditch afterward!"

But there were hardships of another kind, too. Being a new country and close to the international border, it attracted many bandits and outlaws. Shenk, after he sold his first ranch, engaged for a time in store-keeping, and was the second postmaster in Calexico.

"Holding up the stores was a favorite sport," he said. "I had a partner and we used up a good many cases of ammunition in practice. My partner practiced with a rifle mostly; I generally used a revolver. We used to throw nickels and dimes as targets. My partner got so he could hit eighteen out of twenty tries.

"Our store was never held up.

"The nearest shipping point on the railroad in those days," he continued, "was Flowing Wells. It was fifty miles across the desert, and when you got there it was only a siding and water tank. We had to make the trip to Flowing Wells ever so often for supplies.

"There wasn't any road. The sand drifted and covered up the wagon tracks between trips. In order to find our way we would pick out a peak in the mountains and head for it. When we struck the railroad we'd look at the numbers on the telephone poles to decide whether to go east or west to get to Flowing Wells.

"There was no agent and no station. Our goods were thrown off on the sand. They'd lie there, if we were lucky, until we came to get them. Many a time I ordered a crate of bacon and made the trip across the desert, and got nothing but the crate for my pains. Hoboes had the bacon!

"There was no regular mail schedule at Calexico. We had to send out letters by engineers or others who happened to be making the trip.

"We used to carry currency across to the station. Checks were no good in those days. We had to pay for everything in cash. The bandits seemed to take a special delight in trying to hold us up on these trips."

MR. SHENK mentioned this early in the day. When we were driving toward home, after several strenuous hours at the ranch, I reverted to the subject.

"What happened," I asked, "when they tried to hold you up on the desert?"

"I'll never tell you!" he replied. "But I never lost any money."

Adolphus Shenk was never a gun-fighter. He was a man of tremendous energy and definite purpose in a raw country. Guns in the hands of straight men took the place of law, the orderly processes of which were remote and uncertain. Bad men had to be run out.

In the year of 1905 there was added to the torrid climate, banditry, and the other hardships of a new country, the dangers of flood. In that year the Colorado River, from which water is taken to irrigate the Valley, and which normally empties into the Gulf of California, broke away from the engineers.

They had made a cut in the banks for irrigation purposes, meaning to close it again before the spring flood. But instead of one flood that year there were five; they began unusually early, and prevented the closing of the cut. By August,

as a result of this, the Colorado River had completely changed its course. It stopped running into the gulf and emptied into the Valley, cutting new channels and ruining mile after mile of ranch land.

What was known as the Salton Sink was the lowest part of the Valley and lay several hundred feet below sea level. The river began to make a new sea in the Salton Sink. Before the runaway river was turned back into its normal channel it had created the Salton Sea, a body of water some twelve miles wide and thirty miles long.

At that time many settlers thought the Valley was ruined forever. They were willing to sell out for what they could get. Values dropped almost as rapidly as once they had risen. But while others were selling, Shenk was buying.

"I BOUGHT everything I could get my hands on," he said. "Later, when the river was under control, I turned around and sold at a good profit.

"It was a trying time. For a while the whole town was threatened. A levee was built. Every man, woman, and child was drafted to work on it. It held all right until one Saturday night early in April. The wind then was blowing a gale, chopping up the river. The waves rose and lapped over the top of the levee.

"For three days and nights I worked, along with everybody else, in water up to my neck, placing sand sacks to strengthen the levee. We had to tie ropes around men to keep them from being swept under by the current. As it was, the water got into part of the town. It was four feet deep in the railroad station."

After three days the river subsided enough so that the town was saved.

Shenk proved to be a pioneer not only in the sense of enduring physical hardships in building a new country, but also in developing new ideas for the benefit of the country. For two years he experimented to find out how to raise alfalfa properly; then others in the Valley came to him to find out how to do it.

Mr. Shenk was also one of the earliest to experiment with cotton in the Valley, was the first to raise it successfully, and he is now one of the largest producers. He also raises, or has raised, everything it is profitable to produce in the Valley. But Shenk is much more than just a rancher.

In the early days he was the first customs broker of Calexico, and a school trustee when he was scarcely of age. He has engaged in the buying and selling of real estate in the Valley. He does a very large insurance business. He was responsible for building the cotton compress in the town, one of the largest west of Texas. He has promoted or financed cotton gins, and also oil mills to utilize cotton seed and by-products. Finally, he makes loans for some of the banks most largely interested in the Valley. This last fact was responsible for a recent and supreme test of Shenk's mettle.

Across the border in Mexico were a number of cotton ranches operated on lease by Chinese. Shenk negotiated loans for the lessees, and he was required to endorse the notes. Two years ago the bottom fell out of the cotton market. The Chinese saw that everything was lost. They ran for cover. To the bankers

it seemed inevitable that Shenk must be drawn under with them. They said to him: "There's only one thing you can do: go through bankruptcy. After that, you can probably get on your feet again, somehow."

This, however, Shenk positively refused to do. For a week he fought with the bankers. It took him six arduous days to make them see it his way. And thereupon he tackled his biggest job.

He took over the ranches that the Chinese, sixteen of them, had operated. He found the equipment in miserable order; some of it had been made away with before he arrived. There was standing cotton in the fields which was worth less, at the market price, than the cost of picking it. But Shenk picked it.

It was but little more than a year ago that Shenk took over this twelve thousand acres on a ten-year lease, assumed the obligations of the Chinese, and faced what many qualified people told him was a hopeless job. His losses in his one disastrous year was \$232,000. But those who told him the job of recovery was hopeless had not fathomed Shenk. The cotton that he picked at a time when its market worth was less than the cost of picking it, cut his \$232,000 loss in half, for the market, as he had foreseen, recovered.

"You can't run a ranch with Mexican labor," he was told; "they won't work."

But we passed hundreds of them working hard and faithfully, and, under supervision, doing a splendid job. All day and until the sun was setting we drove about Shenk's great ranch. Nothing escaped his attention. He noted the condition of every field and irrigation ditch.

IT WAS nearly nine o'clock at night after supper in the kitchen at the main camp when we started on our drive back to the border. We passed camp after camp on his ranches: little villages in which the characteristic huts of tule grass and arrow weed predominated. For miles after we left the main camp we could see its light across the level fields of what once was desert. Just beyond was the actual desert, that part of it where water will not go; and beyond that were the barren mountains of Mexico, bulking big in the starlight.

It was after ten when we arrived at Mr. Shenk's office in town. His desk was piled with papers accumulated during the day.

"You're not going to clean them off to-night?" I asked.

"Yes," he replied; "I seldom leave before twelve or one o'clock. There's my motto," he concluded, as we shook hands.

He pointed to a frame which enclosed a dozen lines from Henry Austin. I read the lines and copied off one, because it seemed to me to sum up this man, who has endured nearly everything a man can endure, and has come through at the age of forty, full of vigor and with a smile. Here's the line I copied:

There is no failure, save in giving up.

Men like Adolphus Shenk, men who don't know when to give up, who hang on in spite of hell and high water, who have fought for and built this country step by step from the Atlantic seaboard to the Pacific—they are the true pioneers.

## If the Prince of Wales Swapped Clothes with a Beggar—

Scene from "The Prince and the Pauper." Courtesy Capitol Theatre, N. Y.

SUPPOSE to-morrow morning should find the most popular Prince in English history in rags on a park bench.

Would he be spared the surly "Move on, you!" of the vigilant patrolman? Would the loiterer beside him believe his story?

You yourself, walking by—would you recognize him?

It is just such a story that Mark Twain has told in

## The Prince and the Pauper

—the fascinating adventures of the heir to the English throne who changed places with a squalid urchin of the streets. There is no other story like it in the language. There is no other writer who could have told it as it is told by

Novels

MARK TWAIN Boys' Stories  
Travel  
History

OF course you have read a little of Mark Twain—everybody has. Perhaps you know the delightful antics of the immortal Tom Sawyer and Huck Finn, or the strange things that happened to the Yankee of today who found himself suddenly in King Arthur's court. And you have longed to have these books in your own library.

But have you read the rest of the novels, and all the short stories and brilliant essays that have made Mark Twain's name a cherished American institution?

In the history of the world nobody has made so many people laugh as the great American. William Howard Taft says of him: "He gave pleasure . . . to millions, and his works will continue to give such pleasure to millions yet to come."

And yet he is not only a great humorist, but a wonderful story-teller, historian and travel writer as well.

In the 25 volumes that comprise his work you will find a perfectly balanced library of humor, adventure, philosophy and fun—every conceivable form of entertainment from the ridiculous in "The Innocents Abroad" to the sublime in "Joan of Arc," one of the most beautiful serious books ever written in the English language.

### The Only Complete Uniform Edition

The Author's National Edition, originally published by Harper &

Brothers and now published by P. F. Collier & Son Company, is the only complete, uniform edition of Mark Twain's writings. Here you live the quaint life of steamboat days and the Far West, you see foreign lands and strange people through the eyes of the master humorist—you thrill to every wholesome human emotion. And now, by a plan of exceptionally easy terms, they are within the reach of everyone.

We shall be glad to send you free an entertaining little booklet containing some of Mark Twain's cleverest sayings—his famous essays on "How to Tell a Story" is one of them—and including interesting information about his life work. You, an American, should at least know something about the greatest American humorist. Sending for the booklet in no way obligates you. Simply clip the coupon and it will come to you by return mail.

P. F. Collier & Son Company  
416 West 13th Street, New York, N. Y.

Please send me the free booklet about Mark Twain, together with full particulars as to how I may procure a complete set of his writings by small monthly payments.

## No use looking for your ship to come in

unless you've sent one out

Men talk about "when my ship comes in" without reflecting that ships come in only when they have been sent out. The plain truth is that positions of responsibility, honor, leadership and good pay come only to the men who have the foresight to prepare themselves for bigger opportunities.

Success is a conquest—not a bequest. It is won by pluck, not luck; by working, not wishing.

If you want a bigger opportunity to come to you in 1923, 1924 or 1925, have the foresight to begin preparing right now—not next month. Use your spare hours studying with the United Y. M. C. A. Schools. Every year you have 936 week-day spare hours between seven and ten o'clock. The United Y. M. C. A. Schools now offer more than 300 correspondence courses, and an instruction-by-mail service that gives you the most for the least money.

Get our friendly counsel on your problem. We will tell you how thousands of ambitious young men are, with our help, making their "ships come in." Mark and mail the coupon today.

## The Day Always Comes—to Those Who Hang On Tight

(Continued from page 57)

used to give me ten cents a day for my luncheon. Later I found that it was only by the utmost pinching and planning that she managed always to have that money for me.

The Civil War came on. That was a great time for a boy. We little chaps, who were not old enough to enlist, formed armies of our own. Over in New Worcester was a company. We could not go through New Worcester, and one of their company could not come through our valley. They challenged us and we met in the battle of Jamesville. I say "us," although I was considered a little too young to be a regular member. Our crowd, one night just as the mill closed, marched off a hundred strong to give battle. I hid my dinner pail behind a stone wall, picked up a club, fell in at the rear, and went off to war. Our scouts located the enemy in a strongly intrenched position down behind a stone wall near the old Wesson House. Our leaders gave the order to attack and dislodge the enemy.

WE MET at the stone wall and then it was a free-for-all. When it was all over I found myself with a very black eye and lost in the swamp with Pat Manville. Pat managed to enlist in the real army a little after that, and he was killed in the following year, when he was only sixteen years old. We wandered in the swamp until after midnight before we found a way out. On the road back home I met my two sisters looking for me and about half a mile farther along I met my father. There was some doubt as to who won the battle of Jamesville but none as to who won the battle in Logan's woodshed.

It was hard work in the mill. We had to be in our places at five in the morning. We had half an hour for breakfast at seven o'clock, forty-five minutes at noon for dinner, and then worked on until seven o'clock. My sisters worked in the same mill. Annie was twelve and Margaret was fourteen. Margaret was not very strong, and sometimes after the long day it was very hard indeed for her to get home. We would have to stop very often and sometimes we had to help her; but at that we felt ourselves rather well off, just because we had work.

A boss in those days was a boss. Someone in our room broke a lamp chimney, and Mr. Jones, my boss, thought that I knew who did it. I did not, but he would not believe me. He went off and got a rope, made a loop, put it around my neck, and threw the rope over a beam. I felt perfectly certain he was going to hang me, but I wept so bitterly that he told me he would put off the hanging until another day.

Our life was a simple one. We earned enough money to keep us from want and we had no desire for luxuries, because we did not even know what they were. Every Sunday we walked two miles with our mother to the village church and Sunday-school, and it meant a great deal to us, even though our teacher did inform us

that a javelin was a musical instrument which Saul threw at David. And when Lincoln was assassinated, I distinctly remember that one of the congregation said that it was a judgment on him for having gone into a theatre. Years later, when I first entered a theatre, although it was to see Joe Jefferson play Rip Van Winkle, I had an uncomfortable feeling that maybe I was going to Hell! My father never went to church. Probably he got too much of it when he was young. His father was one of those strict, unlovely Christians who thought religion was mostly a matter of discipline. The children had to walk to church two minutes apart so they would not desecrate the Sabbath by talking on worldly subjects.

My own early reading was the dime novel, and, despite what anyone says about dime novels, I know I never read anything in one that did not make for the good rather than for the bad, and probably if I had not read them I should not have read anything. My favorites were the Munroe and Beadle publications. We had a club. Membership in it cost one dime novel. Ten cents was too much money for any one of us to put out more than once a year or so for reading matter, so we each contributed a cent to the library fund, and when ten cents had been accumulated we added a volume. What little time we had away from the mill we spent in high adventure after the manner of our heroes—dwelling in caves or putting to sea on logs. Almost any book that a boy will read is better than any book he will not read. I cannot imagine what life would be to-day without reading.

There were thirteen mills, all drawing water from what was known as the Paxton Reservoir. They were arranged in steps. When the water was low, Number 13 would not get started until nearly noon, for they all used the same water. When the pond of mill Number 1 had filled, it started work. The water it used flowed into pond Number 2, and so on down the line. Each mill had a big bell, and when the bell tolled it was a signal that the power was on and the hands were to run to their places. I worked in mill Number 12, and because of that my life was materially changed.

ABOUT a quarter of a mile away was the village school. While waiting for the bell we boys used to join the other children at their recess play. The teacher of that school was Miss Mary E. D. King, and next to my mother she did more than anyone else to shape my early years. One day she came out at recess and said:

"You boys ought not to waste all this time. Why don't you come to school during the forenoon or whenever you are waiting for the water, and leave when bell tolls?"

I thought it was a wonderful opportunity. So did four others, but they soon dropped out. When the fall rains came on and there was plenty of water, Miss King suggested that I eat my dinner with

## *Why treat your mind like a merry-go-round?*

**A** HARD-WORKING merry-go-round travels as far in a year as a transcontinental express. But it gets nowhere.

Most men and women treat their minds like merry-go-rounds. They read enough, goodness knows, but at the end of the year they have learned nothing, made no mental growth, arrived nowhere.

Said Hamilton Wright Mabie:

"Many people expend in desultory reading time and effort that, wisely directed, would make them masters of epochs and literatures. The art of reading is to read in such a way that with the utmost economy of time one can secure the richest results."

"Fair enough," you say, "but who is going to teach me this 'art of reading'? Among so many million books how can I know which are really worth while?"

It was in answer to this question that Dr. Charles W. Eliot, for forty years President of Harvard University, under-

took the preparation of the most famous library in the world.

### **DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS**

Every well-informed man and woman should at least know something about this famous library. It is described in detail in a free book which the coupon below will bring you.

This free book is called "Fifteen Minutes a Day." From it you can learn how Dr. Eliot has put into his Five-Foot Shelf "the essentials of a liberal education," how he has arranged it with reading courses and notes so that even fifteen minutes a day are

enough, in pleasant moments of spare time, for you to get the broad knowledge of life and literature, the culture, the broad viewpoint, that every university strives to give.

"For me," writes one man who sent in the coupon, "your little free book meant a big step forward, and it showed me besides the way to a vast new world of pleasure."

You are invited to have a copy of this handsome and entertaining little book. It is free, will be sent by mail postpaid, and does not obligate you in any way. Merely clip the coupon and mail it today.

*Send for this free book that gives Dr. Eliot's own plan of reading*

**P. F. Collier & Son Company  
416 West 13th St., New York City**

By mail, free, send me the little guidebook to the most famous books in the world, describing Dr. Eliot's Five-Foot Shelf of Books, and containing the plan of reading recommended by Dr. Eliot of Harvard.

## "Johnny! Don't ever say that again!"

Has your boy or girl occasionally shocked you with a too worldly-wise comment—or surprised you with a wrong understanding of something he or she should have known? Apparently, your guidance has been futile; your child just seems to drift along, learning no more and no better than what companions teach.

### TO CORRECT THE EVIL MAKE HIM READ ST. NICHOLAS

By investing less than the cost of your morning paper, you can let your boy lead himself rightly. Give him a year's subscription to St. Nicholas—the best-loved magazine of America's youth. For 50 years, it has been written and edited for boys and girls up to 18 years of age. In addition to fiction by the best authors of juvenile stories, St. Nicholas has articles on travel, sport, science, topics of the day, and prize contests—all written with a powerful appeal. In St. Nicholas to read regularly, a boy or girl finds the counterbalance to such harmful influences as cannot be guarded against. Order St. Nicholas to-day; youth does not wait.

Send check or money-order for \$4 to St. Nicholas Subscription Department, T-2, 353 Fourth Ave., New York.

**ST NICHOLAS**  
for Boys and Girls

her over at the school and recite my lessons. I did that for two years. She loaned me schoolbooks and I fitted up wire fingers to hold them open near my machine so that I could read and still not touch the pages with my dirty fingers. At the end of that two years I was further ahead than the boys who had been on full time, and that in spite of the fact that often I had to work nights.

The mill in which I worked was not evenly balanced for equipment. To make up for this shortage in equipment my machines had to run extra two nights till ten o'clock and Saturday night till midnight—this for a boy not thirteen years of age and the only person in the mill!

Miss King taught me to write a good hand, and she suggested that I ought to get out of the mill and learn to be a bookkeeper. She opened up to me the fact that the mill was not the beginning and end of life. This seems a simple enough thing to-day, but it was not then, for we more or less took it for granted that we always had to keep on doing whatever it was we started at.

I fell very ill. It was thought that I had tuberculosis. In the "good old days" consumption claimed many a mill worker. I got about half well and went back into the spooling-room of a mill. That was a girl's job.

IN ORDER to stimulate production, the wages of the sixteen children in the room were each month posted up. One girl had always led the list, but in my first full month I passed her and earned thirty-one dollars and twenty-five cents. I worked in that room for more than a year and led in every month but one—although this girl was always on my heels. The whole room speeded up, and as a reward the boss cut our pay ten per cent. In three months we had overcome the ten per cent handicap and were earning the old wages. They again cut us ten per cent, and three months later they cut another ten per cent. I have never quite got over the unfairness of those wage cuts. I felt then and feel now that some of the benefits of speeding up belonged to us.

Many a man has been embittered by this sort of thing. It did not affect me in that way, but it has been a controlling thought with me in wage scales ever since I became an employer of labor.

I did not want to stay in the mill, and really I was not strong enough for even the girls' work, so with the help of my mother, in my sixteenth year I took a course in a business college at Worcester and learned bookkeeping. I was there about a year, and as soon as I got out found a couple of temporary jobs; but when that work was ended no one seemed to have anything for me to do. I was a wee lad. I am not very tall now, but I did a good deal of my growing after my eighteenth year. Probably the mill stunted me. Nobody wanted a bookkeeper who was scarcely higher than a big desk. One of the principal tailors was rumored to need a bookkeeper. I made my application; he took one look at me and, turning on his heel, said:

"No, you are not big enough. That's all, that's all."

My father did not think much of the bookkeeping idea and more especially he thought very little of a bookkeeper who

## Prevents Chapped Skin

"VASELINE" Camphor Ice will take the bite from winter winds. Apply a little to your lips before going outdoors, and liberally to your hands and face when you return. This will prevent the skin from becoming chapped and roughened.

If the damage has already been done, "Vaseline" Camphor Ice will soothe and heal. It comes in metal boxes and tubes. At your druggist's or department stores.

## Deformed 7 Years by Infantile Paralysis

Frances Hall's condition after 34 months at McLean Sanitarium astonished those who knew her as a cripple for 7 years. Read her parents' letter:

It hardly seems possible that Frances' feet could be so changed in 34 months. Her feet were 2 1/2 inches from the floor when she left home. Now she steps flat on the floor, although slightly lame. Her limbs have increased in size, it is straight and she has good use of it. All her friends think it is almost a miracle.

MR. AND MRS. R. S. HALL,  
Franklinville, New York.

### FOR CRIPPLED CHILDREN

The McLean Sanitarium is a thoroughly equipped private institution devoted exclusively to the treatment of Club Feet, Infantile Paralysis, Spinal Disease and Deformities, Wry Neck, Hip Disease, Diseases of the joints, especially as found in children and young adults. Our Book, "Deformities and Paralysis" and "Book of References" sent free.

PLIERS**  
Wm. SCHOLLHORN CO.  
NEW HAVEN, CONN.

did not have a job. He insisted that I go back into the mill. I would have had to go back—we obeyed our parents in those days—but my mother put her foot down on it. She said positively:

"Jamie is out of the mill, and now that he is he is going to stay out."

Finally, I got a job at one hundred and fifty dollars a year in a dry-goods store. I slept in the store, acted as watchman, and thus saved room rent. On the side I received fifty dollars a year for keeping the books of a valentine manufacturer, and three evenings a week I kept the books of a grocery store, getting one hundred and fifty dollars more for that service. Later I went back, as bookkeeper, to the mill in which I had been a spooler, and remained there two years.

**MY NEXT** job was in a bookstore, and it was from that job I got my real start. The Worcester Polytechnic School had just been established, and ours being the principal bookstore I soon came to know the boys. The students at the Polytechnic Institute were graduating each year and going out into the world as leaders. I began to wonder if when they came back to their class reunions I would still be selling pens and writing pads. I said to myself, "I won't! I won't!" And I didn't. But I got a great deal out of that five years in the bookstore—more than some men get out of a college course.

The stationery store was not well managed. One partner spent more than the business could afford. The senior partner went to a rich neighbor, G. Henry Whitcomb (the envelope manufacturer I have mentioned), to borrow money. He asked for a statement of the business.

I made up a summary covering the transactions of five years and boiled it down so that it was included on two sheets of paper.

The moment Mr. Whitcomb saw the statement, he asked: "Who did that?" Mr. Sanford (my boss) told him. "Send him to me," said Mr. Whitcomb. "He is the man to talk to me."

He loaned the money, and in about a week I was approached by a friend who asked me why I did not buy an interest in the business. I said I had no money. He said that he knew a man who was willing to lend me the money as an investment. I imagine he had been sent by Mr. Whitcomb, although I never knew definitely. My guess was that, having loaned some money to the company, shrewd Yankee that he was, he would insure the first loan by making a second loan to me; so I refused to borrow or buy. Very soon came an offer from Mr. Whitcomb to work for him at seven hundred dollars a year.

I was twenty-six years old. That was two hundred dollars a year less than the bookstore was paying. I asked advice of five friends, and four of them advised me not to take the place. But it was a national business; I saw a future and I took the job. It proved to be my life work. I traveled on the road; but I was a salesman, not a drummer. There's a difference. I tried to find out everything about the business. In those days there were no stenographers, and all correspondence was in long hand. They put a box on my desk, and it became an office custom, instead of settling hard questions, to say, "Put it in Jim's box," and usually when I got home from a long trip the box was full,

# Leonard CLEANABLE Refrigerator

"Like a Clean China Dish"

## Save Time, Work, Money, Food

C. H. LEONARD

The Leonard means less labor for housewives—better meals, lower costs; foods kept fresh by chilled, dry, moving air within ten heat-repelling walls. One-piece food chamber, triple-coated with porcelain.

One out of every six refrigerators sold is made by Leonard. See the Leonard dealer. If you cannot find him write us and we will see that you are supplied.

Send for actual sample of porcelain, and catalog illustrating over 75 styles and sizes of refrigerators. Mr. Leonard's own booklet on "Selection and Care of Refrigerators" will be mailed, too.

There is a Leonard size and style to suit every purse

and for weeks I would work every night till I caught up with the work, and then it was time to go out for another trip.

I was in effect manager, but without the title, and at the end of the fourth year I was getting only fifteen hundred dollars.

We could not agree upon my salary for the fifth year. I asked that I be paid the same salary that had been paid to three of my predecessors—who had not made good. There was nothing to do but get out.

With George H. Lowe, of Boston, I embarked in the envelope business on my own account, and right in Worcester. Then came an offer to return to my old place—enter the firm. I went back. But the arrangement did not work out, so the following year, with the two Swift Brothers and John S. Brigham, I withdrew, and the Logan, Swift and Brigham Envelope Company was formed. The banks and individual friends were willing to lend us all the capital we needed—that is the advantage of starting where one is known—and in seven years we were the leaders in the envelope industry in the United States. When in 1898 the United States Envelope Company was organized by consolidation of ten of the leading envelope companies, I became the first vice president and general manager.

All of which, if it means anything, means just this: the day always comes. What seem at the moment to be misfortunes are usually the ending of an old, outworn era and the beginning of a new and better one. At least, it has been that way with me.

## The Narrowest Escape I Ever Had

(Continued from page 45)

water flowing into the suit in some way. Having settled that, I decided to have myself hauled to the top; but before giving the signal I made sure I had them right. One pull on the life line meant to let more of it out, two pulls to be hauled in, three pulls—quick pulls—haul me in at once. Right!

My first thought was for the three quick pulls; then I thought of Clayton and all the talk I had made of staying down longer than he had, and so I gave two unhurried pulls, or what I meant to be unhurried at the moment, expecting to find myself hauled right up to the top.

I was not hauled up at once, but it did not make me uneasy; there must be some reason for the delay; and so I waited—oh, ten seconds, twenty seconds, perhaps half a minute, not wishing them to think up top that I was getting rattled or anything like that.

Still I did not find myself being hauled up. I waited for another little while.

No action. I repeated the signal. No action yet from above; and all this while the gurgling sound was increasing, while the water rolled into my suit with increasing volume.

Ten more seconds which I counted out, and still I was not being hauled up. I then gave the three strong, quick pulls. That will fetch them, I thought.

It did not fetch them. Then I began to think I must have my

### A Luxury Hides 25% Bran

Pettijohn's is a luxury food. Not ordinary wheat, but a special flavory wheat. You never tasted a finer cereal dish. Yet those rich flakes hide bran flakes.

So Pettijohn's supplies two food essentials—whole wheat and bran—and makes both delightful. It should be served at least twice weekly, and it's always welcome. Try it.

## COMMERCIAL ART

### Taught By Improved Methods

Many art school advertisements tell about the great and ever increasing demand for commercial artists—big pay—equal opportunity for both men and women, etc. Very good! This is all quite true, but you must first be properly taught. Understand? Properly taught! Few top notch artists are good instructors. Very few. By searching through every studio we have found them.

### A Master Course Is Offered

Endorsed as the official training school for leading Commercial Art houses, employing hundreds of artists. Correct educational methods applied. A practical educator and a corps of top notch commercial artists, offer students the benefit of 20 to 30 years of high grade experience. Only the best instruction is good enough for you. Students finishing half of this unusual course can secure and hold desirable positions. Course can be made to pay for itself many times while studying. Either class room or home study instruction. Same course. Same results. If you like to draw, let's talk it over. Ask for our leaflet telling all about Commercial Art and the opportunities it presents. **AS WE TEACH IT.** Send 6 cents in stamps for postage.

**NATIONAL ACADEMY OF COMMERCIAL ART**  
230 EAST OHIO ST.  
DEPT. 10 CHICAGO, ILL.

signals wrong. I rehearsed the signals in my mind; two steady pulls on the life line meant that I was to be hauled up in no great hurry; three quick pulls meant to haul me in at once. I had them right. And there was no confusing the life line for the air pipe; the life line led to the right-hand side of the helmet, the air pipe to the left. No mistake there.

I gave three more quick, hard pulls. And waited.

No sign from above. There must be a reason for their not answering. All of them could not have dropped dead. What was the trouble?

I decided that they were not prepared for a signal from me so soon. I had been set on staying down more than twenty-nine minutes, and only a few minutes had passed. I had also said I was going to explore the wreck, and naturally nobody would be looking for a signal from me until there was something like four hundred feet of life line and air pipe out.

I thought of hurrying down-stream so as to run out the four hundred feet quickly, and then give the three quick pulls. But it was only a thought. Before ever they could reel out and haul me back four hundred feet I would be smothered. . . . And what chance then?

I was once concerned in hauling out of the river a dredge hand who had been under water about six minutes. It was twenty minutes before we got any sign of life out of him. I thought: If they wait twenty-nine minutes before hauling me in it will take more than twenty minutes to bring me back to life!

Three times more I gave the three quick pulls, with intervals of about ten seconds between. Still no response.

JUST about then I began to think perhaps I was in for a drowning; and I recall the intellectual curiosity which bothered me when once I made up my mind that I was in a bad way. I could feel the water inside the suit mounting up to my chest, and I knew that it would not have to more than half fill the helmet to get me.

What interested me was that I had read in various books the statement that when a man sees death rolling down on him, then everything he ever did, especially his misdeeds, comes flashing into his mind. Standing there at the bottom of the Savannah River, I recalled that statement, and I was curious to see if the thoughts of all I had ever done would come flooding to my brain.

Nothing of the kind. I stood dead still and even tried to bring to mind all I could, particularly my misdeeds; but my memory did not seem at all concerned with what I had been doing all my life till then. I remember clearly that when I had settled that question, I said to myself: "There's a hoary old lie nailed—to my satisfaction at least." I also recall adding to that: "Now you've settled that, what good will it do you if you don't live to tell people about it?"

I next tried giving one pull, two pulls, three pulls, on the life line. No use. Something else was bothering me then. The air inside the helmet seemed to be growing thick. I gave a pull once on the air hose. I did not expect to get action on it; but while my arms were upstretched to reach for the air hose I noticed that the water seemed to be

"Another  
\$50 Raise!"

"Why, that's the third increase I've had in a year! It shows what special training will do for a man."

Every mail brings letters from some of the two million students of the International Correspondence Schools, telling of advancements won through spare time study.

How much longer are you going to wait before taking the step that is bound to bring you more money? Isn't it better to start now than to wait for years and then realize what the delay has cost you?

One hour after supper each night spent with the I. C. S. in your own home will prepare you for the position you want.

## DO YOU LIKE TO DRAW?

Cartoonists are well paid

We will not give you any grand prize if you answer this ad. Nor will we claim to make you rich in a week. But if you are anxious to develop your talent with a successful cartoonist, so you can make money, send a copy of this picture with 5 cents in stamps for portfolio of cartoons and sample lesson plate, and let us explain.

The W. L. Evans School of Cartooning  
834 Lorain Building Cleveland, Ohio

Wm. Campbell  
The Original  
Fireless Cooker  
Man

Made in  
one, two  
and three  
oven sizes

### What It Will Do

Roasts all kinds of meats, turkeys and fowl in 5-pound roast uses electricity about 20 to 25 minutes.

Cooks all vegetables—Eight medium sized potatoes require electricity about 8 to 12 minutes.

Does all baking—A pan of biscuits, a cake, loaves, use electricity 12 to 15 minutes.

A boiled ham uses electricity 20 to 40 minutes.

Cooks a boiled dinner complete—using electricity about 40 minutes.

Fries—Toasts—Stews—Makes Coffee, Boils Tea Kettle. No other stove needed.

All items made ready to use—factory price—no middle man.

## An Electric Fireless Cooker Saves 50 to 75% Cost Fuel

HERE is the easiest, cheapest method known to prepare the family meals. With the same electric current that lights your home you can do all your cooking at one-fourth to one-half the cost of any other method. It is a new, simple, practical invention that gives you every cooking, baking, roasting, frying, boiling and toasting facility of the expensive electric range, plus every advantage of the fireless cooker, at less than you would pay for even a good gasoline or oil cook-stove.

### Better Meals—Less Cost

Use Electricity,  $\frac{1}{4}$  to  $\frac{1}{2}$  Cooking Time

You prepare the entire family meals with less effort and less cost than ever before. High priced cuts of meat can be discarded for lower priced cuts and inexpensive food made equally appetizing, more nutritious and healthful. No "pot-watching." No worrying about burning.

**No Special Wiring** Not a penny additional expense for wiring and fixtures. Attaches to any electric socket, the same as electric iron or toaster. You prepare the food for cooking, the same as you have always prepared it. Put it in the cooker, turn on the switch, and leave it. No clocks to set. No dials to regulate. No thermometers to watch. No radiator to place to heat. You use electricity only to bring the food to the cooking point. It then, automatically shuts itself off. The heat you pay for is used for only one-fourth to one-third of the cooking time. Guaranteed Wear-Ever aluminum utensils furnished with it. It is aluminum lined throughout—won't rust or corrode.

WM. CAMPBELL CO., Dept. 297, Detroit, Mich.

### Get My Special Offer

### Iron Clad No. 17

## Stout Stockings for Out-door Play

Triple Knee and Double Sole make Iron Clad No. 17 the choice for outdoor boys and girls. Made from the best of combed lisle yarn these fine-ribbed, good-looking stockings will stand up under the hardest wear.

They come in fast black and African brown—colors as lasting as the stockings themselves. Get several pairs; there is unusual value in these stout stockings at the prices.

If you do not know of an Iron Clad dealer nearby, order direct from us, enclosing remittance and stating sizes and colors wanted. Your order will be shipped promptly, postage paid.

### Prices:

50c a pair,  
sizes 8 to 10;  
65c a pair, sizes  
10½ to 11½  
(East of the  
Rockies).

Cooper, Wells & Company

204 Vine Street, St. Joseph, Mich.

coming in faster. I raised my right arm again, then both arms. It was so.

Why was that? And puzzling that out I took notice—and not till then did I take notice—that I had no rubber gloves on. I felt one sleeve. It was wide open at the wrist. I could slide either hand well up the open sleeve of the other arm. I remembered then that Johnston had taken off a pair of rubber gloves, dropped them into the bottom of the boat when coming out of the water, and Johnston was a big-boned man with tremendous wrists. Even with the rubber gloves over his big wrists there was a stout rubber band over the gloves to keep the water out at the wrists. That was a fine bust certainly—in a diver's suit rigged like that!

Well, if they could do nothing for me up-top I supposed I would have to do something for myself. I faced about and walked up-stream, having a notion that if I got under the "Mary Jane" I might by some miracle find a way to claw up to her. I walked now with less buoyancy than coming down-stream in the beginning. I tried to bounce up from the bottom, but there was no bouncing with all that loose water inside the suit.

I WAS back to what I judged would be under the boat. I began to figure. It was thirty feet to the bottom of the river at that tide. The diving ladder stretched perhaps five feet under the surface. The keel of the little "Mary Jane" might be six feet under. My finger tips might be able to reach up seven and a half feet. Seventeen feet between. No use there.

If that wasn't tough luck! There they were and there I was, and no way to connect. It was then it occurred to me that my voice might carry through the air tube, make a speaking tube of the air pipe. I shouted. The shouting was something to do and I shouted again. "Hullo, up there! Haul me in, haul me in, haul me in!"

All at once I felt a twist at my helmet. My feet were coming off bottom. What? Yes, I was being hauled up, steadily up, my hands going out to reach something up ahead of me. They felt something besides water at last. One of the ladder uprights, it turned out to be. I gripped it, and then the other upright—oh, but I gripped them! I next hooked my claws into a ladder rung; and another ladder rung.

Up I climbed till I found one foot on a ladder rung, the other foot on the next rung. They were sure enough rungs, too, no dream, because just then I saw through the little helmet window. I could see the forms of people and a little shine of moonlight.

The moonlight made me suspicious for a moment. There had been no moon when I went under. I turned my head to see; all right, there it was, a barrel-head of a white moon climbing, lifting above marsh grass of Hutchinson's Island in the east.

Someone was unscrewing the helmet. It was Johnston, I saw, when he had it off. Clayton was standing by him. There was Grundel, too, with his watch still in his hand.

I lifted one foot to step into the boat, and stubbed it against the top ladder rung. I had under-estimated the weight of the leaden shoe, or my own strength.

Only for Clayton I would have pitched head first into the bottom of the boat.

They unbuckled the suit, pouring out what seemed to me a barrel of water. I looked down at myself. My shirt, a starched linen one, was like a wet handkerchief, which sight cheered me. I hadn't been shaken up without reason. My trousers, a pair of nice new gray ones, were clinging to my legs like wet swimming trunks; all of which cheered me. It was real.

"How long was I down?" I asked.

"You were down about five minutes," said Johnston. "You might have lasted as much as two minutes longer, not more."

"How're you feeling?" asked Clayton.

"Fine—now. What a boob I was not to think of yelling up through the air pipe sooner."

"Yelling—through the air pipe? What do you mean?"

They did not know what I meant; whereupon I asked them how it happened they had all at once hauled me up after letting all my signals go by.

They never got a signal. I pulled on the life line, no doubt, but Wash was all the time paying out line, not thinking of any signals before I had reached the wreck, four hundred feet away. So my pulling on the life line had only helped to run it off the reel.

THEY told me what had happened: I was under water, the air pipe and life line unreeling freely, everything going all right, apparently, when Johnston (after dressing to go ashore) came out of the "Mary Jane's" cabin. He stopped in the operating boat to see how things were going. He watched Jeff working the air pump. He watched Wash unreeling the life and air lines. All right there. He followed the lead of the air pipe and life line over the stern of the boat and noticed that the current was setting the lines toward the stern of the "Mary Jane."

"That's a pretty strong current," said Johnston, "and that old rudder post of the schooner is pretty well splintered. That air pipe could easily get fouled there, and his wind choked off. Or the life line jammed. I don't like it. Better haul him in."

"He'll be sore," said Clayton. "He said he would stay down longer than I did."

"I know; but an accident to one of you fellows from the office wouldn't do a contractor any good. Better haul him in."

Johnston had hardly said that when he felt something under his foot. The moon gave but little light, and he had to stoop to see what it was. It was a bolt from one of the metal shoulder straps.

"Who put Mr. Connolly into that suit—you, Wash?" he shouted.

"No, suh!"

"I put him in. Why, what's wrong?" answered Clayton.

Johnston, who had been pawing around then in the boat, picked up two more bolts and a shoulder strap. Two bolts went to each shoulder strap.

"A lot's wrong. There must be water seeping through his shoulder seams. Haul him in." Just then he discovered the rubber gloves and the big rubber bands. He jumped to the reel with Jeff. "Haul him in, haul him in! For the love of heaven, haul him in—"

And so I was hauled in.

## The Snap of Health!

Kellogg's whole-wheat KRUMBLES should be served at least once each day on every home table! Because, KRUMBLES build health, making red blood, bone and tissue in a wonderful nature-way. And, because KRUMBLES, with their content of mineral salts and other life-sustaining elements, offset the denatured, bleached foods.

KRUMBLES are delicious—with the full-flavor of whole wheat for the first time in food history! They delight every one—you never tasted more appetizing cereal! And KRUMBLES are ready to serve—they do not have to be prepared.

Children thrive on Kellogg's KRUMBLES, growing strong and robust. Every mouthful spells health and mental and physical exuberance! KRUMBLES are ideal, strength-making food for the workers. KRUMBLES are wonderful for the aged. All grocers.

# \$258 PROFIT THIS WEEK

That's Berger's profit from his standing order. Bentley of Phila. made big money from the start.

There are no equal. Every man who handles the new Oliver Oil-Gas Burner, makes money. And he makes money fast. The Oliver Oil-Gas Burner does more with less gas and less money. It saves, saves, saves, saving time, saving money, saving space, saving gas, saving labor and saving about as much as you can save. It's the only burner that burns any stove, heater or furnace into a Gas Burner. Oliver is set in your stove in one minute—turns on and off with a valve—and gives you the best of both worlds. Cheaper too. Burns 50% less gas and 50% less money. The cheapest fuel there is. Gives as much or better heat as is needed.

**Sells Itself** That's why businessmen all over the country are clamoring for this amazing new invention. That's why salesmen are clearing up on the Oliver Oil-Gas Burner.

**Big Profits Quick** It isn't hard to sell a thing that everybody wants. And the Oliver makes an instant hit with everyone because just by the turn of a valve—like a gas stove—it gives instant heat.

## No Experience Needed to Make Big Money

You do not need to be a high-powered salesman. The Oliver's amazing features sell it for you. That's why Oliver Salesmen make big money. You, too, can use this secret of making big money easily. We have a number of definite territories which we are ready to dispose of to those who act quickly.

**Write for Full Offer, Now** Write at once for our offer. We are not making any extravagant claims about this. We don't have to. We want to give you the facts. Writing will not obligate you in any way. But by acting quickly you will receive our offer in time to get an exclusive territory franchise with private selling rights—if you want it.

But hurry. Write at once if you want to get in on this big money seller before winter sets in. Oliver Oil-Gas Burner & Machine Co., Oldest and largest manufacturers of Oil-Gas Burners in the World. 2153-N Oliver Building, St. Louis, Mo.

## The Girl Who Was Brought Up to Be a Snob

(Continued from page 25)

One day Bert was not in the store. A middle-aged man was weighing up three-and-a-half pound lots of sugar. She heard him say to a customer that Bert had pneumonia. "Not serious," he explained; "but you never can tell, with pneumonia."

Connie felt very sorry that the young manager should be ill. After weighing the matter in her mind, she decided to express her sympathy. When her turn came she told the substitute that she was sorry to hear the bad news.

"I hope he is receiving proper care," said Connie. Then she added, without intending to do so at all, "I—I wonder if I could be of any assistance to him."

"He's getting all the care in the world, miss. His mother's a fine nurse. They live down on River Street." Connie started at the mention of one of the town's mean thoroughfares. "But I'll tell him you offered. What name shall I say?"

"Just say that Miss Major inquired," she said uneasily. How had she ever come to offer her services? It was so unnecessary.

"You any relation to the old Doc that died, miss?"

"He was my father," said Connie.

AS CONNIE walked home, she felt weak; partly because she had offered assistance to Bert, but mostly because he was ill. It was a shame for such a cheerful soul to have pneumonia. "What if he should die?" she thought.

She couldn't keep her mind off Bert. His joking ways; he wasn't really impudent, she was sure, now. And his nice hair—"I would like to touch his hair," she thought suddenly. Then she was ashamed.

She looked at herself in the mirror, tilting it so as to get a full-length reflection. What a colorless thing she was! She pulled at her ash-blond hair until it puffed out at the sides something like young Mrs. Goldstein's. Then she raised the hem of her skirt two—three inches. It occurred to her that it would be all right to wear her skirts a trifle shorter.

Next day the substitute manager beckoned to her confidentially. She didn't like that. She began to blush before he said a word. "I gave Bert your message, and he said he was more glad to get it than anyone else's." The man beamed knowingly.

Connie's pulse quickened. "He's a great joker," she said.

"He is, and he ain't," the man corrected. "He wasn't joking then. You'll see, miss. One of these days he'll tell you himself." He laughed and shook his finger at her, while she blushed painfully. "He's on the mend fast. Can't hold Bert down long."

Connie tried to rid herself of the excitement caused by the man's words. When she got home she looked in the mirror again. Yes, her hair did catch the light a little when it was fluffed out.

Before she went to bed she shortened two dresses. There was no reason, she told herself, why she should not dress more becomingly.

Next week Bert was behind the counter again, thin, interestingly pale. Connie's vision blurred a trifle. When her turn came he did not call her "Young lady." He said, "What for you, Miss Major?"

She gave him her order in a low voice. It seemed as if his fingers dawdled over the tying up. She noticed for the first time that his hands were well kept and well shaped; not broken-nailed and stubby, like old Herzog's.

"Awfully good of you to think about me when I was laid up," he said, as he dropped her change into her hand. The coins gave her small electric shocks.

Connie hurried out. . . .

AS TIME went on there came to be no doubt about Bert's fingers dawdling; they certainly did. Not enough to halt business perceptibly. But Connie knew.

He couldn't seem to get over her offering to help when he was ill. "You were the only one that bothered to say anything like that," he said.

"It wasn't anything, really," she insisted. She wished he wouldn't stress the matter so much. It made her uncomfortable. Yet it made her glad, too. Bert was only a clerk in a grocery, but she, Connie Major, had stirred up something in him.

They fell into short, desultory conversations about the comparative merits of cocoa and chocolate, the drizzly spring weather; things that he discussed with all customers. Connie didn't realize that wedges were being driven in bit by bit toward the opening of personal friendship. All she knew was that she had trodden upon tradition by being sociable with one whom Carewe would surely classify under "such persons," and that, although the tail of the tradition still squirmed, the consciousness of her defection was like wine.

She had the on-edge feeling that something was going to happen. Yet when it did happen she was angry. He asked her to go to the movies, asked her quite suddenly one afternoon, very low, while he fitted her purchases into a big bag.

"Oh, no, I thank you," she gasped promptly. And her manner added, "The ideal You, asking me!" For she was really very indignant. The sense of stirring up things had been vague, with always the possibility that perhaps she might be mistaken; while here was something bald, concrete—and outrageous. The movies, of all places!

Bert shrugged his shoulders slightly. She saw his face redden. He handed her back her change in silence. Clearly, he was hurt.

Connie walked home swiftly. The idea of his imagining that she would accompany him anywhere. She, a Major, accompany a nobody from River Street! To the movies!

Yet she was sorry she had hurt his feelings. He hadn't realized his offense, she knew. She didn't like to hurt anyone, especially a person just up from having pneumonia.

Perhaps, in the interest of humanity, it would have been better to accept his amazing invitation. She wouldn't like to send anyone into a dangerous relapse.

In every man's life there is one Big Moment when he makes the decision that robs him of success—or leads on to fortune.

## Your One Chance to Earn The Biggest Money of Your Life

HAVE you ever considered why our richest men come from our poorest boys? Isn't it a strange thing that it is almost invariably a young fellow who starts life without a cent in the world, without education, without influential friends—in short, without one single solitary advantage—who accumulates millions of dollars? Isn't it a miracle that inside of a comparatively few years a man can rise from abject poverty to fabulous wealth?

Astonishing, certainly—but more important, it is wonderfully inspiring. For it means that no man need be held down by circumstances. Once he knows the "millionaire's secret," he can put it into operation regardless of all obstacles. His fancied handicaps simply vanish into thin air. He suddenly finds that everything he touches turns to gold—money flows in upon him—fortune showers him with its favors. Everything he wants seems to come to him just as surely and easily as day comes after night.

### The Secret That Makes Millionaires

But millionaires are not the only ones who use this secret. It has made every great man of history. Think of Napoleon—an unknown Corsican soldier in the ranks—then suddenly startling the world with his meteor-like rise, overthrowing empires, reshaping the destinies of nations!

What is this amazing secret that can work such wonders? It is just this: *The thing behind all big achievement, whether in business, political or military life, is Opportunity.* The man who wins is the man who sees his opportunity and seizes it. The man who never rises above the rut is the man who lets his opportunity pass.

To every man there comes one BIG opportunity—the golden chance of his life. And in the moment he decides for or against that opportunity—whether he will seize it or let it pass—he decides the whole future course of his life.

How often you hear a man say: "If I had recognized my opportunity when it came—if only I had taken advantage of it—I would be a rich man today."

### The Graveyard of Neglected Opportunities

The world is full of such men—they plod along year after year—slaving away, hoping that somehow things will take a turn for the better. But their chance for success is gone—it lies buried in the graveyard of neglected opportunities.

On the other hand, let a man see and grasp his big opportunity—no matter how obscure he may be, how poor, how lacking in advantages—and his sudden rise to success will astonish the world.

Read the life of any millionaire and you will find this to be so.

This very minute you may be face to face with your BIG opportunity—your one chance to earn the biggest money of your life! Right now your decision may mean the difference between a life of plodding, routine work at low pay and a career of inspiring success and magnificent earnings.

### Choose Between Low Pay and Magnificent Earnings

Now you are offered the very opportunity that has made other men rich, that has brought them more money than they ever dreamed of earning.

It is the same opportunity that lifted Warren Hartle of Chicago out of a job in the railway mail service, where in ten years he had never gotten beyond \$1,000 a year, and landed him in a \$10,000 a year job. It jumped Charles Berry of Winterset, Iowa, from \$60 a month as a farmhand, to \$1,000 a month. It brought to C. W. Campbell, of Greensburg, Pa., a clerk on the railroad, a position that paid him \$1,500 in thirty days.

These men and hundreds more have found their Big Opportunity in the wonderful field of Salesmanship. They are all Master Salesmen now. They are earning the biggest money of their lives—more than they ever thought possible—they are engaged in the most fascinating work in the world—they are independent, come and go as they please—they meet big men—every minute of the day is filled with thrilling variety.

Your Big Opportunity may be here, too, in the wonder field of Salesmanship. Perhaps you say you have never even thought of becoming a Salesman. But before you decide one way or the other, examine the facts for yourself. See what Salesmanship offers you—why it is the best paid of all vocations—why there is no limit to what you may earn. Read the amazing proof that no matter what you are doing now, you can quickly become a Master Salesman in your spare time at home—read how the National Salesmen's Training Association in its nation-wide search for men to fill the great need for Salesmen, has devised a wonderful system that reveals to you every Secret of Selling. See how this famous organization helps you to a good position in the line of Selling you are best fitted for.

The opportunity that the N. S. T. A. offers you may be your one chance to earn the biggest money of your life, as it has been for hundreds of others. But whatever you do, don't pass it by without getting the facts.

### Facts That Will Amaze You—Sent FREE

Mail the coupon below. This will not cost you a penny—it places you under no obligation. It simply means that you will receive, entirely FREE, a wonderful, illustrated Book, "Modern Salesmanship," and Proof that you can be a Master Salesman. You will receive, also, the personal stories of men throughout the country who today are enjoying magnificent success and earning five, ten and fifteen times as much money as ever before.

Address, National Salesmen's Training Association, Dept. 23-B, Chicago, Ill.

sipped his soda. "I'm taking a night course in chemistry," he said.

"How delightful that must be," she answered. "My brother is a chemist—as well as a biologist, you know." Bert rose in her estimation, nearer her own men-folk.

"Oh, I won't ever be a high-brow like him; but I don't intend to cut cheese all my life. There are chemical jobs in food factories, and that's what I've got my eye on. I guess you think I'm slow getting at it. But I've had to help support my folks. Never went to school much."

"My father took up the study of criminology when he was fifty," said Connie. "He did! Gosh!"

"So I'm sure you'll succeed."

When they came to her house, she said primly: "I've had a pleasant evening."

"So've I," said Bert. "Go again?"

"Why—yes, thank you."

Bert White whistled a syncopated bar softly. "Oh, my gosh!" he exploded.

Connie jumped. "What is the matter?"

"Oh, nothing. Can't tell you. You'd laugh."

"I don't think I should."

"No—can't tell."

Connie did not insist.

"Now, just for that, I will tell you," said Bert. "Any other girl would have teased to find out. It just goes to prove what I was thinking—that it's so kind of queer, you and me talking here, so friendly and common."

"I suppose—it is." Connie felt a sudden warm sense of companionship.

"Your dad didn't have any too much love for us on River Street," Bert went on soberly. "I guess he thought we weren't much better than dirt. So isn't it queer, really?"

"Yes." Connie understood. She felt a great pity for her father. "My father was a lonely man," she said gently. "But I—I believe in friendliness, don't you?"

"Bet I do! Can I come again soon?"

"I hope you will."

THERE is a bloom that comes to a woman only when she is pleasing in some man's eyes. It is a perishable bloom, as involuntary as youth itself, and as easily lost.

Connie's neighbors noticed it. "You must have stayed in too close with your father," young Mrs. Goldstein told her. "You're a different person."

Mrs. Salvatore didn't say anything. But she smiled wisely.

The weeks passed in a haze. Connie and Bert White went to the movies often, and sometimes to a real play in town. There was an Italian restaurant that Bert called "Tony's," where they ate spaghetti, a place Carewe would have scorned. Connie felt like a real bohemian, going to "Tony's."

What Connie did not realize, of course, was the fact that there is no such thing as a stationary admirer. She was not the first woman to imagine that things could go on pleasantly forever. . . .

One day Bert whispered something that startled her. "I've had a raise, Connie! I'm going to ask you something to-night!"

She nodded faintly, and turned pale. It was the first inkling she had of the thinness of the ice. She grew suddenly afraid of life.

When she got home it seemed as if all

## The Magic Power of A Few Little Lines

Have you ever noticed a cartoonist draw? A short line here. Another there. A small curve. A splash of shading—and you have a wonderful picture! It was all so easy—because he knew how—he knew which lines to use and just where to put them. Through this New Easy Way to Draw you too can learn the Magic Power of a Few Little Lines and how to make big money in drawing them!

# New Easy Way to DRAW

## How Easy!

Send from these few little lines are transformed into a picture.

One of the most fascinating, best paid businesses—yours after a few minutes' training a day.

Delightful pastime! Endless fun! Acquire the knack in your spare time.

Invaluable asset in your present business. A few lines can drive home your intangible ideas. New way makes it easy to learn drawing.

THIS wonderful new method makes it possible for **anyone** to learn Illustrating, Cartooning, or Commercial Art. Hundreds of our students are now making splendid incomes. And most of them never **touched** a drawing pencil before they studied with us.

The simplicity of this method will amaze you. You will be amazed at your own rapid progress. You learn by mail—yet you receive **personal** instruction from one of America's foremost Commercial Artists of 30 years' successful experience. Frank Goodwin and Wynne Holcomb (Wynne), the famous artists, are but two of his many successful students. Get into this fascinating game. **NOW**. You can easily qualify and make big money. A few minutes' study each day is all that is needed.

Newspapers, advertising agencies, magazines, business concerns—all are looking for men and women to handle their art work. Cartoonists and designers are at a premium. Dozens of our students started work at a high salary. Many earn more

than the cost of the course while they are learning.

**YOU**—with a little spare time study in your own home—can easily and quickly get one of these big-paying artists' jobs.

This amazing method has exploded the old idea that talent is an absolute necessity in art—that "It's all a gift." Just as you have learned to write, this new method teaches you to draw. We start you with straight lines, then curves. Then you learn how to put them together. Now you begin making pictures. Shading, action, perspective, and all the rest follow in their right order, until you are making pictures that bring you from \$50 to \$500 or more. Many artists get as high as \$1,000 for a single drawing.

Big money is gladly paid and big money is waiting for anyone with foresight enough to prepare for this pleasant profession. Through our new easy method of teaching, **YOU** can earn big money as an artist, regardless of your present ability. Mail coupon today for interesting booklet telling all about it.

## Coupon Brings Fascinating Booklet

An interesting and handsomely illustrated booklet, "How to Become an Artist," has been prepared and will be sent to you without cost. It tells how you can easily become an artist in a few minutes' daily spare time and at a cost of a few cents a day. Explains about this amazing method in detail. Tells of our students—and their wonderful progress—and how we can qualify you for a high-salaried artist's position. Booklet gives full particulars about our "Free Artist's Outfit" Offer. This booklet will be sent free, and without obligation. Read all about this amazing New Easy Way to Draw and how you can quickly learn, at home in spare time. Fill out the booklet-coupon now. Mail it TODAY.

CROWELL

the ghosts of all the Majors had heard that whisper, too, and were crowded in her small rooms, waiting. They wanted to know what she was going to do about it.

She sat down on the old sofa. She thought of Carewe's words: "As a Major, you cannot compromise." And she had been compromising ever since her father's death!

She had not scrupled against the compromise of renting the house to aliens. That had been necessary. And the mere act of renting, even to undesirable tenants—which hers weren't—could not sully the fabric of a family.

But to marry a man from River Street—that was another kind of a compromise; that wasn't necessary. Bert's father clerked in a cigar store, and his brother was a butcher. . . .

Oh, why couldn't they go on just being beautiful friends? Why did Bert have to get his salary raised?

"I suppose I have led him on, accepting his attentions," she considered miserably. "Oh, I am so ashamed! I can't marry him!"

The ghosts of the Majors receded.

CONNIE didn't eat any supper. She sat on the sofa, dry-eyed. At a quarter to eight she heard Bert swing around the corner of the house, whistling soft jazz. He knocked . . . he knocked again. She had not lighted the gas.

Once she started to her feet. It was cowardly not to let him in. Maybe he wasn't going to ask her to marry him.

But she knew he was. She sank down again.

Bert gave up knocking and walked away, not whistling.

Connie slid to her knees, and pressed her face against the frayed brocade. "Oh, God, don't let him be unhappy about this!" she prayed. Her sharp fists beat the lumpy upholstery. "Why was I born in a family that won't let me marry Bert? Tell me, God! I want him! I . . . want . . . Bert!"

But the God of the Majors was silent.

Connie slumped to the floor. There had been some satisfaction in frenzy. Now there was nothing.

The chill of the night roused her finally, and sent her shivering to bed.

She had done the only thing a Major could do. The only thing she regretted, as the days passed, was her cowardice at not letting Bert in and telling him the truth. But how could you tell a man he wasn't good enough for you?

Herzog charged her more than ever, no doubt to pay her for her defection. She kept within her budget by eating meat only twice a week.

Sometimes the longing to see Bert was so great that she walked past the cash-and-carry store. She could catch glimpses of him, rushing around in his white coat. Once she heard him laugh. . . .

"I mustn't go past here," she said. But after a few days she went again.

There was a time in the afternoon when trade was dull. Half past three. It was Bert's custom then, she knew, to lean against the shelves where he kept the shrimp and tuna fish and eat a bar of chocolate. Once she had come upon him so engaged, and he had broken off half the bar, and made her eat it with him.

A longing came over her to see him in

# WE TEACH COMMERCIAL ART

Meyer Both Company, the largest commercial art organization in the field, offers you a different and practical training. If you like to draw, develop your talent. Study this practical course—taught by this widely known institution, with twenty-two years' success—which each year produces and sells to advertisers in the United States and Canada over ten thousand commercial drawings. newsdealer for "Uncle  
Henry," or write to

**\$1**

**Reynolds Publishing Company, Inc.**  
416 West 13th Street, New York City

In the evening we all sat together around the big lamp. It wasn't a case of sister being at the movies, brother out on a joy ride, father at his club, and mother worrying about all three of them.

"A real home atmosphere won't stand expensive trimmings. Despite the money that has come to us, Mrs. Rackham and I live almost as simply as we ever did. But things can't be quite the same again. I'd like some of those old evenings when the neighbors used to drop in for a game of pedro!"

"Then I mentioned real friends as among the greatest satisfactions in life. Too much money may not break off old friendships, but it can put them to a hard test. Some old friends don't keep up their free and easy intimacy, for fear you will think that they are trying to 'play up to you.' And with new friends you can't be sure that it is you that interests them."

"A couple of years ago one of my former friends hunted me up and asked me to put quite a sum of money into a project he was interested in. I knew it wasn't sound, from a business standpoint, and I turned him down. Then he made a personal appeal to me—which was taking an unfair advantage. He reminded me of the old days and how he had helped me out then. I knew that the proposed investment would not only be a waste of money but that it would do him no good in the long run. So I still refused to go into it. I suppose he went away thinking me a tight-fisted old ingrate. I couldn't have done anything else, but it spoiled the day for me."

**MR. RACKHAM** folded his arms and his head dropped. For a while neither of us spoke. Then I broke the silence with:

"You said a few minutes ago that you and Mrs. Rackham live almost as simply as you ever did. Is that literally true?"

"Yes, yes! Nothing we could buy with money would add to our happiness. I've tried it and I know. We have to turn back to the simple things of life. Mrs. Rackham is the best cook and housekeeper I've ever seen, and she enjoys running a house. Most of the summer we have been without a servant. Our former maid had married and left us. Now she is back with us again; but she goes to her husband every week-end."

"I've always driven a Ford car until this year. Finally, I bought two big cars, built a garage that cost more than the house, and hired a chauffeur, because the driving in the crowded city is so hard. But I don't use these big motors very much. I like to ride back and forth in a street car. It's friendly, and one gets into such nice talks with people! It's no fun riding in a limousine with a chauffeur out in front and you sitting there stiff and alone. It's kind of pathetic."

"One of the great pleasures in life is giving to others, and when a man gets too much money he hasn't even that pleasure left. It's not real giving to write a check that you don't miss. The laborer who buys a basket of fruit for a sick friend, or the farmer who strips his garden patch to take a batch of new peas over to his neighbor is getting an inner glow that a rich man never knows."

"To feel that you are the steward of a lot of money, and are responsible for what is done with it, is often a depressing

## Fenestra

Steel Basement Windows

When you build, plan your basement so you get a real livable workroom! Let daylight and fresh air make it pleasant and healthful. Fenestra Steel Basement Windows are low in cost and offer these advantages:

- admit 40% to 80% more daylight

thought. It isn't easy to know what to do. The nearest you can come to satisfaction is by giving anonymously. Then you can be sure, at least, that you didn't make the gift for the sake of publicity or popular gratitude.

"Nearly all people who openly solicit gifts of money would be better off without them. Trading independence for charity is a poor bargain.

"Even the best intentioned gift may easily do harm. Suppose, for instance, that I were able to give enough money to some small denominational college so that the institution would become self-supporting on the income from it—so that it wouldn't even be necessary for the students to pay tuition. That money would be cursed. It would rob many of the students of the stern discipline of self-support; it would take away the joy of giving that former students have, when they sacrifice fifty dollars or one hundred dollars to help swell a needed endowment fund—and the whole spirit of the institution would be the poorer.

"Often nowadays people ask me to invest in this or that—promising me large profits. I tell them that that's the best reason for my not investing. I don't want any more money.

"The man with a simple little home, whose income is large enough so that he doesn't have to worry about life's necessities; the man who can watch his children growing up around him and going forth to battle with the world, is as rich as any millionaire. I know that I'd be willing to exchange places with him."

THERE followed another silence, broken by Mr. Rackham.

"Please don't think I mean that a man can't be rich and happy, too," he said. "Mr. Ford, for instance, is one of the happiest men I know, despite his great wealth. But Mr. Ford has retained his simplicity, his kindness, his interest in everyday folks and everyday things.

"For a number of years after I became a stockholder in the company we were near neighbors out on Edison Avenue. His life there was full of simple, thoughtful acts. I remember once, for instance, when I had gone to bed early because I wasn't feeling well. Presently I heard someone coming up the stairs, and I knew from the step that it wasn't Mrs. Rackham. Then someone tiptoed into the room and fumbled for the electric lighting switch. When the light was snapped on I saw that it was Mr. Ford.

"He asked me how I was and sat down beside me. I wasn't feeling much like talking; so he told me all about his recent visit to Washington, and his long conference with President Wilson. I don't know how long he sat there chatting. The point is, however, that the spirit of the whole thing, and the way he talked, was just the same as if it had been twenty years ago with both of us.

"Once, when we were out in the country together, he told me of a hope that some day the water power that was being wasted in the streams running through small towns would be harnessed, and a lot of little plants put up—each of which would turn out some one part of an automobile or other machine. Then these parts could be shipped to a central assembling plant.

## BUY DIAMONDS DIRECT

FROM JASON WEILER & SONS

of Boston, Mass., one of America's leading diamond importers

## Tiny Motors Need Extra Good Oil

Don't ever neglect the small motor in your vacuum cleaner, washing machine, electric vibrator and fan.

Proper lubrication with high-grade oil means longer life and much better service with a minimum of repairs. Such a small quantity is required at a time that you can well afford the best. A very little every time you use the machine is most satisfactory.

## 3-in-One

The High Quality Household Oil

penetrates smallest bearings. Stays in and lubricates perfectly. Won't dry out, burn out or become gummy.

Used also on locks, hinges, bolts, window pulleys and catches to stop squeaking and make them work easier.

3-in-One is sold at all good stores in 1-oz., 3-oz. and 8-oz. bottles and in Handy Oil Cans.

FREE: Greenbook sample and Dictionary of Trade Names, both on postal.

3-IN-ONE OIL CO.  
110 E. Broadway, New York

"I love the small towns and small-town people," he said. "They talk my language! We're herded too much in big cities for our own good. Now if we could have these little plants scattered around through the country, they could be shut down for two or three weeks every fall, and all the workers could go out and help the farmers harvest. It would be a good thing for both the factory folks and the farmers, and there wouldn't be any more crops rotting for want of someone to gather them."

"THERE'S another thing that keeps Mr. Ford happy. His mind is always working, just as it has done since he was a boy. Mechanical problems fascinate him—and he has the best mechanical instinct and mechanical memory that I have ever known."

"A few years ago one of our Detroit business men's associations was having an excursion. At Saulte Sainte Marie most everyone went ashore for a while. A handful of us sat on the deck of the boat. Among them was Mr. Ford and Governor Cox, of Ohio, the Democratic Presidential candidate in the last election."

"Governor Cox was talking very entertainingly about something or other, when I noticed a steamboat nosing along the St. Mary's River quite near to us. At that moment Mr. Ford pricked up his ears. I could see from his attitude that he was listening to the throb of the engine."

"Why, I helped build that engine years ago!" he exclaimed. "But that isn't the boat we put it into!"

"How do you know?" I asked.

"I can tell by the sound of it!" he replied. "To the person who loves and understands them, engines have voices just as human beings do."

"And, amazing as it may seem, we learned later that the engine on that boat was the very one that he had helped build."

## What I Would Do With a Million Dollars

### Prize Contest Announcement

SUPPOSE that through an extraordinary piece of good fortune—such as came to Mr. Rackham—you were to wake up some morning and find yourself worth a million dollars. Just what would you do with this amount of money? What part of it would you spend on yourself and your family, and how would you spend it? How much would you spend on other people, and in what manner? If you gave part of it away, to whom would you give it, and for what purpose? Would you want your children to inherit any considerable amount? If you were to make extensive donations to institutions and other charities, what would be your method of distribution? What would be the guiding principles of your entire system of expenditures?

For the best letter of not more than 400 words, we offer these prizes: \$20, first prize; \$10, second prize; \$5, third prize. Competition closes February 20th. Winning letters will appear in the May number.

Address Contest Editor, THE AMERICAN MAGAZINE, 381 Fourth Avenue, New York City.

Contributions to this contest cannot be returned, so make a copy of your contest letter if you want to preserve it. Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

## A Big Raise in Salary

Is Very Easy to Get, if You Go About It in the Right Way

You have often heard of others who have doubled and trebled their salaries in a year's time. You wondered how they did it. Was it a pull? Don't you think it. When a man is hired he gets paid for exactly what he does, there is no sentiment in business. It's preparing for the future and knowing what to do at the right time that doubles and trebles salaries.

## Remember When You Were a Kid

and tried to ride a bike for the first time? You thought that you would never learn and then—all of a sudden you knew how, and said in surprise: "Why it's a cinch if you know how." It's that way with most things, and getting a job with big money is no exception to the rule, if you know how.

## We Will Show You How

Without loss to you of a single working hour we can show you a sure way to success and big pay. A large number of men in each of the positions listed are enjoying their salaries because of our help—we want to help you. Make check on the coupon against the job you want and we will help you get it. Write or print your name on the coupon and send it in today.

## Free to Writers!

A WONDERFUL BOOK—read about it! Tells how early Stories and Plays are conceived, written, perfected, sold. How many who don't DREAM they can write, suddenly find it out. How the Scenario Kings and the Story Queens live and work. How bright men and women, without any special experience, learn to their own amazement that their simplest ideas may furnish brilliant plots for Plays and Stories. How one's own imagination may provide an endless gold-mine of ideas that bring Happy Success and Handsome Cash Royalties. How new writers get their names into print. How to tell if you ARE a writer. How to develop your "story fancy," weave clever word-pictures and unique, thrilling, realistic plots. How your friends may be your worst judges. How to avoid discouragement and the pitfalls of failure. How to find this inspiring book is absolutely free. No charge. No obligation. Your copy is waiting for you. Write for it now. Just address: AUTHORS' PRESS, Dept. 308, AUBURN, NEW YORK

# Safe-Keeping Your Teeth by the Colgate Method

## 5 Good Rules for Good Teeth—Good Health

1—"Wash," Don't Scour Your Teeth (you wouldn't scour piano keys)

"Wash" your teeth thoroughly. Don't scour them. Washing cleans safely. "Scouring" cleans harmfully. Scouring scratches the enamel, the enamel protects the teeth, and you can't grow new enamel! Colgate's Ribbon Dental Cream contains no harsh grit. It cleanses and polishes by washing without scouring.

2—After Each Meal

"Wash" your teeth after each meal. When you eat, particles of food lodge between and around the teeth. Remove them promptly before they ferment in the high temperature of the mouth. Fermenting food causes cavities in the teeth. A clean tooth doesn't decay. "Wash" your teeth regularly, carefully, and thoroughly. Wash them just before going to bed.

3—Use a Safe Dentifrice

Use a safe dental cream. Powerful drugs in a dentifrice injure the mouth and throat. Avoid any dentifrice so strong that it cannot be used safely several times a day. Select an established, tried-and-tested dentifrice with a reputation for merit. You can use Colgate's during a long life without in the slightest degree injuring the enamel of the teeth.

4—Rub the Gums (Gingival massage)

As advised by many dentists, after you use the tooth brush, finish the cleansing by rubbing both upper and lower gums with the tip of the forefinger covered with Colgate's Ribbon Dental Cream. That massage helps to keep the gums firm and healthy.

5—See your dentist twice a year

Some people try to doctor themselves, but even they don't attempt to be their own dentist. See your dentist regularly, twice a year at least.

## COLGATE'S Cleans Teeth the Right Way

"Washes" and Polishes—  
Doesn't Scratch or Scour

Colgate's cleans teeth thoroughly—no safe dentifrice does more. A LARGE tube costs 25c—why pay more?

Truth in advertising implies benefits to manufacturers

## Dot Aldrich Has an Attack of Conscience

(Continued from page 31)

I went back to cleaning silver with a sort of exalted feeling. Will might earn money for our physical necessities; it was my part to see that the esthetic side of life was not overlooked. Besides, it had been very pleasant to be treated like Mrs. William Eldridge Horton. That may have had a little to do with it.

Just before dinner time, I was out on the back porch a minute and I saw Dulcie on hers.

"Hello!" she said. "If you hear wild screams from our house you'll know that Roger is cutting my throat. I've got to break the news to him that I fell for another book agent this morning."

"A book agent," I echoed.

"Poetry," said Dulcie. "'Epics, Sonnets, and Lyrics of the Ages.' He was a silver-tongued orator, and I guess I went into a trance. At least, the first conscious moment that I can remember I was signing on the dotted line. Roger will have a fit."

I WENT back to the kitchen, feeling strangely uneasy. Someway, it had never occurred to me that Mr. Napp was a book agent. Dulcie putting it that way made it seem an entirely different matter from the way I had thought of it. My feeling of uneasiness grew. I suddenly recalled that Will is not so very fond of poetry. For the first time it occurred to me that I had not asked how long I would have to pay fifty cents a week.

I didn't say anything to Will about it during the first half of dinner, trying to make up my mind the best way to tell it. Suddenly, an inspiration came to me. I needn't ever tell him at all. Half of that luxury money belonged to me. I would just pay fifty cents a week to feed my soul, and not say a word to Will about it.

The last of the week the books came, and they were beautiful, but huge. Ten of them! They were a lovely glowing red, and Mr. Napp was right, they would furnish just the color-tint our living-room needed. But it suddenly occurred to me that if I wasn't going to tell Will about buying them I couldn't very well have them appear in the living-room. They weren't the sort of thing one could slip in unobtrusively.

Finally, after much thought, I took them up to the attic storeroom and put them under a quilt. It didn't seem right to keep the epics, sonnets, and lyrics of the ages under a quilt, but I thought it would do for the time, till I thought of something better.

The trouble began Monday, when I had to send the next fifty cents in a little cardboard holder that had come with the books. I opened the budget box, and there in the luxury square were two new half dollars, our week's luxury. It would be very simple and perfectly honest for me to slip one of them into the holder and send it, but, of course, later in the week, Will would be likely to want some luxury, and would see that half of the money was gone.

I cast my eye over the other squares, and the idea occurred to me that I might borrow from one of them, refuse all luxuries of any form, and then—Will, of course, wouldn't spend the whole dollar himself, week after week—return the loan as soon as I had a good chance. This was a very simple way, and at once I took a half-dollar out of the doctor and dentist square and sent it to the epics firm.

This all sounds simple and easy, and it was. Everything would have worked out perfectly all right if it hadn't been for the one thing that causes me practically all my troubles. That is my conscience. I do wish my conscience were either stronger or weaker; strong enough to keep me from doing questionable things in the first place, or else weak enough to let me just forget all about them once I've done them. But your conscience is like the shape of your nose—you're simply born with the kind you've got.

THAT half-dollar hadn't been in the post office an hour before I had warnings that I was going to have an attack of conscience. I can always tell when it's coming on, just the way a tooth feels queer and sensitive before it begins to ache. "Dot Aldrich," I said to myself, "I do wish to heaven you weren't so good!"

Someway, my conscience ran all in one direction; I just felt that I was being terribly mean to Will. I made chocolate pie, his favorite dessert, for dinner, to sort of make it up to him; but the fact that I had taken the fifty cents out of the doctor-and-dentist box preyed on my mind. I felt that while I was feeding Will rich and indigestible food with one hand I was stealing his doctor money with the other. I wished I had made a simple cornstarch pudding and not trifled with his health.

To make it worse, all that week Will did not touch the luxury money. The next Saturday night when he put in a dollar bill, he said:

"Gee, two dollars for luxury! Hurrah for our side!"

I was no better off than before; I couldn't take out fifty cents now without his missing it. This week I took the money out of wear-and-tear-on-house-and-furniture. That did not seem quite so mean, but, as luck would have it, Will spilled salad on the rug and I had to have it cleaned, which took every penny out of that square. I couldn't borrow from it again.

The next week I took the fifty cents out of dentist-and-doctor again. I felt like a sneak thief, but there was no other square I could get it from.

And, to make it all the worse, he was so simply darling to me all this time. Every nice thing he did for me made me feel meaner and guiltier. He never even touched the luxury money. Finally, when there was four dollars in the box, he said:

"Let's buy you something with this, Dottie. What'll you have?"

"Nothing," I said hollowly. "There isn't a thing I want."

"Oh, come off!" said Will, coaxingly. "Try to think of something. I want to buy you something nice. Gee, Dot, I'm getting sweeter on you every day."

And that was the man I was deliberately stealing from! The man whose doctor money I was embezzling to pay for epics and sonnets!

# Looking for Business

## A Movie by yourself

George Faulkner was broke.  
George Faulkner & Company was broke.  
And worst of all George Faulkner  
LOOKED broke.

True, his accounts receivable were more than his accounts payable, but he couldn't collect soon enough. And his creditors were on deck—at the phone—at the door.

But opportunity still lurked around the corner, as it had all through George's life.

Jones & Company, Inc., were open to a big order if he could only sell them. But even if he sold them he would have to get so much down

or else he couldn't continue. It was a fighting chance—all depending on the presentation.

He finished opening his mail, consisting mostly of bills, duns, and more bills.

In a dejected state of mind he put on his hat and slipped out the side door of the office and headed for Jones & Company, Inc.

It was with a sigh of relief that he was told in their outer office that the manager was out. He picked up a current magazine to while the time away. In the advertising pages he came across a message that seemed to have been written personally for him.

"Look Success and you'll be successful. Go to a barber shop and get that tired, ageful look exchanged through a *Boncilla* appearance of success."

Look Success. That was what he needed more than money. He reached in his pocket. His last \$10 bill was still there. First he went to a haberdasher's and got a new collar and tie. Then he stepped into his barber's and got a shave and a *Boncilla* Facial.

Looking into the mirror he saw a fresh, glowing face that surprised even himself. He began to feel success as well as look it.

Did he get the Jones order? We'll say he did. And he got what was better—confidence in himself.

*Boncilla* built up his personality, as well as his face tissues.

You live this story yourself.

And then take home a 50c Package o' Beauty for your pal. There's three treatments for her to use at home that will take her back to her sweetheart looks.

If you can't get to the store readily, mail the coupon below.

INTERIOR LINCOLN MEMORIAL IN

# WASHINGTON

—A CITY OF GLEAMING WHITE BUILDINGS, OF WON-  
DROUS MUSEUMS AND MEMORIALS; CHARMING  
PARKS AND CIRCLES—THE ONE PLACE ABOVE ALL  
OTHERS, THAT EVERY AMERICAN SHOULD VISIT

From that marvelous architectural panorama of the great wings and towering dome of the mighty Capitol, to the glistening white marble shrine of patriotism, the Memorial Amphitheatre, in Arlington, the visitor to Washington is enthralled by the almost endless number of places and objects of historic interest that clamor for his attention.

Little does the new-comer dream of the unending store of surprises that await him here. To stand in the chambered silence of the Lincoln Memorial and gaze upon the calm and beloved countenance of Lincoln, that heroic figure of marble; to linger for a few moments in the stately rooms of the White House; to wander through and breathe the atmosphere of the home of Washington at Mt. Vernon—just this alone is an experience you would treasure.

The convenient, pleasant way to reach Washington is over the lines of the Baltimore & Ohio. Convenient, because it is the only route east and west passing directly through the Capital City, where liberal stop-over privilege is accorded. Pleasant, because of the comforts the Baltimore & Ohio provides—modern equipment, splendid dining-car service and courteous employees.

Much of interest about Washington is entertainingly presented in a new 48-page "Guide to Washington" just issued by the Baltimore & Ohio. A copy of it will be mailed to you on receipt of the coupon below.

A 115

My conscience was becoming worse by the day. It seemed to me that Will spent all his time thinking of sweet things to do for me, trying to make me happy. I felt so guilty that I could almost make myself cry, just thinking about it. The next week I managed to save the fifty cents out of the housekeeping money, but instead of the nice, thrifty feeling I had always had before when I saved on the housekeeping money, I just felt lower than ever.

I'd keep telling Will about how thrifty I was in marketing, in order to ease my conscience a little. Once or twice when I did this, he looked at me so queerly that I wondered if he suspected anything. And all the time the luxury money kept mounting higher and higher. Will never touched it, but he seemed to take a morbid pleasure in counting up just how much there was, so I never dared touch it, either.

Then came a week when I couldn't possibly skimp the fifty cents out of the housekeeping box. I went to the dentist-and-doctor square again, remembering how Will had said proudly that he'd die before he'd go to his father for help, now that he was a married man. I wondered if he really would, if he should be terribly sick and there was only enough doctor-and-dentist money to pay for one or two visits. I stood, looking at that little square of bills and fifty-cent pieces, my heart like lead. I could see Will getting sicker and sicker, and no money for the doctor, just because I was indulging myself with epics and lyrics.

AND then, suddenly, an idea came to me. Maybe, if I should refuse to send the fifty cents, they would take the books back and drop everything. New hope in my heart, I rushed up to the attic to see if they were all right. I lifted up the quilt and looked at the books. My heart sank again, lower than ever. There must have been a mouse in the storeroom, because one corner of the lowest book looked as though it had been nibbled. It didn't really hurt the set hardly at all, but I realized that now the firm would never take them back.

It was raining a cold winter rain and I could hear it dropping gloomily on the shingles over my head. I opened the top book and read sadly. It seemed fate that I should open to

Out of the day and night

A joy has taken flight;

Fresh spring and summer, and winter hoar,  
Move my fair heart with grief, but with delight

No more—O, never more!

Then I went on and read "The Land of the Leal" and "The Light of Other Days" and "My Highland Mary," the rain dripping sadly on the shingles. The whole world seemed sad and rainy to me.

I must have been up there for ages, because at last I heard Will come in. He whistled his frat whistle. "Who the devil are you-hoo?" and I pursed up my lips to whistle the answer, "I'm the devil, who are you-hoo?" But I couldn't whistle. The sound of that familiar whistle was just too much. It brought back so clearly the happy, care-free days before I had begun to embezzle, when my conscience was clear, and Will and I could be happy and silly together. I couldn't stand it another minute. Come what might, I would tell Will.

He found the open attic door and came up-stairs to find me. He kissed me and then kept his arms around me.

"Will," I began huskily. (It's easier to tell anybody anything when they have their arms around you.)

"Dolly," said Will suddenly. "I'm a perfect rotter."

"Oh, Will," I wailed, "wait till you know about me—you won't say that—"

But he didn't pay any attention to me, just went right on.

"I've been stealing from you—taking your poor little money that you save—money that you work and scheme to get ahead—I take it out and spend it—"

"You—what?" I gasped. It was almost as though Will were making my own confession.

"I've meant to pay it back out of the luxury money sometime," Will went on; "but I knew you'd miss it and—well, I'm just a bum, that's all."

"What money did you take?" I asked, feeling as though I'd wake up in a minute.

"Money you thought I was putting in the bank," said Will. "I sneaked out half a dollar every week; I meant to put it back as soon as I could and—well, to-day I got to thinking what a peach you were and how I was squandering money that should be left to take care of you in your old age; I got to thinking of you getting old, and being poor and— Well, I'm through, that's all. I'm a bum."

"You are not," I said, hanging on tighter. "What did you spend the money on?"

"The basket-ball pool," said Will grimly. "I—I hated to turn the fellows down; they think you're a tightwad if you can't raise fifty cents a week, and kid you about being henpecked, and—and— Well, if I can't stand a little kidding for you—"

"Oh, Will!"

THEN I told him about the "Epics, Lyrics, and Sonnets of the Ages."

"And I've been stealing all the time from you, Will," I said. "Taking fifty cents a week that I don't know how long I'll have to keep up, money that you might need when you are sick and—"

I lifted my head off Will's chest, and to my surprise he began to grin. The grin got broader.

"Wh-what are you smiling at?" I asked.

"Oh, I don't know," said Will. Then he began to laugh. "You lifting off my deathbed fund, and me stealing from your old age and—oh, gosh, it's funny!"

Then he laughed and laughed till a tear trickled down the side of his nose. I didn't see anything funny at all; but I began to laugh, too, because Will was laughing, and my worry was off my mind, and everything in the world seemed to be all right. We laughed and laughed. Then Will hugged me and kissed me again, and we laughed some more.

Finally, we opened up the books and found the slip saying how long I'd have to pay fifty cents a week, and how you got discount for cash. Will said they were a darn handsome-looking set of books, and why didn't I take Uncle Horace's twenty-five dollars and pay them off.

"That would not be enough," I said, thinking of that money for the first time.

Will started to laugh again.

"I've got just enough," he said, "to make up the difference."

"Where did you get it?" I asked.

## Only One in Five is Safe

### Forhan's guards the teeth and health

Just before Pyorrhea starts to undermine the teeth and health—kindly, knowing Nature sends a warning: the gums are tender and bleed easily. Take heed immediately, before it is too late, before the gums recede and the loosened teeth must be extracted.

Better yet, play safe. Don't wait for Nature's warning. Four persons out of every five over forty years of age, and thousands younger, are afflicted with Pyorrhea. This is the immutable law of averages. Your dentist will tell you that.

Go to him regularly, systematically, for tooth and gum inspection. And brush your teeth, twice daily at least, with Forhan's For the Gums. This healing dentifrice, if used in time and used consistently, will help to prevent Pyorrhea or check its progress. It will make your mouth clean and healthful, preserve your priceless teeth, safeguard your precious health.

Forhan's For the Gums is the formula of R. J. Forhan, D. D. S. It is time-tested, efficient, safe; pleasant to the taste and refreshing to the mouth. The foremost dentists recommend and use it.

Be on your guard. Buy a tube of Forhan's For the Gums today. Brush your teeth with it regularly. Remember, in your case, the odds are 4 to 1 in favor of Pyorrhea. At all druggists, 35c and 60c in tubes.

## Forhan's FOR THE GUMS

*More than a tooth paste—it checks Pyorrhea*

## So they painted the fence—and paid for the privilege!

Here is a story that has made millions laugh.

One fine day Tom Sawyer's Aunt Polly kept him at home to whitewash the fence. Tom hated work, but he set about it whistling.

Pretty soon other boys came along. Tom looked so happy they envied him, and began to snatch at the brush. But Tom wouldn't let them work; not until they paid for the privilege.

The first boy offered an apple; another had a jew's harp; a third went home and got his pet kitten for Tommy. When evening came, the fence had three coats of whitewash on it—and Tom was fairly rolling in wealth.

And this famous story is only one of the funny, human, memorable stories Mark Twain loved to tell.

Perhaps it is familiar to you, but do you know the hundreds of others—how Huck Finn dressed up as a girl, but gave himself away by throwing a brick like a boy, or how Pudd'n-head Wilson got famous in his home town; do you know the "Jumping Frog," or why the Earl of Bilgewater went on the stage.

Those are the stories that made Mark Twain immortal; that is why men of every degree loved him, why he "walked with kings," received an honorary degree from Oxford, and became the best loved American of his time—he had the rare, wonderful power of making people laugh.

Learn how he did it; let us send you to-day a free copy of that famous little book:

### "How to Tell a Story"

By MARK TWAIN

When you have read it, you will enjoy good stories more. It is as though Mark Twain had chatted with you a while, giving you the secret of his charm. One thing he said, when his fame reached its height, which is well worth repeating:

"Let's make an inexpensive edition of my books so that everybody can have them."

How this wish of Mark Twain's has been realized, and how and why his books are now owned and read and loved by more people than know the work of any other humorist, is explained in the free book.

There is a copy for every reader of The American Magazine, free and postpaid. Send for yours to-day.

731-MTH L

"I won it," said Will. "That's what gave me the nerve to 'fess up."

"You won it? You won the basket-ball pool!"

"Yep!" said Will.

We stayed up in the attic while the rain pattered cheerily on the eaves, and talked a long time. It was then that we thought of the simple thing which would solve so much married unhappiness. We decided that never again would we feel that we didn't have a penny that didn't belong to the other one, too, and that we had to account for. We agreed to split the luxury money, fifty cents a week apiece. Neither had to tell the other one what he did with his fifty. We even went further than that—we made the absolute flat rule that neither one *could* tell or ask the other what he did with his share.

NOW, that may sound very simple and trifling, but I honestly believe it is one of the secrets of a happy marriage. There is something too tight-fitting about owning every single penny together and having to spend it together, like machinery that's screwed up so tight it won't work. Having fifty cents a week that belongs just to you, alone, is just like the oil on the machinery; it seems to give a little slip and ease to the budget wheels.

I know that this one little secret would make thousands of married people happy. I'd like to tell them about it, explain how, although I am saving every penny of mine to buy Will a birthday present with, just knowing that I don't *have* to makes me feel so free and comfortable. It is a valuable discovery. But would it do any good to tell this to anybody in Montrose who, perhaps, can remember me when I had mumps on both sides at once? It would not. Oh, but that is a true saying—the prophet in his own country.

It doesn't make any difference, though, in a way, because I doubt that many married women would have strength of character to carry it out, anyway, and keep from asking their husbands questions. I have unusually strong will power, and it takes every bit I have. Basket-ball season is over now, so there is no pool. Sometimes I sit on the other side of the light and look at Will sitting there, and want to ask him so bad that I have to bite my tongue and hang on to the chair seat with both hands to keep from doing it.

What can Will be doing with all that money?

"WHAT Happens to a Play Before You See It" is told next month by Mary B. Mullett, who has obtained from an important New York theatrical producer some astonishing facts about the number of manuscripts a big office receives a year, what most of them are about, how much the author is paid, what it costs to produce plays, and how many of them succeed.

MONTAGUE GLASS, the famous humorist and playwright, has written for next month an article to which he has given the title: "Why I am Forty-five." In it you will find some canny and frequently astonishing observations by a keen observer who has just reached one of the important milestones in life's journey.

## Getting Acquainted With Father

(Continued from page 39)

hardly taste his food and would linger around after the meal.

He wouldn't come straight to the point on such occasions but waited around until the rest of us had gotten out of the house. Then he would approach Mother shamefacedly, like a guilty boy and, after clearing his throat, say, "Dar, I've got to trouble you for that money I've been saving up for a special purpose. I've got a note to meet at the bank and it's the only way. I'll give it back to you in a fortnight."

But he never had the money to put back in a fortnight. Sometimes it was weeks before he had another dollar to put back into that fund "for a special purpose." And then he would build it up bit by bit, month after month until something else happened to force him to withdraw it all for the business. Once a lot of meat went bad on him. Another time his horse died. Again, he endorsed a note for a worthless neighbor and had to pay it. Something always happened to take the money he so persistently tried to save "for a special purpose."

AFTER a while we began to regard this fund as a joke. Some of us thought that, after all, it was just a whimsical way he had of laying a few dollars aside for emergencies. His "special purpose" ceased to perplex us or annoy us. For thirty years he had indulged this idiosyncrasy. In that time he had built up those savings in Mother's keeping only to have to tear down and start all over again, as many times as there were years in his efforts. It was amusing, vexing, pathetic, or tragic, according to the temper of us on occasion.

I was one of the first of the children to grow up and leave home and, like so many children, I did not keep in close touch with the old folks at home. I had almost forgotten about Father's habit of building up and tearing down savings for his "special purpose," when I got a letter from him one April day. The letter read:

DEAR WILL: I thought I would write and let you know we are all well, except for my back; it has bothered me right much. I reckon I need a little rest and a change of air, and I plan to pay you a visit some time next month when the weather is warmer and it's safe to take off my flannels. I've been saving up a little for a special purpose and I figure I have enough to pay my way and back. I've always wanted to take a trip to Washington, and have been counting on going there ever since you moved there. How far is it from Washington to Niagara Falls? Your loving FATHER.

The letter made no unusual impression on me and the revelation of the "special purpose" escaped me entirely. I wrote Father and told him I would be glad to see him in Washington, and planned to make his trip interesting and restful. But he never came. Instead, I received a letter from Mother several weeks later saying that Father was extremely ill and asking me to come to see him.

I arrived at the old home to find it looking about as I had left it, and after greeting Mother and the rest I went into the room where Father was lying. I was with

## In Your Country —a "Strange Land." See it now

BY AN ENGLISHMAN

I HAVE been to Europe and the Orient—have climbed the Alps in Switzerland and Italy, and the Chinese Himalayas. I've seen the famous island of Capri. I've ridden camels on the great Sahara Desert at sunrise. Enjoyed, in fact, most of the beauties and the grandeurs that mark different portions of the earth.

And yet I've visited no one spot on the globe that combines "so many trips abroad in one" as one section of your own country provides.

The railway journey there from your eastern cities is itself worth while, and the most comfortable that I've ever taken—summer or winter, and I've made it several times during both seasons.

But the most extraordinary thing about your Southern California, is that year-round perfect climate, which I had heard about but never quite believed could be so delightful.

In my country we love sports and follow them almost religiously in good weather.

But in Southern California you have more than three hundred days a year with the sun shining and all our sports to boot.

English golf courses are famous, but you have many of the world's best there, and you can play almost every day. Then there's fishing, hunting, yachting and sea-bathing of the finest kind. You ride your horses in the mountains, motor to your desert, enjoy the peaceful beauty of the rare old mis-

sions, or have tea at your hotel or modest boarding place in your great central city there, and all within a radius of two hundred miles which you travel on those incomparable motor roads.

I don't see how anyone could be bored there, and I never met a fellow who was bored. He was always going here or there or doing this or that. And his children looked the happiest and healthiest that I have ever seen.

I hear that a hundred thousand new visitors went there last summer. My only wonder is that they had not been there before.

Above is a tribute to a portion of your country that perhaps you've never seen—the All-Year Playground of America, the one place of its kind.

Come now or next summer—come at any season—and enjoy its complete change. Bring the family. Put your children in fine schools.

There are things to see and do here that you've never seen or done before.

It is not too soon to plan now for this great trip. No matter what season you plan to come send now for full information. Ask railroad ticket agents or mail coupon below. Plan for next summer, or come now. You'll say it's the best trip of your life.

of Southern California

**T**HE "Center of Population" means one thing to the teacher of geography, another to the merchant, but to the manufacturer it means more than to all others combined. The number of his potential customers is based on population. It is people he is trying to reach and serve. The East was settled first, and the first factories were built there. As the country grew, the Middle West and then the Far West were settled. The center of population has been pushed steadily westward.

The center of population in 1800 was a few miles west of New York. By 1860 it had reached the Alleghenies. It has since moved across Ohio and Indiana. Today it marks a spot 150 miles east of St. Louis. It is moving slowly now, and scientists tell us that it will never go further than 50 miles beyond St. Louis, because the two oceans, the gulf, the desert and the cold North set their own limits.

#### Reaching the Markets

As their markets grew westward with the population, eastern manufacturers endeavored to serve an increasingly distant patronage. In order to reach their western customers, Atlantic seaboard industries paid more and more transportation charges and faced growing western competition.

The day is past when the manufacturer can shrug his shoulders at a high freight rate and say, "Pass it on to the customer." Eastern industries cannot indefinitely overcome the disadvantage of high freight rates and successfully compete with plants more favorably located.

What is the logical answer? Either re-establish your operations at St. Louis or build a factory branch in St. Louis to handle the ever increasing westward movement of business. *St. Louis: manufacturer ship from the center—not the rim.*

St. Louis is a good city to live in, work in and play in.

*Send for one or both of our free illustrated booklets, "Industrial St. Louis," and "St. Louis—The Home City."*

**ST. LOUIS CHAMBER OF COMMERCE**

St. Louis, U.S.A.

him more than an hour before we were left alone, and then he began to talk to me freely and confidently as I had never known him to talk before. It was just as if we had always been the best of pals, understanding each other in all things.

He said: "I thought I was going to see you, Will, but I don't think I'm ever going to get out of this room. It's Bright's disease and I'm too far gone. If I get over it I count on going to see you later in the summer."

One of his mottled hands with its dark outstanding veins sought mine and we clasped hands for half an hour before another word was spoken. And then he said:

**"YOU** know, I've always wanted to take a trip. Pa was a sea captain. He died when I was just a boy, but I always remember his trips to Boston, Charleston, and the West Indies. Once he sailed as far as Buenos Aires. I always wanted to go on one of his trips, but I was little and the baby, and Ma didn't think much of it. They promised me I could go when I was twelve years old, and I could almost see bananas and coconuts and monkeys and poll parrots down there in the West Indies, just thinking about it. But Pa died before I was twelve, and I never got my trip.

"It was the greatest disappointment in my life. I just can't tell you how it worked on me. Finally, however, I made up my mind that instead of grieving over spilt milk I would have a trip all of my own sometime when I got able and the family was looked out for.

"It didn't matter much where I went; I didn't especially care about going to the West Indies or Buenos Aires or some foreign place like that; I thought Florida might be a pretty place to go to. And then I heard so much about New York and Washington and Niagara Falls, and places like that that weren't so far off. So I thought I might visit one of them sometime. I never could get it out of my mind that I was due a trip that I never got.

"And then when you went to Washington to live, I made up my mind that I would at least go to Washington. I sort o' thought that maybe sometime you would invite me to come to see you; but then I knew you didn't know that I wanted to go, and I knew, too, that you had just about all you could take care of without me.

"But this month, anyway, I was going to take that trip for which I'd been saving up all my life. I never did tell you all what I was trying to save for, because it would have sounded foolish to anybody who didn't understand. Of course, you know how something always happened to take the money for something else, and it just seemed like I never would get that much ahead until this spring.

"This spring I figured out that I could make a trip to Washington for about twenty-five dollars, my board and lodging not costing me anything because I would be with you. I had nearly a hundred dollars saved up and wanted to take Dar, but she wouldn't think about going. You know, she never would go anywhere. And so I figured that maybe I could go to see you and see the sights in Washington, and have enough left to go to Niagara Falls, too."

And the end of all his planning was here on what was to be his deathbed. Coming near to the end of life's journey, the great secret of a childish heart was revealed.

His meek and sensitive soul had never permitted him in all his life before to breathe one word of a heart-hunger which must have seemed to him a bit of selfishness. I began to see him then for what he was, a plain, plodding, toiling, sacrificing soul, who had toiled and served and sacrificed while carrying always in his heart a love for an adventure and a yearning which none had ever guessed. For nearly two score years he had planned and saved for "a special purpose" that would, alas, never be realized. And none of us had ever taken thought that Father wanted anything in this life, except the privilege of working twelve to sixteen hours a day to keep a roof over the heads of the rest of us. It came to me all of a sudden that in all the thirty-five years of my own life I had never taken the trouble to get acquainted with Father. Now I was getting acquainted with Father. There on his deathbed, in several conversations which followed before his death, he said many things that have profoundly influenced my life.

For instance, I asked him if he had any fears of death.

"No," he replied thoughtfully. "I am not afraid to die; I don't reckon anyone is afraid to die when the time comes. I have lived my life the best I know how and tried to do the Lord's will. But I don't suppose that makes much difference in the way one feels when his time has come. I sat up once with a man who was to be hanged in the morning. I was with the Death Watch. The man had killed his wife and baby. It was cold-blooded murder. But that murderer wasn't afraid to die. He laughed and joked at day-break, when he was to be hanged at sunrise. I have seen a lot of folks die and none were afraid. We've all got to go sometime, and a man who can weather the storms of this life needn't worry much about the next.

**"THE** only thing that has bothered me is I haven't laid by anything for your mother and you children. I did think I should like to live just a few years longer to get some things straightened out and leave something for Dar. When my debts are paid off she won't have enough to run her many years, and she will have to depend upon you and the other children. I've been thinking a lot about the rest of you. I never did much for you; it's always been an uphill struggle with me and most of the time I just did manage to keep a roof over our heads.

"But somehow I feel everything will come out all right. I've got a lot of faith in God, and that faith has been a great comfort to me these past few days. Lying here, counting the hours, a lot of things have become plain to me, and I seem to understand things I never understood before. I know now just what Jesus meant when he said: 'And lo, I am with you always, even to the end of the world.' He is with us always, the very thought of Him comforting and helping those who love Him and try to live His way. I don't believe I am going very far away; I have a feeling that I am going to be very close to all of you even after I am gone." His eyes closed and he slept for several hours after that.

Presently, all the family had retired for the night and the house was wrapped in

# Come in and see the NEW CORONA

## A N I N V I T A T I O N

You are most cordially invited to visit any of the 1300 Corona stores, from Maine to California, where the New Corona is now being shown. Whether you are one who has never tried *personal typing*—or an expert from the ranks of Corona's half million users—you will want to try this new Corona with your own hands, and see what an advance has been made in portable typewriter designing. To locate the nearest store, find "Corona" in your phone book, or write for our new folder.

CORONA TYPEWRITER CO., INC.  
GROTON, N.Y.

### New Features

The New Corona is really an office typewriter in portable form.

A lot of the improvements are:

1. Automatic Ribbon Rewinder.
2. Double Carriage.
3. Standard Portable Key Layout.
4. Wide-Spread Carriage Return and Line Spacer.

There are Corona sales rooms and service stations in all parts of the world. Above is a glimpse of the Corona store in Rochester, N.Y.

# How merchants are using *Dramatized Selling* to build up Farm Trade

—as reported by a traveling salesman

A unique window display that "never fails to have a crowd before it on days when farmers are in town" is reported to Farm & Fireside by R. C. Bowden, traveling salesman.

The display consisted of a single pair of Crompton All-Weather Corduroy Trousers, one leg fastened to the ceiling, the other supporting a heavy steel rail. A card in the window stated: "This pair of trousers has been worn six months by . . . . . (a well known farmer). Buy a pair and try them."

Interest in the product, sales of these trousers, increased greatly as a result of this display. It was Dramatized Selling—making a dramatic story of the simple, honest facts about the product which the manufacturer had repeatedly emphasized to the farmers of that community through advertising in Farm & Fireside.

Any issue of Farm & Fireside, any product advertised in its pages, as shown below, offers you the same opportunity for Dramatized Selling, for cashing in on the confidence in the product which advertising has created. In proof of this, witness the following incidents, as also reported by Mr. Bowden:

## *How other merchants are doing it*

Two years ago a hardware merchant handling Devoe Paints (as advertised in Farm & Fireside) in a town of 2,000 population saw business going to a cheaper, unknown product. He painted his store, half with Devoe Paint and half with the cheaper paint—and now, with the Devoe-painted surface practically as good as ever, the other side cracked and peeling off, he is get-

ting about all of the paint business in his town. Dramatized Selling, surely!

A furniture merchant applies Dramatized Selling to window shades. In one window he has a Hartshorn Shade Roller (as advertised in Farm & Fireside) which has been used four years; in another window he has a cheap roller which, he points out, is the third one used during the same

period. He sells three times as many Hartshorns, he reports.

In the rice belt of eastern Arkansas, Mr. Bowden investigated a window which had doubled the weekly sales of a hardware merchant. The idea is simple enough—a showing of merchandise advertised in Farm & Fireside, a few copies of the magazine opened at the advertisements and an attractive sign, "As advertised in Farm & Fireside." Dramatized Selling again!

## *Dramatized Selling wins confidence*

Can farm families who read about the products listed below in Farm & Fireside each month be otherwise than impressed by Dramatized Selling, dramatized displays, of these products? Certainly those merchants who tie to the products advertised in Farm & Fireside are gaining that most priceless of all assets, *confidence*—a confidence built up during the years by editorial and advertising policies which have made Farm & Fireside truly "The National Farm Magazine."

The instances reported by Mr. Bowden, traveling salesman, prove the soundness of the plans outlined in our recently published booklet, Carl Brown's Letter. If you have not received a copy of this Letter, written by a practical, everyday farmer, just write us, "Send me Carl Brown's Letter," and we will gladly do it.

silence save for Father's heavy breathing. I had taken a cot in the hall just outside Father's room, where I would be within easy call should he want any of us in the night. I had fallen asleep when I was awakened by a noise. I arose quickly and in the dim light of the hall I discerned a ghost-like form walking with outstretched hands. It was Father and he was unconscious of his movements. I spoke to him; he did not answer. I took him by the arm; he offered no resistance, but was not aroused by the contact. I led him back to his room and to his bed. He yielded to my directions like a lost child, but gave no sign of consciousness. I forced him upon the bed and gave him water mixed with a drug the doctor had left. He took several swallows and soon was asleep.

I HAD to leave him the next day to attend to some matters at home. When I returned three days later Father was dead.

I did not go at once to the room where his body lay. I avoided that room until no one else seemed to be about, and then I entered, closing the door softly behind me. Since I must take one last look at that which was Father I desired to be alone. Was it an unconscious sense of guilt that impelled me to avoid coming face to face with the dead in the presence of living witnesses? After closing the door I moved over to the casket and looked at the pallid face. It was not unlike the face that had lived, death had wrought few changes; the eyes were closed naturally as in sleep and there was the suggestion of a quizzical smile about his mouth.

There had been subdued voices in the hall outside when I entered the room. Presently they faded away and all was silent. As I stood there, looking down at that calm face, there seemed suddenly to come out of the void these words: "You have a friend on the other side!" They struck my ears as plainly as if they had been spoken. Now I know that it was the still, small voice of conscience, extracting a measure of self-justification from the memory of my last talk with Father—assuring me that my years of aloofness and failure to understand were lost sight of forever in the great and perfect peace upon which he had now entered. At once I felt strangely reassured and satisfied.

In the midst of the church service over the dead, a few hours later, this comfortable, satisfied feeling gave way all of a sudden. I tried to hold back the tears. I set my lips tight that no tremor might betray the sudden surge of emotion within. And then I succumbed, sobbing like a child and quivering there in my seat like one in convulsions. I clutched the side of my pew where I sat, to steady myself.

At last I felt a full and overwhelming consciousness of the debt that I owed to Father—a debt that now could never be repaid. The whole story of his tragic life had unfolded itself before me. I saw the silent, plodding, prosaic citizen in baggy trousers and a frayed shirt for the hero that he really was. He was only a private in the bedraggled army of life, but of millions of such the army of humanity is made.

It is an inconspicuous part that fathers seem to play in life. Yet how unselfishly, how resolutely they set their faces to the task of building and maintaining homes that families may be raised. Out of their loins come all the great ones of the earth,

and out of their sweat and blood and heartaches is produced the food, raiment, and shelter of a race that would otherwise perish utterly.

Father never had any opportunities himself. When he might have sought opportunity and adventure, he obeyed the impulse of a nobler heart and stayed on a poor little farm in a section where neighbors were few, to maintain a home for his mother. Later on in life, when the economic pressure forced him to leave the farm and seek greener pastures for his own flock, it was too late for him to choose that occupation or trade that might be attractive or interesting to him. He had to take that which came nearest to hand and make the most of it. He could be only a huckster. It is true, of course, that even a huckster may rise to heights of material prosperity. Father might have sold the produce of his farmer friends for one price and returned them another; he might have advanced small sums of money to farmers out of season, and taken heavy usury out of the next crop or out of the increase of poultry and pigs. But that wasn't like Father; the short cuts and "opportunities" of business were not in his make-up. He got that which was his by patiently plodding and scrimping.

Yes, it was my own conscience that lashed me at the funeral. Father had forgiven my years of contemptuous indifference to him, but my conscience was not so forgiving. It bared my soul as a back bared at the whipping post, and with a knotted lash of stinging memories it rained blow upon blow upon my naked soul until I cried and writhed and almost screamed aloud under the hurt of it. It lashed me until I succumbed, sobbing like a child and quivering like one in convulsions. No wonder I clutched the side of the pew where I sat to steady myself, lest I faint and fall under the punishment.

IT HAS been long in my heart and on my mind to tell this simple story of how I got acquainted with Father. I do not delude myself with any idea that in putting a flower on his grave at this late day I am atoning for the flowers I never sent in my lifetime. I got acquainted with Father too late. But I do write this earnestly and hopefully as a thought for the sons of millions of other fathers still living. Everywhere I see children who do not know their fathers; who sail along blithely and blindly, unconscious of the fact that fathers may have souls. Most of us are neglectful enough of mothers; we are more neglectful of Father, leaving him who has taken care of us to take care of himself. Your father may not want to take a trip to see some strange part of the earth; but there may be something for which his heart yearns without your knowledge. It may be only a new suit of clothes that he wants, but which he denies himself because he feels an obligation to you and Mother.

If he has forgotten how to play, the probability is that he has never had time to play. Get hold of him; get him out of himself; make a chum of him once. Your dad may be the loneliest creature on earth, and hungry for understanding, sympathy, and friendship. Get acquainted with him while he is up and going; it isn't a pleasant thing to have your conscience lash you—too late—after he is dead.

## You said it, Sir!

*Mr. C. A. Latimer, of Holyoke, Mass., writes us that he treats his friends as well as his customers*

HERE is his letter:

GENTLEMEN:

I use Old Hampshire Bond for the same reason that you use the magazines you advertise in—because I want my message found in good company.

Your advertisements, or my letters, are addressed to many whom we know not at all, or very slightly. They will judge your advertisement, first, by the standing of the medium in their eyes; then by the make-up of your advertisement. They will judge my letter and the offer thereby conveyed in the same way—first, by the vehicle, and secondly, by the make-up of the letter.

Many people are very susceptible to first impressions. Man, as a race, is prone to build greatly on evidence in hand (witness the popularity of Sherlock Holmes and other masters of deduction), and I want what I put before a man to set him building in the right direction. Consequently, I use Old Hampshire Bond for these letters, and I never treat my friends with less consideration.

Yours very truly,

[Signed] C. A. LATIMER  
1677 Northampton St.  
Holyoke, Mass.

People who like fine things instinctively look for the watermark that identifies Old Hampshire Bond.

**Old Hampshire Bond**

For printers and business men interested in fine paper, we have some interesting samples which we shall gladly send to all who write on these business letterheads.

## How I Made \$876 In One Month's Spare Time

\* My name is Rowe and I live in a small city in New York State.

Two years ago I was a baker—constantly hard up—living from hand to mouth.

And yet—to-day I am a successful business man. Last month I made \$876 during my spare time. I own our nine-room house. I have an automobile. I have money for books, the theater, or any other pleasure that I may want. I have the cash to-day to educate my son and send him through college.

## This Is How It Happened

One day in glancing through a magazine I read an advertisement. The advertisement said that any man could make from a hundred to three hundred dollars a month during his spare time.

I didn't believe it. I knew that I worked hard eight hours a day for \$50.00 a week, and I figured that no man could make that much during a couple of hours a day spare time.

But as I read that ad I found that it pointed to men who had made that much and more. In the last paragraph the advertiser offered to send a book without cost. I still doubted. But I thought it was worth a two-cent stamp, so I tore out the coupon and put it in my pocket, and the next day on my way home from work I mailed it.

When I look back to that day and realize how close I came to passing up that ad, it sends cold chills down my spine. If the book had cost me a thousand dollars instead of a two-cent stamp, it would still have been cheap. All that I have to-day—an automobile, my home, an established business, a contented family—all these are due to the things I learned by reading that little eight-page booklet.

All the work I have done has been pleasant and easy, and without, amazingly simple. I am the representative in this territory for a raincoat manufacturer. The booklet I read was one issued by that company. It tells any man or woman just what it told me. It offers to anyone the same opportunity that was offered to me. It will give to anyone the same success that it has brought to me.

The Comer Manufacturing Company are one of the largest manufacturers of high-grade raincoats in America, but they do not sell through stores. They sell their coats through local representatives. The local representative does not have to buy a stock. All he does is take orders from Comer customers and he gets his profit the same day the order is taken. Fully half of my customers come to my house to give me their orders.

My business is growing bigger every month. I don't know how great it will grow, but there are very few business men in this city whose net profit is greater than mine, and I can see only unlimited opportunity in the future.

## You Can Do As Well

If you are interested in increasing your income from \$100 to \$1,000 a month and can devote all your time or only an hour or so a day to this same proposition in your territory, write at once to The Comer Manufacturing Company, Dayton, Ohio. This is their special offer: They will send you, without preliminary correspondence or red tape, a complete selling outfit with full instructions, samples, style book, order book and everything you need to get started. Sign and mail the coupon now and in less than a week you can be making more money than you ever believed possible.

## Mail This Coupon At Once

THE COMER MFG. CO.,  
Dept. 81-510, Dayton, Ohio.

I am ready to start as a Comer representative if you can show me how I can make from \$50.00 to \$200 a week. Please send me, without any expense or obligation to me, complete outfit and instructions.

# They Never Grow Up

(Continued from page 49)

at him, while Hicky was doing his best to save the tackle by hanging to the curving pole and howling a fury of juvenile abuse.

Saggy, on feeling the backward haul on his shoulder, turned his head and vaguely saw the hook and line. But almost in the same instant he caught a watery glimpse of his dad and Mr. Graham in a reckless bloodthirsty run not so far away up-stream along the right-hand bank at the water's edge. Wholly mystified and alarmed by the mounting hullabaloo and the commotion in the water, the men had redoubled their speed, and were sending forth stentorian hails, that only stirred and thickened the chaos. With a gurgly yelp of dismay Saggy lunged away and struck out diagonally for the left-hand and nearest bank, and the line snapped apart somewhere between cork and hook.

"You just wait till I get hold yuh," screeched Hicky, in a lathering rage, stooping forward and brandishing his rod at the distant bobbing head. "I'll hammer yuh to mincemeat. Y'just wait till your dad gets yuh. He's right here. I hope you drown, yuh—" And he knocked his sizzling epithets together and hurled them in bunches.

"Is that my boy?" imperatively roared Mr. Borts from the water's edge, abreast Hicky and the others. "What's he swimming for? Did a carp or pike pull him in?"

"Naw-w. He's scared silly, and tryin' to get away from yuh," shouted one of the boys with glittering terseness.

Saggy only swam the harder for shore. In a moment he found himself in shallows with muddy bottom where the water was only up to his waist.

WHEN close to the rather steep bank of clay and sand he was seen to halt with a backward start. The next moment he threw himself forward screaming:

"Here's a turtle, a turtle! Big as a tub!"

What followed to the eyes of the dumfounded men and boys was a furious thrashing and wallowing, with nothing to be seen but Saggy's back and head, now above water, now almost submerged.

"It is one, by Gad, it is!" cried his dad to Graham. "He's got to have help."

The boys in a furor were already rushing for the bank and to his aid. Borts, followed by the enchanted Graham, and both heroically indifferent to wet shoes and trousers, dashed into the riffles and ran across the river and down the bank.

Meantime, the battle was waxing stubborn and long drawn, with the odds against Saggy unless he could hang with both hands to the turtle by the left hind leg till it died. It must have weighed nearly the half of Saggy's avoirdupois.

"Help! Help!" he cried frantically. "I can't hold him much longer." He was sitting on the slippery clay muck and hauling desperately backward, immersed in the muddied river to his chin. The turtle in its struggles came to the surface.

"Holy Smoke, what a whopper!" Saggy heard his dad cry from the bank behind him. "Hang on! I'm coming."

Mr. Borts, while speaking, stripped off his coat and, tossing it to Graham, plowed

into the water, which by now had been roiled into mud purée. He squatted down beside Saggy and began feeling out the submarine situation, nothing but his back and head visible. Several moments of breath-holding by Saggy and the spectators and then Mr. Borts straightened up amid a shower of water and disclosed the armor-plated soup king supported horizontally in front of him, as he might have carried a tray of dishes, its ugly head, to be sure, not the end in contact with his belt. Mud and water from head to toe, he staggered over the treacherous footing to shore, followed by Saggy, and triumphantly deposited the catch on its back, its great flappers clawing, revolving, squirming.

"By George, he's a buster and the granddaddy of 'em all!" exclaimed Mr. Graham, overwhelmed with elation. And all flocked around the capture, marveling at its size.

WHEN in his terrible panic Saggy had seen the turtle paddling at the surface, a heaven-sent burst of inspiration had precipitated him joyously upon it. Its capture would blot out the past and buy him immunity. But now, when the excitement was over, and he saw with horror at what price in ruined clothing the capture had been made, his panic returned. Besides, no one had acted as if he had had anything to do with the capture. If his dad had hoisted him to his shoulder and all had cheered him he could have felt the crown of success. But no one had even looked at him.

The boy next to Graham backed from the circle and brought his concerned visage close to Saggy's. "Say," he whispered, "is yer dad goin' to lick yuh?"

"I don't know," murmured Saggy, assisted by the lump in his throat. His face set off by his mud-dressing was very white and pinched and solemn.

"Phew!" now sounded in a whistle of ruefulness from his dad. "I'm some mess. What kind of a fit my wife'll have when she sees me is the next question."

"Oh," grinned Graham, "the turtle will console her."

"Well," groaned Borts skeptically, eying his shirt sleeves and trousers, "it may—after she's had her—"

From down the river came a quick splutter and splash. Down where the river was deep and still, and dark with the reflected densest portion of the woods, gleaming rings were expanding from a core of bubbles.

"Bass!" ejaculated Mr. Graham in rapture.

"Have they been doing that before, this morning?" demanded Mr. Borts of the circle of boys.

"Oh, Giminykrauts, yes!" gushed Hicky. "They've been jumpin' down there all morning. And y'oughter seen the rock bass that were beginnin' to bite just as you come. And silver perch—we saw slathers of um, only we hadn't small enough minnies. I got this extra steel rod. Don't you want to try for bass? I got some minnies."

*Tighten a string around your finger and very soon your whole hand will throb with pain. The blood is fighting to get through. Circulation is retarded. Unless the string is loosened mortification will soon set in and your hand will be crippled.*

## Are You Doing This to Your Pores?

NATURE is kind to you so long as you are kind to Nature. Stop or retard a single bodily function and immediately a penalty is imposed. Close the pores of your skin and they cease to breathe. Then your body suffers and your health falls below par.

Nature demands that your millions of pores be kept open. That calls for *real* cleanliness—not *near* cleanliness. Twenty-five ounces of perspiration should be thrown off by the skin daily. Nature will take care of that if you will only keep the way clear. And that is

easy—it means simply using a soap that will thoroughly cleanse and gently stimulate the pores instead of retarding their action with clogging, irritating pigments and cheap scents so often used to disguise soaps of inferior quality.

Fairy Soap will give you the skin freedom so essential to perfect health. It is *soap in its purest form* with no camouflage added. It is the *whitest soap in the world*—a live, sparkling whiteness which evidences purity and endures to the last thin wafer. Fairy Soap has set the fashion of *American white cleanliness*—the joy of people

who are *really* clean instead of *nearly* clean.

Fairy Soap helps your body breathe. Try it in the bath and toilet for a week and see how your body responds to its healthful, invigorating action. Bear in mind as you use it that it is the *one soap* used in the foremost men's clubs, baths and other places where cleanliness is a *business*. Use it for that *deep-down* cleanliness which makes for everyday wholesomeness and well-being.

THE N. K. FAIRBANK COMPANY

Factories in United States and Canada

*It Is Winning New Thousands to American White Cleanliness*

THE HUNTINGDON VALLEY  
COUNTRY CLUB  
ABINGTON, PA.

The N. K. Fairbank Company,  
65 Broadway, New York City, N. Y.

Gentlemen:

*Fairy Soap is the crowning touch in a game of golf or tennis. It cleanses thoroughly and aids the pores to function normally. As you say, it does help the body breathe. Because of this, Fairy Soap is used throughout this Club.*

Yours very truly,  
*Thomas H. Kewill*  
Manager.

TH/OL

# FAIRY SOAP

## HELPS THE BODY BREATHE

# They accused him of cleaning his pipe

**But he pleaded not guilty;  
he had merely filled it  
with Edgeworth**

There is an old story about the youngster who washed his face and hands before going to school and none of his boy friends recognized him.

There is another about—but as this one comes in the form of a letter, we're going to give it to you that way.

1551 Portsmouth Ave.  
Portland, Oregon

LARUS & BROTHER CO.,  
Richmond, Va.  
Gentlemen:

A short while ago you were kind enough to send me generous samples of both kinds of Edgeworth, and I enjoyed every grain of them.

When I lit the old pipe, several remarked on the fragrance of the tobacco and actually accused me of giving my pipe a scouring. But I had to disillusion them and tell them it was the tobacco and not the pipe.

So if I continue to woo Lady Nicotine, my best bet (and her best) will be Edgeworth.

Thanking you, I remain,

Very gratefully yours,

(Signed) Aptan A. Brown.

This letter gave us a genuine surprise. Although we have often been assured by smokers that Edgeworth has a fragrance that can't be beaten, this is the first intimation that smoking Edgeworth does away with cleaning your pipe.

And of course we don't admit that it does.

Edgeworth smokers may not find it necessary to scour their pipes often, but any pipe should

be cleaned now and then—for sentiment if for nothing else.

If you haven't tried Edgeworth, write your name and address down on a postal and send it off to us. We will send you immediately generous samples both of Edgeworth Plug Slice and Ready-Rubbed.

For the free samples address Larus & Brother Company, 25 South 21st Street, Richmond, Va. If you will also add the name of the dealer to whom you will go if you should like Edgeworth, we would appreciate that courtesy on your part.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Edgeworth Plug Slice or Ready-Rubbed for the same price you would pay the jobber.

Mr. Borts's face flamed with illumination, became transfigured with the temptations of piscatorial paradise. He lavished his heart on the steel rod for a moment and looked away to the beautiful water, where his eye took fire. "What time is it, Graham?" he asked.

Graham drew forth his timepiece and thumbed its face. He grinned down at the tale it told. "Fifteen to one," he announced.

Mr. Borts's eyes dilated and his jaw dropped.

"Fifteen to— Holy Smoke!" he exclaimed. "That luncheon was due fifteen minutes ago. How long did it take us to come up here, anyway?"

"Well, you said it would take about five minutes, but it took nearly twenty; and it was near twelve when we left town."

"Well, no use crying. I'm in for it!" Mr. Borts was a philosopher, and he spoke with a determination to be happy at all cost. His eye gave the turtle a thoughtful overhauling. "We've got no time to waste and it'll take too long to lug this fellow home now. We'll just leave him by the camp fire and come back for him later. Soon as I square myself at home, Graham, we'll come back and fish till dark."

He forthwith lifted the turtle to position against his belt and started upstream for the camp fire, Graham and Saggy trailing behind, the boys flocking around him. Up there on the shingle, where the boys when out in the riffles could see it, they stowed the reptile on its back and hedged it about with large stones.

Saggy's part in this act was mostly that of a gloomy bystander. The increasing weight of uncertainty was telling heavily upon him. It seemed to him that he could endure it no longer, and that he must get relief by asking his father what was in store for him. But his father's face did not invite such heroism. It was steadily lengthening with a worried and drawn, a nervous, preoccupied, and haunted look.

And, so, carrying his shoes and stockings, he splashed across the riffles behind the two men, and dumbly, meekly, followed them to the car. He found no chance to talk to his father. In fact, no one had breath for speech. His father in the lead, the two men traveled Indian file at their fastest walk, and kept Saggy's tender bare feet at a painful flinching trot. And, riding home, Saggy sat alone with his conscience and his doom on the back seat.

WHEN the car at reckless speed dove into the drive, the company were in full array on the veranda—five women. As the car sped back to the garage, Saggy saw his mother bounce up and flash into the house. And when the car came to a stand they heard the screen door to the kitchen slam and saw her stationed on the brow of the porch steps.

At this sight of devouring judgment, the flame of life in Saggy died low and left him for dead, all but his eyes. And then, just as the dying will gasp for air, he jumped from the car.

"Ho, Maw," he cried, "y'oughta see the turtle we caught—big as a tub. It's up the river on its back. We're goin' back after it. Dad got there just as I grabbed it, and he jumped in and helped me get it out. That's what got us all wet. Didn't we, Dad?"

"That's what!" echoed Mr. Borts.

Mrs. Borts's countenance was terrifically calm. Her deadly eye saw but one object, and that was the bedraggled, mud-stained delinquent who was sliding with as little display as possible out from behind the wheel.

"Well," called Mr. Borts, "did you think we were lost?"

Mrs. Borts did not answer him. She remained absolutely motionless. Her eyes were set, and they were implacably watching him approach and awaiting with coldly measuring intensity the right distance for one swift stroke of extermination.

"By George, Beckie," he faltered, "I never dreamed it was so late!"

"It seems to me I have heard excuses like that before in the last day or two."

HER tones were distant and awful, and their sarcasm left him without one hope or recourse. He opened his mouth to speak, but no words came. His eye shifted as if looking for help, and when his lagging steps reached Saggy he halted beside him. Somehow, he felt easier near Saggy. Somehow, there was consolation and strength beside his companion in crime. Saggy, thunderstruck, was gazing up at him. He had never known his dad's face to look like that. It looked just the way he himself was feeling. His dad! It made his heart ache—made it hot and big.

"Aw, Maw," he cried, forgetting himself, "what y'want to get mad at him for? He couldn't help it, so he couldn't. He came home just as soon as he could. And he went into the river because he didn't know but I was drownin', mebbe."

She was unprepared for this. She straightened slightly and gave her son a stare of astonishment, and then viewed the two of them as a group picture. Wet and wretched, they certainly were, two of a kind. The boy in his partisanship had taken a bristling step forward, and the dad was gazing down at the old cap in front of him, not so much as a father surprised at his son, but rather as one boy safe under the wing of another.

He looked up at his wife, something of gladness, of triumph, in his gaze; and their eyes connected and held in silent communication until the same smile crept into each face. The boy had saved him.

"I suppose you know luncheon is over?" she asked in a thawing voice.

"Yes, and we're as sorry as can be," he avowed eagerly. "I never dreamed it would take so long and the time went before we knew it. But as it is a hen party, anyway, I wasn't missed so much, was I? Say"—he put his hands on Saggy's shoulders and gave a pressure that made the boy grin—"will you give us kids a bite to eat, Graham out there and us, and let us go back fishing?"

She smiled down at them quizzically and weighed both them and the proposition.

"Oh, I suppose I'll have to, seeing it's you," she laughed. "But you'll have to eat in the kitchen. I can't have you in the dining-room with those horribly wet, dirty clothes."

"Go on, kid," he cried gayly, giving Saggy a push, "jump in and dig bait while she's setting the eats. Come on, Graham!"

And somewhere, up along the riffles, the feathered spirit who sees all things, relaxed and lowered his arms, winked to himself and smiled, got out his peace pipe and sat down and took a smoke.

*It "Kills pain!"*

*For a minute*

**You think it has simply made you forget**

*Then you realize that the pain is really gone!*

**T**HAT is what will astonish you most the first time you use Sloan's Liniment—the rapidity with which it brings relief.

You apply Sloan's to the sore spot or the aching muscle. Immediately you feel a comforting glow—a sensation of tingling, penetrating warmth.

For a minute you wonder if this warmth has made you forget the pain. Then suddenly you realize that the pain itself has gone. Not just for the moment, but gone completely.

#### *How Sloan's works*

The explanation of the unique effectiveness of Sloan's is simple.

Most muscular or nerve pains are due to congestion. When blood collects in a tissue and does not circulate freely congestion is the result. This condition may be due to infection or to a simple bruise or strain.

Sloan's Liniment brings relief by breaking up this congestion. It draws the blood away from the congested spot and allows it to circulate freely and normally again.

But Sloan's does this so quickly, so easily and so effectively that the result comes time after time as a distinct surprise to you.

#### *Just apply Sloan's—don't rub*

Apply Sloan's lightly with the palm of the hand. Don't rub it in. Don't bandage. Just let this potent, soothing liniment do the work by itself. It will not stain the skin or the clothing.

Get a bottle of Sloan's Liniment today and keep it always on hand. Don't wait for the occasion to arise when you will need it badly. If you have never used Sloan's before you will soon wonder how you ever got along without it. You will find more every day practical use for it than for any other item in your medicine cabinet.

# **Sloan's Liniment**

*Wherever congestion causes pain—use Sloan's*

# USE

## The tooth paste that's good for the gums

**T**OO MANY PEOPLE pamper their gums and fail to get their teeth clean because the brush they are using is too soft.

Even people with tender gums can give their teeth a good brushing if only they will use Ipana Tooth Paste.

For Ipana heals the gums as well as cleans the teeth, and thousands of dentists, because of its Ziratol content, prescribe it to their patients whose gums are soft and spongy.

Ipana has a *delicious* flavor and leaves a clean "after-feel" in the mouth.

In large sized tubes for 50c.—or we will gladly send you a week's supply if you will fill out the coupon below.

Get a sample of

# IPANA TOOTH PASTE

## I Know 8,750 People—How Many Do You Know?

(Continued from page 7)

sent from Chicago to Canton to stay with Major McKinley during the St. Louis Convention, which was to nominate him. A kid reporter on such an important assignment, I was naturally nervous, and it was painfully hard to approach the McKinley residence. Mr. Hanna was sitting on the porch with Major Heistand. He sprang to his feet, shook hands cordially, led me past older and more important correspondents, and presented me to McKinley, saying: "Here is a boy we need. He wants to do something for the party, and doesn't want anything for doing it."

He had not forgotten the country kid's bashfulness, nor did he ever forget. Later, when an important political matter was brewing, he telegraphed to the head of my paper requesting that I be sent on the story. I had great assistance from him in carrying out that mission. My whole career has been influenced by him. Even to-day I frequently feel the effect of his advice.

**W**HEN I went from Cincinnati to Chicago I knew just two persons in the latter city. It was a friendly city then, more so than it is now, and it was easy to get acquainted. George Ade sponsored me and that, of course, helped. But after a time I discovered that something was wrong: I remembered nearly all the persons with whom work threw me in contact, but only a few remembered me. Some forgot me in spite of a dozen meetings. It was embarrassing and, being sensitive, I was hurt.

One day I was sent to get a story from John Farson, the banker, one of the best-beloved men in the city. He explained that he always wore a red necktie so people would remember him and, while working up the story, I met James Hamilton Lewis, who said that his flowing pink whiskers had the same effect. Both advised me to have some trade mark to aid others in remembering me. I wanted a trade mark and accidentally found one. Working nights and sleeping days caused me to say "Good morning" at the wrong time. It became a habit. The other day I met a man from Omaha who said, "I remember you well; you always say 'Good morning' and ask for a sulphur match." Those small items had caused him to remember me all those years. The majority of people do not remember *you* at all. They remember something *about* you by which they identify you.

Theodore Roosevelt had this very system of recalling people by remembering something about them. I first met him when he was police commissioner in New York. I was then with the Chicago baseball club. Later I met him at Tampa with the Rough Riders, and afterward a score of times. He probably never remembered or tried to remember my name, but each time he would say, "How is baseball? Is Captain Anson still playing?"

There are few finer thrills in life than meeting someone who has shared part of your life; a fine thrill that carries through

the handclasp and makes the world seem a better place. When a man accumulates as many acquaintances as his mind can hold he gets a lot of these thrills; and the strangeness of the meeting places is an added experience. I remember one night a theatrical company was sailing from San Francisco to Australia and the farewell party lasted until three in the morning, when we all went to escort the players to their launch. Way down Market Street we passed a party coming up and, suddenly, one cackling laugh arose in the dark. The last time I had heard it was in a Cuban jungle, and before that on a college campus. There was but one such in the world. I stopped and yelled:

"Oh you Tommy Williams."

And out of the other crowd came the boy who had hungered and feasted with me—just in from seal poaching off Sakhalin. We hugged each other and danced in the middle of Market Street in the dark.

Of course everyone has strange meetings with old acquaintances. One of the queerest in my career was first at a spot outside Ogden, Utah. I was in a berth, unable to sleep. At daybreak when the train stopped I looked out to see where we were. An engine came puffing up the other track and stopped so that from the window I looked into the cab of the locomotive—and leaning out the window was good old Dutch, with whom I had played ball years before. I raised the window and yelled:

"Hello, Dutch, how are you hitting them?"

He almost jumped out of the cab, and we talked for several minutes before his train moved eastward. Nearly ten years later, on a new railroad in Nova Scotia, I was sitting on a trestle when a train pulled slowly over it. As the engine passed, Dutch looked down and yelled his greetings.

**T**HE fellow who gets acquainted with a great many persons needs control, because friends and even casual acquaintances may become more of a handicap than an asset. The thoughtless ones often become pests in the way they use up a man's time and interfere with his work. No matter how much you may like to have them around, it is necessary to dodge them at times. In the last dozen years more than half my time allotted to work has been given up to meeting people. The result is that a fellow must neglect either work, play, or friends. I used to fret about it, but solved the problem by giving up, from play and sleep, time enough to be with friends.

Recently I kept a record during one day in the office, and registered twenty-eight fellows who dropped in, not more than six of whom had any business to transact. Their average call was more than fifteen minutes, but luckily some came in bunches. Most of them came during the rush of work, and as a result the work suffered and I had to sit up half the night to catch up.

## GIVES WINGS TO WORDS!

*Wings!* to symbolize the service of the Underwood Portable—to show that from its keys words leap in swift flight; imagination soars; thought speeds onward; all that lives in heart and mind is given freest expression.

*The Portable is obtainable at Underwood offices in all principal cities, or direct by mail. It weighs 9½ lbs. cased. Price \$50 in the U. S. A.*  
UNDERWOOD TYPEWRITER COMPANY, INCORPORATED, UNDERWOOD BUILDING, NEW YORK CITY

# UNDERWOOD PORTABLE

Do not imagine I kick on this. Rather, I invite it and would be miserable if the fellows did not come; but very few appear to realize that they are wasting time. The worst pest of the lot, a fine fellow and my great chum, comes after luncheon, stays nearly an hour, and says that, as it is his slack time, he just runs in to chat. His slack hour happens to be my busiest one—and after weeks of that thing I determined upon revenge. Discovering his busiest hour, I went to his office and remained until he told me to get out and let him work. I grinned and went; the next day he came in and said: "Old man, I learned a lesson. I never thought before of how I wasted your time and interfered."

A fellow you can chase out on occasion is a real friend. We meet after work now.

**F**OR a newspaper person, the time spent with friends has its rewards in the information accumulated from men and women of all sorts. All your acquaintances know things that you do not. It is marvelous how much information you can accumulate by sitting for a long evening around a camp fire in the woods, or before a blazing log. Wood fires seem to extract stories from men and refresh their memories.

One of the most wonderfully informative nights in my existence was in Chicago. The family was away and in the evening a man who was known to the police as a desperado and a gunman came to call. We drew the curtains, and he was telling a wonder story of his experiences when the bell rang and the priest in whose parish we live dropped in to talk of a matter in which both of us were interested. Half an hour later an old ball player, then on the police force, came. We sat there until three in the morning, talking and listening, the priest telling of his missionary life in the Philippines and other places, the desperado relating yarns of his experiences, the policeman of his new life; each interested in the other, and we had four widely separated phases of life. We parted the best of friends. The gunman insisted upon escorting the priest to his parish house, for fear something might happen to him. I have often thought that if all men could meet in that way, just man to man, lay aside class and calling for a few hours, and give each other the benefit of their own views and experiences, the world would get better rapidly.

I have known more than two hundred and fifty boxers, and people engaged in fighting, and more than that number of race-track people, from owners to touts. Horse people are one of the most interesting of all classes, living in a world all their own and with a language and a romance found nowhere else. I know more than two hundred men in the army service, from privates to generals, and almost as many men in the navy. At a joint session of the House and Senate in Washington I pointed out to a visitor more than one hundred members I knew personally and had talked with.

Policemen always have been one of my weaknesses. Twenty years ago in Chicago I knew almost every Central detail detective and scores of uniformed men in all

the stations. Both they and their work interest me, and in picking up information about crime and criminals I met many of the opponents of the police. When a fellow has been around police stations and knows the crooks, the "romance" of crime fades quickly.

In theatrical circles I know about two hundred persons, yet not a dozen actors are in the list, excluding vaudeville people. The majority of them are in the producing or business end of the business. The mechanical part of the theatrical business, the making and building of plays is vitally interesting; but I never go to a theatre to see a performance if it can be avoided, because I can watch just ordinary human beings at work or play, and see more drama and comedy than the stage ever knew.

I find that I know the presidents of about twenty colleges, the athletic heads of more than that number, and scores of athletes of all kinds.

A list of title holders reveals that I have met almost every champion in the last two decades.

There is another group that is worth while: the circus folk. The lure of the circus has lasted through all these years. I can start with Hutch and Mister John, Webby and Ed Norwood, Johnny Agee, and go right through the big top to the Joie row and find acquaintances in every ring and every cage.

There is another class—the Y. M. C. A. crowd, so much cussed, and so much criticized undeservedly. I used to have an idea that the Y consisted of sissies and pimply faces; until once I got dragged into some work with them and found the gang about as red-blooded and rough-and-tumble as they come—with exceptions of course. I worked on four big campaigns with them in four sections and never met a better bunch of fellows.

**C**OUNTING acquaintances by races is interesting, and if a fellow simply buries his own preconceived ideas he will find that human beings grade up about the same, regardless of race, creed, or social standing. It is certain that, no matter what his race or social standing, a man receives just about the same treatment as he extends. I have known a great many negroes, and some I count as among my most valued friends—Art and Windy, Put and Jim Sol and Buck, old Mon and Baldy. One of the earliest friends I had was Paul Dunbar, who came from a neighboring town, a great soul who, although a poet, always reminded me of little George Dixon; one a poet with the soul of a fighter, the other a fighter with the soul of a poet—yet both seemed sad under the surface, with the woe of centuries of oppression overcasting their souls; always a sad minor note under the laugh.

It is a homesick work, this canvassing back over the half-forgotten pages of memory, recalling old friends and acquaintances, and wondering where they are and how the world goes with them. The one who has traveled much is apt to be homesick for many places, and for many old pals and chums.

One takes a map and, glancing over it, recalls the dancing heat imps of the desert, the uplifted cone of Cooks, the purple shadows of the Black Mountains, and wonders what has become of Big Perkins, and Danny Taylor, or plump, laughing little Black, and the gang that rode down the Mibres. One remembers the rushing white water, the soggy depth of the moose woods of New Brunswick, and longs to camp again with George and Harry, Uncle Dan and the gang.

One remembers the old crowd of homesick fellows gathered in the hotel lobby in bachelor days, and wonders where Bill and Jake, Old Man Hunter, Jack and Louis, and all that crowd are now. Memories come of the happy-go-lucky bunch of American lads, gathered from all the world, who went down into the heart of Mexico with us; memories of burning days and chills of night, of the whining of spent bullets, the sudden crash of arms, the restless, half-moaning noise of the sleeping army. One remembers the rude shacks beside the muddy torrent of the Colorado; the little Japanese engineer from Tokio, the famous German expert, the big, quiet, efficient Fauntleroy leading his men as they rippapped the great Laguna dam onto the shifting sands of the mighty river, and then scattered to build dams and bridges all over the world.

**O**NE wonders what became of Pete and Harris and Grif, down at Bluefields, Nicaragua. What has become of the gang that used to gather in Benny's garret before the fire in San Francisco? How does the world go with Cornes and his fishermen on the St. John? Did the boys around the Officers' Club at Winnipeg all come back after the war? Are Olson and his boys taking as many whitefish in the nets off Point Betsie in Lake Michigan, as they used to?

It would be fine on a Sunday morning like this, to walk up Paint Street in Chillcorthe and to know all the people you meet coming from church; or to ride up to the ranch in the hills near Bayard, where the old fort was, and yell until the crowd came out; or to go back-stage in the Palace in New York and find Babe and George, Bill Clark and Billy Borden; or to stop in Columbus, and just start up High Street, stopping to shake hands with Patton, Mont, the Goodman boys, Maddox and Mr. Glenn, good old Bill Ireland and John Pontius over at the Y.

To-night, writing this, I'm really homesick, homesick for the ones I knew first and best—the home folks. I'd like to walk up to the post office to-night, see all the folks coming and going, stroll down High Street, gathering up the old gang until we came to the big oak. When we'd get Reddy and Monk, Sharphead and Smock, Whiteye and Spider, and lie there flat on our backs, staring up through the leaves to the moonlit sky and the stars, talking in low tones and telling each other how the dreams that we dreamed in the old days have come true. Then, maybe, one of the fellows would start a song, and if we sang now it probably would be the half sob of the Kerry Dancing.

**"DOES Anything Come After Death?"**—the oldest and most significant of all questions—is discussed next month with telling effect by Harry Emerson Fosdick, D. D., one of the greatest living clergymen in America. No person can afford to miss Doctor Fosdick's views and conclusions, which are ably and sympathetically reported by Bruce Barton.

SIX-ROOM HOUSE No. 610

Designed for Service Dept., American Face Brick Association

This is one of the ninety-six designs in "Face Brick Bungalow and Small House Plans."

## Homes of Lasting Satisfaction

For the home-builder who seeks a house that will be beautiful when completed and grow more charming with age; that will be as staunch in the days of his grandchildren as in his own time; that will require no repairs and but a minimum of upkeep; that will save in insurance rates and fuel bills—in short, for the home-builder who seeks the utmost of beauty and durability at the greatest ultimate economy, Face Brick has an interesting story. It is told in detail in "The Story of Brick." For your copy, address American Face Brick Association, 1736 Peoples Life Building, Chicago, Ill.

### Send for these booklets:

"*The Story of Brick*" is an attractive booklet with beautiful illustrations of modern homes, and discusses such matters as Comparative Costs, Basic Requirements in Building, The Extravagance of Cheapness, Financing the Building of a Home, and kindred subjects. A copy will be sent free to any prospective home-builder.

"*Face Brick Bungalow and Small House Plans*" embrace 96 designs of Face Brick bungalows and small houses. These houses are unusual and distinctive in design, economical to build, and convenient in floor plan. "Face Brick Bungalow and Small House Plans" are issued in four booklets, showing 3 to 4-room houses, 5-room houses, 6-room houses, and 7 to 8-room houses. The entire set for one dollar; any one of the

books, twenty-five cents. We can supply complete working drawings, specifications and masonry quantity estimates at nominal prices.

"*The Home of Beauty*" contains fifty designs of Face Brick houses, mostly two stories, representing a wide variety of architectural styles and interior arrangements. These houses were selected from 350 designs submitted in a nation-wide Architectural Competition. We also distribute complete working drawings, specifications and quantity estimates for these houses at nominal cost.

"*Orienting the House*" is an illustrated booklet, with a sun dial chart and explanation for placing the house with reference to light and shade. Sent for 10 cents.

# You Can't Live on Your Reputation

(Continued from page 43)

"No. Just remembered you hadn't been in. Go ahead and renew for this year."

Now this man might have taken the hint; but reputation is deaf to subtle advice. The next year he telephoned again.

"How about those renewals?" he asked.

"I'm sorry," was the reply, "but this year I am giving half of our insurance to another company."

My friend was in the manufacturer's office as soon as his motor car could take him. Something had happened to his fences. An enemy had slipped in, and he couldn't understand it.

The manufacturer was friendly as usual.

"Did I understand that you had taken half your business away from me?" asked the insurance agent.

"Yes," was the reply. "When you first began I was glad to help you. You seemed ambitious and keen and willing to give service. For a year or two you were on the job. Then you began to show signs of thinking that you had a perpetual right to our insurance. You dropped us from your calling list; last year you didn't even take the trouble to come in person to make the renewals. I let you get away with it that time, but when you tried it again this year I handed you a jolt. Nothing is a cinch in business. What is worth having is worth going after, and what is worth keeping is worth taking care of. You lost by not keeping on the job."

"THAT was the best lesson I ever had," said my friend. "It happened to me over twenty years ago. I got back all that business the following year and I have looked after it ever since. I take nothing for granted any more."

"The bigger they are, the harder they fall," is real philosophy. I have had my share of flattery, and it is nice to hear, but I am more fearful of it than of poison. The few poisons in our house are all plainly marked and put away in a safe place; but the poison of flattery is insidious and undermining, and he who lets it into his system may enjoy the thrill of it to-day, but regret its sad effects to-morrow.

"That bit you had yesterday was your best," said a kindly soul to me, referring to a verse of mine in the paper. I was glad it had pleased him and glad that he had expressed his pleasure to me; but he was wrong and I knew it. If he had been right and that verse which had chanced to have pleased him so was really my best, I was in a bad way. There was nothing left for me to hope for or to work for. I should be obliged to live in the past, on my reputation.

It was not my best. At least I hoped it wasn't. I hope I have not done my best yet. As a matter of fact I feel that I never shall do it. There are some things which may stand out as the best among all that I have done, but I am of the opinion that I shall never really achieve the best that I am capable of doing. No man ever does.

To-morrow is my one big stimulant. What does it hold in store for me to face?

I know one thing surely—there will be a certain amount of space in my paper for me to fill with something. I cannot fill it with my reputation or the nice things that are said to me.

"What are you going to do with this job?" says each morning. "You made good last night, but what if you fall down now? And remember nothing succeeds but merit, let poor work strut how'er it will."

Thousands of young people have done their first work well, never again to be heard of. The list of one-story writers is a long one. It is so in every trade and every profession. Skill is blasted in the bud by the hot sun of success. Either they couldn't keep it up, or they wouldn't try.

THE game of life isn't played that way. My own experience is that I have never done poor work but that the editors spotted it. I had it happen to me recently. I had promised an editor a bit of work, but I put it off, until finally a telegraphic appeal from him determined me to rush it through. I was tired but I went at it, not with a desire to do my best but with an eagerness to get it finished and be done with it.

"I'll take anything you'll write," he had said to me in a letter. I took him at his word and learned another lesson. An editor who would do that would not remain an editor for long. He may say it, but he doesn't mean it.

I rushed off that manuscript to him. It was poor stuff and I knew it and was ashamed of it. But he had said he would take anything I would write. I had a chance to get by on my reputation. It didn't work.

In less than a week the manuscript was back on my desk with a personal note from the editor:

"Dear Eddie," he wrote, "I am disappointed in this. It isn't in your best vein. It isn't like you, or worthy of you. It reads just as though you had slapped it out for a space filler. Look it over again and see if I'm not right."

I didn't have to look it over. I knew he was right. I knew it was poor stuff when I sent it out, and I should have been ashamed of myself if it had appeared.

The world is quick to discover a falling off in quality.

"He isn't as good as he used to be," is one of the commonest phrases of human speech.

I have picked up many useful lessons from golf. It has taught me much about myself and the life we live. When I began to play there was a young man in our club at the top of his game. He was the unbeatable member. To-day twenty or more of us can play him even, and a few can give him strokes and defeat him.

He is an ex-champion; but he did not keep it up. The illustration is not altogether pat, because it is to his credit that his golf game has suffered. Strict attention to business required his time; he discontinued practice and his skill was lost. His game could not live upon his reputation—that's the point I wish to make.

For my own boy I hope success will not come too early to him. I would have

him pass through the school of stern experience first. I want him to learn the difficulty of doing good work.

Some years ago I received a letter from a man in Grand Rapids, Michigan. He began by thanking me for something I had written and then he added:

"I have no right to say this to you, I know, but you and your work have grown to mean so much to my wife and me that should anything ever happen in the future to make us ashamed of you we should both be deeply hurt."

He had no right to suggest such a thought to me, and yet I am glad he did, for it opened my eyes to a new phase of life. I had a certain reputation now, and with it had come responsibilities. If I were to stray from the right in one careless hour not only my own family would suffer, but a man and wife living in Grand Rapids would be deeply hurt. One ought not to shirk that sort of responsibility.

He who takes pride in his work can hold no honest conceit for himself. He knows he is no magician and no alchemist. He cannot with a wave of his hand produce roses from an empty bag or gold from ashes. To be at his best he must continue to strive for his best. The finished task must be deserted for the difficulties of the new. Though he have a thousand victories to his credit he may still lose the last battle.

THE man who builds a mouse trap better than anyone else will have the world beating a path to his door, but only so long as his mouse trap continues to be the best. The day he decides that his reputation is made and the quality of his product need no more concern him, the world will desert him.

"This mouse trap isn't what it used to be," the people will say. "He is substituting reputation for merit. I have heard of a young man who is making a better trap; let's go to his door now."

As a boy I worked in a drug store, and stood at the cigar counter many hours a day. I knew little about the business of cigar making, but, young as I was then, I caught one deep impression:

A new cigar would attract the attention of the men in our neighborhood. For two or three months in that drug store we would sell one brand almost to the exclusion of the others. It jumped into popularity. It was well advertised, of course; but it possessed quality. Then with success fairly assured came the falling off.

"No," some man would say, "I'll take something else to-day. That used to be a good cigar, but they've started to cheapen it."

That was always the beginning of the end. The manufacturer had begun to live upon his reputation, and always it was fatal. Nothing but good work endures.

This is the creed I have written for myself:

That I shall come each day to its tasks eager and glad to work, grateful for the accomplishments of the past but mindful always that to-day demands the best that is in me.

# A watch should be accurate as well as beautiful

**K**EEPING accurate time is the primary function of a watch. The Hamilton has performed this difficult task so successfully, for so many years, that it has earned the reputation of being The Railroad Timekeeper of America.

Jewelers like to sell Hamilton Watches because the dependability of the Hamilton is a creditable reflection on their own selection and service. The Hamilton is a watch that is seldom returned for repairs or readjustment.

Besides the feeling of satisfaction and comfort derived from such a watch, there is the added joy that comes from possessing an object of fine workmanship. Accuracy and beauty are on a par in the Hamilton Watch.

It is now possible to get Hamilton accuracy, dependability, and service at a very reasonable cost. Our Number 974, movement only \$25.00, can be fitted by your jeweler in a case to suit your pocketbook.

HAMILTON WATCH COMPANY, Lancaster, Pa., U. S. A.

## Hamilton Watch

*"The Watch of Railroad Accuracy"*

**Hamilton No. 920 in  
"Florin" Case \$117**  
Unusual are these inlaid cubist numerals, on a silver dial. 23-jewel, five-position adjusted movement. Green gold permanent case.

**Hamilton No. 920 in  
"Byron" Case \$172**

The demand for cases of green or white gold is met by this beautiful model, 14k engraved, 23-jewel five-position adjusted movement. Dial, sterling silver; numerals, 18k raised gold.

**Hamilton No. 910 in  
"Fulton" Case \$43**  
A Splendid Timepiece. 17-jewel, adjusted movement, engraved case of green gold filled (25 year), with metal dial and radiating numerals.

# Why I Stopped Being Too Hospitable

(Continued from page 61)

invitation to stay with us, which was usually accepted. Although their visits as a rule were short, they were the most tiring of all, for on account of their brevity they were packed full to overflowing.

These guests were rarely familiar with the city, so they needed constant guidance. I would put aside my own occupations to plunge chokingly with them from one errand to the next, creating an atmosphere of such haste that by the time I had rushed their meals into their schedule, dashed the house into a semblance of order to make train connections or to chaperon them on their pilgrimages, to fly home again and have dinner ready for Tom, their visits left me physically and nervously exhausted.

**A**GUEST is never so wearing on a man as on a woman. The man goes to business the same as usual, seeing the visitor only in the evenings, when he is looking about for diversion of some sort. His wife, on the contrary, must give her entire time to her guests. To me, the necessity of being constantly with my visitors, even my most congenial friends, was such a strain upon my nervous system that in time it began to tell on me severely. I became very irritable over trifles. I lived in such a state of tension that I did not digest my food properly, and I lost weight till Tom at length became alarmed about me. Then the crisis came!

It was at the end of a particularly harassing visit from Aunt Lucy, who was not one of my most congenial "in-laws." She had come to town to see the dentist, and he had kept her more than a month. So she had taken advantage of this long sojourn in Baltimore to do all the extra things that she had been saving up. As she did not know the city, I had been obliged to go with her on most of her perambulations—some of them to very remote parts of town that I had never before visited, where she had heard, for instance, of a woman who did a special kind of weaving. Again, she would have a burning desire to hunt up a niece of some poor neighbor at home, who would be hurt if Aunt Lucy failed to call on her relative.

When she had finally departed, leaving me in a state of collapse, Tom took this occasion, of all others, to scold me for becoming negligent about my duties. He said I had become so careless that the house looked like a junk shop instead of a home, while my appearance was so slovenly that he was ashamed of me. I tried to tell him through my tears that I had been obliged to let things go to make time to go out with Aunt Lucy, and that I was too tired to care how I looked. He kissed away my tears and asked my pardon for being ugly—I suspected that too much company was telling on his nerves also—and then I had to stir around and get ready for Kate, who was coming the next day.

When she had been with us two days we received a message that Tom's two brothers with their wives and another friend were coming for the week-end. It was taken for granted that we could ac-

commodate the whole party; in fact, that we would be hurt if they came to town and did not stay with us. We had only one guest-room and Kate was occupying that, so it was a problem in higher mathematics to figure out the permutations and combinations necessary to make sleeping quarters for everyone. At last we did find places for all eight of us to lay our heads. It meant, though, that Tom and one of his brothers had to sleep on the floor, while I occupied a cot, which was so uncomfortable that it exaggerated my sleeplessness, caused in the first place by the confusion into which our home had been thrown.

During the day the presence of so many women, all getting in one another's way, it seemed, made my nerves more on edge than ever. I had got to the place where the very sound of their voices irritated me, and my frame of mind could not have failed to react upon them. Unintentionally, I answered one of my sisters-in-law very shortly, and a misunderstanding resulted. This added to my discomfort. After Kate's departure I heard that she said I was becoming old and cranky, and that I had made her feel unwelcome. Perhaps I had. I was so beside myself with fatigue that I was quite unaccountable for what I said and did.

And now there came to us a shocking realization of the pass to which our exorbitant hospitality had brought us. I was obliged to go to a doctor, and he found me in a bad condition resulting from over-exertion and nervous strain. When he advised an operation Tom and I looked blank. In the three years that we had been married we had not saved one penny. We had less than fifteen dollars to run us till the next pay day!

**W**HEN we married we had made elaborate plans about the amount we would save each month. We had figured a certain allowance for food, clothing, shelter, amusements, and incidentals, and had found that if we adhered rigidly to this budget we could put aside half of Tom's salary each month. But we had not figured that every time we had company these allotments would be increased.

Our grocery bills had been nearly four times the calculated amount, while amusements and incidentals had usurped more than three their allotted portion. Instead of saving half of our earnings we had nothing to show for our first three years, except the small monthly payments that we had made on the house, and it was now in need of several repairs. The thought of an impending operation, with hospital, doctors' and nurses' bills, made us reel. Where was the money to come from?

As I lay in my bed at the hospital, convalescing, Tom and I tried to devise a means for paying the expenses of my illness. My brothers had generously offered to help us, but my pride and independence told me that it was not their place to be assuming our burdens. Moreover, Tom and I alone were responsible for what had happened. This was our time to decide that we would face the world as self-respecting individuals, accepting help from no one.

Right then Tom held in his hand a letter from a cousin who had not heard of my illness, announcing her intention of coming to see us the following week. Tom had already written to say that I was in the hospital. We had taken the first step in drawing in the lines of our hospitality. We agreed that we would send a similar message to all prospective visitors. But I did not expect to be ill indefinitely, and the precedent for making our home a stopping place for one and all had been so firmly established that it was now hard to change the policy without offending someone.

"I have an idea," said Tom. "Let's try and sell the house and get back what we've paid on it. That will bring enough to keep us out of debt and start life again with a clean slate. Let's take a two-room apartment, where we can't possibly have room for a visitor for longer than a day, and stay in it till we've saved enough to buy another house and have a nest egg besides."

"You're a bright boy," I said.

**W**E FOLLOWED Tom's plan, and found a purchaser for the house. The small apartment filled two very timely needs: If I had gone back to the house when I left the hospital I would have been obliged to have a maid for some time; but my two rooms and kitchenette required so little work that from the first I could keep them without help. Thus our expenses were reduced at once. To all our friends I immediately wrote, giving my illness as our reason for having given up the house, but stating in no uncertain terms that our apartment was too small for us to have room for guests. My operation proved to be our salvation.

The effects of my new mode of living soon became evident: I regained my health rapidly, and for almost the first time in our married life Tom and I enjoyed the experience of being alone for an indefinite time.

We have now been living in our little apartment three years. We have missed some things, but we have gained others. Instead of saving half of Tom's salary, we have managed to put aside almost two thirds of it each month. We have invested and reinvested the interest, with the result that we already have enough to buy our home, which we intend to do in a few more months, or after we have acquired the additional "nest egg."

In our new home we shall moderate slightly our present program, but we shall never again entertain so indiscriminately as before. I expect to have no one visit me except by special invitation, in which I shall state the exact length of the stay. I believe that one week is usually long enough. Those who attempt to overstep my bounds by inviting themselves to come, or to prolong a visit already begun, will be told regretfully that other plans make it impossible for us to have them. This liberty, Tom and I believe, is a home owner's inalienable right—and we have resolved firmly that never again shall we depart from it.

## Buick shows the way for 1923

Buick leadership has come through Buick's unerring anticipation of the public's motoring requirements. The extent of Buick leadership is best evidenced by the frequency with which the Buick emblem is seen on every road.

## Successful Investment

THE achievement of financial independence through successful investment is, after all, not so difficult a matter. It requires only two things:

**First**—lay by regularly as large a share of your income as you can.

**Second**—invest this surplus regularly in safe securities, reinvesting the interest as it is paid you.

In laying by money for future independence, Straus Bonds may well be your mainstay. They are safe. They free you of all worry and care. They yield 6% net. And they come in convenient denominations—\$1,000, \$500, and \$100.

Write today for literature which will help you to invest safely and build surely for the future. Ask for

## THE FAMILY'S MONEY

### How We Kept Going After My Husband's Death

A YEAR and a half ago I faced what seemed at the time a mortal blow—the death of my husband, my good, strong, dependable John. For weeks I thought I could never live through the grief and loneliness. Then came the day when I must face the problems that were confronting me.

I found we had John's life insurance of ten thousand dollars, twelve hundred in "Victories," and our home.

Other assets were my own good health, my business experience, our five children, all of whom had been trained since babyhood to help Daddy and Mother, and a host of good friends.

My problems were: *First*, my leaving home to take a position. Our one little daughter, Patricia, sixteen years old, is partially crippled as a result of an attack of infantile paralysis five years ago. How could I leave her alone all day? And what about the other vital things; good nourishing meals for the four boys and someone there when they came home from school? Who was going to keep the home machinery oiled and running smoothly? What about the house itself? Could I make that an asset, and so keep it? Relatives advised me to sell; but it was in a good neighborhood, had a fine place for a garden and a tennis court, and, most of all, it was home, endeared by a thousand associations.

Since my problem is a common enough one, its solving may interest many other women who are facing similar ones.

BEFORE my marriage I had been a "stenog," and fortunately had kept in practice through helping my husband occasionally in his office work.

I applied for a position, was accepted, and took two months at home to readjust our affairs. The Victories went for our few debts and for the building of a sleeping porch; the insurance was safely invested—at five and a half per cent—not to be touched except for the boys' education, and our housekeeping was simplified. This last took many months, and while it is now seemingly running on "high efficiency," I am always open to suggestions.

A neighbor comes in from ten to one each day. I pay her, of course. She prepares our lunch and starts preparations for the evening dinner which is usually a casserole of meat and vegetables, or a roast with baked potatoes and a vegetable. A simple salad nearly always completes the meal, or in summer the boys and "Pat" like to make a freezer of ice cream.

We have our meals out of doors whenever possible, consume five quarts of milk a day, everyone helps with the table setting and dish-washing morning and night, and we make a game of the work as much as possible. On Saturdays the twelve-year-old twins, David and Bob, run the vacuum and clean the porches. My

little "Sunshine Girl" dusts and sets things to rights mornings after her brothers and mother have left; but each boy has been trained to open his bed to air and to pick up his own belongings.

Once a month I have a "day off." Then a man, a woman, and I go over the whole house—washing windows, sunning mattresses, vacuuming everywhere, and laundering the fine things, although we have few of these. In between I have had to learn to shut my eyes to much disorder: it isn't *real dirt*, the children love to bring their friends home. Sometimes the house is a "sight," but it is a home, and that's the big thing.

I make a real asset of my house by renting the large front bedroom and the smaller one behind it ("released" by the boys using the sleeping porch) to some old-time friends, Nan and Tom Edwards. They pay thirty-five dollars a month for the sunny, prettily furnished suite, and they have proved a wonderful help, Mrs. Edwards being "company" for our little Pat, whom she adores, and her husband helping in so many ways with the boys.

THE garden has been run on shares by an old English gardener, Michael, my eldest, and John, Junior, have assisted in the planting and cultivating (storing up good health the while), prepared all the vegetables ready for cooking, picked fruit on shares, washed the neighbors' cars. The twins have a paper route, run errands for the neighbors, and deliver milk.

The interest on the insurance money has so far clothed us all. The room rent has paid taxes, fire insurance, upkeep, and fuel. The one hundred a month, my earnings, set a good table and allow us to keep even with all other expenses.

Best of all, my little Pat has developed a fine business sense. One of my friends suggested that she take a magazine agency. This has grown into quite a flourishing affair, and the feeling that she, too, is earning money keeps her happy and contented.

The boys' paper routes, the car washing, and so on, furnish their spending money; they all buy their own school-books and supplies, and besides learning valuable lessons in the earning and use of money they are *busy*. Busy boys aren't near as apt to get into mischief these strenuous days of raising children.

The outstanding features of reducing our living from over five thousand a year to less than twenty-five hundred, counting Patricia's "business," have been:

1. Entirely eliminating the question of each child's spending money.
2. Making the home-keeping a partnership, with each child a working member.
3. Budgeting the income.
4. Doing away with *all* nonessentials.
5. The help of the garden.

H. G.

## New— *A Standard-Built, Two-Passenger Coupe*

A feature that immediately impresses you is the exceptional width of the doors. The door opening is 31 inches wide and 47 inches high—assurance of easy entrance and exit.

Under the rear deck is a storage space so roomy it is bound to win favor with the man who has much luggage, or bulky sample cases, and with the tourist.

Door windows raised and lowered by standard regulators. Dome light. Ventilating windshield. Sun visor. Windshield cleaner.

Perhaps the first thing that will impress you in this new Coupe, is the very evident superiority of the body construction.

It is perfectly apparent that body and chassis are designed as a complete car, each for the other.

Finer work has never issued from our great body plant at Racine—and never did chassis and body fit into

a more beautiful and practical harmony of design.

The new Hupmobile Coupe is especially intended for those whose use of a motor car is continuous and exacting—but thanks to the exceptional character of the body work, it is also endowed with a high value, in point of comfort and lasting satisfaction, rare and unusual in cars of this type.

# Hupmobile

# Search for spices helped lead Columbus to America

*Meats were spiced—not iced*

Everybody knows, of course, that Christopher Columbus discovered America on a search for a short cut to India and the East.

The reason Europe wanted a short route to India was to provide a better way to bring in treasures, merchandise, and spices from the Orient.

Everybody does not know, however, what Europe wanted these spices for—and here enters refrigeration.

The people of Europe needed spices because they had no way of handling meat to keep it fresh and sweet. They did not know anything about refrigeration.

Much of the meat was put into pickle or heavily salted and spiced to keep it.

By the time fresh meat came to be eaten, it was often so strongly flavored that the cooks also used spices liberally in its preparation.

How they did this is shown in the quaint recipe printed on this page, taken from a 15th century cook-book. (Bodleian Library—Laud MS.)

## A Fifteenth Century Recipe

*"Boke Metis: Take fresh porke and hew it and grind it on a mortar and take it uppe into a fair vessell; and take the white and the yolks of eggs and strain into a vessell thru a strainer and temper the porke therewith. Then take Pynes, Raisons of Corouner, and fry them in fresh grease and cast thereto powder pepper and ginger, cannelle, sugar, saffron and salt, and cast thereto and do it on a Cofynne (crust of pie) and plante this Cofynne about with Pynes and cut dates and great raisons and small birds or else hard yolks of eggs or if you like birds, frye them on a little grease or put them on this Cofynne and enclose (cover) with yolks of eggs and saffron and let bake til it be enough and serve forth."*

It is interesting to know that the land which owed its discovery in large measure to Europe's lack of refrigeration, should have become the originator of this vital science.

Today meat is dressed at centers of production, hauled hundreds of miles in perfect condition and placed in the hands of the consumer fresh and sweet.

The bountiful food supply of seasons of plenty can be carried over into periods of scant production, to the benefit of all.

Swift & Company, among the first to make use of and develop this great servant of the human race, is still among the first in putting it to helpful uses.

Refrigeration does more than make a world supply of meat available. By increasing the volume that can be handled it brings down the cost of meat to all. Swift & Company's profit from all sources is distributed over so many pounds of meat that it averages only a fraction of a cent per pound.

# Wash Embroidered Silks?

## Think twice! Consider this safety-test

PERHAPS you believe that the soap you are now using for the more hardy type of fine garments would be safe for the very finest and most delicate things you own. But are you really sure?

Perhaps we can help you to be sure before you imperil a delicate fabric.

*Here is the Test:*

Ask yourself:

*"Would I be willing to use the soap for my face?"*

Women who have never before felt absolute confidence in a

soap for their most precious garments have adopted Ivory Flakes because it meets this face-test conclusively and distinctively.

For Ivory Flakes is Ivory Soap!

Yes, just the same Ivory Soap which has protected faces and hands for 44 years—pure, mild, gentle, white—changed only in form—*flaked* for instant wash-bowl suds.

Ivory Flakes has a real margin of safety for the sheerest, most

delicate-hued silks. Yet it is economical enough to use for cottons, linens, and fibre-silks which *deserve*, but seldom receive, such prudent care.

Wouldn't you like to have a free sample of Ivory Flakes and the attractively illustrated booklet, "The Care of Lovely Garments?" A note or a post-card addressed as suggested in the lower left-hand corner will bring them.

*The full-size package of Ivory Flakes may be had at grocery and department stores.*

PROCTER & GAMBLE

*4-color embroidery on rose crêpe de chine—green, yellow, red, blue.*

*Safe after 6 washings*

Miss R. bought this delicate and costly negligée on Fifth Avenue. When it needed cleaning, she washed it—easily, quickly, economically, safely—with Ivory Flakes. We wish you could see how bright and fresh it is now, after six such launderings!

*(This garment and its owner's letter are on file in the Procter & Gamble office.)*

**FREE**—This package and booklet

A sample package of Ivory Flakes and the beautifully illustrated booklet, "The Care of Lovely Garments," will be sent to you without charge on application to Section 18-CF, Dept. of Home Economics, The Procter & Gamble Co., Cincinnati, O.

*Makes dainty clothes last longer*

# Does Anything Come After Death?

An interview with Harry Emerson Fosdick, D. D.

By Bruce Barton

**W**HEN I worked in a construction camp in Montana I saw a loaded wagon turn over, burying the teamster underneath. We expected to find him dead; but a projecting rock had intervened in his behalf, holding the wagon suspended hardly an inch above his face. After a period in the hospital he recovered, and a few weeks later I rode with him on his wagon past the scene of the accident.

"Pretty close call you had there, Sam," I said to him.

"Yes, *sir*," he answered rather proudly. "Closest call anyone's had on this job, I guess."

"Tell me, Sam," I said; "when you lay there under the wagon, expecting any minute to see that rock give way and let the load down onto you, what did you think about? Did you realize that you were going to die? Were you afraid? Did you have any feeling that in another minute you might be standing in front of Almighty God and explaining your sins? Does a man get any glimpse of another world when he's right on the edge like that?"

"Well no, sir, I can't say I had any such feelings," he answered. "I ain't never thought much about those kind of things. I just lay there lookin' up at that rock, and I seen it weren't a very strong rock. And I says, 'When you slip, old fellow, Sam Hawkins is a dead dog.' And I sort of shut my eyes and I says, 'All right, darn you, slip!'" . . .

In a hospital a cultivated middle-aged man lay dying of pneumonia. It was the

hour of the crisis: the nurse sat at one side holding his hand, as if by the very force of her own will she would keep him from slipping away. The doctor stood at the foot of the bed. The critical instant came; for a minute neither of those tense

over the threshold," I told him afterward. "What did you see on the other side? What did you think or feel?"

"Nothing," he answered. "I had no interest, no desire. I was just terribly tired, and I thought, 'Now I can sleep.'"

"And you didn't care whether you lived again either in this world or another?"

"Not then," he replied. "I care *now*, you can bet. But *then* I was tired of fighting; I was glad it was the end."

## How John Quincy Adams Looked at Death

**"H**ERE'S a story I like to tell," said Doctor Fosdick. "In his eightieth year John Quincy Adams, ex-President of the United States, was walking one day on the streets of Boston, when he met a friend.

"'Good morning,' said the friend; 'and how is John Quincy Adams to-day?'"

"'Thank you,' was the reply. 'John Quincy Adams is well; quite well, I thank you. But the house in which he lives is becoming dilapidated; the tenement is almost uninhabitable! I think John Quincy Adams will have to move out before long; but he *himself* is well, quite well.'"

"That's great, isn't it? You feel like lifting your hat to that doughty old patriot, facing calmly the fact that his body was about to be leveled to the dust, yet going his way undaunted—knowing positively that he was not his body but an immortal Something which had used his body and now was done with it."

watchers could be sure whether he lived or had died. It seemed almost as if his spirit had left the body and, hovering a moment, was hesitating whether to return or to go away. Then the moment passed; the man lived.

"The doctor says you were almost

At the memory of some of those old-fashioned sermons, Doctor Fosdick smiled.

"I don't think it is true by any means that men are most interested in immortality at the moment of death," he said. "Very often men and women meet death like travelers tired out by their journey."

**S**ITTING in Doctor Fosdick's study I told him these two incidents.

"Stories like that don't check up very well with some of the sermons I have heard on immortality," I said to him. "The sermons were based on the assumption that every man has a deep interest in the possibility of eternal life—unexpressed perhaps, but none the less real; and that his interest grows more intense with advancing years, until at the end it becomes a consuming desire. Yet here are two men: one simple and untutored, one a college graduate. They stood on the edge of eternity, and neither of them cared what might be beyond. Either these two men were exceptions to the rule, or there was something wrong with the sermons."

You have seen such travelers arrive in the evening at a place which they have very much desired to visit. The place may be celebrated for the glory of its sunsets, or the beauty of its cathedral, or the splendor of its music. Yesterday the thought of being here thrilled them. But now they are exhausted; they want only to sleep.

"If you ask me to show you a man to whom immortality is a vital thing I would not select the weak, the defeated, or the dying. I would take you to a strong man in the midst of a great work. It is when we are at our best that we feel immortal and want most to be immortal; not when we are tired out and depressed.

"**TYNDALL**, the great scientist, testified to it in a singularly revealing sentence: 'I have noticed through years of self-observation that it is not in hours of clearness and vigor that this doctrine [of materialism] commends itself to my mind,' he wrote; 'for in the presence of stronger and healthier thought it ever dissolves and disappears as offering no solution of the mystery in which we dwell and of which we form a part.'

"No, the deathbed is not the testing ground of immortality. The real testing ground is in the office, the factory, the home—wherever men are giving their very lifeblood to objects that seem to them of lasting value. It is such men, in the midst of their battles, who stop and ask, 'Is this, after all, a real fight or only a sham battle? Will it make any real difference ten years or a hundred years from now whether I win or throw up my hands?'

"I will give you two examples right out of this city," Doctor Fosdick continued: "A young man sat in the chair where you are sitting now. He was going through one of the hardest struggles that any man of his age could possibly face. By a compromise he could win a very large material reward; the cost was merely a little violence to his conscience. He gripped the arms of the chair; the look in his eyes was almost terrible in its earnestness.

"If I could be *sure* of immortality, absolutely *sure*, this thing would be simple!" he exclaimed.

"What did he mean? Simply this: that if his character was really a thing of eternal significance then it was worth the fight, no matter what the cost. But once let him have the suspicion that his life is merely a piece of tissue paper, destined to be crumpled up and tossed away—well, why sew diamonds of virtue onto tissue paper?

"Or, take the other case: The man is one of the business leaders of this city. He had stood that day at the grave of his daughter, and he came here in the evening haggard and worn.

"I don't want any dope," he cried, 'I've had formulæ enough. But, Fosdick, if you have anything real to say about death, in God's name tell it to me, for He knows I need it to-night!'

"These are the types of men to whom immortality is a vital thing," Doctor Fosdick concluded; "the young men, sweaty and bloody with their battles, the middle-aged men who have buried part of their hearts. The craving for

immortality is the craving of our finest and best moments. And when you seek for the best arguments for faith you find them coming, not from the weak who have failed, but from the greatest whom our race has produced—from Jesus and Socrates, from John Fiske and William James and Doctor Osler, from Cromwell and Stonewall Jackson, from Gladstone and Lincoln—strong men."

Whenever I see a preacher depicted on the stage or in the movies I think of Harry Emerson Fosdick, and other preachers of my acquaintance, and become exceedingly wroth. I wish the theatrical magnates would visit Doctor Fosdick, take a good look at him, feel the muscles in his forearms, and then rule off the stage forever the milk-and-water, lap-dog type of preacher in whom they have delighted so long.

Doctor Fosdick is forty-four years old and looks as if he spent every morning in a gymnasium. His church seats fifteen hundred people, but unless you are on hand fifteen minutes before the hour there will be no standing room for you. People, chiefly young people, come from all over the city and form a line which runs up Fifth Avenue and turns into Twelfth Street, waiting to hear—what? Nothing sensational; nothing that will be reported in the papers of the following day; just old-fashioned, straight, helpful thinking from the lips of an "honest to God" real man.

**AFTER** I left his home it struck me as significant that in our two-hour talk about immortality he never once had relied on verbal authority, not even the Bible. He does not ask you to accept anything because it was spoken by a prophet; he takes no shelter behind a verse. You need not soften the expression of your doubts out of deference to his cloth; you can hit out at Harry Emerson Fosdick as hard as you want, and be sure of getting as good as you give. The business leader who visited Doctor Fosdick in his trouble was typical of the kind of men he attracts. I wondered what he had said to him.

"When he came to you from his daughter's grave and told you that he wanted facts, not formulæ or dope, what did you tell him?" I asked. "What are the facts?"

He hesitated for a moment as if not quite sure where to begin, and then called an unexpected witness.

"You remember the discussion on philosophy which Napoleon carried on with a group of scientists," he said. "He listened silently to their arguments and at length, interrupting them crisply, he pointed to the heavens, and exclaimed, 'All that you say may be very true, gentlemen; but tell me who made all that?'

"Now all our thinking about immortality must commence with some such question, it seems to me. Some Power made this world. Creative energy is here. Is it more reasonable to think that this Power is purposeful Intelligence, or to think that it is dynamic dirt going it blind?

"Everywhere that science turns its microscopes or its telescopes it finds the unmistakable evidence of order. Even Huxley, agnostic as he was, admitted

that, and adopted it as the corner stone of all scientific progress.

"As for the strong conviction that the cosmic order is rational," he says, 'and the faith that throughout all duration unbroken order has reigned in the universe, I not only accept it but I am disposed to think it the most important of all truths.'

"That's the starting point, I take it.

"The universe is a real *universe*, not a conglomeration of planets made of different stuff and acting according to diverse laws. The chemical elements of the farthest star whose light passes through our spectrum are the same as the elements which compose our earth and sun. Men discovered the laws of the ellipse and found out afterward that the planets in their courses observe them perfectly. They deduced, from their calculations, that there must be another planet circling our sun, as yet undiscovered; they found the planet, and called it Neptune.

"In other words, the universe is everywhere amenable to thought; it can be understood; it is trustworthy, not capricious. Now what does this assertion mean, if not that the world acts as it might be expected to act if it had been thought through by Mind? When Charles Darwin exclaimed, 'If we consider the whole universe, the mind refuses to look at it as the outcome of chance,' he is saying that the cosmic process is rational and that nothing rational comes by accident.

"Reasonableness is the work of mind. Can a man read sense into a printed page that bears the impress of type which, haphazard, has pied itself? Type must express previous thought before any man can discover thought there. And when Science, searching the universe, finds no exceptions, no mistakes, but everywhere rationality, *thought*, how shall we explain that thought without a Thinker? No atheist scientist has ever answered that question. Great believing scientists have answered it in the words of Kepler who, sweeping the heavens with his telescope, cried, 'O God, I think Thy thoughts after Thee.'

**SO**, OF the two hypotheses, the theory that the universe merely happened seems to me the less reasonable, the harder to believe; and every forward step of Science increases the difficulty of believing it. Being at variance with all our experience it requires the larger measure of credulity. If there be no intelligence behind the universe, then matter has created something greater than itself—for we ourselves are intelligent. How much easier, more rational it is to believe that our personalities are not a product of something *less* than themselves, but parts of a *greater* Personality whom some have called the First Cause, some Mind, and some God.

"That is the first step," Doctor Fosdick continued. "And the second logically follows. If there be a personality behind the universe, what sort of personality is it? Let us think His thoughts after Him for a moment:

"We see this creation moving up from low to higher forms, from a chaos of star dust to an ordered universe of stars and planets; on the earth, from

inorganic to organic, from crystal to vegetable, from vegetable to animal, from animal to human, until at last there comes the consummation of it all—*personality*.

"If this evolving universe has been headed toward anything, it has been headed toward personality. Can we suppose that, having finished this agonizing task, having completed at last His purpose—personality—God would toss it on the scrap heap, as though He did not care for it at all, as though what He had wrought by the agony of a million years was but the caprice of a careless, passing whim?

"Darwin, who gave us our great vision of evolution, revolted from that idea. 'It is an intolerable thought that man and all other sentient beings are doomed to complete annihilation, after such long-continued slow progress!' he exclaimed. Who of us would not echo his exclamation?

"IN INDIA, they tell us, there are fakirs who sit beside pools of water, with piles of colored dust beside them, and with skillful ingenuity drop the dust upon the quiet surface and make for the observer portraits of distinguished characters. Then the breeze ruffles the pool and the picture disappears.

"Is that God's business? He takes the colored dust, drops it on the quiet surface of Life's water, and lo! a Lincoln. Then the breeze blows and all the dust is gone. Or He takes the colored dust and on the surface He makes Christ, with a spirit so exalted that He could surrender this life gladly, with unwavering faith in another. Then, on Golgotha, the breeze; and again all the dust is gone.

"Is God only such an Indian fakir? Does a reasonable person build a violin, with infinite labor gathering the materials and shaping the body, until upon it he can play the compositions of the masters, only to smash it into bits?

"Professor Palmer, writing of the death of his wife, said: 'Though no regrets are proper for the manner of her death, who can contemplate the fact of it and not call the world irrational, if out of deference to a few particles of disordered matter, it excludes so fair a spirit?'

"That, beautifully expressed, is the thought of every man and woman of fine intelligence beside the grave of one whom they love. Is the Personality that has given us the possibility of such thoughts less good, less kind, less reasonable than ourselves?

"The stronger and wiser our reasoning

powers, the more powerfully they revolt against such a thought. Admit, as Science does, that the universe is rational, and how can you escape from God? Assume God, and how shall you escape the assurance of the survival of His choicest creation, human personality?"

"But human personality *seems* to perish," I said. "We seem to *see* it perish. The great Emerson grew dim before he flickered out. He could not remember his own name. He laughed and stammered like a child—like an idiot, worse than a child. Everyone has seen the eyes

man to a harp, and thought his intellectual and moral life the harmony that comes from the vibrating strings. Since, therefore, he essentially is the instrument which gives being to the music, the music cannot outlast the destruction of the harp. But Socrates insisted that man is neither the harp nor the harmony; that he is a harper who plays upon the physical strings, dependent upon them for the quality of the music he produces, but independent of them for his own existence, since the player may leave one instrument and find another.

"What we see in old age is the decay of the *harp*—not the decay of the *harper*. A man riding in a limousine is dependent upon the windows for his impression of the outside world. If the glass is covered by curtains, or besmeared with mud, he cannot see. All that happens to the windows affects his power to receive impressions from outside or to signal his friends. Yet the *man* is not thereby proved to be the *glass*. Nor is it clear that he may not some day leave his limousine, and see all the better because the old mediums are discarded.

"JUST as it requires infinite credulity to believe that the universe was created by chance, so it requires infinite credulity to believe that we are the creations of our brains. The lobes of the brain are made up of physical cells, connected by innumerable avenues of nerve communication. How can these cells be pictured as conspiring to write Hamlet or to compose the sonatas of Beethoven? Has each cell a mental aspect? If each cell has, how can it communicate its mental power, and arrange with its neighbors to contribute theirs, so that together they shall produce an Emancipation Proclamation, or a determination to die on Calvary rather than be untrue?

"The thing is inconceivable. Our brains are not ourselves. Our bodies are not ourselves. They

are merely the instruments which we use. They are the scaffolding erected for the building of the greatest thing in the world—personality. The scaffolding is necessary; without it the building cannot be carried on. But the time comes when the scaffolding is no longer necessary, when it can be torn down, leaving the building, the personality, to stand alone.

Men say to me, 'But I can't imagine a human being existing without a body.' And I answer them; 'If you are going to rule out as impossible all the things that strain your imagination, you are going to fall far (Continued on page 120)

DR. HARRY EMERSON FOSDICK

Doctor Fosdick, of the First Presbyterian Church, New York City, has the greatest "pulling power" of any clergyman in America to-day. Every Sunday his church is crowded with the largest audience in the metropolitan district—people coming from all parts of the city, and from out of town, to listen to his brilliant and human sermons. In addition, publishers have sold nearly one million copies of his books—the most popular of which is "The Meaning of Prayer." Doctor Fosdick was born in Buffalo, New York, forty-four years ago. He is a graduate of Colgate University and of the Union Theological Seminary, New York City, where he is now professor of practical theology

of age grow dim, like the windows of an old house where the tenant has passed away. It would be easier to believe in immortality if men passed on at the height of their powers; but we see their minds die before their bodies are dead."

"We see both minds and bodies decay, yes," Doctor Fosdick answered. "But is the body or the brain the *man*? Or is it merely an instrument which the man has used and has at last worn out? That is one of the oldest questions in the world. It was discussed long ago in an Athenian prison cell where Socrates awaited the poisoned hemlock. Some there compared

# This Man Strongheart, the

"Larry" Trimble, who is one directors, both with human tells about his experiences other four-footed creatures, friends exactly as he wins they fear and

*By Keene*

**A**BOUT a year ago, I was sitting in the projection-room of the Associated First National Pictures, in New York, where a certain film play was being shown to a group of invited guests. As a particularly striking close-up of the hero appeared on the screen there was a murmur of admiration from the spectators.

Then the man sitting next to me whispered: "And, just think! We are looking at a moving-picture star who is guaranteed to be scandal-proof, past, present, and future!"

That was a sweeping statement, but a perfectly safe one. For the picture play was "The Silent Call;" and the star, of unimpeachable character, was Strongheart, the wonderful dog actor. Since then he has taken the leading part in another picture, called "Brawn of the North."

I admit that Strongheart is wonderful. But, like a successful man, he owes a lot to the "other fellow;" and the other fellow in this case is the man behind the dog, his director, Lawrence Trimble.

If you want to learn about *men*, get "Larry" Trimble started talking about dogs; or, in fact, about other animals—wolves, tigers, lions, hedgehogs, skunks! Mr. Trimble knows them all. In animal circles, he probably is referred to as "a good mixer."

Strongheart was a German police dog, who also saw Red Cross service toward the end of the war. Three years ago he was brought to this country, and was purchased by Jane Murfin, the playwright, who wrote "Lilac Time" in collaboration with Jane Cowl, the actress.

Miss Murfin and Mr. Trimble are the producers and owners of the picture

In "The Silent Call," the first motion picture play in which Strongheart was the star actor, the dog and the villain apparently have one of the most thrilling fights ever shown on the screen. Yet the dog was really very fond of the man whom he seemed eager to tear to pieces

plays in which Strongheart is the star.

Just as a dog, he is worth close to fifteen thousand dollars. But as a dog actor, he is almost beyond price. He is not a trick dog. Mr. Trimble does not want him to do mere mechanical tricks, but to *act*—and to act as a dog would. It is a task that demands not only a wonderful dog, but also an extraordinary man.

**T**HIRTY years ago, "Larry" Trimble was a red-headed boy down in Maine, where he was born in the village of Robbinston. In spite of his red hair—and it

was curly red hair, at that—there was one thing he was mortally afraid of. When he was little more than a baby, a neighbor's dog jumped on him. Perhaps it was only in play; but the child was so frightened that as he grew older he would go a mile out of his way to avoid passing any kind of dog.

A fixed terror of that sort in childhood sometimes gives a person a lifelong obsession of fear. But when this red-headed boy found that other children did not run away from dogs, he wondered whether he had the "wrong dope" about these supposed enemies.

You can win human  
animal ones, even when  
hate other men

*Sumner*

Read how Mr. Trimble gained the effects he wanted in these terrifying scenes, yet without endangering the man or undermining the dog's code of behavior. We can apply Larry Trimble's wisdom about animals to our own relations with the human beings whose respect and affection we want to win

He began to study dogs, hoping to figure out *why* they did *what* they did. He tried to put himself in their place and to get their point of view. When he was only ten years old he wrote down an account of his observations and what he had deduced from them. It was really a treatise on animal psychology, although the boy probably never had heard the word. In this way, he cured himself of his fear of dogs; and he also laid the foundation of his understanding of all animals—including those of the human variety.

"You can get along with human be-

ings," he said to me, "just as you get along with animals. If you apply the same methods, you will get the same results.

"IN THE case of an animal, the first thing to be done is to make him realize that there is nothing for him to be afraid of. His strongest instinct is fear. And that is also the strongest instinct of human beings.

"Suppose, for example, that a salesman goes to a business man to get an order. The immediate reaction in the business

man's mind is fear. Oh, yes, it is! If he isn't afraid that the salesman will try to put something over on him, he is afraid he can't afford to give an order, or that the goods are not exactly what he needs, or that he won't get them on the best possible terms, or that he can drive a better bargain with someone else. You can be absolutely certain that there is fear of some sort in his mind.

"THE first thing the salesman should do is precisely what I do with animals. I show them that there is nothing for them to be afraid of. People talk about the 'blood-lust' of wild animals. That is a myth. A normal animal does not attack a human being out of pure maliciousness. If he does attack a man, it is almost always because he is afraid the man will attack *him*. He thinks it is his life against the man's; and if he thinks that, you can't blame him for trying to beat the man to it.

"A few years ago, when I was directing a Shakespearean production in Hollywood, another picture was being made on another part of the 'lot.' I strolled over there one day and found that they were trying to get a scene of the heroine with a tiger lying at her feet. Both the lady and the tiger were on the premises; but these two interested parties had looked each other over, with an evident lack of sympathy which was most discouraging.

"The lady made no bones of admitting that she was afraid of the tiger. And there was no doubt in my mind that the tiger returned the compliment—if it was a compliment. He was afraid of the whole blamed shooting match. He prob-

ably thought it was a shooting match, for they had a lot of men around his enclosure firing blank cartridges, till it sounded like the Battle of the Marne all over again.

"They wanted to paralyze the animal with fright. But the trouble was that fright *doesn't* paralyze an animal, not often. It makes him think he's got to do something to save himself, and to do it darned quick! So he blindly attacks the first thing that comes his way.

"The lady was perfectly right when she flatly refused to do an at-home scene with that tiger. They'd have had to put her on the ribbon counter when he had finished with her. He would have spared nothing but her reputation. Everything else about her would have been torn to shreds. Not because he was blood thirsty; but because he was scared!

"The director turned to me during a lull in the artillery rumpus and remarked that, as I claimed to know something about animals, maybe I thought I could show that tiger where he got off. I said I'd be willing to try, provided he would let me work it out my own way. He agreed with alacrity.

"THE first thing I did was to banish the blank-cartridge brigade absolutely. The tiger's cage was alongside the 'set' of the room where the scene with the lady was to take place; and the door of his cage could be opened, allowing him to go out into this room, which of course was enclosed with strong wire netting. I had them leave his cage door open most of the time, so that he could go in and out as he pleased.

"In this way he had a chance to examine the enclosure and to find that it contained no hidden dangers. He made up his mind that it was a pretty nice place to stroll around in. The people outside seemed to go about their business and to let him go about his, which was all he asked.

Mr. Trimble has fourteen "wolf actors" in his latest picture, "Brawn of the North." He gained their confidence and friendliness so completely that the baby in the upper picture was as safe as if the wolf had been a kitten. His account of how he won the devotion of a supposedly vicious wolf called Lady Silver is a wonderful little story. Above is a splendid "portrait" of Strongheart, who is once more the star actor in "Brawn of the North." He is a German police dog, who also did Red Cross service in the war.

One has only to look at this picture of Mr. Trimble and Strongheart to realize the affection that exists between the man and the dog. Strongheart really belongs to Jane Murfin, who is associated with Mr. Trimble in making the motion pictures featuring this wonderful dog.

"Next, I put a chair just outside the gate, sat down there, and read my paper. But I paid no attention to the tiger, so he decided I had no designs on his peace or safety. The next day, when he came out of his cage, he found me sitting *inside* the enclosure, reading my paper. That was a little different arrangement and he evidently gave it careful consideration, walking back and forth at a little distance from me and waiting to find out what my intentions were. Apparently I had none at all. I was still attending to my own affairs and showed no rude desire to butt into his.

"FINALLY, I got up and started to walk across the room myself. But I made no fuss about it. I did it as if I had the same idea *he* had about walking back and forth. He was doing it for exercise. It seemed to him perfectly natural that this two-legged animal should feel the same desire.

"We met; and we did as animals do! We showed the courtesy of the road by stepping aside and giving each other room as we passed. This is common etiquette in the animal world. It is followed far

more universally than most people know. The tiger and I practiced this mutual courtesy as we continued to promenade back and forth.

"I knew he was saying to himself, in his own way, 'Why, this chap is a quiet, sensible fellow! It's really rather nice to have him around.'

"After a day or two of this companionship, he began to try to tell me that he was willing to be friends if I felt the same way about it. He rubbed up against the table to show his pleasure. Then he came and rubbed against me! I had to brace myself against the wall to keep from being knocked over; but he meant (Continued on page 95)

# Ten Things That Keep Us Apart

*By Dr. Frank Crane*

**W**HETHER you will discover the things that keep us apart and show us how to avoid them will be our greatest benefactor. I do not hope to do this perfectly for you, but I would open up the subject and give a few hints which may enable you to work out the problem for yourself, and, after all, that is the only way it can be worked out.

And I know of no more important subject. For the tragedy of life is drifting apart, just as the triumph of life is coming together.

It is the fashion among superior people to sneer at happy endings, for it is always the favorite pose of intellectual vanity to affect to despise whatever the great mass of people like. But people like happy endings, for the simple reason that it implies that Jack has found his Jill and they have come together. The deepest craving of life is for unity. The whole drive of love is toward union. The imagination finds its satisfaction only in the contemplation of this union. And not all the supercilious reasonings in the world can budge this fundamental instinct.

All the words that connote joy are words that imply the coming together of soul to soul. Love—its high point, its halo and glory, is where the two fond creatures at last are locked in each other's arms. Friendship—the essence of it is living, thinking, feeling together.

There is a great sentence in Goethe's *Wilhelm Meister*:

This world is so waste and empty when we figure but towns and hills and rivers in it; but to know that someone is living on with us even in silence—this makes our earthly ball a peopled garden.

Each club, lodge, church, or other group of people is an effort to trap the blue bird of happiness in the net of unity. The underlying force in the dream of Socialism is the hope that somehow the separating elements in the struggle for bread and butter shall be eliminated, and men shall work together, instead of in competition.

One of the highest reaches of ecstasy is that attained in religious mysticism, and as we read the lives of the Saints, we discover that even that is a form of union—the union of the soul with God.

Up the whole ladder of human relations, therefore, from two children playing in the nursery, to the scheme of Karl Marx or the visions of St. Theresa, the happiness of human beings is but another

name for unity; and their misery is but another name for separation.

It is a very real, present, and insistent problem. Many a wife who reads these lines is puzzling her head and breaking her heart over the fact that she is losing her hold upon her husband. Many a husband is baffled because he sees the gulf widening between him and the wife with whom he once enjoyed perfect oneness. Many parents are dismayed because they find a wall rising fatefully between them and their children.

And the matter has larger proportions. For more than one business concern is on the verge of bankruptcy because of dissension and misunderstanding; churches are being ruined; nations are decaying, and the world itself faces the continual prospect of war, simply because it is so hard for people to work together and the

So in marriage. Our laws provide for divorce only on the ground of great offenses. Yet more marriages are spoiled by petty things than by thumping crimes. Many are the wives who have loyally stood by their husbands even though they knew them to be drunkards, embezzlers, or murderers. They have visited them in prisons and stood weeping at the gallows. But there are a great many more wives who cannot endure their husbands, and yet can give no reason at all; they have simply drifted apart, live in a state of armed hostility, and continue the marriage relation simply because they don't know what else to do. You can stand one big shattering crime and adjust yourself to it, but a constant recurrence of offensive actions continued three hundred and sixty-five days in the year is too much for mortal endurance.

Let us consider some of the things that make for separation.

**I. Egotism:** First, prime and blue-ribboned among the separators is egotism.

Do not imagine that egotism always takes the form of self-complacency, boasting, and self-praise. A much more common form of egotism is self-depreciation.

Egotism has many disguises. It loves masks. One of its commonest and most detestable rôles is that of self-pity. You may be sorry for yourself and have good cause; but rest assured that when you reveal this to another person you have given a blow to his affection. Only mother love is strong enough to endure a whiner.

Another form of egotism is sensitiveness. It is extremely difficult to live

with a person when you are in constant fear of treading on his toes. It is too much to ask of anybody to enjoy constant association with one so thin-skinned that he cannot be touched without causing pain. Sensitiveness is merely a diseased condition of the ego, and results from loving ourselves or thinking of ourselves so much that we turn the most innocent acts into offense.

The egotist is abnormally personal. Everything that happens is conceived by him in terms of himself. The egotistic husband thinks that everything his wife does, whether she sits down or gets up, goes out or comes in, wears a blue dress or a white one, laughs or cries, reads the Bible or the sporting news—whatever she does, is directly aimed at him. If you have that sort of disposition you must expect constantly to (Continued on page 90)

## Are You Guilty—or Not Guilty?

**FAMILIES**, friendships, and even nations, are torn asunder by things (often small) that keep human beings apart.

Dr. Frank Crane names ten of these things.

Go through his list and see if any of them apply to you.

THE EDITOR.

microbes of separation are so vigorous and virulent.

But let us not trouble about the world and its governments. Let us get down to study our own immediate little problems, and perhaps if we can find what the trouble is there it may help us to deal with larger issues.

**THE** things that keep us apart seem to be the little things, not the big ones. Few quarrels can be traced to causes that really are of importance. Historians have shown that the occasion of even great wars is often trivial. And in the schoolyard, when you find Johnny and Willie rolling over in the mud and pounding each other's faces, separate them, and ask them what it is all about. They cannot for the life of them, either one of them, tell you.

Between the lovers in those two short days sprang up a passion as high and extraordinary as their physical beauty

# The Girl Who Was a Mystery To Her Town

A seacoast romance

By Lincoln Colcord

ILLUSTRATIONS BY LESLIE L. BENSON

PEOPLE used to wonder where Rebecca Gilmore's boy got that striking Spanish look. His father was a type of the close-knit New England stock; his mother, who had been Rebecca Grant before her marriage, was a magnificent Saxon beauty with violet eyes and yellow-gold hair. But young Sanford Gilmore seemed like a child of another race, swarthy and slender, a dusky, handsome Iberian.

The beginning of this tale goes back to the time of Rebecca Grant's girlhood, before Captain Daniel Gilmore had appeared on the scene. When the romance at length transpired, years enough had intervened to soften all its aspects. Captain Gilmore had kept his secret well.

Rebecca Grant in those days was something of a mystery to the town. A big, healthy girl, she had drifted through adolescence with a sort of sleepy natural growth. A strange passivity seemed to mark her development; yet no one thought of calling her a stupid girl. On the contrary, her character suggested a calm and deliberate isolation.

Her extreme beauty at an early age had begun to emphasize this quality of somnolent mysteriousness. Never an animated beauty, it invariably excited wonder and admiration; its sheer calm perfection was overwhelming. Her features were purely classical in their mold and immobility. In appearance, she seemed like an embodiment of ancient legend.

During her teens, all the eligible boys in town paid court to her in turn; one after the other, she calmly sent them away. In each case, she received the attention readily and graciously; but when the stage of ardor was reached, and the name of love invoked, she would always draw back as if in alarm.

Rebecca Grant was ripening into womanhood when her father died suddenly in Java on board his vessel. She had grown up hardly knowing the stern and taciturn sailor who came occasionally to visit them; she and her mother had always lived ashore in the Grant homestead, an old-fashioned house on the outskirts of the town. The relation between these two was intimate and precious. Mrs. Grant suffered from a heart trouble that made her a great invalid.

Her mother's health was Rebecca's chief concern when the tragic news of Captain Grant's death arrived from abroad. In the long three months' wait before his effects could be brought home—the period that prolongs the sorrow of a sailor's death—Mrs. Grant had many a serious talk with Rebecca about the future.

"I wish that I could see you happily married, dear, before I have to go," she often said.

"Don't, Mother! You are going to live many years. I suppose I'll marry when I fall in love."

"Yes—if you ever do, Rebecca. You don't seem to fall in love easily."

DANIEL GILMORE had been mate with Captain Grant for ten years, and had taken command of the vessel when the other died. On the homeward passage he had left Rebecca's picture in the desk, where he could see it every day. In view of his years, he had permitted himself a feeling of genuine sentiment toward this fatherless girl, blooming in an exalted beauty that clutched the heart. Professionally, he had stepped into her father's shoes; he must supply the lack in other directions, as far as he was able. A man nearing forty, who never had married, who had no children of his own. . . .

But when he had been in town a few days, bringing Captain Grant's effects to the widow and daughter, he discovered that he had fallen head over heels in love with Rebecca. He was too honest a man not to face the fact. Yet there remained a trace of fatherliness even in his love. He longed to protect her from the world he knew. His devotion was paternally blind and faithful. But when he thought of asking her to marry him, a cold fear stopped his heart.

Captain Gilmore's attentions were a source of deep satisfaction to Rebecca at this time. For her father's sake, she was anxious to be kind to him; he brought her nearer to the man who had gone forever. She urged him to talk of the sea, to tell about her father's life on shipboard; her manner toward him was warm and animated. Little did she dream that this new charm was searing the heart of the middle-aged sailor who drove her about the country, gave her such pleasant days, and was so uniformly dignified and courteous. Little did she realize that her mother, watching the progress of the affair, was lending him all the assistance in her power.

WHEN Captain Gilmore entered the Grant parlor on his last evening in town, Rebecca greeted him warmly, but with a touch of sadness in her voice. Soon afterward Mrs. Grant slipped away upstairs.

"It is such a violent break when a seafaring man leaves for his next voyage," Rebecca was saying as her mother went out. "You have been awfully good to me,

Captain Gilmore." She glanced up with a smile.

Captain Gilmore crossed the room and stood looking down at her. The moment terrified him by its imminence. He took his courage in both hands.

"There need be no break, Rebecca," he said, in a tone that still managed to be fatherly and dignified. "That is, if you feel about it as I feel."

"Oh, I do." She glanced up again brightly; then, as she gazed at him, a look of puzzled anxiety crossed her eyes. "You mean—?" she asked in confusion.

"I mean that I love you, Rebecca. Haven't you guessed it, haven't you seen it every day? I love you with my whole being, and want you for my wife. I am older than you are, Rebecca; but not too old for you. I can offer you a clean heart, at any rate, and a devotion that will never change."

"Oh!" Rebecca leaped to her feet, pressing both hands across her mouth, trying to cut off the cry that had escaped her. Her wide, deep eyes were full of startled pain. She faced him in sudden horror. It had come so unaccountably, out of such a clear sky.

"MY DEAR girl," he said, quick to sense the trouble. "I didn't mean to alarm you. Please sit down. I hoped that you had seen—Don't despise me; it is the highest compliment that I can pay."

"No, no—it isn't that." She sank back in the chair and covered her face. So he had been making love to her all the time! Was there no simple companionship in life? No free and unadulterated intercourse? Was love always lying in wait, like a fever, to spoil natural happiness?

"Forgive me, Rebecca," he went on tenderly. "I see that the thought is new to you. But I'm glad now that I have spoken. Promise me that while I am away, you will give the matter your deepest consideration. I can't ask for more."

"Oh, Captain Gilmore," Rebecca cried brokenly, "you must try to understand. I can't bear to make you unhappy. I admire and respect you so much—I do love you, in another way. But—but I can't marry you."

He smiled unsteadily. "Perhaps your feeling will change with time. I pray to God it may. I sha'n't say good-by to hope until another voyage. Give me a year of grace, my dear."

The year of grace was a year of torment for Rebecca. As soon as Captain Gilmore had gone, she felt the need of her mother's advice; but when she had opened her heart to her, she discovered that she had set new

She turned away, leaning on the branch of a low apple tree. All her strength suddenly seemed to leave her; for an

and strong influences in motion. Not that Mrs. Grant urged her to accept the captain; it was the passive force of a strong hope, unexpressed yet plainly revealed to the daughter's devoted sympathy, which now came into play.

"You mustn't marry him, dear, unless you are sure of yourself. You must do as you have always done."

"That is just it, Mother. I'm wondering about myself. How can I know that I am doing right?"

"There is no rule, Rebecca. Tell me how you really feel toward Captain Gilmore."

"I care for him immensely—but not to marry him. Why, he seems like another father."

"Well, dear, you will have to make your own decision. I wouldn't dare advise, except to warn you against a loveless marriage. Captain Gilmore is as noble a man as you could find. But that isn't everything—and it is nothing without love."

These talks showed Rebecca more plainly than reproach or argument the strength of the hope that had been planted in her mother's heart. Was it possible wisdom and experience were right, and instinct was wrong? Captain

Gilmore was a man among the thousands. With him she would at least be safe; might she not learn to be happy? As the year drew to its close, Rebecca gradually made up her mind to accept him.

**H**E CAME in a flurry of excitement; the ship's business called him back to the city on the next train. He had stolen the day for the sake of an hour with Rebecca. They walked a little way into the orchard.

"I had to see you, dear," he said earnestly. "Is there any hope for me? Have you thought it over?"

"Yes." The answer came involuntarily. She had anticipated a quiet meeting; she had planned exactly what she would say. This hurried, impetuous call had thrown her again into confusion.

"Then tell me—don't be cruel, dear. Tell me if I am to come back to you a little later, and be happy—or never see you again."

She turned away, leaning on the branch of a low apple tree. All her strength suddenly seemed to leave her; for an instant she felt as if she would sink to the ground.

"You must come back . . . and be happy," she breathed at last.

"Thank God!" he cried exultingly. "Now I can go on. And when I do come back, dear, I'll show you a different man."

A moment later he was leaving; Mrs. Grant and Rebecca came to the gate. His kindly face glowed with happiness and devotion.

"Oh, I nearly forgot to mention it," he exclaimed, turning a few steps off. "I have sent for young Rodrigo to go mate with me. He'll probably stop here overnight, and I will write him to call on you. The boy in college that I told you about, Mrs. Grant," he called, as a passing carriage interrupted the conversation.

Rebecca waved her handkerchief. "Who does he mean, Mother?" she asked idly, as they watched him out of sight.

"Some Spanish boy from South America; Captain Gilmore has been educating him. Has he never told you the story?"

"No. He must be more than a boy."

"I have an impression that he is nineteen or twenty."

A week later, as Rebecca came into the house one afternoon, Mrs. Grant met her in the kitchen.

"He is inside," she said gravely, nodding toward the parlor.

instant she felt as if she would sink to the ground. "You must come back . . . and be happy," she breathed at last

"Who—Captain Gilmore?"

"No, the Spaniard."

"Oh!" There was a note of relief in Rebecca's voice; she had been dreading Captain Gilmore's return.

Wrapped in her own thoughts, Mrs. Grant went on into the parlor. For the past week she had been intensely happy over Rebecca's choice. A brief talk with their visitor that afternoon had strangely upset her.

"My daughter has come, Mr. Rodrigo," she announced.

He had leaped to his feet as Mrs. Grant entered the room, and now stood looking past her, where Rebecca paused in the doorway. The light from the south windows lay on the girl as an artist might have arranged it. The vision fairly stifled him; he caught his breath, his dark eyes widened in a gaze of veneration and awe.

As Rebecca came forward, she looked full into this glance of open admiration. The figure that stood before her was another plaything of destiny. Tall and straight, black-haired and olive-skinned, he was a picture of the young Spanish aristocrat, a flower of the ancient high-bred race of Castile. He was fated from

that moment to stand in her heart, bringing to life its magic and meaning, explaining with great simplicity her own years of waiting, her strangeness, her instinctive hesitation, her fine consistency, and fulfilling in all its truth and dignity her innocent dream of love.

"Rebecca!" said Mrs. Grant sharply. "This is Mr. Manuel Rodrigo."

THEY advanced slowly, with eyes still fixed on each other, as if mutually drinking in the revelation that had appeared before them. The air of the room was tense with a new force suddenly loosed, a force that dominated human conduct, that could not be turned or stayed. Rebecca took Rodrigo's hand.

"I am glad you have come," she said frankly, speaking the thought that lay in her heart and seemed to possess her whole being. The touch of his hand in hers swept through her veins in a warm tide that slowly mounted to her cheeks.

"Thank you." His voice trembled slightly. She had been waiting to hear it; it seemed like a voice she had always known. "Your mother has kindly asked me to stay to supper," he went on. "Cap-

tain Gilmore assured me that I would find a welcome."

They sat stiffly about the parlor, talking of ordinary matters. Soon supper was ready. Mrs. Grant had to sustain the conversation. Hard as they tried, the young couple could not be natural after the shock that they had received.

The dishes done, Rebecca followed her mother to the parlor. She could not understand herself. She was being carried away by a great unknown current. She wanted to be alone with Rodrigo, to escape the oppression of artificial behavior, to hear him speak freely, to reach the bottom of this wonderful experience.

Then a moment came when she suddenly felt unable to restrain the fierce desire for freedom that was driving her mad.

"I must do an errand, Mother," she said, rising abruptly. "Mr. Rodrigo, would you like to go with me?"

"With pleasure." He sprang to his feet. Mrs. Grant followed them to the hall. "Why, Rebecca, it is nearly nine o'clock. What errand?"

"I'll only be gone a short while, dear. Mr. Rodrigo will see that I am safe."

She did not (Continued on page 68)

# You Can Always Cash In On Your Experience

"What you have learned in one business can be applied in almost any other business," says the subject of this article, who has operated successfully in twenty different lines, from coal mining to New York real estate

An Interview with August Heckscher

*Reported by George Mortimer*

**F**IFTY-ODD years of active business have taught me, above all, this:

*"One kind of business does not differ much from any other kind.*

*Any man who has ambition, who is willing to work, and who will bear in mind that two plus two always equals four, can learn to manage any sort of a business that does not involve technical knowledge. He can pass from one kind of business to a very different kind. The knowledge he acquired in the first business will probably be seventy per cent of all that he needs in the second.*

"A very considerable number of failures are due to thinking that nothing can be learned from another business unless it be in exactly the same field as your own. A great number of personal failures are due to getting in the rut of imagining that because you have, say, sold woollens for ten or twenty years, woollens are the only thing you know anything about, and that if no one wants you to sell woollens then there is nothing for you to do. The truth is otherwise. The experience gained in one sort of business will answer in practically every other sort. The additional knowledge that is necessary can be picked up in a very little while. I know this absolutely from my own experience.

"I came to this country with three years of training in an exporting house. My first job was helping the owner of a coal mine. Before I had drawn my first pay the owner fell ill, and for a long time I had to manage that mine on my own responsibility. It was the first coal mine I had ever seen. After fourteen years of coal mining I went into the zinc business. Since then I have been in all kinds of mining, in steel making, and altogether probably in twenty different lines, including New York real estate. The principles I learned in the exporting house so many years ago made it comparatively easy to grasp coal mining. The cumulative

experience of these various enterprises took the difficulty out of learning to find my way about in New York real estate.

"Do not think for a moment that I am minimizing the amount of work required. One cannot simply walk into a new establishment and start to give orders. That is not managing—that is making a fool of one's self. Neither do I advocate dropping a successful business to take up a new one, unless the first business is in such a condition that it may be sold profitably or can be put into capable hands. I do not happen to be one of those men who can direct an enterprise without

days against taking on a new variety of business when an exceptional opportunity offers itself. There is nothing more fascinating to me than plunging into a new enterprise, finding out what has made other men in the same field successful or what has made them fail, and then going ahead."

August Heckscher has to be reckoned among the first fifty of the country's successful business men. When he talks about common principles running through every phase of commercial enterprise he is speaking on a subject that he knows. He landed in this country fifty-four years ago—not as a penniless immigrant, but to all intents and purposes he might as well have been a penniless immigrant, for he had with him only enough money to pay his board until he could learn the language and get a job. He had told his mother that this money was the only money he was ever going to ask from the family, that he would make or break on it. To-day he is a very wealthy man, but he is one of our least known millionaires.

Not long ago there was opened on upper Fifth Avenue a splendid building, which is finer and more complete in equipment than any private school in the world. No college has a building that can match it. It was put there by the Heckscher Foundation and it cost three million dollars.

The whole roof is a playground. The swimming pool is the largest in the country. It has a theatre decorated by Willie Pogany and directed by David Belasco. It is an institution, but it is fitted out as a club. The club members are mostly elected by the courts.

Children are the first interest of August Heckscher and his wife. They thought that homeless children, children committed by the courts for one reason or another—the most unpromising children, the kind that no one wants to adopt—ought (Continued on page 206)

## Around Forty A Man's Reputation Begins to Count Solidly

**"AROUND forty,"** says Mr. Heckscher, "is the time when reputation begins to count most solidly. Between thirty and forty a man builds his reputation for integrity, but it is seldom until he is past forty that he begins, so to speak, to cash in on his reputation."

knowing its every detail. I very much doubt if any enterprise can be managed successfully by anyone who does not keep in close touch with detail. The man who has the title of manager may not be in close touch. If so, he has a title, but someone else is doing the managing.

"The point I want to make is that business experience, no matter what its kind, never goes for nothing unless one wills it that way. Experience can always be made to count. Any limitations are self-imposed. So strongly do I feel this that I really have to guard myself in these

### *August Heckscher*

ARRIVING in this country fifty-four years ago, an immigrant, Mr. Heckscher has become one of the big business men of America. His first job was helping the owner of a coal mine—who became ill and left the management of the mine to his young assistant for two years. Since that time Mr. Heckscher has been connected with at least twenty successful business enterprises. To-day he is president of the Empire

Trust Company, the Lawyers' Title and Trust Company, of New York, is guiding genius of several other enterprises, and one of the important real-estate operators of the city. He spent ten years as manager of the New Jersey Zinc Company. Recently he made a three-million-dollar gift of the Heckscher Foundation Building, in Fifth Avenue; it receives homeless children committed to it by the courts.

### *Sidney Smith*

**MR. SMITH** is one of the most conspicuously successful cartoonists in America. Recently he signed a contract with the Chicago "Tribune" that yields him more than \$100,000 a year. His life has been full of hard knocks and rough-and-ready human associations. Mr. Smith was born in Bloomington, Illinois. As a boy he sold a few cartoons to the Bloomington "Sunday Eye." Failing to land a regular job on any newspaper

he decided to go on a lecture tour, in the course of which he would do chalk portraits for his audiences. His haphazard jaunts around the country brought in very little money.

Mr. Smith's first regular job was in the art department of an Indianapolis newspaper. After working on a number of other dailies, he became connected with the Pittsburgh "Press," where he made his first big hit.

# Sidney Smith and His "Gumps"

The romantic story of a cartoonist who pursued his hobby through dozens of reverses and to-day is the entertainer of millions of newspaper readers—His ideas of popular humor—  
How the "Gumps" developed

By Neil M. Clark

**A**BOUT the year 1890 a teacher in the public schools of Bloomington, Illinois, caught one of her boys drawing pictures when he was supposed to be studying his lessons. It was not the first offense. She took him by the coat collar, and marched him to the door.

"Young man," she said, "you go home. You're not fit for anything but a cartoonist!"

He went, bawling at the top of his voice. He did not know what a cartoonist was, but he believed he had been mortally insulted!

The other day the Board of Trade in Minneapolis suspended operations for several minutes during the busiest part of the day in order to give the brokers a chance to read the early edition of an afternoon paper. The newsboys were excitedly shouting:

"Uncle Bim—no marriage!"

The brokers turned unanimously to the page on which appeared the comic serial pictures depicting the adventures of the Gump family, including the fabulously rich uncle from Australia who had been so unfortunate as to get himself promised to marry the unscrupulous Widow Zander. Sales on the Exchange could wait, the brokers evidently decided, but to a man they wanted to know without delay what had happened to Uncle Bim on the day scheduled for his wedding!

The lad who was sent home from school for drawing pictures and the artist who created the Gumps, whose family adventures are followed daily by millions of people all over the country, were one and the same—Sidney Smith.

Almost everybody knows the Gumps. But who and what is their creator, Smith? That was what I went to learn the other day. I found him on an upper floor in the offices of the Chicago "Tribune." Bit by bit, with a fresh series of unfinished adventures of the Gumps on the drawing table in front of him, he told

me about himself. "I always wanted to draw," he said. "I never wanted to do anything else."

"My father wanted me to be a dentist. But to be a dentist I had to study, and school and I never agreed; they didn't teach drawing where I went. I was about seventeen, I think, when I saw the inside of a schoolroom for the last time. I was

how to stretch a piece of muslin and glaze it for a canvas. I set to work on a picture as big as a door. I called it 'The Mother and Child.'

"I used house paint and house brushes, and some of the paint I slapped on with stones and a knife. That was all I had to work with. When the picture was done, I thought it was pretty good. I got a

storekeeper, a friend of mine, to display it in his show window. He put lights all around to illuminate it, and to me it looked great. I put a sign on it:

FOR SALE—\$500.

"That was more money than anybody had, but I didn't mind. I would have been glad to take ten dollars. However, there were a lot of ladies in town who set themselves up to know the best things. They immediately regarded it as their duty to constitute themselves critics of my picture. I soon discovered, according to them, that it was all wrong. There wasn't a thing about it that was right or commendable.

"I didn't want them to get ahead of me, so the following day I put another sign in front of the picture:

SOLD!

"The canvas stayed on display for a few days longer. Then the storekeeper put it away in his back room. So far as I know, it's still there.

"From the start, I was crazy to draw pictures and see how they would look reproduced in the papers. I made my first sales to the Sunday 'Eye,' a Bloomington paper, since defunct. Whenever the paper had any of my drawings in it I used to sit on the doorstep

waiting for it to arrive, Sunday mornings. After I had feasted my eyes on my pictures in print for a while, I would dress up—I had a new suit at the time—and go down to the Public Square to strut all day and talk about 'the paper!'

"I tried to get a regular job, but nobody would have me. So I decided, for lack of anything better, to go on a lecture tour! My only equipment was chalk, a

## We Are the Gumps

**S**IDNEY SMITH gets a laugh out of the millions because he shows us folks as they are. We can see ourselves and our relatives and friends in his comic pictures. He walks right into our homes and caricatures us. In other words, we *are* the Gumps.

When it comes to selling a product on a large scale your success will depend on how well you understand the millions. Henry Ford won out because he made a product that matched with the desires of the ordinary man. He didn't make a chariot that nobody wanted to ride in.

The moral is: *Know folks*, if you want to sell something to them. Study them honestly. Don't try to convince yourself that they are different from what they are. Don't try to regulate them or change them. Don't argue with them. Don't quarrel with them. First find out what they are. That is the first step—to *know*—even if your final aim is to turn into a reformer and try to make folks better.

THE EDITOR.

at Wesleyan, in Bloomington, at the time, but I hadn't been there long. A bunch of us wanted to start something. We all agreed to go to class in our football suits. I was the only one that showed up! They sent me home, and I never went back.

"I had an idea that I could paint. I had nothing to paint with or on, but a fellow named Matthewson showed me

Here is the famous Gump family, whose adventures are followed every day by millions of Americans. One hundred and six daily newspapers and sixty Sunday editions feature these cartoons by Sidney Smith. Sometimes when a Gump family crisis is imminent, the cartoons are carried on the front page with streamer headlines. At the left is Mrs. Minerva Gump, looking over the shoulder of her husband, Andy Gump, around whom the action usually revolves. Next is Uncle Bim Gump, the fabulously rich uncle from Australia. Just now he is engaged in earnest conversation with Chester, the Gump's young and mischievous son and heir. The pictures on the wall represent other characters in the Gump family cartoons: the Widow Zander, the Old-Timer, Carlos, Short-End, and the mother-in-law.

blackboard, and nerve—chiefly nerve, no money. However, I traveled from one end of the country to the other that way and got by, but I'll have to admit I rode on freight trains oftener than any other kind.

"I remember once coming into a little town called Hillsboro, where I was scheduled to give a chalk talk. I arrived on a hand car. I was dirty, and my clothes were torn. What was more, there was no prospect of getting cleaned or mended before my appearance. It happened to be winter and the talk was to be in a church.

"I climbed on a fence where I could see through the church windows. Men and women were filing in, one by one, all dressed up. It struck me so funny that they were paying a quarter apiece to see me that I fell off the fence into a snow bank *three times*, I laughed so hard!

"I went all over Texas, among other states, and I never supposed towns could be so far apart as they were there. One night I was on a freight train which stopped at a little place for water. I got off to stretch my legs. There was nobody around but a brakeman and myself. He saw me, and of course he knew I had no business there.

"However, I thought I'd be pleasant, so I spoke to him as cheerfully as I could.

"Can you tell me," I said, "how far it is to the next town?"

"It's ten miles," he replied, "by train. It's twenty miles if you walk. *You walk!*"

"I did. And it seemed *ninety miles!*

"Indeed, the walking was so hard that whenever I rode I dug deep and stayed

down. One night I was buried in a coal car. A couple of brakemen came along and sat down on the end of the car for a chat. One of them had a lantern, and he was mighty careless with it. He kept setting it down in different places near me, and finally he set it on my head. I tried to stay hid and yet get out from under the lantern, but the brakeman saw me.

"What are *you* doing here?" he demanded.

I was black from coal dust and half choked, but I managed to say in a weak voice:

"I'm giving lectures."

"Hey, Bill," roared the brakeman to his pal, "look what's givin' lectures!"

"AS a lecturer I often felt about myself just as that brakeman did! Once, I remember, I got into a town where I had arranged to rent the opera house for the evening. I had distributed handbills, but I didn't have any money. I did not know how much the opera house would cost, but I depended on the receipts of the evening to cover that and leave something over for me.

"However, shortly before the time set for the entertainment, it started to rain. It poured. I knew the rain would probably keep a good many people away. I wanted to have some idea in advance how I was likely to come out, so I went across the street and stood under an awning where I could view the entrance. A grand total of six people went into the opera house!

"I knew those six would never pay my expenses, so I found the nearest dark alley and left town the quickest way.

"At another town, I remember, I had just twenty-five cents in my pocket. I was scheduled to make a talk at the next village down the railroad. I knew that twenty-five cents would not begin to pay my fare on the train, so I decided to take a chance on a freight. I spent my quarter for a telegram, telling the folks who were expecting me that I would be there; then I climbed on a freight.

"But that train did not figure on my convenience. It put on steam and sailed past my village at fifty miles an hour! I caught a glimpse of a lot of boys and girls all starched and clean, marching to the schoolhouse for the lecture with my dimes wrapped in their handkerchiefs. I've often wondered what they thought of the fellow who was going to make a chalk talk and never showed up!

"A lot of queer things happened to me in the year and more that I went about the country that way. Also a lot of worth-while things. I wouldn't go through the experience again for a good deal of money; but at the same time I wouldn't take a mint of money for it. It taught me a lot. I had to keep on practicing something new all the time. I saw life in a thousand aspects that have been of help to me since. And I had to get used to drawing under all sorts of conditions. That was worth something later on the newspapers where, as a chap who wanted to be a cartoonist once said:

"You don't *draw* cartoons; you *write* 'em!"

"While I was traveling around I was doing a weekly page for a Boston paper. They sent me my (Continued on page 72)

# The New Baby In Our House

By Edgar A. Guest

**W**E HAVE a new baby in the home. She is just nine weeks old as I write this paragraph. It has been ten years since there has been a baby in the house, and ten years, I find, make many changes. What they will be doing for the good of the little ones when I become a grandfather I don't know; but I do know I shall not be able to stand it. Our baby's grandmothers are horrified at the way we are raising our daughter. They shake their heads at us, and make queer sounds through their teeth to indicate displeasure, and they tell each other behind our backs they suppose we know what we are doing, but they never did that to us when we were little.

We never did it to Bud, either. Ten years ago this evening I was walking the floor with him and jolting him up and down to shake the colic out of him and sleep into him. As a pedestrian I was a success, but as a nurse I was not so much.

The baby is crying now. She has been crying for ten minutes. I come from old-fashioned stock, and my whole nature cries out that something ought to be done about it. I want to do something, too. It is my idea that I should go right up there now and take her in my arms and pat her back, and lift her onto my shoulder, with her little head dangling in my neck, and shake her up and down in the manner a bartender once mixed drinks, and sing (in a sympathetic if not tuneful voice) something soft and soothing to her. I have suggested doing that, too, on several occasions, but the whole outfit, exclusive of the grandmothers, is against me.

Her mother stands on guard at the foot of the stairs.

"You shall not pass," she says decisively. "She is not to be picked up."

"But don't you hear her crying?" I exclaim.

"Yes, but that is not a cry of pain. She is perfectly all right. She will settle down in a few minutes."

"But," I insist again, "she may injure herself."

"She will not injure herself. Babies never hurt themselves by crying. That is a mistaken notion. She is merely

strengthening her lungs. She is getting her exercise."

"I wish she would exercise when I am at the office," I reply somewhat sullenly. "It sounds to me now as though she were crying for me to go up there and comfort her. . . . There now, don't you hear her—she has hiccoughs?"

"That is nothing to worry about. They will subside."

It is no use. The mother, the doctor, the nurse, the neighbors on our right and left, the articles in all the magazines on

too. This period of training and discipline has now been going on for several weeks, and I will say that the baby is taking to it more kindly and more readily than I.

Ten years is too long a stretch between babies. One forgets too much in that period, and science discovers too much. Mother and I agree on that point. All that I recall that is identical in the two cases took place the night of their arrival. Little Janet came on July 12th and Bud was born on July 7th. Thus they both came in the summer time and were received into this world by the same loving hands. I suffered precisely the same pangs of fright; paced the floor in the same nervous way; listened as eagerly for news of the proceedings up-stairs; endeavored to catch consoling conversation from the lips of the doctor and the nurse, and waited anxiously to hear that first cry of greeting from the little newcomer—the sweetest sound, by the way, that ever falls on mortal ears.

The same good people were in attendance. Aunt Irene Wilson, who was with Mother when Buddy was born, happened in that evening by chance and remained to assist. It is too bad that there isn't an Aunt Irene in every family. Quiet and gentle and brave and devoted, she radiates confidence and comfort and faith that everything will be all right. The doctor afterward paid her this tribute:

"I wish I had someone just like her to assist in every case."

But Irene stayed upstairs with Mother, and I had to be looked after. My reputation among the family is that I get sicker than the patient. I can stand

things myself, but I can't stand to see others suffer. The minute anything goes wrong with Mother or Bud, or with the baby now, my nose gets icy cold, and my cheeks lose their color, and my appetite deserts me, and I run up a temperature and altogether I get into a bad way.

So when the word was passed that events were happening at our house, Mrs. Guest's sister, Florence, hurried over to look after me. She would use her charming influence to keep my mind occupied. I was her patient. I have a vague recollection (Continued on page 78)

## What "Bud" First Thought Of His New Sister

**"WE KEPT** our secret from Bud almost to the last," says Mr. Guest. "Then one evening I told him."

"Did you order a boy?" he exclaimed gleefully.

"Well, Bud," I said, "of course another little boy would be nice, but you can't always have what you order. Suppose they should send us a little girl?"

"I hope they don't," he replied. "What I want is a brother."

"They brought Bud back to the house about ten o'clock that night. I met him at the automobile."

"Bud," said I, "you have a wonderful baby sister up-stairs."

"A sister!" he exclaimed. "Aw, Heck! Why didn't they send a brother?"

"Five minutes later he had kissed his mother and seen his new sister, and he wouldn't have exchanged her for a dozen boys."

motherhood and all the advances of modern science are against me. What I learned as a father ten years ago must now be unlearned. I am being taught new tricks.

What I once thought perfectly good "fathering" has been thrown out as poor business. The promptings of a tender heart are not scientific. I may be that baby's father, but I am not to have anything to say regarding her infancy. She is to be trained in the right way, and while that is being done if her father gets into the picture he will be trained,

# The Kidnapping Of Prunes Alaska

The story of a stolen bear

By R. de S. Hart

ILLUSTRATIONS BY TONY SARG

THE "Alaska" had finally beaten the "Samoa" at football. Sister ships they were, huge iron-lunged monsters of death and destruction, and now, after two long years of defeat and humiliation, the "Alaska" had won.

"Will we celebrate?" said Turret-captain Brooks of the victors. "Will we? We'll put on a parade the likes of which this burg never seen!"

They did. The moment the head of that parade struck the first corner of the down-town district Norfolk realized that here was a parade that was a parade.

At the head of the rioting, raving throng that swept down the street was a blue-clad clamor. Once it had been the "Alaska's" band, proud model of the Fleet. Now it was anything but a model! Collars agape, instruments festooned with paper streamers, hats on backward, sideways, aslant—anyway but the one way uniform regulations prescribe. The bandsmen's one thought was to produce the maximum amount of din in a minimum amount of time. Behind them yelped, yowled, and yodeled eight hundred of the wildest sailormen that ever scrubbed a deck.

The Norfolk chief of police, drawn to the spot by the uproar, gave one look and breathed a fervent prayer. "I hope to heaven the 'Samoa' bunch stays good and plenty away from here till this is finished!

If they run against each other down here—Good night!"

But not all of Norfolk was in accord with the chief's anxiety. Jewelry-shop keepers and near-beer venders smiled joyously, and prepared for a rushing business, and others, visitors mostly, viewed the parade with amazed, delighted eyes.

"Hi, Frenchy!" ejaculated one huge red-faced man who stood among the spectators on the sidewalk. "Just look at the sailors!"

His companion, a dark, dapper-looking little man, sniffed disdainfully, however, and endeavored to press ahead. "We haven't got any time to be looking at sailors. If we're going to arrange for that straw and stuff, we got to hustle. Come on!"

But the big man lingered. "Hold on, let's watch 'em a minute. The traffic's jammed at the corner anyway and we can't get through till they pass." His eyes were sweeping the line of parade interestedly. Suddenly he grabbed the little man by the arm. "Now I guess you'll be willing to wait. Look, Frenchy. It's a bear!"

He had caught sight of Prunes Alaska, loafing and ambling along in the place of honor just behind the band.

Not only did Prunes have the place of honor but he was the only occupant of that place, outside of his keeper, Bugler

Kearny. Any ordinary mascot can bring victory to the better of two teams. But Prunes Alaska had just conjured his ship victorious through a contest where the betting odds had been five and six to one against her. Now he and his diminutive keeper occupied to themselves the whole of a platoon-sized space between the band and the cheering sailors behind. Uncurbed by chain or rope, he rolled comically on, to the great delight of all the children along the route. The little dapper spectator, however, was unimpressed.

"Humph! There ain't any more real bears—not since Josephine died. These is just imitations!"

"You always did think too much of that Josephine bear," grunted the big man. "You might 'a' known the minute you get to thinking too much of an animal it's gonter die. Just the same, I think this one is mighty cunning. Look at him!"

OBSTRUCTED by the traffic jam ahead the band had halted. Taking advantage of the pause between selections the bandsmen began to drain the moisture from their wind instruments. The fat bass drummer eased his drum to the pavement. Bugler Kearny seized the opportunity to exhibit his pet. He turned around and assumed a commanding attitude.

"Halt!"

Prunes Alaska came to a lazy lolling halt. Red tongue hanging out, he squatted and began to inspect the bystanders good-naturedly.

"Attention!"

The bear sat obediently up on his haunches. His shaggy fore arms came up to the horizontal. But his tongue still hung out, his eyes still roved, and his head still retained its funny cock to the side.

The bugler eyed him disapprovingly. "Trim ship!" he ordered.

Prunes brought his shaggy head to a trim horizontal. His tongue still protruded from his lips.

"Close yer hatch!" commanded the bugler.

In came the red tongue, very reluctantly.

"And now feather yer ears!"

At this outlandish order the cub moved his stumpy ears back with an absurd little wiggle that sent the surrounding sailors and seafaring spectators off into howls of laughter. The little bugler, however, did not even smile.

"You look better now," he decided after a grave inspection. "Now we're going to have landing-force drill. You're a buck private in the rear rank, Prunes. Here's your gun—grab!"

THE bright bugle beneath the bugler's arm passed into the brown fore arms of the erect Prunes.

"Per-r-r-r ar-rumps! . . . Shoulder-r-r ar-rumps! . . . Slo-o-o-pe ar-rumps!—Order-r-r ar-rumps!"

With each command the cub went through some weird imitation of the manual of arms, rocking gravely on his haunches, while the crowd shrieked with laughter.

"Per-r-r-r ar-rumps! . . .  
Shoulder-r-r ar-rumps! . . .  
Slo-o-o-pe ar-rumps!—  
Order-r-r ar-rumps!"

The red-faced man on the sidewalk likewise laughed his appreciation. "Some bear, even if you didn't have nothing to do with training him, hey, Frenchy? Huh! What's he gonter do now?"

The bugler had retrieved his instrument from the brown paws. "Now, Prunes," he announced, "you ain't no gob no longer. You're a ship! A ship in formation and the admiral's on the bridge! So you got to make it snappy! Now for the maneuvers. . . Full speed ahead, both engines!"

At the word "ship," the cub had descended to all-fours. At the command, "Full speed ahead!" he dug his toes into the paving and surged forward. So quickly did he lunge and so near to the bass drum was he that he was almost into it before the bugler could shout again.

"Ship's right!"

So precipitately that he almost threw his chubby brown body off balance,

observed the red-faced man approvingly. "If he ain't as good as Josephine he comes pretty close to it."

A huge figure broke out from the crowding sailors in the rear. By the red band at his shoulder he was a member of the "Alaska's" "black-gang."

"Lemme try him," he begged. "Lemme try him!" He placed his huge hands on the cub's neck. "Full speed ahead, Prunes! Full speed ahead! Come on, guy, let's make that fruit stand across the way there!" As the animal gave no signs of moving, the fireman shifted his hold. He grabbed the bear's hind quarters and endeavored to force him ahead. "Hi up, Prunes! Full speed ahead!"

Prunes responded by stiffening his fore legs and squatting closer to the pavement. His head turned inquiringly around at the fireman, and then forward to the bugler again.

Bugler Kearny laughed. "Don't you mind him, Prunes; he's only a coal passer! And what do coal passers know about navigation? Full-speed astern, Prunes, before he gets you on the rocks!"

THIS time Prunes stirred. Digging his paws into the pavement he endeavored to move backward. The fireman was endeavoring equally hard to shove him ahead. Suddenly the man's shoe soles skidded on the paving; he slipped flat onto his face. Prunes promptly backed over and across him, while the crowd roared and ridiculed.

"Say—that bear is smart!" chuckled the red-faced man on the sidewalk. "Huh, Frenchy?" He turned to his smaller companion. Then a startled note sprang into his voice. "What's the matter with you, guy?"

Gone was the dapper man's lethargy. His eyes gleamed, his lips mumbled low fervent phrases. "Did you see him—did you see him—! A real bear—a real bear again! With a little training I could—By Gosh, I will!"

Before the big man could prevent, he had lunged forward through the thin edge of the crowd. He ran wildly across the open space toward Bugler Kearny.

"Sailor! How much will you take for that bear—hey?"

Bugler Kearny (Continued on page 138)

"Wouldn't make no difference if you was the President hisself! Nobody can't take Prunes off the 'Alaska'!"

Prunes swerved to the right. He grunted at the effort to retain his equilibrium. The spectators cheered and roared.

"Ship's left about! . . . Stop both engines!"

With a likeness to a rolling, pitching boat Prunes puffed to a standstill. His mouth sagged open and his irrepressible tongue popped out again as he surveyed the audience jauntily.

"That bear ain't any fool, I'll say that!"

# What I Owe My Father

**T**O OTHER people, my father must seem a very simple and unpretentious figure. He is neither rich nor famous. He never made much money. He never did anything spectacular. So far as I can recall, he never held any public office, except when he was elected alderman for one term! I can't imagine how that happened, for he hasn't a grain of the politician in his whole make up.

Yet if my father had made a hundred million dollars, had been elected President of the United States, and had become the most celebrated man of his time, he might have been worth less to me than he is, just as himself.

Not long ago I went back home to celebrate his ninety-first birthday. And there was something *real* to celebrate, something more than the mere fact that he has reached a ripe old age.

Part of my debt to him is this inheritance of health and a sound body; an inheritance which, if I use it wisely, promises me a long life in my turn. But that is not all. My father hasn't simply grown old! He has shown me, by his example, how to keep on growing in *other* ways while growing old.

My debt to him began further back than I can remember, before I could even walk or talk. I don't mean the obvious debt of food and clothing and a roof over my head. Those are things which practically all of us have owed to our fathers for a more or less protracted period. And small thanks most fathers get for them! Moreover, if the time comes when this debt can be repaid in kind—food, clothing, and a roof over *their* heads—how many of us feel that it really is a debt?

However, another kind of debt to my father had its origin also back there in my earliest childhood; for it was then that he began to teach me a very rare and wonderful thing—the delight and satisfaction of *using my mind*. When I was only a baby he taught me the rudiments of thinking.

I suppose there are other fathers who do this with their children, but I never have happened to see one doing it as my father did. He used to take me in his arms and carry me around, talking to me quietly, softly, sometimes even in whispers, which, for some reason, always seems to fascinate a child. And his talk was not mere rambling chatter! He pointed out things, *explained* them, and *asked me questions* about them.

He did this long before I could understand his explanations or could even try to answer his questions. But the effect was to stimulate me to think about things. As far back as I can remember he was always trying to rouse my interest in the *reason* for everything we came across, always trying to make me find out the *how* and the *why* of whatever I saw.

I cannot possibly overestimate the value of this part of my debt to him. Sometimes, when I watch other fathers with their children, I have an overwhelming sense of gratitude to my own father. If I went to him with a question, I never got the perfunctory, or even impatient reply so many men give to children. He not only gave me some fact, or facts, that added to my store of knowledge but he helped me to think things out for myself. And he did it with infinite patience, with unvarying gentleness.

If I ran to him with a pebble, or a flower, or an insect that I had picked up, he never dismissed me with a careless, "Oh yes! isn't that nice!" An absolutely stupid thing to say, but the one which most parents do say under similar circumstances. He always told me *something interesting* about it. He would ask me questions and try to get me to figure out the answers.

In this way, he taught me two wonderful habits: the habit of looking with my mind, as well as with my eyes, at the world about me; and the habit of *using* my mind to understand what I saw.

As I said before, if he had given me millions of dollars it would have been dust and ashes compared with his gift to me of an *intelligent curiosity about life*, an appreciation of the marvels among which so many human beings walk as if they were blind and deaf. If I owed him nothing more than that he still would be my Great Benefactor.

**H**E TAUGHT me also to look for what is good and beautiful. Almost the first word I learned to speak was, "Pretty." He had a way of saying it that always appealed to me. I can hear it plainly in my memory even now: "That's *pretty*, isn't it?" He says it to this day. That is one of the reasons why we "celebrate" the fact that he is ninety-one years old; he is still looking for, and finding, the beauty of life.

I owe a great deal to him because he always treated me with respect. That simple sentence means more than I can express. I know of no surer way to breed *self-respect* in a person than to treat him *with respect*. When my father did that the inevitable reaction in me was the desire to *deserve* respect.

You must not think that I realized all these things when I was a child. Of course I did not! I neither understood nor appreciated that I had a wonderful father. That came later. One of the things I am most thankful for is that it came before it was too late for me to let him know. So many of us find out our debt only when it is no longer possible to acknowledge it—not to the one to whom the acknowledgment would mean so much.

Another thing I owe to my father is an absolutely untarnished name. There are men who achieve fame which itself is in-

famous. Or a man may gain distinction for some worth-while achievement, and yet there may be dark corners in his life that cannot stand the searchlight.

I would rather be conscious of my father's absolute integrity, in every relation of life, than to see his statue in The Hall of Fame, if I knew that his honor was not unimpeachable.

He taught me to be ashamed of owing money to anybody. A few years ago I thought it would be a matter of convenience to have a charge account with certain business firms. I arranged the matter—but I never have charged a single purchase to those accounts! Don't misunderstand me. I think a charge account is a matter of convenience and a perfectly legitimate thing. I am simply telling you that the habit of paying at once for anything I buy is so ingrained in me, because of my early teaching, that I can't seem to do anything else.

**M**Y FATHER'S integrity was more than a mere matter of paying money. One reason why he never made much money himself was that he did not charge enough for his own services. He was a professional man and a very able one. But he did not think it was "right" to charge large fees.

Here again I don't want to be misunderstood. I think he was mistaken. He did not charge a fair price, considering the quality of his service. But I would rather go back and have only the meager comforts of my early home life, yet know that my father erred on the side of what he felt was just and right, than to have him err on the other side.

The point is not what he did, but his motive in what he did. We hadn't as much money as we really ought to have had. But that doesn't count now, compared with my pride in my father's inviolable sense of justice and fairness. I would rather have that than to have a bank full of money.

This, too, I owe to my father; this very ability to understand that there are things which are worth more than money. I don't recall that he ever told me this in so many words. He just *lived* it. I didn't know then what I was learning. I wanted money, or, at least, the things that money would buy. But I don't believe there is, or ever was, a child on whom a *living example* does not set an indelible mark! All the preaching that parents do, day after day, is as nothing compared with the *living* they do, day after day. You might just as well be dumb; never speak a word. Your children would probably grow up to be exactly the same as if you could talk. It is your acts, not your words, that count.

I want to say that in everything I write here, except the next few paragraphs, I could just as well change the word "father" to "mother." But it is because

there seems to me to be something wrong with the father business in general that I am talking about my father.

I learned from him my ideal of what that much abused phrase, "a gentleman," should mean. He was born on a farm. His people were poor. He did not have what are called social advantages. Yet his character has the texture—that is the best word for it—that makes a man a gentleman. True courtesy is nothing but kindness in action.

I like to watch my father with other people. Children almost always feel at ease with him. I have seen a child come up beside him as he was walking along the street, look at him with that curious appraising look which children have, and then slip its hand into his and walk with him, talking as freely as if he were its own father. "Who was your little friend?" I would ask him when he came into the house.

Half the time it was some child he did not even know. Children follow their intuitions; and they knew instinctively that he was kind. To women he has always shown a gentle courtesy; not the mere trimmings of artificial courtesy but the reality.

I never in my life heard him discuss a scandal! I never heard him gossip about anybody! I have very rarely heard him say anything that could be construed as a criticism of a person.

That is another item in my debt to my father. I am not as irreproachable as he is in this respect, I confess. But mere gossip, especially unkind gossip, simply doesn't interest me. People whose talk is nothing but gossip bore me. And I think it is because I never acquired a taste for it at home.

ANOTHER thing I learned from my father was the self-discipline which comes through *respecting authority*. I read an article some months ago in THE AMERICAN MAGAZINE, in which a man told how grateful he was to his mother for teaching him obedience when he was a boy. That got a hearty "Amen" from me. I am glad that my father taught me to obey.

From him I learned another thing: the satisfaction to be found in work well done. Please notice that I say "work *well done*." It did not make a particle of difference whether anybody but himself would know how a piece of work was performed. He

did it as perfectly as he possibly could; first, because it would not have been *honest* to do less; but also because of the inner satisfaction to himself.

He worked very hard, sometimes far into the night. But he would not slight anything he undertook. You may wonder how I know. Well, I know because he used to show me things he had done and explain to me how he had tried to make even the details perfect.

That sort of thing stamps itself on a child's mind. When he talked to me about how he did his work, it was not because he was trying to influence my character, or my own attitude toward work. At least, I don't think it was. He was simply showing me something he was proud of. But the effect was gained, just the same. My work is entirely different from his; but I am unhappy and uncomfortable when I am conscious of defects in it. I hate to let it go when it isn't up to the mark. I wonder if I should have felt that way if my father had been slipshod and indifferent about the quality of his work.

I could go on itemizing the debt I owe to my father. But (Continued on page 168)

## Sid Says: *Obey—or Pay*

A FRIEND from the old home town where I was born came to see me the other day. Among other things, he said, "I remember your mother with great distinctness—and I remember that she made you obey."

I am interested to hear that other people noticed it, for the Lord knows I noticed it at the time. And I still remember it, although my mother has been dead and gone for many long years. She was one-half Scotch—and a born disciplinarian. What she said—"went." Ours not to reason why—ours was to do, or take the consequences. I was fully six inches taller than she, out of college, and well able to grow a mustache, before I began to say what was what without first casting a questioning glance in the general direction of the Commander-in-Chief. After I got out into the cold, hard world and used to visit her, she would say in her blunt, matter-of-fact way, "Well, when you were here I did the best with you I could. Now you will have to settle these things for yourself. I hope that you know enough. Remember one thing—you can't dodge them. You will have to face them."

Then it was that I discovered there were other cops on the beat besides Mother. I don't refer so much to the various bosses I met as to the natural laws I encountered. Those are the boys with the brass buttons and the billy-clubs! They grab you and put you through your paces. And they don't care whether you have had experience in obeying or not—they *make* you obey. At the top of this editorial I have written the words "obey—or pay." And that is just what these natural laws make you do. You can whine and yelp and squawk, but you can't get past them without

either obeying or paying. Take your choice—but you've got to take one or the other. If it's the laws of health—obey, or pay. If it's a hot temper—sit on it, or pay the piper. If it's extravagance—save, or go broke. If it's laziness—shake loose from it, or let others have the bacon.

And these real bosses of the earth—natural laws—are, not sentimental about it either. They don't pet you or give in to you or humor you. In their presence you are the rankest kind of a stepchild, a complete outsider. Yet if you obey them they are good to you, without favoritism of any kind. They are the great democratic forces of the world—rewarding those who obey, punishing those who disobey, without preference, without regard to where you emerged from, without caring whether your ancestors came over in the "Mayflower" or in the steerage of the "Aquitania."

So the boy or girl who early learns to obey has been saved a lot of trouble. What he really has acquired is the ability to make himself do what he may not want to do. He learns to put his will in control of his desires. The child who never has to obey grows up a slave! A slave to the worst tyrant he could find anywhere—himself! He is the slave of his whims, his caprices, his follies, his weaknesses. He cannot stand up against desires from within, or blows from without.

Don't run away with the idea that I think myself the model little obeyer. I am not telling you that I have obeyed all these laws—or many of them. I would have been better off if I had. But I am glad that my mother had sense enough to put on her helmet and start in early at the job of trying to enforce order and put down the rebellion.

# Why I Am Forty-Five

By Montague Glass

**I**F I were again seventeen I can imagine myself interviewing the forty-five-year-old me in this style:

"How do you account for your ability at so advanced an age to turn out an occasional play, short story, or article, Mr. Glass?"

"Ah!" I reply, my voice still quite firm. "You may well ask that. . . . Do you mind handing me that box of throat lozenges? . . . Thank you. . . . I can remember very well in the early nineteen hundreds; or was it the early nineteen-tens?—pardon the failing memory of an old man—that I read somewhere how Mr. Irvin Cobb, then at the very zenith of his powers, said that what kept an old man young was the possession of a good hobby."

"And you *have* a hobby?"

"I have."

"May I ask what it is?"

"Eating."

"Eating?"

"Yes, eating," I say, my voice growing stronger as I proceed. "At forty-five I find that one cannot ride a hobby with the same seat as at thirty. A forty-five-year-old man's hobby must be warranted kind and gentle to ride, to pursue the equestrian metaphor. Book collecting, for instance, implies going from one book store to another, and I have just enough stiffness in my joints to appreciate a hobby which keeps one seated—now that the vogue of free lunch is past."

I am not beginning this way just to fill up space. I am trying to put it to you that the youth of seventeen thinks forty-five is the age of the old codger. I can remember, when I was seventeen, that we had a forty-five-year-old neighbor up in Harlem who was a veteran of the Civil War. It is true that he had been only a drummer boy in 1864, but to me he was nevertheless Old Mr. Bach, or, colloquially, Old Man Bach. Is it possible that some youth is calling me Old Mr. Glass or Old Man Glass? If he is, let me tell him that he is quite mistaken. I am precisely as young as any other man my age; and let me say also, to the young man of seventeen to twenty-five, that the only time a man of forty-five years feels that he is not so young as he used to be is when he finds himself in their youthful company. An oldster who tells you that the way for an aging man to keep young is to associate with young folks is capable of asserting that the only place a bolshevik really and truly feels at home is in the Metropolitan

Club talking to a bunch of big bankers.

I see that a Polish gentleman, whose name I will not attempt, died last week at the age of one hundred and thirty-four. His last illness, which was a short one, he attributed to smoking, a vice he had acquired at the age of one hundred and thirty. Without really knowing anything about the circumstances, I deny this absolutely. I hold no brief for tobacco. I use it moderately myself in the form of cigars—only one box a day. But smoking of itself couldn't crumple up a man so strongly addicted to the habit of longevity.

What he did was to pay a visit to his son, a kid of ninety, and no doubt he

a dandy or a lady-killer. He cannot then wear college-cut clothes and hope to create the impression that he is the original of the young man in the colored advertisement. The face may deceive, but not the figure. Or, conversely, the figure may, but not the face; for the preservation of a youthful figure at forty-five is only going to add a few lines of self-denial to a face which probably possesses other lines in abundance. As far as I'm concerned, I would rather have people say of me as Beau Brummell did about the Regent: "Alvanley, who is your fat friend?" than have them remark, as did the French courtier about Richelieu when that old

prelate tried to hide his age by cosmetics, "How much that gentleman looks like the late Cardinal Richelieu!"

"Well," says a lady who is reading this before publication, "you get your wish."

She ought to know. She has been sitting opposite me at meals for sixteen years, not only in the capacity of wife but also that of consulting dietitian.

"Why do you eat cheese?" she has said to me only as recently as yesterday. "You know it always disagrees with you."

Quite so, but forty-five is no age at which to begin dieting. In fact, at any age one should never humor one's stomach. There is only one way to train a weak stomach and that is by putting it to work on the horizontal bars and making it chin itself with baked beans, hard-boiled eggs, Welsh rabbits, and fried cakes. And if your digestion fails to respond to exercise of this sort, what, I ask you, are pills for?

Somebody said—and I'm not going to trouble myself to find out who did say it—that at forty-five a man was either a fool or a physician. Aside from his intention of crowding as many alliterative f's into a short sentence, what he meant by this was

that at forty-five the wise man knows the value of the standard remedies for headache which may be procured at any drug store. There are, of course, persons who will say that what he meant was something entirely different. They will falsely and even maliciously interpret this plain aphorism as advising the man of forty-five to pay strict attention to diet and all that sort of thing. What nonsense!

At forty-five it is of course highly necessary that a man should take stock of his remaining years; but what for? So that he may fill them with self-denial,

## My Hobby—and Why I Recommend It

### Prize Contest Announcement

**I**N THE accompanying article Mr. Glass tells about his hobby. It is eating. That's one most of us could not ride hard without veering toward the hospital; but Mr. Glass has his hobby thoroughly domesticated and completely in control.

Now then—what is your hobby? Tell us about it. How did you come by it? What do you get out of it? Can you recommend it as safe for others? What does your family think of it? You may have hit upon a hobby that would be as good company for others as it is for you. Tell them about it by writing us a letter of not more than four hundred words. We offer these prizes: \$20, first prize; \$10, second prize; \$5, third prize. Competition closes March 20th. Winning letters will appear in the June issue.

Address Contest Editor, THE AMERICAN MAGAZINE, 381 Fourth Avenue, New York City.

Contributions to this contest cannot be returned, so make a copy of your contest letter if you want to preserve it. Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

could not help feeling that his boy regarded him as lingering too long upon the scene, precisely as I regarded Old Mr. Bach when he was forty-five and I seventeen. Had the Polish gentleman associated only with men of his own age or a trifle older, he might have been an endless-chain smoker and still have lived to die with his boots on underneath an imitation yellow taxicab while attempting to cross the street on his way to a palais de danse.

There are of course characteristic drawbacks to being any particular age. Forty-five, for instance, is not a grateful age for

PHOTO BY LOW GOODALE HIGGINS, CORONADO

## MONTAGUE GLASS

Mr. Glass holds a unique record of simultaneous success in the three diverse fields of fiction, drama, and special articles. For the past nine years his plays, most of which have been built around the inimitable characters of Potash and Perlmutter, have convulsed theatre audiences. They have included "Potash and Perlmutter," "Abe and Mawruss," "Object: Matrimony," "Business Before Pleasure," "His Honor Abe Potash" and "Partners Again," the last named being his current success. Several of his books bear the same titles as his plays. Among the others are "Elkan Lubliner—American," "Competitive Nephew," "Worrying Won't Win," and "Potash and Perlmutter Settle Things." Mr. Glass was born in Manchester, England, forty-five years ago. He came to New York when he was thirteen years old. After finishing preparatory school he attended the College of the City of New York and New York University. In 1907 he married Miss Caroline Patterson. His wife and daughter, Mr. Glass says, are the real reasons why he hopes to remain forty-five indefinitely. Without them he would have been at least eighty more than five years ago.

regular exercise, blood-pressure tests, and ten hours' sleep a night? Not at all! Forty-five is as good an age as another to begin to reckon one's expectancy of life in terms of hearty dinners, travel, and the doing of things that one has missed in early life through lack of funds or opportunity.

But what, you ask, is the normal expectancy of life for a man of forty-five? Answer: It is an indefinite period, reckoned roughly for the purpose of happiness as forever. If you are forty-five, there is no particular hurry about crowding into your remaining years as many good dinners, good books, and good shows as possible. But there ought to be no undue delay about it, either. Remember, there are a great many versions of the saying that a man is only as old as he feels. It is now variously quoted as: "A man is only as old as his arteries," "A man is only as old as his digestive apparatus,"

"A man is only as old as this, that, and the other." But the true, only, original low-down on the proverb is: "A man is only as old as his appetite for enjoyment."

NOW, one's appetite for enjoyment is the same as the whatever-it-was of which Shakespeare said, "It grows by what it feeds on." If Shakespeare didn't say this, or if he didn't say it in just those words, it is nevertheless true. Thus, if you retain your appetite for enjoyment, there is really no reason why you should ever be any older than you are at present. I expect, therefore, to be forty-five indefinitely. On the other hand, as Mrs. Wiggs of the Cabbage Patch said, there are people walking around the streets right now, who are just as dead as they ever will be. Men of thirty-five who cut out all starchy and fat-producing foods and staying up late nights have completely passed away as far as good dinners and

good card games are concerned. As for me, I want to be all alive or all dead.

Here I will make the confession that once in a while after a too-hearty meal, I suffer a twinge in the region of the gall duct. But what of it? It is only Nature ringing up the price of a good dinner on one's cash register. A warning, you will say. Not at all! It's a receipt.

In their anxiety to retain their health, a great many people I know worry continually about their digestion—yes and about a number of other purely personal impedimenta, such as their ductless glands and their lymphatic system. Some of them have formed quite definite mental portraits of their internal organs. I am sure that one of them, for instance, has visualized his stomach as a little, shriveled up, bad-tempered old janitor in his alimentary tract, and in consequence has been self-intimidated into foregoing nine tenths of the (Continued on page 136)

# The Marvels of Artificial Legs and Arms

Stories of the extraordinary doings of people who wear them—How they are operated—Also queer facts about artificial eyes—  
(Some people have two kinds, one for day and one for night)

*By H. J. Murphy*

SOME time ago a man came to my office to inquire if his nephew, who had lost his leg above the knee as the result of an automobile accident, could be fitted with an artificial limb that would enable him to walk naturally.

I told the uncle that this was easily possible, and I showed him a modern type of artificial leg made of yellow willow with joints at knee and ankle and with a flexible rubber foot. The limb is attached by lacing a leather "corset" around the person's stump leg and by a belt around the waist. The knee joint is operated by a suspender which goes up over the shoulder.

Whether a man is walking or sitting, if he wants to straighten his leg he gives an almost imperceptible shrug of the shoulder, and the leg straightens out just as though the wearer had control of it with muscles from his hip to his toes.

"It looks promising," said the uncle; "but I can't imagine a man walking with it so I couldn't tell from a mile off that he had a wooden leg!"

I got up from my desk and went to the window. Presently, I crossed the room again and took the leg from the man's hand to show him how easily it was straightened by a slight pull on the cords.

"Oh, I see that," he said; "but is there anyone around here who wears one of them?"

I told him that there was a man in the place who wore two of them and that I would see if I could find him. I left the office, but in a few moments came back alone, much to the disappointment of my customer.

"Well," I said, "let me show you. It works just like this." And I sat down, held my leg out straight in front of me, then bent my knee and straightened it several times.

"Yes," the man said, "my leg works that way, too! What I want to see is how an artificial leg works!"

Then I rolled up my right trouser leg.

PHOTOS BY SPARK BROS.

If the man in the upper picture had had his coat on you would scarcely have suspected that he was using the telephone and jotting down memoranda with the aid of two artificial arms. In the lower picture you see the same man, Mr. T. C. Gates, a traveling salesman, carrying a suit case whose contents weighed over forty pounds. The ease with which artificial legs and arms imitate practically all the complicated motions you make naturally is really marvelous. The accompanying article tells what can be done with artificial limbs and how they work

"Great heavens!" he cried. "You haven't a wooden leg?"

To his amazement, I rolled up the other trouser leg, showing him that I had two artificial legs, one for an amputation below the knee and the other above the knee.

Of course a man who walks with an artificial leg of this kind does not go along shrugging his shoulder at every step. When walking at a fair rate, he seldom finds it necessary to move his shoulder at all. Instead, he simply lets the toe drag ever so lightly on the floor or the sidewalk. This causes the knee to bend; then, as the leg is swung forward from the hip, the knee straightens

and the foot comes into the natural position for another step.

During a recent mayoralty campaign in New York City, I spent a good many evenings with a group of young men, going about to open-air mass meetings in an automobile from which we delivered speeches in support of our candidate. A few weeks after election we had a party to renew acquaintance. When dinner was over, some of my friends, who had been athletes in college, began talking about how they kept up their physical fitness. Jestingly, they began to test each other's biceps and calves.

FOR a while I looked on, taking no part in the competition. Then I thought I would take the conceit out of them and said, "Bet I've got harder calves than any of you. Feel my right leg!"

One of my friends did so; then, straightening up with an exclamation, he looked at me to see what kind of a joke I was playing on him.

"Feel of the other one," I said, and he felt of it.

"Great Scott!" he cried. "What have you got in there anyhow—coconuts?"

Then I showed him. Not a man in our party of six had suspected the truth, although I had been climbing in and out of automobiles with them for two weeks.

I know a good many men with two artificial legs who can *run*. They have acquired the ability by hard practice, of course, in balancing, swinging their legs properly from the hip, and in using the suspender control occasionally as need requires. I know one man who used to be a vaudeville performer. Many of his tricks were performed on a slack wire. After he lost his legs he said he would never be happy again until he had learned to walk a slack wire with his artificial limbs. He had the tenacity and skill to accomplish it; but he did not do any of his complicated old tricks, as his attention was taken up with the main business of keeping himself on the wire.

**A** MAN with two wooden legs can dance very well, almost any kind of a dance except the liveliest of the modern jazz and the old hippity-hop Boston. A man with one wooden leg can do even these. No matter whether a man has one or two wooden legs, there is nothing striking or awkward in his dance movements. Unless his partner *knows* in advance that he has wooden legs, she doesn't suspect it from dancing with him.

Many men with wooden legs drive automobiles. I do it myself almost every day. It is a simple matter to operate the pedals that control the clutch and brake, but a little more difficult to operate the foot accelerator cleverly. This is because a man with wooden legs has no *feeling* in his foot. When he steps on the accelerator he does so by a movement, not of his ankle but of the muscles of his hip and thigh. Thus he has to exercise care when he wants to advance the accelerator merely a trifle, or he will shoot his car forward under full power.

It is seldom nowadays that a man who loses a leg is unable to return to his trade or regular occupation, or to a similar one. More artificial limbs are worn by railroad men than by the members of any other one occupation. Next come miners; then truckmen. A surprising number of professional men, including lawyers, doctors,

PHOTO BY EDWIN BRON.

Put your hand over this legend and ask a friend which man in the picture at the left has two wooden legs. If he guesses the one on the right, he's wrong. It's the other one. The tall man on the left is Hugh J. Murphy, a representative of J. E. Hanger, maker of artificial legs. Mr. Murphy both uses and sells wooden legs, and in the accompanying article he writes about them as well. The upper picture shows him making a friend with two natural legs hustle to keep up in a walking match

druggists, dentists, and mining engineers, wear artificial legs.

Ten thousand American soldiers lost one or both legs in the war. In all, there are at least a million persons in this country wearing artificial legs. The most common accident causing the loss of a leg is due to the motor-cycle; the next most common is due to the automobile.

There are over four hundred miners in the Pittsburgh coal district who wear wooden legs, and they work on regular shifts along with the other miners. In New York City, there are two hundred and fifty truckmen with wooden legs; in Chicago a hundred and fifty. In other large cities hundreds of men are similarly employed, as truckmen, delivery men, or porters.

The truckman with a wooden leg will readily undertake to carry a trunk up two or three flights of stairs, but he has to take the stairs a little more slowly. If he has lost his *left* leg, say, above the knee, then he takes the first step up with his *right* foot. (Continued on page 124)

At the left is a scene in the "eye fitting" parlor of a manufacturer of artificial eyes. The customer is purchasing an eye from the maker's ready-made stock and it is being selected with care to match the good eye. Very often people who want their eyes to match exactly have their glass eyes made to order. The picture at the right shows how natural an artificial eye can look. This man makes glass eyes and has slipped a "shell eye," a kind worn by many people, over his normal left eye. The difference between the good eye and the glass eye is scarcely discernible.

# Outwitting the Flapper

The story of a smart mother

*By Dorothy Sanburn Phillips*

ILLUSTRATIONS BY WILL FOSTER

**B**UDDY CARPENTER grabbed his cap from the hat rack in the hall and stealthily made for the front door, but he was neither so quiet nor so quick that he escaped the notice of Aunt Mamie. She was sitting in the living-room, and as he passed the door she caught a glimpse of his tall, slim, young shadow and looked up.

"Going down-town, Buddy?" she asked. "No," came the rather sullen answer; "I'm . . . just going out."

The front door banged behind him.

Aunt Mamie looked over at his mother, her lips drawn together in a thin, disapproving line.

"He's going to see that girl."

Mrs. Carpenter did not glance up from her sewing. She was a little, slim woman, very young-looking to be the mother of a twenty-year-old boy.

"Yes, I imagine he is," she answered calmly, almost indifferently.

Aunt Mamie turned upon her. "Why, Elizabeth! You talk as if you didn't mind it at all, as if you approved of her!"

"You know, Mamie, I don't like her any more than you do."

"Then why don't you do something?"

"What is there to do?"

"You could set your foot down, that's what you could do. You and Edgar are too easy-going with that boy. I don't see why you let him go around with a girl like that. There are plenty of nice girls in town. There's Nina Roberts just down the street and—" She stopped suddenly and hurried to the window as she heard the noise of an automobile turning out of the driveway. "He's taking the car! Did he ask you if he could have the car? Did he tell you that he was going to take it?"

"No, he didn't."

"There! See the influence that girl has on him! He always used to ask you, didn't he?"

Mrs. Carpenter nodded. She could recognize as well as anyone the change that had come over her son. In the past he had never sneaked out of the house, in the past he had always told her where he was going, always talked freely about the boys and girls he knew. Now he never told her anything; at the supper table he never talked about the tennis he had played that afternoon or the dance he was going to that evening. For, if he did talk about them, he would inevitably mention the girl, and then would follow cold disapproving silence on the part of Aunt Mamie, or open disapproving words.

Mrs. Carpenter sighed softly to herself: "It's just because she's so fond of him, that's all; she's so proud of him. But she doesn't realize that he isn't just a little boy any more; since he's been away at college and had that job last summer, he's grown up."

Aunt Mamie was still standing at the window.

"There he goes!" she cried triumphantly. "And that girl with him, and she's sitting all on top of him in the front seat. It's disgraceful! Elizabeth, how can you countenance this sort of thing? You ought to make Edgar talk to that boy—"

"Please, Mamie, let's not discuss it any more. I don't want to trouble Edgar; and I don't want him to talk to Buddy, anyway. Everything will come out all right if we can only keep quiet and let things alone." As she said this, she rose, and taking her sewing went out of the room.

The situation was getting worse by the

Across the table his aunt Mamie's eyes were fixed on him, cold

day. As she had said, she did not like Ruthie Baxter any more than Aunt Mamie. Ruthie was one of the "fast" girls in town. She was pretty, bob-haired, rouged, and short-skirted. She smoked cigarettes continually, and Mrs. Carpenter felt was probably not above taking a cocktail.

**B**UDDY had never had a girl before. He had always been quite impartial in his attentions; he had gone to dances and parties and played tennis and skated with most of the girls in town, and, being tall, good-looking, and happy-go-lucky, had been very popular; but it was not until he had come home in the spring from two years of college, taller and better-looking and more debonair than ever, that he had been sought out and accepted by the "fast crowd." Besides Ruthie, there were a few

other girls and boys, children of wealthy parents, with automobiles and a good deal of money and spare time on their hands, and a young, attractive, rather flirtatious widow, who had a big house on the outskirts of town. There the crowd gathered and played tennis and bridge, and smoked and danced, and it was there, Mrs. Carpenter was convinced, that Buddy was going.

Buddy was late for supper that night. He came in, flushed and smiling, and threw himself into his chair.

"Hullo, Dad! Hullo, Mom! Say, I'm hungry! Got steak to-night—" He broke off quickly and his smile faded, for across the table his aunt Mamie's eyes were fixed on him, cold and disapproving, and the corners of her mouth were turning down.

"Buddy, you didn't tell your mother that you were going to take the car this

afternoon, and I wanted to do some errands down-town."

For a moment he was silent, then he spoke very quickly:

"Oh, did you? Why didn't you tell me, then? If I'd only known it, I'd have taken you down-town. I'd have—"

"Son," interrupted his father, calm and judicial, "I thought the arrangement was that you were always to tell your mother when you wanted the car. It's your mother's car, you know, and she might want to use it."

"Well, Aunt Mamie didn't say a word this afternoon when I went out. I can't tell by intuition that anyone wants the car; I can't—"

"Buddy!" His mother's tone was entreating.

He lapsed into silence, but his mother caught the quick glance he threw at his aunt. It was angry and antagonistic. He knew, and his mother knew, that Aunt Mamie had had no important errands down-town, that thus, by holding up his little fault to his father and getting him in wrong, she was voicing her disapproval of the girl who had sat beside him in the front seat.

A silence fell over the supper table.

**BY** WAY of making pleasant conversation, Mr. Carpenter remarked, "Saw your friend, Mrs. Rupert, this afternoon, Buddy. She came into the office. Attractive woman!"

Mrs. Rupert was the name of the young widow.

"Attractive!" Aunt Mamie echoed.

Mrs. Carpenter's heart jumped. Why had her husband stumbled on that subject, of all subjects?

"I don't call her attractive," went on Aunt Mamie; "she has the most smirking smile, and—"

"She is always very pleasant," put in Mrs. Carpenter, "much more agreeable than a great many women in town. She always stops and talks when you meet her, not at all like Mrs. Fotheringhame. Now, Mrs. Fotheringhame..." Her voice trailed on to another subject. She did not care for Mrs. Rupert, but she was not going to have her son's friends abused before him at the supper table.

Buddy threw her a quick glance, half suspicious, half grateful, but her face and her voice were so unruffled that he did not know whether she had stood up for him and changed the subject by accident or intent.

Right after supper, as usual, he skipped off.

"Humph! he's gone again," said Aunt Mamie. "He never stays home now."

Mrs. Carpenter gave a little sigh. That was true. He never did stay home.

That night she spoke to her husband.

"Edgar," she said, "please don't mention Mrs. Rupert again before Aunt Mamie. She's awfully down on her, and she's always criticizing her and Ruthie Baxter and all of Buddy's friends. I don't know what I'm going to do. She's driving him to them. I don't like them, either. I wish, I wish he'd stop going around with them! They aren't his kind, they—"

He put his arms around her. "Now see here, sweetheart, there's no use worrying. Buddy's all right. He can look after himself. Just give him enough rope.

and disapproving, and the corners of her mouth were turning down

"I've got a flask out in the car . . . Do you mind if I go out and get it? Just a few drops in the punch. That's what you need to put pep into a party." Her eyes challenged Mrs. Carpenter's

That's what you have to do with a boy who's growing up."

She sighed. It sounded easy enough, if it weren't for Aunt Mamie.

The next afternoon, she and Aunt Mamie went out to make some calls. She had intended to be gone all afternoon, but she was so preoccupied and so worried about Buddy that she deserted Aunt Mamie and, under plea of a headache, went home.

As she went into the house the sound of

the phonograph greeted her, pounding out the jazziest of jazz music. She stopped, startled, in the front hall. Somebody was dancing in the big living-room. She could hear the glide of feet across the hard-wood floor. It was Buddy, of course, Buddy and some of his friends. She caught her breath quickly and her hand went suddenly to her throat as she remembered that at the lunch table Buddy had questioned her about the afternoon.

"I'll have to have the car," she had

said; "Aunt Mamie and I are going calling, and we won't be back until late."

He had thought that they were to be away all afternoon, and in her absence he had brought his friends to his home.

The music stopped, and a girl's voice rang out, gay, laughing, and loud.

"That was a good one, Bud. You certainly can dance!"

Then Buddy: "Shall I put on the other side?"

"No, wait a (Continued on page 104)

# Can You Make Yourself Do A Difficult Thing?

Do you tackle it with the idea that you will probably fail; or do you begin with the definite conviction that you can put it through?

*By George Peak*

**I**T IS strange how few persons know anything about a certain practical fact which can be worked into the life of any man or woman. The frenzied financier of Wall Street can use it. So, too, can the social leader as she weaves her exasperating web of exclusiveness. But, better still, we millions of work-a-day people can use it.

To every person this idea is either an ally or an enemy. True, many use it unconsciously; just as did some boy whom we grown men still remember with a trace of the old envious resentment. You recall how, at the game of marbles called "keeps," he got us down to empty pockets. We used to marvel over his "luck."

He was in fact an ordinary boy who somehow had grasped the trait of keeping his mind pinned upon what he was doing. This trait is called positive suggestion. When he knelt at the ring's edge to pluck out his prey with skilled shot, his entire world had dwindled down to a certain one of those whitish spheres, and his whole thought was to plug it center. With mind intent on the thing he wanted to do, and with not a mental flicker as to what he did *not* want to do, he was "positive" through and through. And the result was that *he* hit, while we discouraged ones who were negative, our minds set on missing, did miss—just as we expected.

A poor shot with a rifle can make use of this idea with astonishing results. It is a sleight of the mind rather than of the hand. On one occasion within my own knowledge a timid, nervous amateur, after repeated trials, could not even touch the target. Goaded by the gibes of his companions, and aroused by that peculiar humiliation felt over this kind of failure, he threw his entire attention on the bull's eye, and the instant the bead was on the spot he pulled the trigger and achieved his mark.

He had changed from a man who was afraid that he would miss into a man who knew that he must hit; and from then on he was able to make a favorable score in competition with one of his friends who had been a crack-shot for years. Within a few months he won a tournament in which the entire group competed.

An athletic coach told the writer that he—having a band of youngsters lined up for practice in throwing basket-ball goals—would often select for intensive training what seemed to be the least promising material among his boys, just because he had a curiosity to see how much

improvement could be made. He would stand at the lad's elbow, and almost compel the boy to keep his mind glued to the vacant spot at the top of the basket through which the ball must pass.

By questioning his pupils he found that invariably the success of the shot depended upon how accurately the boy could hold his mind to his task. A boy with his thought on the *rim* of the basket always failed; while a boy with his attention solely on the empty *center* succeeded.

This same man had a youthful baseball pitcher whose curves rivaled those of a professional, but who was so wild at times that he would miss the plate by an arm's length. When a period of this wildness seized the boy during practice, the man stood behind him, urged him to think only of the spot above the center of the plate through which he wanted to put the ball—and when this was done, the ball went true.

**I**F a skeptical reader would be convinced of the truth or falsity of this idea of positive suggestion, let him borrow a bicycle—it being understood that he has never broken himself to ride one. Let him mount it in his back yard and try to ride between two posts set a fair distance apart. He will almost certainly make a miserable failure. Like a magnet, one post or the other will draw him toward it.

Anyone that has ever put himself at the mercy of a bicycle in order to learn how to ride will corroborate this statement. He will say that the more he determined to miss running into some obstacle, the more certainly he gravitated straight for it. A friend of mine once ran into a telephone pole at the side of the street, although he had the whole width of a sixty-foot roadway in which to pass the thing.

"I knew I was going to hit that pole!" he declared whimsically. "I had my eye on it for two blocks, and I felt it in my bones that I was bound to run into it!"

And, of course, he did. So completely was his brain occupied with the pole he wished to avoid, that the mechanism of his body, delicately adjusted to the most subtle suggestion of that brain—as is every human body,—had no choice but to obey the tyrant's command.

If you want to convince yourself of the truth of this, let the experimenter mount the wheel a second time and fix his thought on a spot midway between the posts. With his mind thus set unwaveringly upon his desired course, there is nothing left

to assure success but to pedal. A trial will convince the most doubtful.

Recently, in the town from which this is written, a woman driving a car was unfortunate enough to have an accident which maimed a pedestrian for life. The woman was distracted with remorse; for she had seen the victim all the time, and yet she had run him down. The occurrence is a parallel to that of the bicycle. In a way the woman was blameless, for it was her frantic desire to save the man, as she bore down upon him, that was the very cause of her striking him. Had she been less concerned over his welfare, the chances are that the accident would not have occurred. It certainly would have been avoided if, instead of keeping her eyes and her mind on the *man*, she had fixed them on the course she wanted to take.

It is well known that the most deadly gunmen shoot from the hip. Parenthetically, it might be stated that this position is assumed for the steadiness it lends to the firearm and the time it deducts from the covering; but the point to be made here is the accurate subordination of the gun hand of the man to his brain. He fixes his eye and his mind intently on the spot he wishes to hit, and his hand lines the bead true to the mark, without the aid of sighting along the gun. The result is but another proof of the power of positive suggestion.

**T**O SAVE a child from the flames that were eating toward it, a Chicago fireman walked along an ice-covered ledge, not much wider than his hand, that ran across the face of a building eight stories above the nerve-racked crowd which watched him. When questioned as to how he could do such a daring feat, he, taciturn and evasive as such heroes are, blushed and declared that he had not done much; but, pressed further, he added: "I forgot everything else—a-listening to that baby's cries, and a-making myself think it was my own little Nell I was going to save."

This man was not a physical giant, but a mental one, as can plainly be shown by the following proposition: Any person can walk a six-inch board without falling off, provided the board is lying on the ground. Place that same board a thousand feet up in the air, and how many can safely walk it? There is just as much room on the board as ever. Its distance from the ground has not caused it to become smaller. The only (Continued on page 171)

# What Happens to a Play Before You See It

A thousand plays a year are sent to the Sam Harris office alone—Who writes them and what most of them are about—How much the author is paid—The cost of producing plays and how many of them succeed—How they are rehearsed; and other interesting facts which few outsiders know

*By Mary B. Mullett*

**I**T ALWAYS surprises me to find how many people, and how many *kinds* of people, are intensely curious about the theatre. They are always wishing that they could go behind the scenes, that they could watch a rehearsal, or that they could see the actors off the stage. People have asked me scores of questions, such as: Who writes the plays? Who reads them? How much does the author get? How much does a successful play earn? How are the rehearsals conducted? And so on and so on.

Now I am going to give you an experience which mighty few persons have had. I am going to let you hear the inside story about all these matters from a man who knows as much about them as *anyone* knows. When you have heard what Sam Forrest says, you can flatter yourself that you are pretty well informed on the subject.

For years Mr. Forrest was with the firm of Cohan and Harris. When Mr. Harris opened a separate office, Forrest went with him. As a director of successful plays, his record is so far above the average that few men are in the same class with him.

I asked him first how many plays the Harris office receives in the course of a year.

"About one thousand," he said. "They come in a steady stream, and they come from all sections of the country. About half of them are written by men, and half by women. Among the amateurs—the people who evidently know nothing of play-writing—there are a good many lawyers and doctors.

"A lawyer has an interesting case in court and tries to write a play about it. A doctor learns the hidden life story of some patient of his, and thinks it would make a great drama. But I never have received, from either of these sources,

a play that was really worth producing.

"The commonest theme, of the people who do submit plays, is *sex*. You can't get away from the fact that 'the love interest' has a more universal appeal than anything else in the world. Practically all plays written by women have this as their theme; most of them deal with a

business in his plot. That's natural, too. For he divides his own interest between femininity and finance.

"Then there are what might be called the 'epidemic' plays. If a play of a certain kind has made a big hit, we know we will get a perfect flood of plays of the same kind. For instance, there have been several very successful mystery plays during the past few years. The consequence is that our mail is choked with mystery plays.

"A really good mystery play is about the safest gamble there is in the theatre. But to be good it must have originality. And when people deliberately start out to imitate something, it is pretty certain to be an imitation. If I were going to write a play, I wouldn't go to the theatre to get my ideas. I would go to *life* for them.

"Out of one thousand plays, as they come into theatrical offices, only about one hundred are worth reading. About ten of these are worth taking a chance on producing. And perhaps one of these ten will make a genuine success. In other words, of the plays submitted to managers, about one tenth of one per cent are produced successfully.

"I think that is a fair statement of the general average. It does not apply to the plays produced by Mr. Harris, for we have been exceptionally lucky. I think our ratio of successes has been about three out of five productions. But we choose our plays very carefully.

"It is a curious fact that our worst failures were made by our best plays! At least, they seemed particularly good to the *experts*. Some years ago, we put on a play called 'The Big Idea.' It was a beautiful thing. The critics raved about it. They haven't stopped talking about it yet. But we just couldn't get the *public* to come! It lacked *something* (Continued on page 179)

## A Play That Lasted Two Hours Without a Single Break

**"W**E WERE playing 'Seven Keys to Baldpate' on the road some years ago," says Mr. Forrest, "and at Buffalo on a Saturday night we had to take an eleven-o'clock train out of town. I told the local manager that we would either be obliged to cut out the performance that night, or else begin it at seven o'clock. We were doing big business and he didn't want to lose that performance; so tickets were sold for it with the understanding that it would begin at seven.

"But I had not told him the rest of my plan. The action of the play, as you may remember, is continuous. It goes right on from one act to the next. We played it that night without dropping the curtain once! The house was packed. And I never saw an audience so spellbound. For two solid hours they sat there, gripped by the swift passage of events, without a single interruption of the interest. I don't think they knew, until it was all over, that they were having a different experience from their customary one. They didn't have a chance to think about it. When they were leaving the theatre, I saw them looking at their watches in amazement. It was only nine o'clock! That experiment proved to me that, with a play in which the action is continuous, it can be *shown* continuously with powerful effect."

matrimonial tangle of some sort. I suppose that is natural enough; for marriage is the biggest factor in the life of almost every woman.

"The sex interest—or the love interest, whichever you want to call it—is the trump card with the men also. But a man is pretty likely to combine love and

made by our best plays! At least, they seemed particularly good to the *experts*. Some years ago, we put on a play called 'The Big Idea.' It was a beautiful thing. The critics raved about it. They haven't stopped talking about it yet. But we just couldn't get the *public* to come! It lacked *something* (Continued on page 179)

*Sam Forrest Directing a Rehearsal*

**MR. FORREST** is one of the best and most successful stage directors in this country. For years he was with George Cohan and Sam Harris while they were partners. Since Mr. Harris became an independent producer, Forrest has directed for him. Judging from the number of "big hits" to his credit, he must be a

wizard at stage management. Among the most recent of these are "Rain," "It's a Boy," and "Six Cylinder Love." In the picture above he is showing an actress how to express a feeling of tense emotion, so that the audience will get a responsive thrill. Mr. Forrest is married to Mary Ryan, the well-known actress.

Photo by Waling Studio, Chicago

*Joseph B. Strauss*

**MR. STRAUSS** has built some of the most notable bridges in North America—particularly of the movable, or bascule, variety. He originated two types in this latter class. He designed and built the giant aëroscope, a feature of the Panama-Pacific Exposition; he turned out the portable searchlight outfits used by the United States during the world war; and he is the designer and builder of the first reinforced concrete

freight car. His "Yielding Barrier," a photograph and description of which appear in the article beginning on the opposite page, helps to solve the grade-crossing problem. Mr. Strauss was born in Cincinnati, Ohio, in 1870, and was graduated from the University of Cincinnati in 1892. In 1905 he organized the Strauss Bascule Bridge Company, of which he is president, chief engineer, and principal owner.

# Ideas Are Worthless Unless You Put Them Over

This story of the remarkable career of a great engineer proves this truth—He made people see that his schemes would work—He is now planning a colossal bridge far surpassing any now in the world

*By John Kidder Rhodes*

A CURIOUS crowd had collected at the top of one of Cincinnati's high hills. They were a mixed lot of boys and men, white and colored, loafers and firemen. One busy black-haired boy appeared to have charge of affairs. He gave directions and answered questions, and tried hard, in spite of his youth, to contain his private excitement.

The occasion was an experiment; the black-haired boy devoutly hoped it would also prove a demonstration. He had invented a new contrivance to be used on a fire hose. It was having its first try-out under the conditions of actual use.

The youthful inventor was Joseph B. Strauss. For years he had spent all his spare time in machine and railroad shops. His boyish head was full of inventions and his fingers itched to "make things." He had amused himself with the development of electric devices of one sort or another—electricity was then in the early stages of development—and he had spent a good deal of time on a contrivance to do away with the movable head on car couplers.

His first completed effort, however, was the fire hose scheme. His idea was to afford a means of communication between the nozzle man and the fire engine through the hose and couplings.

The device had been very carefully worked out. The inventor considered it as a test of his ability to reduce his ideas to practice. It showed him, before he was through, that there is more to an invention than the inventing.

Everything, including the necessary permission from the city to use the high-pressure hydrant at the top of the hill, had apparently been arranged to give the apparatus a thorough test. At the last moment the segments of hose were coupled up and the nozzle adjusted. Ordinarily the pieces would have been attached to the sections of hose by machinery to make

them perfectly secure. However, young Strauss had provided no means for doing that. He and his helpers did the best they could with their hands. A colored boy took hold of the nozzle, he gave the signal, which instantly traveled back to the fireman. He opened the high-pressure hydrant.

No chain is stronger than its weakest link. No fire hose is stronger than its weakest coupling. The weak coupling in this case was that at the nozzle!

The water rushed through the hose in a

science and technique of his field. He is past fifty now and he has spent his life doing new things—things that other people did not think of—things that many people were certain "couldn't be done." He is an engineer, and inevitably an inventor. Primarily, he is a bridge designer, and some of his bridges are the greatest of their kind in the world. He has won a distinguished place for himself, partly because he has so many good ideas and knows how to perfect them; but even more, perhaps, because he knows how to put his good ideas across after they are perfected.

"You might say without being far wrong," he remarked to me, "that that first venture into the practical was a complete failure. However, I learned something that day on the hill-top. I learned that the value of an idea depends not only on the sweat you put into thinking it up, but also on the sweat you put into getting people to recognize and accept it. I proved that the principle was sound. But my demonstration of it lacked one element: I hadn't quite measured all the possibilities of failure and protected myself in advance against them.

"When I began to design bridges," Mr. Strauss continued, "I supposed that bridge engineering was a settled profession in which about everything was already known. I imagined that the art had been developed to its maximum.

Not until I was called upon to pass on some bascule bridge plans did I begin to dream how much remained to be discovered.

"Bascule bridges at that time were rare and limited in length and strength. They were very costly, because cast-iron counterweights were employed almost exclusively. No cheaper material had been thought of. A bascule bridge, I ought to explain, is one that simultaneously lifts and rotates in a vertical plane. If a bridge is built close to the water over a navigable stream it has to be moved out of the way

## How to Test Your Idea

**"THERE** is only one real test of an idea," says Mr. Strauss. "Submit it to the conditions of use. Examine all the objections that can be brought against it. Weigh these against the advantages, and thus estimate its probable value in the field in which it is to be used.

"Modify the idea, if the test shows that is necessary. Give it up if it fails and cannot be modified. Don't hang on to a worthless idea simply because you happen to like it, or because it is your own."

powerful stream, blew the nozzle right off, and turned with fury on the colored boy, who was unprepared for calamity. He went rolling over and over down the steep side of the hill after the nozzle!

Young Strauss never undertook to repeat the demonstration; and he never heard of the colored boy afterward!

At the time of this fiasco he was only eighteen years old. He went through college after that, graduating with high honors as a civil engineer. Then he spent several years in drafting- and designing-rooms, in shop and in field, mastering the

somehow when a tall vessel passes. Swinging bridges pivoted in the center, although a familiar type, had many disadvantages.

"A bad example had been set for bascule bridge builders by the erections of the great Tower Bridge of London. That was a wonderful structure in itself, a bold venture in its day, and after thirty years few bridges of its kind have been built to excel it in size.

"However, its engineers were not limited in the matter of cost. Consequently, they equipped the Tower Bridge with lead counterweights, hydraulic operating machinery, roller bearings for the trunnions, and other exceedingly expensive refinements. It required some time and a good deal of patience to dissipate the general idea that these high-cost items were essential.

"I CONCEIVED the idea of substituting concrete for the cast iron in the counterweights. Concrete at that time cost only about one-sixth as much as iron, weight for weight. This eliminated one heavy element of expense, bringing the cost within reason; but it presented a new problem: iron, weight for weight, was far less bulky than concrete; where could so huge a mass of concrete be placed so that it would not interfere and infringe on the roadway or the supporting structure?

"This was a perplexing difficulty, but I finally evolved what was called the pin-connected or parallel link system, which permitted the use of a large-bulk counterweight, placed either above or below the roadway, without 'fouling' other parts of the bridge. I showed my plans to a number of engineer friends. All of them, without a single exception, said the plans were impractical.

"Now, first and last, I have had a good deal of experience with the introduction of new ideas and new ways of doing things, and I find that there is almost always a time when nearly everybody is against your proposal. They are against you chiefly because they are not for you. Most people hesitate to accept a new thing when the old will do, unless the new thing is put up to them in a peculiarly forceful way. Every idea until it has been proved, in other words, is considered *bad*. It has to be demonstrated beyond doubt, and I have found that what usually happens is this:

"(1) You evolve an idea.

"(2) You make dead sure it is a bona fide idea—that is, you demonstrate it thoroughly to yourself; then

"(3) You put it over—*put it over!*

"Not many people fail on number one. Some fail on number two. But dozens fail on number three.

"Why?

"I suppose the answer is simply that it takes hard work and an absolute unwillingness to be discouraged by what others say.

"There is only one real test of an idea. Submit it to the conditions of use. Examine all the objections that can be

brought against it. Weigh these against the advantages, and thus estimate its probable value in the field in which it is to be used.

"Modify the idea if the test shows that is necessary. Give it up if it fails and cannot be modified. Don't hang onto a worthless idea simply because you happen to like it, or because it is your own.

"As an engineer, I knew that my design for a bascule bridge with a concrete counterweight, though

novel, was scientifically sound. So I refused to let the objections of my engineer friends stop me. I succeeded finally in obtaining an initial order for a railroad bridge in Cleveland. But before the railroad people would give it to me they insisted on having an independent report from other engineers to the effect that the design was at least practical.

"For fully two years after that first bridge was in operation efforts were made to prove that it was impractical. It is not altogether mental inertia that has to be overcome in presenting a new

idea. Money is often invested in equipment which the new idea will render obsolete; and no new idea ought to succeed unless it is so much better than the old way that it is profitable, if necessary, to junk the old equipment. That first bascule bridge, however, in spite of the efforts against it, is in active service at the present time and has been efficient and economical. It saved the railroad something like twenty-five thousand dollars in first cost.

"THIS whole matter of cost is an important item to keep in mind in checking up the worth of an idea. Many things can be done—that is, they are practicable. But sometimes it doesn't pay to do them. Business men, executives, the people who count, the people who have the money to help you or the authority to tell you to go ahead, demand facts. They ask: 'Granted that your idea is sound, is it profitable? Does it cost less? Does it earn more?'

"You may be sure on these points and still have to overcome severe opposition. A striking instance was furnished on one bridge where I devised a new scheme for supporting the trolley wires. The old way was to support them on cross struts: a heavy iron framework placed on the leaf of the bridge and lifted with it. The cross struts weighed several tons, and the counterweights had to be correspondingly heavier in order to lift the bridge easily.

Here are two photographs of one of the most extraordinary amusement devices on record—designed by Mr. Strauss for special use at the Panama-Pacific Exposition, in San Francisco. A two-story car, accommodating 150 persons, was lifted by an automatic arm to a height of 260 feet above ground. The car was so constructed that it was automatically balanced by every passenger stepping on and off. Surmounted by a powerful searchlight, visible far out at sea, it was a striking picture at night

"My device was simple, did away with the cross struts, saved the extra weight and considerable money. The engineers of the trolley company were skeptical from the first, but they let me go ahead. Unfortunately, during the early days of operation the device, due to imperfect adjustment, caused some trouble. The engineers, five of them, descended on me in a body and demanded the removal of my device.

"I refused. I was alone in favoring the device, except for the chairman of the board, who stood by me. He and I fought it through together. We readjusted the device so that it worked perfectly. After that the trolley company's engineers withdrew their objections and the device has continued in uninterrupted service to this day.

"THIS first bascule bridge design was followed by other types, all of which represented such radical departures from customary practice that they met serious opposition even in my own office. It was necessary for me to fight them through. The result, however, has been a great reduction in cost and a corresponding increase in the range of application of the bascule, and in the size and weight of spans.

"There were formerly no single-leaf spans over one hundred and sixty feet. The St. Charles Air Line Bridge at Sixteenth Street in Chicago, however, which I designed, is two hundred and sixty feet and is the longest single-leaf bascule in the world. When they lift it to let a vessel pass, it is much

The St. Charles Air Line Bridge is the world's greatest structure of its kind. Raised and lowered by the action of counterweights, it spans the Chicago River in Chicago. This picture illustrates how it would look, when open, if stacked up beside a modern twenty-story office building. Incidentally, Mr. Strauss so designed it that it can be entirely raised in ninety seconds

the same as up-ending, in one minute's time, the equivalent of the completed steel frame of a twenty-story office building!

"The length of double-leaf bridges has correspondingly increased. The interna-

tional bridge at Sault Ste. Marie, which is the longest double-leaf bascule bridge in the world, and therefore the longest bascule of any kind, is three hundred and thirty-six feet long.

"There are now more than two hundred and twenty-five of my bridges in service or under construction. They are scattered all over the world, from Tientsin in China to Petrograd in Russia, and from Egypt to Denmark; but most of them are in the United States and Canada.

"DURING my early years of bridgework I became interested in concrete construction. Concrete bridges were then in their infancy in this country. The only type employed here was known as the 'barrel concrete arch,' which is a solid arch across the full width of the roadway. In entering this field I began trying to eliminate the centering, and also to erect the bridges without the temporary wooden scaffolding commonly built underneath to support the concrete while hardening.

"I evolved a design in which the arch proper was made up of a series of U-shaped *voussoirs*, which were cast and set in position end to end like bricks in an arch, and anchored until the keystone was placed. Thereupon, the arch of *voussoirs* became self-supporting. The concrete and reinforcement were then placed in the trough thus formed, and the arch was completed without the need for underneath supports.

"This design had several advantages: It could be used to (Continued on page 151)

STRAUSS ENGINEERING CORPORATION, CHICAGO

Mr. Strauss's famous "Yielding Barrier"—designed for the protection of railroad grade crossings and open bridge spans. The cable network which forms its feature has sufficient elasticity to bring to a dead stop, within twenty feet, a two-ton vehicle traveling at thirty miles an hour. No harm is done to the barrier, the vehicle, or its occupants

Here is another of Mr. Strauss's remarkable bridges. Located at Sault Ste. Marie, Michigan, it spans the great U. S. Ship Canal connecting Lake Superior with the lower Great Lakes. It was built for the Canadian Pacific Railroad and is the longest bascule (lifting) bridge in the world

# "Children Given Away"

A story

By Will C. Beale

ILLUSTRATIONS BY GEORGE BREHM

**S**PEEDING busily along over New England country roads, Mary Cartwright was as young and delightful as the spring all about her. But, at that, Mary was challenging the prerogative of her Creator, for—she was giving away a little child.

The object of Mary's vaulting generosity sat on the seat beside her, demurely erect, her little brown hands folded circumspectly in her lap. A mere four or five years old, she already manifested the solemn gravity of a little life decreed to find its way alone.

Her staid little body bespoke repression, discipline. But in the depths of the big dark eyes she was a poignant little comrade to the merry, joyous spring, a wistful, yearning little comrade, albeit submissive, uncomplaining, as would be the way with a little being whose nursery had been an institution, and whose sole parent was—the State.

The little car ran into an enchanting green world of tender young birch and beech, a still, woodland world of startling, almost eerie beauty. Mary felt the swift start of wonder in the child's body touching hers. She pulled out and stopped: for, long since, Mary had known that *beauty* was the instinct of this child's soul. She sat for a moment watching the child's face. And now she yielded to the dull little pain which had been in her heart all morning, a pain which, as agent of the State Board of Charities and Corrections, she had no business to have.

She laid an impulsive hand over the soft little ones. "Oh, dear honey," she said, almost reverently, "the State had a hand-ful left it in you!

To state charity boards you all look alike, dearie, but"—she shook her head ruefully—"the State is no more fitted to be disposing of the daughter of Dave Ritter, socialist, and Margaret Canavan, singer, than—" Mary lost herself. "It isn't fair; but I suppose it's—God."

The child looked up into Mary's face on a sudden big inspiration of childhood, her eyes the deep eyes of the eternal seeker.

"Who was *God's* mama?" Mary started. "Did they give *Him* away to someone?"

**M**ARY stooped for the brake. She didn't reply. She couldn't. A moment later, when she was recovering, "I do hope your new mama will just love all beautiful

things, Ardath," she murmured fervently; "just as you do yourself."

They scampered by a signboard: "Dunfield, four miles." That was their destination; and Mary's heart quickened with anticipation. This was her first commission for the board, and for every reason she hoped that Dunfield would turn out well. Mary wanted to *impress* the board. She wanted to dazzle it with her efficiency. There were skeptics on it. And there was someone else, too, who had always said—

This brought her back in two seconds to a scene of that very morning; to the state-house, where she had driven for her papers; to an angle of a corridor; to a young insurance commissioner who had held her ten-

"Wait, boy!" It was firm enough to distract, gentle enough to

derly, and begged her for the twentieth time to reconsider—by which he meant give up the thing of career and marry him.

Reminiscent tenderness was mounting strong in Mary, when a little hand crept out to her arm and a quiet little voice said, "Will there be a daddy?"

"Will there be a daddy?" The question brought Mary to, and the tenderness died down—several degrees.

"I don't know, honey-lamb."

On the application papers Mary had noticed the applicant's score of three husbands, but she was in ignorance as to a fourth.

"Anyhow, with a nice mama you can do without a daddy." A pause, then, "There are times when men *do* figure as a necessary evil, dearie, but it's very little of the first and a good deal of the last. "Anyhow,"—in independence supreme—"we don't need 'em!"

Now came Dunfield. And suddenly the day became grimly matter of fact.

Dunfield lay along a wale in the earth. By no amount of beneficence could one say it "nestled in the valley." There was a sluggish stream. The mud road, deep rutted and rough, crawled along one side

of the stream. Then over a bridge to the other. Two sawmills slammed and screamed at each other by the bank. A scattered settlement held aimlessly along one side. The outlook was dirty, bare, depressing. The lumber must have come a long way.

Mary stopped and studied her papers. "Marcelia Mae Henwood, Dunfield." Somehow, Mary shivered a trifle now as she associated the name with little Ardath. It struck her as ominously saccharine. It made her think of a fly striving in a pot of honey.

AT THE grocery post office Mary inquired for the abode of Mrs. Marcelia Henwood. At the name, the kindly old man smiled quietly, led her to the door and pointed. His smile awoke no response in Mary's heart. Somehow it clanged against it, ominously.

Mary drove along the muddy street and off into an open space built up to a level with half-rotted waste from the mills, than which there is no counterfeit of solid earth more depressingly unreal. At the back of it was Mrs. Henwood's house, naively kept within bounds by a pink picket fence. The house itself drooped

from premature old age, albeit rakishly, like an aging dandy. It must have been the pride and joy of some lumberman's heart—once. It was scalloped and jigsawed to its very shingles. It had been painted instead of repaired. The last time was long ago.

A youngish woman in a greenish plaid house dress answered Mary's knock, and Mary knew her instantly. Evidently, she took things in at once. "Oh, how do you *do*," she tilted effusively. "For goodness' sake, don't look at me. I'm a sight!" She caught off a reasonably clean apron and clutched instinctively at her hair. "I wasn't expecting you so soon. Come right in."

It was only after she had shut the door that Mrs. Henwood with a perfunctory hand turned up the child's face, cursorily. But even then she spoke to Mary: "You run right in and sit down. I'll get off these rags."

Mary went in and sat down. Out in the hall she had received an impression of rather amiable disarray; but here in the parlor was a ferocious cleanliness. Three men in crayon occupied the room; and immediately to Mary the little place became a stage—eternally set.

She looked around, and something tightened within her. There were pictures, beside the crayon males: mother-of-pearl mill streams; framed plaques of feather flowers; a photo-print of a blasé cupid. There were zoölogical rugs. There was an erstwhile molasses jug laid up in putty, adorned with bits of colored crockery, and gilded. And—Mary started—hanging down from one corner of the mantelpiece were three oblong black plates of metal, engraved like coffin plates, and strung on yellow baby ribbon.

MRS. HENWOOD entered. She had on a blue figured silk dress. She wore a chatelaine watch. And now she took up the matter of the child. "Come here, dearie. Come and see your new mama."

Ardath went obediently. She stood on inspection, gazing somberly at the other from out her deep dark eyes. Mrs. Henwood turned her round, then began taking off her hat. In that instant something poignant passed from the child's eyes into Mary Cartwright's. Suddenly, Mary found herself wanting to cry.

Mrs. Henwood's smiling face was showing a pronounced tinge of disappointment. She was looking at the child's heavy brown hair. "Oh, isn't it a pity! I had set my heart on her having yellow hair. I wouldn't have minded if it *had* been straight. Let me see," she began musing, speculatively. "I think I'll dress her in pale blue. And I feel sure I can make her hair curl if I keep at it enough. Pale blue is sort of chick, don't you think?"

Mary straightened.

"Sit down, dearie, while the lady and me talks," Mrs. Henwood was saying. "Not in *that* chair, Hennie doesn't like her tidies mussed. *Here*, in this one. *That's* the girlie!"

"Here" was a hard little kitchen chair, painted white with gold bands. There was something haunting in the child's face as she sat upon it, her little body institutionally erect, her hands folded neatly on the durable wool dress. Mrs. Henwood nodded approvingly. She settled back.

"Now I suppose you want to know

bewilder. "I'm not going to hurt you"

Mrs. Henwood's smiling face was showing a pronounced tinge of disappointment. She was looking at the child's heavy brown hair. "Oh, isn't it a pity! I had set my heart on her having yellow hair. I wouldn't have minded it if it had been straight"

about me. First," cooly, "how old do you think I am—really now?"

"Forty," Mary lied, nastily. What did the woman's age matter!

"Mer-r-r-cyl!" Mrs. Henwood had shrieked in dismay. "My dear! I'm only thirty-three. People always seem surprised when I say I'm thrice widowed. It *does* seem terrible, doesn't it?" She glanced at the yellow-strung coffin plates.

"Have you never had any children of your own?" asked Mary. The things she felt assembling deep within were beginning to drum a scaring tocsin on her heart.

Mrs. Henwood had reddened, foolishly, Mary thought.

"Never," she admitted. "Children take so much care. I mean, of course, children of your own. But after my last husband died and left me this house, I thought that soon I'd be getting old, and it would be nice to have someone you'd trained yourself handy to keep it for you."

Mary stiffened. "What plans would you have for teaching her?"

"Why—she wouldn't need to know much." She turned to stare speculatively at the child. "If I get time, I guess I can teach her all that's necessary. And now tell me about her. For goodness' sake *who* were her parents? Were they... respect-

able? Is she healthy? You know, I always have a perfect horror of catching something."

Mary could not look at the little face. Why *couldn't* the woman grasp the flawless intelligence of the child, intelligence that bespoke perfect comprehension!

"Her father was Dave Ritter, the socialist. He threw away his life a couple of months ago saving a drunk from a train."

"Goodness!" lofty eye-browed. "And how about her mother?"

"She was a singer. She died when Ardath was born."

"Is... that... so-o! Was she much of a singer? I hope she wasn't on the stage."

MARY scarcely heard. Her eyes were fixed straight ahead like a sleep-walker's. Her body was thrilling to something. The little child had slipped down from her seat and crossed to her chair, her wide, solemn eyes fixed on the woman opposite. The little brown hand stole out pleadingly to Mary's arm. It was then that Mary's body had thrilled. The little hand was trembling.

Mary answered, "She sang Handel's 'Messiah' at the State Festival five years ago, as it was never sung there before."

Mary's throat was aching, horribly. The little trembling hand was tightening on her arm. Without looking down, she knew the dumb misery in the child's eyes. And now the strange things focused within her were gaining recognition. An eternal thrill from out the ages had reached forth and touched Mary's heart.

She began putting papers *back* into her portfolio. Then she rose, and said, "I have decided not to leave her, Mrs. Henwood."

"Why—what do you mean?" Mrs. Henwood rose too.

"I don't think she would suit you. She is not an ordinary child... we decided long ago that she must find a very particular home."

"But I'm going to need someone!" Then, spitefully, "I don't believe you have any right to take her away. And, believe me, I shall find out."

Mary hadn't; not according to the State. But according to other, bigger laws...

"Another application came only yesterday from a woman over in Franklin County. I have a right to see her, also." Mary was putting the hat on the child. "Children are true products of their parents. It is (Continued on page 144)

# Human Nature in a Hat Store

Curious facts and stories about hats and heads, men's tastes and the shapes and colors of headgear that suit them, as told by Gordon A. O'Neill, hat buyer for "The Man's Shop," Lord and Taylor's Department Store, New York City

*As Reported by Merle Crowell*

**L**ONG ago I came to the conclusion that you can tell more about a man's habits and tastes by the hat he wears than by any other article of clothing. Many of the so-called business suits, for example, sold in the course of a season are along the same general lines of cut and style—with a variation only in color and texture. When a man buys a pair of shoes he is interested mainly in the fit and wearing qualities. His ties are likely to be bought by his wife or given to him as Christmas and birthday presents. But his hat is his own choice. He picks it out himself; and he has a wide range of colors, shapes, widths of brim, and heights of crown to choose from, not to mention the even wider gamut of colors in hat bands. Moreover, in the soft felt, straw, derby, and beaver hats there are infinitely more variation than in any other kind of masculine wearing apparel.

In addition, the average man does not seem to be particularly constrained in his selection by the fear that a hat may not be "in style"—an all-important consideration with women. He wants a hat that suits his fancy and that he thinks will look well on his head. Usually he tries on half a dozen, and sometimes as many as fifteen or twenty—so you can't say that his final decision has been unduly hurried by lack of evidence.

The thing uppermost in his mind is usually the question of looks. "Do you think this hat is becoming to me?" he asks. Right there he shows his good sense; for a man's whole appearance may be made or marred by the color and shape of his hat.

The man with a sallow complexion, for instance, should not wear a green felt hat. It tends to give him a ghastly look. He will find the light tan or brown infinitely better. Nor should the pallid man wear a black derby; it only accentuates his pallor.

Tan and brown are good colors for the individual with a ruddy face. An olive

complexion and dark hair are best matched by an olive or dark brown hat. The pearl-gray felt with a black band almost invariably gives a distinguished appearance to the well-built man with iron-gray hair.

A red-haired man usually looks best in a black derby, provided he is trim and erect. If he slouches, a brown felt is the hat for him. He should never wear gray,

rules as hard and fast. No observation about human beings can be rigid. I've seen a customer buy a hat that suited him almost to perfection, and the next day a man who looked enough like him to be his twin brother would try on the same kind of hat and it wouldn't suit him at all. There's where the baffling thing called *personality* enters in. The suggestions I have made, however, are true in the vast majority of cases.

I am always interested in the angle at which a customer wears his hat and the tilt he gives to the brim. From his old hat—the one he has owned long enough to give "character" to—you can tell a lot about his moods and habits of thought. If the brim droops down over the owner's eyes it is usually the barometer of an indifferent or sleepy mind. If the hat is pushed far back on the wearer's head it indicates a breezy nonchalance, a catch-as-catch-can attitude toward the world at large. A hat pulled down sideways until it touches the ear usually gives a man a rakish appearance. Sometimes, however, it suggests a strong and individual personality. Also I have seen men who, on hearing some unexpected good news, would yank their hats down over one ear and strut off whistling.

There's an interesting study in the psychology of hats at a baseball game. Watch it the next time you go. If the home team gets four or five runs behind and some fielder makes a glaring error, you will see the fans pulling their hats down on their foreheads until they can just squint out from under the brims. But the

minute the home team comes to life and ties the score, these same hats will be pushed far back on their owners' heads.

Almost every man wears his hat tilted slightly to one side or the other. Not one in twenty keeps it habitually at exact right angles to his body. The exceptions to the rule are almost always mature and sober-minded citizens. Englishmen have an individual and (Continued on page 186)

## A Fly on a Pumpkin

"**B**IG men must avoid small hats," says Mr. O'Neill. "It calls attention to their bulk. And a small, slender person should forswear the hat with a wide brim and high crown; it only accentuates his lack of size. The man with a large head or chubby face does well to select a hat with generous brim and crown. Fairly high crowns are usually best for men whose heights range from medium to very tall. One should remember, also, that a beard adds to the size of the face, and calls for a wider brim and higher crown."

"You can get a few suggestive hints along these lines if you study the comedians in vaudeville. The small hat perched on the fat man's head makes him look a lot fatter. The slim comedian will wear a wide, floppy-brim that gives him a ludicrous appearance; or else he will come strolling from the wings with tight trousers and a tall hat with a narrow brim, which adds inches to his height."

Most of us have had experiences that corroborate Mr. O'Neill's sensible advice. I have noticed that a man's friends (including the women-folks of his own family) like to tease him if he buys a hat that does not look well on him. Here is the worst roast I ever knew a man to get. He was a large man with a fat, round face. He bought a small hat and went home with it on. His wife laughed at him and said, "You have no idea how funny that hat looks on you. It looks like a fly on a pumpkin."

THE EDITOR.

because it emphasizes the color of his hair.

Any man who is trim, alert, and erect stands a much better chance of looking well in a derby than the man who slouches or is round-shouldered or conspicuously fat. These types should stick to the soft felt and panama—or else start in to patronize a gymnasium.

Of course I don't intend to give these

# "Do It Better—and Do It In Your Own Way"

That is the recipe for turning a little business into a big one, according to George M. Verity, who took a small bankrupt tin-roofing concern twenty years ago and built it into the great and powerful American Rolling Mill Company

*By Samuel Crowther*

**S**OMEONE ought to start a "Society of Preachers' Sons Who Have Made Good." It would have an astonishing list of members, including a startling number of big business men!

There's George M. Verity, for example, president of the American Rolling Mill Company, which he built up in twenty years out of a little tin-roofing business that was in the hands of a receiver when he took charge of it.

It can't be mere chance that so many of these sons of parsons make a name for themselves. George Verity, for instance, had no business training. Even his schooling was a thing of shreds and patches. He had no money. The largest salary his father ever received was nine hundred dollars a year—and the average was nearer five hundred!

The biggest thing the preacher-father was able to give his son was an example of clean living, honest thinking, and conscientious work. That is the only capital most of these successful sons of preachers had to start with; but it seems to have been worth more to them than a legacy of a million dollars has been worth to many another boy.

"My father was the most remarkable man I have ever known," Mr. Verity said to me. "A man had to be remarkable, if he was going to hold down the job of a Methodist preacher in southern Ohio just after the Civil War, as my father did.

"He had to be sincere; he had to be rugged enough to carry through with his sincerity; and he had to be sure that the Lord would provide—because most of the time nobody else did. My father had all these qualities.

"He was one of the most imposing figures I ever saw; a great shaggy sort of man, standing well over six feet and weighing more than two hundred and

fifty pounds. He had a splendid voice, a natural eloquence, and a marvelous capacity for getting along with people. He always wanted to be where the work was hardest. For years he was a circuit-riding preacher. That was before I was born. But even during my childhood and youth we rarely lived in one place more than a year. The Conference assigned the pas-

money to pay my way, and I decided that instead of working my way through college I would begin to work my way in business.

"I did go to a commercial school for a year. Then I became bookkeeper and general manager of a feeble grocery business, owned by one of my relatives who couldn't find anybody else to tackle it. I

slept on a cot in the back of the store, opened the shop at five in the morning, and closed at nine in the evening. My salary was next to nothing, but I did get some practical contact with business.

"At the end of three years, I persuaded my relative to sell the grocery. I never did like it and I wanted to get into something else. The first thing—in fact, the only opening that presented itself—was not a very brilliant one. A friend of mine, a lawyer, had a client whose company was in the hands of a receiver. It was practically defunct. I doubt if they thought I could resuscitate it. Probably all they expected of me was that I would take charge of the funeral.

"The name of the concern was imposing enough, The Sagendorph Iron Roofing and Corrugating Company. But that was the only imposing thing about it. As for me, the only idea I had about roofs was that I liked to have one over my head! However, I took the offer.

"There was a pay roll of twenty-five men. I was bookkeeper, manager—in fact, the entire office end of the concern. But by the end of the first year the business had picked up so that I could hire a bookkeeper. He was the first man I ever hired, and he is still with me.

"At the start, the company simply handled tin roofing and corrugated iron pipe. The business was that of any ordinary roofing concern. But I didn't like

## The Right Way To Go Into Debt

**S**OME men are fond of boasting: "I never borrowed a penny in my life. I pay cash as I go. It's a principle with me." If you're that sort of man you have a good deal to learn. Unless you know how to borrow money you're going to have a hard time making much headway in business. A wide-awake young man frequently sees a most promising opportunity. Provided he has a reputation for level-headedness, he is able many times to borrow the money to take advantage of it. If he tried to save that money out of his wages it would take him ten years—and by that time the chance would be gone. Nearly every man has to borrow *some* money when he starts in business for himself; seldom has a man of twenty-five been able to save enough to initiate any really important enterprise.

But you must be sure of your own honesty of purpose and clearness of vision. Be sure that you intend to put *into your business* every cent you borrow, and not to use it for your own living expenses. Your first step is to find out just how much money you need for your purposed business venture. If you cannot get the full amount, then change your plans or give up that particular scheme. For if you try to go ahead with too little money, the chances are that you will fail.

You can borrow the money if you have established your character. You can't borrow it if you haven't. The man will lend to *you*, not to your business, because he has confidence that *you* will pay him back even if your business venture falls short of your hopes for it.

tors to the churches; and they kept us always on the move.

"The result was that I attended fourteen different schools. It is not a method I would recommend for getting an education. When I finally graduated from the high school in Georgetown, Ohio, in 1884, I was nineteen years old. Father wanted me to go to college. But we had no

the idea of doing just the same sort of thing that any similar company could do. I thought we ought to have a specialty of some kind; so that the product itself, the people who made it, and the people who sold it, should all be special and *our own*.

"This was long before the word 'specialty' had become a trade term. We did not use the word then; we just wanted 'something different.' I learned a good deal about roofing and more about men; and at the end of two years the lawyer suggested that I organize a new company and buy the business from the receiver."

Verity did this; and with five hundred dollars of borrowed money he bought himself a substantial interest in the business. That shows how small it was. Then he went to work to carry out his idea about "something different." He brought out a special, twisted rain conductor that was stronger than the ordinary pipe; he borrowed some more money and put in special machinery for making it, and within three years he had a corporation with assets of thirty thousand dollars. He was the vice president and manager.

**T**HE business grew with fair rapidity, but the field of its operations was only Cincinnati, and Verity wanted to get into something larger.

"In 1899, after we had been going for eight years," he said, "a promoter suggested that he form a company to take over our little roofing business and build a rolling mill, so that we could produce our own roofing material. He convinced us that it was a good move. Indeed, he convinced us so thoroughly that when we found out he had no particular facilities for raising money and was generally useless, we went right on with the project ourselves and gained the support of enough individuals in and around Cincinnati to raise half a million dollars. We started building in the spring of 1900 in Middletown, Ohio, and in March of the following year we were under way with three hundred and fifty men, a little bar mill—that is, a mill for rolling out bars—an open-hearth furnace, a sheet mill, and the necessary apparatus for galvanizing.

"Half a million dollars is a good deal of money ordinarily; but a plant investment of half a million dollars in the steel trade is nothing at all, and we entered business just as the great United States Steel Corporation was getting under way. If our resources had been a hundred million dollars instead of half a million we might have become active competitors of the big corporation, and so possibly have failed. Our small size was a great advantage to us. We could manufacture only on a small scale, could not hope to compete in quantity products, and had to go in for quality.

"There is an idea that the big fellow always has a great advantage over the little fellow. Undoubtedly he has if the little fellow chooses to give it to him, but not otherwise. If the man of small resources chooses to put himself on a level with the man of large resources and to compete on a quantity and price basis, he will most surely be wiped out. But if the smaller man, instead of going into the quantity market, devises for himself a specialty he has a field all to himself."

After a few years a report of the Department of Agriculture came to the at-

KNOW BY STAMPA

GEORGE M. VERITY

Since 1899, the time of its organization, George M. Verity has been president of The American Rolling Mill Company, of Middletown, Ohio. Mr. Verity was born in East Liberty, Ohio, in 1865. He attended the common schools and took a course in a commercial college. Before entering the iron and steel manufacturing business he was manager of a wholesale grocery firm located in Cincinnati. He is a member of the board of trustees of Antioch College, Yellow Springs, Ohio.

tention of the officers. It pointed out that the old hand-made iron did not rust as easily as modern iron. Verity and his associates started to investigate in a small way. Everybody had been making steel. The whole trend of the industry was toward steel, and the day of iron was supposed to be past. But steel quickly rusted. The Department of Agriculture had been drawn into the question by the complaints of farmers about the short life of steel fences.

**T**HERE seemed to be a good deal to say for the old-fashioned iron. For instance, a soldier was buried in 1792 in Fort St. Clair, Ohio. The coffin was dug up in 1892. The nails in that coffin had scarcely rusted. The old tin roofs often lasted sixty or seventy years or more. Nails driven in before the Civil War were found, in tearing down houses, to be in better condition than steel nails put in thirty years afterward. The secret of it was that the old iron was made by hand and the impurities laboriously worked out. Modern iron and steel were made by quantity-production methods. The coffin nails on analysis showed that they were 99.83 per cent pure iron.

Without being technical, pure iron means iron with the smallest possible amount of carbon, manganese, silicon, sulphur, phosphorus, or copper in it. Verity saw a new special field open if the company could make pure iron. Of course it could be made by hand in the old-fashioned way; but that would have been far too expensive a product to be salable. They had to find a commercial way. The experts said that it was impossible to produce pure iron commercially; but Verity's men, working for years on the problem, did find a way. And then, instead of a little specialty that could easily be imitated, they had a big specialty that could not easily be imitated.

"One idea has controlled all our business," declares Verity: "The *specialty* idea extends equally to men. We could no more make a specialty product with odds and ends of men than we could with odds and ends of material. I am emphasizing this specialty phase because I have observed that the only way men accomplish things is by separating from the crowd and doing something better and different from what the crowd is doing.

"It is not possible to buy interest and coöperation. I (Continued on page 154)

# Scattergood Becomes A Private Detective

*By Clarence Budington Kelland*

ILLUSTRATIONS BY PAUL MEYLAN

**C**OLDRIVER had been reveling in a street carnival, the first in its experience. For a week it had been taking its best girl to ride on the carrousel and to see the trained seals and the living statuary and the Mammoth Menagerie of Strange Beasts. Twice each day it had gaped while Speedy the High Diver poised seventy feet above their heads and, to the accompaniment of a roll on the drum, soared downward through the air to plunge into a shallow tank containing hardly enough water to give fin-room to a goldfish.

Now the carnival was gone—all of it except Speedy the High Diver, who, on the very last night, had turned in the air so that one of his legs struck the edge of the tank and was fractured just above the ankle. Therefore, Speedy remained.

In those days high-diving was not a highly lucrative profession. For risking life and limb twice a day Speedy received the sum of eighteen dollars a week, and found himself. He was not, therefore, independent. Indeed, he was in nowise prepared for a rainy day. However, the carnival took up a collection amounting to something like a hundred dollars, which it presented to him with its blessing, telegraphed for a new diver, and went on its way.

The Widow Watts, aunt to Sheriff Ulysses Watts, came to see Scattergood Baines about it, her interest being both social and financial. Speedy, whose real name was James Goodrich, had roomed in the widow's home during the carnival. There he was after his accident.

"What d'ye calc'late I better do?" she asked Scattergood, who was seated as usual on the piazza of his hardware store.

"Hopin' fer the best is a fine occupation," said Mr. Baines. "What was ye aimin' to do?"

"Charge him five dollars a week fer room and board—if I kin git it. . . . But the's the p'int of havin' him layin' there in the house for a month, and mebbe two. I dunno nothin' about him."

"How come ye to take him in?"

"The's a difference betwixt boardin' a man for a week, and takin' him in reg'lar. I could keep Mattie out of his way fer six days. But if he's flat on his back, Mattie'll have to help me wait on him."

"Um. . . . Mattie showed any leanin' toward divers?" asked Scattergood.

"They hain't scassly spoke."

"Then, if I was in your shoes, I don't figger I'd get all het up till the fire's built. Mebbe I might's well run up and kind of look the young feller over, though."

"Wish ye could find time," said the widow.

"Gus Naddicks and Walt Toomey been heard from?"

"Guess 'tain't none of them boys' business who I take into my house."

"Wal, betwixt this here divin' feller and them two, I dunno but I'd choose the diver unsight-unseen," said Scattergood. "G'-by, Widder. G'-by."

So Scattergood called upon James Goodrich, as he would have done without the Widow's intervention. He found him to be a red-haired young man of some twenty-one years with a chronic inability to be depressed. He grinned amiably.

"Mrs. Watts says you're a committee to inquire into my character," he said.

"Um. . . . Widder does some more talkin' than the usual run," said Scattergood. "How be ye?"

"Pretty spry for a man with one leg."

"Um. How ye fixed financial?"

"I can pay my board at the going rate for twenty weeks—if I'm laid up that long. But somebody else'll have to tell you how I'll ever pay the doctor's bill."

"Doc's used to that. When anybody pays him up he has to go to bed to git over it. How'd ye come to take up divin'?"

"A man told me once that life was full of ups and downs," said Goodrich; "so I thought I'd get in as many as I could."

"Wal, guess I'll be gittin' along. . . . Kind of lonesome?"

"I wouldn't be," said Goodrich with a grin, "if you could convince the young lady of the house that a busted leg isn't catching."

Scattergood grunted. "If I got any knowledge of womankind," he said, "she'll prob'ly find it out for herself. G'-by."

"Committee ready to report so soon?"

"The committee," said Scattergood, "is prepared to report progress. G'-by."

**I**N THE succeeding month Mattie Watts did find out for herself that young Goodrich was not poisonous. It began by her carrying his meals in to him; it took its next step when she felt it her duty to read to him when his leg was especially troublesome; and by the time he was able to hobble out on the porch with the aid of crutches, she discovered that he needed much nursing. And Coldriver talked.

Mattie sat by him on the porch every minute she could spare from her housework. In the evening they sat together behind the shelter of the vine which overspread the front of the house; and Gus Naddicks and young Toomey passed and repassed, mentioning under their breath what they would do to the "circus performer" the minute he was able to step foot in the street.

In another four weeks Goodrich seemed to be as good as ever, if one excepts a slight favoring of the injured leg. He was well enough to thrash soundly Gus Naddicks, on the town bridge, in the middle of

the day. Two days later, with somewhat more trouble, he thrashed Naddicks and Toomey jointly, and earned for himself the unenviable reputation of a bully and a tough. Coldriver overlooked the fact that both fights had been forced upon him.

He was well and able to go away, but he did not go. Neither did he make any effort to find work and that, though Coldriver boasted as many loafers as any place of its size in the land, was a telling defect in a stranger.

**E**VEN Scattergood Baines mentioned the matter to the ex-diver.

"Hain't it about time you was lookin' fer a job?" Scattergood asked.

"I'm looking," said Goodrich; "but just now, Mr. Baines, I've got something a lot more important to do."

"Such as?"

"It's private," said Goodrich with a grin.

"Nothin's private in Coldriver. Is this here business of your'n named Mattie Watts?"

"It is."

"Um. In this here town we don't go courtin' a gal till we kin show how we're able to support her."

"I'll take that up later. Anybody can support a wife. Look at the folks who are doing it. But it takes a good man to get the wife he wants."

"Sure ye want Mattie?"

"Dead certain."

"Um. . . . Folks don't take kindly to ye, somehow. I've heard talk of tar and feathers."

"Tar and feathers, eh?" Goodrich's eyes glistened.

"And folks is askin' how you live without workin'."

"I'm paying my board."

"With money that come from charity," said Scattergood. "No, young feller, I dunno's I hold with your course of action. Seems like you're lackin' in ambition. Your clothes is shabby. You hain't got money to hire a livery rig to go buggy-ridin' with your girl. You hain't got nothin'. You don't want nothin'."

"Except Mattie," said Goodrich. "Money? . . . Well, I suppose I'll have to get me some. It's easy come by."

Scattergood was to remember that saying at no distant date.

The courtship assumed the proportions of a village scandal. Deacon Pettybone and Elder Hooper took the matter up in their energetic way.

"Can't make me believe he means right by the gal," said the deacon.

"More'n likely he's got him two-three wives scattered around already. What's Mattie's ma thinkin' of?"

"Suthin' ought to be done. 'Tain't alone the gal. If she makes her bed she's

He turned to Scattergood and said, with awe and wonder in his voice,

got to lie in it. But we hain't wantin' no young tough a-hangin' around our town thrashin' folks and a-leadin' others into temptation."

Talk bred talk. Goodrich was endowed with all the characteristics of a desperado. It was authoritatively reported that he had deserted a wife in Hampton, and somebody started a rumor he was an escaped convict.

The village could have looked on with equanimity while either young Naddicks or Toomey courted one of its girls. They were lads who frequented the pool-room, and in Coldriver pool is a diversion of Satan. Coldriver was used to them. . . . But characteristics which could be glossed

over in a native became heinous in a stranger.

It was on the second of August that Marvin Towne, driving home with the proceeds of the sale of two heifers in his pocket, was stopped a mile from town by a man with a shotgun and a red handkerchief over his face, and robbed of seventy dollars. It was the most exciting event in the recent history of the county. A bandit! Coldriver was proud, while it shivered at the thought. It was a distinction.

THE crowd in the post office next morning was as large as one would have expected on town-meeting day. Marvin was catechized fifty times. . . . Had he no

suspensions? Could he describe his assailant?

"Fur's I'm concerned," said Deacon Pettybone, "he don't need to do no describin'. I kin describe him."

"Me too," said Elder Hooper. "And I hain't afeard to speak right out. It's that circus feller. Where was he all day yestiddy? Nobody seen him. Where was he last night? Tell me that."

It was inevitable that suspicion should rest upon Goodrich. When, questioned by Scattergood, he declined to account for his whereabouts and when, the following day, he went into Wade Lumley's store and bought a suit, shoes, and a straw hat, suspicion became certainty.

"She . . . cares for me . . . and she would stick to me even through this"

Three days later Sam Kettleman was held up by a man with a shotgun and a red handkerchief and robbed of fifty dollars. Again this happened on a day when Goodrich was unaccountably absent. Kettleman had kept his head better than Marvin Towne had done. He was able to describe the robber with some pretense of accuracy. Indeed, he even saw and related that the bandit wore about his left wrist a leather strap, such as men who are accustomed to putting a strain upon their wrists sometimes affect. . . . And James Goodrich was accustomed to wear such a strap.

On the top of this Goodrich disappeared. None knew where he had gone nor why. . . . Three days later he returned

coolly to the village and walked down Main Street with a certain bravado.

Scattergood Baines hailed him. "Hey, young feller," he called.

Goodrich stopped and grinned in his friendly way.

"Where ye been?" Scattergood asked sternly.

"There was a rainbow," said Goodrich. "I needed gold, so I was looking for the end of it."

"It hain't no time fer jokin'. The's been a second robbery. Suspicion p'int's to you. The robber wore one of them leather dinguses on his wrist."

Goodrich held out his wrist and regarded the leather curiously.

"What ye got to say?" Scattergood demanded.

"Nothing."

"Where were ye?"

"Walking," said Goodrich. "What time was this robbery?"

"Close to nine o'clock."

Goodrich shrugged his shoulders. "I can't prove I was anywhere else," he said. "But they can't prove I was *there*."

"Maybe," said Scattergood, "they won't wait fer proof. Folks has got a way of bein' satisfied with believin' what they want to believe."

It was then that Coldriver was scandalized. Mattie Watts was seen to cross the bridge. She saw (Continued on page 173)

# He Makes Homes Grow In Waste Places

The story of a Kansas City man, just over forty, who has made a fortune and who has done a great service in the real estate business

An Interview with Jesse Clyde Nichols

By James H. McCullough

**A** DOZEN years ago, a gentleman who had once been governor of a certain state, desired to buy a home in Kansas City. A young real estate man named Nichols urged the ex-governor to select a site in a subdivision which at that time was a new development.

One of the principal arguments urged by Nichols was the character of the restrictions placed on the property. Every lot, he pointed out, was safeguarded by elaborate provisions in the contract of sale, to prevent the encroachment of undesirable neighbors, and of factory, store, or apartment buildings.

"Young man," said the ex-governor, "your restrictions sound very fine. But they are all on paper. I am going to buy a house where I can see what is around me."

The ex-governor accordingly chose a fine house located in the heart of the older aristocratic section. On one side of him was a handsome red-stone residence which had cost its original owner more than a hundred thousand dollars. The ex-governor could see this handsome home next to his, and he thought he was safe. But what he did not see was that the business part of the city was rapidly growing in that direction.

Within a year after he bought his house, the restriction period on an adjoining property ran out; and as there had been no provision for the renewal of the restrictions, an enterprising undertaker bought the property and built his shop there!

The ex-governor protested vigorously. He carried his case to court, and testified on the witness stand that his daughter had become a nervous invalid from seeing corpses carried in and out of the undertaker's place of business. But he could not

drive out the undertaker nor collect damages. Within a couple of years he sold the house that had originally pleased him so much for almost ten thousand dollars less than he had paid for it.

Jesse Clyde Nichols, the young man who tried to persuade the ex-governor to buy in another section of the town, showed me this house the other day. It

tirely transformed by the swift inrush of business.

Nichols has devoted fifteen years to fighting just this sort of thing. His story is remarkable. It is the story of a man creating his opportunity and holding to an ideal in spite of the most discouraging obstacles. He tackled the job of making the owning of a home a sound financial investment; and in a short space

of years he has succeeded in transforming a desolate tract of land, that formerly lay outside the city limits, into what is universally regarded as one of the finest residential districts in the entire country. The homes in this district are protected for years to come—permanently, if the property owners wish—against such encroachments as that which depreciated the investment of the ex-governor.

Mr. Nichols is still young, just a little past forty. But he has had time to make a fortune for himself, and to engage in an extraordinary variety of activities outside of his real-estate business. Many of these activities are concerned primarily with the interests of the city, and have nothing to do with promoting his private fortune.

I rode for mile after mile with him the other day through the district of beautiful homes he has created. He told me the story of its development—and incidentally he told me many things about himself which helped to explain why he has been able to achieve so much in so short a time.

He was born in the little town of Olathe, Kansas, about thirty miles from Kansas City. His father was well-to-do, but that made no difference to the boy Clyde.

"I got my first job," he told me, "at the age of eight, in a local store. When I came home one day very proud of the fact that I was earning money, my mother objected.

Think of This—If  
You Want to Buy a Home

**H**OW would you like to have an undertaker's establishment put up next to your house?

Read in this article about the big man in Kansas City who had this happen to him.

Are you thinking of buying a home?

Have you got one picked out?

Do you know anything about the restrictions governing the property?

If not—you had better find out.

is now used for a restaurant. The hundred thousand-dollar house next door is a conservatory of music. Down the street a block and a half is a huge bakery. Next door to the undertaker's shop is a row of stores of every description; and just beyond is a busy corner where two street car lines intersect. What was once a quiet, fashionable street of homes, has been en-

"You don't need to work, Clyde," she told me. "Your father can give you money."

But the boy wanted the independence that came with earning his own money. So he kept that first job and, in the years that followed, he got a variety of others. He clerked, at various times, in the village hardware store, in the grocery, the drug and dry-goods stores, and he carried papers.

When he got into high school, he went into business for himself. With money that he himself had earned and saved, he bought a horse and wagon and became a huckster. During the summer vacations he drove into the country, buying butter, eggs, and other provisions from the farmers. It took him two or three days, as a rule, to get a load, and during this time he slept in or under his wagon, and cooked his meals along the road, or by the side of a stream.

WHEN his load was completed he would drive to Kansas City, where, in competition with men many years older, he disposed of his produce to whoever would buy it, but mostly to retail merchants, because they gave him better prices than the commission men would pay.

"I regard this experience," Mr. Nichols said to me while we sat at lunch in a handsome country club which he was responsible for building, "as the finest training I could possibly have received; for I learned from it the value of courage. Initiative is necessary; vision is fine; but without the courage to carry on in spite of every obstacle a man will not go far.

"Sometimes the fruit in my wagon would rot before I sold it. Sometimes the market would drop and for two or three trips running I would lose money. It took courage to dig into my pocket time after time to pay for produce or fruit, and to go ahead in spite of losses."

With the same sturdy independence, Nichols made his way through the University of Kansas. His father wanted to pay his expenses, but the lad insisted on paying them himself. Between high school and college, in order to accumulate some money, he worked for a year in the wholesale meat business; and when he went to Lawrence, Kansas, where the university is located, he kept the agency there for the wholesale meat house. He went to retail stores every Saturday and took the merchants' orders.

In this way he earned about forty per cent of his expenses. The balance came from a variety of jobs—working for a laundry, selling things to other students, corresponding for the Kansas City "Star" at five dollars a column, and doing other kinds of work in the summer vacations.

Between his junior and senior years Nichols decided that he would go to Europe for pleasure. He had saved one hundred and twenty-five dollars, and he started with that sum, working his passage on a cattle boat. In Europe he bought a bicycle and rode over a good share of the continent. But his money gave out when he reached Switzerland, so he sold the bicycle and walked the rest of the way. He came back in the steerage, arriving at Montreal with just enough in his pocket to pay his fare to Kansas City and to leave a balance of thirty cents!

ing up the collar of his coat, he arrived in Olathe, ragged and penniless, but triumphant.

Nichols not only supported himself at the university, but he also tied with another man of his class for first place in scholarship. Besides this, he was active socially, and in fraternity life, took a part in athletics, became a class officer, and was a chief organizer of the various counties of the state in a campaign to get from the legislature a larger appropriation for the university.

The acting chancellor, speaking at a small gathering where Nichols was not present, said that no man, either on the student body or on the faculty, had ever, within his recollection, done more for the general good of the university than Nichols.

After finishing college, Nichols spent a year at Harvard, intending to become a lawyer. But while there he took a course in economic history and became enthusiastic about reclaiming undeveloped lands. It occurred to him that a fortune could be made by taking profits accruing through the increase in value that time and work and the growth of a new country would bring. He therefore gave up law and spent a year in Mexico, New Mexico, and other parts of the Southwest. It proved a slow, tedious process, and did not come up to his first expectations; but it did turn his mind to real estate.

RETURNING to Kansas City, he determined to go into the real-estate business. He began by building some small houses to sell to workmen, having enlisted for that purpose the financial aid of a number of farmers and of two friends. Nichols directed everything himself. He lived in a little shack on the property, and paid five dollars monthly for desk space in the rear of a drug store. That was his office.

Starting thus, with no practical knowledge of contracting or building, but with a vast amount of energy, Nichols cleared eight thousand dollars the first year, and ten thousand the second.

"My next project," Mr. Nichols told me, "was to subdivide a ten-acre tract. I invested most of my cash in it, buying it with my two friends at nine hundred dollars an acre, on time. My friends were lawyers, busy with their practice, and they left me to take charge of all the work on the property.

"This ten-acre tract was outside the city limits. There was no city water, gas, electric lights, sewers, graded streets, or sidewalks. The only handy way to get into the city, except by carriage, was by a slow "dummy" train that traveled back and forth every (Continued on page 157)

JESSE CLYDE NICHOLS

Mr. Nichols is president of the J. C. Nichols Investment Company which has developed the Country Club District, in Kansas City, from mere waste land into one of the most beautiful residential districts in the country. He is a director in twenty-one business enterprises, including banks, insurance companies, a title and trust company, and a telephone company. He is president of the Art Institute, treasurer of the Conservatory of Music, member of the Board of Education, and an officer or director of other civic enterprises in Kansas City. He was born forty-two years ago in Olathe, Kansas, graduated from the University of Kansas, and received a degree at Harvard

He reached Kansas City with two cents in his pocket, and the fare to Olathe, his home town, was sixty-five cents. He did not know how he was going to make up the difference, but he happened to meet a friend who admired the sweater that Nichols was wearing and offered to buy it.

"You can have it," said Nichols promptly, "for sixty-three cents!"

The deal was closed at once. That sweater had taken the place of a shirt, for the last shirt Nichols owned had worn to shreds and been discarded. So, fastening a handkerchief across his chest, and turn-

# "Income-Taxidermy"

The great indoor sport until March 14½, when the season closes

*By Nina Wilcox Putnam*

**W**HEN the Editor of this AMERICAN MAGAZINE told me I was going to write a piece for him about why I pay my income tax—well, I had to laugh.

I will at once admit that it is unusual to do so in connection with said subject, but I had to laugh just the same. Why, I says, that is even less possible than the well-known finding of a needle in a haystack or making a prohibition officer go through the eye of it, when found. And he says why so and I remarked, well because the only reason I pay it is because I have to, see Section Twelve of Instructions for Individual Return. That, I went on with a bitter smile, is where they tack on a nasty little P. S., as if to say Oh I almost forgot, but the Penalties for stalling, doctoring the dope-sheet, or purposely omitting odd sums, such as that two-ninety-eight which the Emporium returned on account the baby's new rompers did not fit after all, is not over ten thousand berries, a free trip to jail, a lot of sour publicity, and the electric chair, or something. So, I says, it is reading this Section Twelve deters me from acting on a perfectly natural impulse and leaving for Alaska the same day the new return blanks come in. I pay this tax, see, because I have not as yet heard of how not to with any reasonable assurance of safety, and the fact is sufficient in itself, but not sufficient to make a whole entire article out of, even if paid for by the word.

Well, the Editor thought this over rapidly and then he says well, why not express yourself on the subject anyways? And I says because if I was to do that I would probably land in the above mentioned penalties just the same, on account of what I think about the income-tax being pretty violent. I am sure you can imagine what I mean, and he says you're darn tootin', I can.

Well, then, we kind of left it at that, as you might say, and only for me eating supper at an alleged friend's house that night, where I was helpless against an amateur but nevertheless most successfully cast iron Welch rarebit or Welsh rabbit, spell it your own way, well, only for me incautiously accepting this Sunday night invitation, see, without realizing that I was stumbling in upon one of those hostesses who take it personal if you don't let them crowd you with a second helping of something you don't want, well, anyways, as I was saying, only for me being let in for one of these informal little pick-up meals, this article would never of been written.

Well, pick-up meal was certainly right as far as I personally was concerned, because after that second helping of rarebit—and believe you me it would of made lovely golf shoes—why George, that's my

husband, had to pick me up and get me home, someways or another. And after the doctor was gone and I lay there thinking, why naturally my thoughts was on melancholy subjects and equally of course the income-tax come first to mind.

But also along with thoughts about this tax come a realization of all the people which was suffering under it—millions of 'em, ranging from the stenographer @ \$2,200 per fifty-two or, if she is lucky, fifty weeks per year, up to the poor abused capitalist who gets nicked for more than half his wages and has to struggle along on around \$50,000 or more dollars after the revenue officers have had theirs, and what with the cost of liquor and white pants, why I realized the suffering at Palm Beach must be something fierce these winters.

**I** ALSO realized that in between these two well-advertised classes was quite a few other folks, who, while they are not often given as much publicity by the world, nevertheless, as the poet says, do most of the world's work. What I mean by that is for inst. clerks, fellers drawing down anywheres from \$20 per to \$70 in some cases, and it don't look a bit like any income tax was going to be required from them, not while these sums is still setting pretty in the old pay-envelope, but oh Boy! Even said amounts can run to a lot of bother when added up at the end of the year and has, ever since the fifteenth of March come to mean something beside two days before St. Patrick's Day!

I felt this went for a lot of just average M. D.'s, or as they say in common parlance, doctors, averaging, in dribblets, \$2,000 to maybe \$7,000 berries yearly income on account they are only average smart and have only average luck collecting their bills. And I knew there is also many lawyers who are personally very good scouts yet seem to run to no better money, although \$10,000 yearly is not as infrequent among them as a person might suppose, and they should ought to have less trouble collecting same than men in other lines. Also I thought of business-managers, bank cashiers in small towns, and believe me, even bank-pres. that has been known to suffer from our great National mid-winter epidemic, not to mention school-teachers, with \$2,500 per to spend in their own reckless fashion; college profs. with all of, say, \$3,000 to squander, railroad men and fellers in the telephone and allied corps, which they don't naturally pay the boys any more then they have got to, meaning anywheres from the general managers at about \$15,000, down—mostly quite a long ways down.

Well, while I lay there thinking about this income tax and the way it had citizens by the back of their neck and also by the

slack of their pocketbook, why I got to feeling as sorry for them all as if they wasn't perfectly capable of feeling sorry enough for themselves. And so I decided well, I would take a chance on jail and the electric-chair and ect., and write the article after all, and maybe it would get printed, and if it did, why maybe all the terrible things I would say in it would get across and somebody would do something about it. Just who would do what, I wasn't sure, and of course cannot be before publication, but I was, honestly, thinking of Congress.

It's a funny thing, but do you know, whenever there is something ails the country and the happiness of our great Nation and so forth, I can't help but believe it is the fault of Congress. This brilliant original idea is not my own, I will at once confess, but I got it off of George, my husband, and from listening to him talk over the top of his newspaper in the evenings, which he sometimes does without rancor, if he has had a good day. Well anyways, since I have got my vote I have got also to realize that it is now important I should understand all about the political situation, and how things in the Govt. are run, see? And consequently I will listen to George with attention and a whole lot more tolerantly than I used to, and can often by doing so pick up some enlightening piece of information such as wool suits will be higher on account them Republicans has passed the tariff. Or else something to the effect of I see by the paper to-night that the Democrats have dug up Bryan again in spite of his reluctance. You know—precious scraps of information which broaden my outlook and I can spring them very nicely on the other women at my Thursday Bridge Club, besides.

**O**F COURSE one of the masculine secrets I have learned from George on the subject of our Govt. is that Congress is to blame, and that every once in a while it is good for the human system to write to the papers about it. So knowing this great truth, why, I thought, I will write that article for THE AMERICAN MAGAZINE and Congress will rise up in arms. Well, maybe as high as the arms of their chairs, anyways.

Now, of course, I realize that in order to make the above-mentioned miracle take place I have got to specifically mention the evils which the present form of the income tax gives rise to, and the nature of the rise. And the first evidence I will lay before the hard-hearted Govt. is the form of the form itself.

Up to the year 1917 I had thought that the most awful piece of paper in the whole entire world was a blank pad upon which I was supposed to write something for

which I hoped to get paid. But since that date, why I know better. The most awful sheet of paper is not entirely empty, it is printed in parts and all you have to do is to fill in the gaps. But the part which is already printed, why the one who wrote that had a cinch, the same as the guy which wrote the arithmetic book. The both of these birds knew the answers before they started. At least the author of the arithmetic book did. As for the author of the income-tax-return sheets, I am sometimes strongly tempted to believe he merely made it up as he went along, see, and that there never was no answers—not as far as he knows, anyways!

Take Form 1040 A, for instance—you will have to take it eventually so why not, ect.? There is a lot of meaningful sentences laid out on that sheet, and probably it has on it every question concerning incomes below \$5,000 that the author could think up; but only one phrase of the lot seems to have any sense to it, and that is the occasionally reoccurring words "if any." You may of noticed they are tacked on to the end of several lines concerning losses, if any; bonds, if any; profit, if any; dependent mothers-in-law, if any, ect. Showing that in his madness, the feller which wrote this scenario had one gleam of intelligence, because he dimly realized that a few of us have no losses either in bonds or mothers-in-law; we are not that lucky, if you get me.

I KNOW a friend of mine who had a item put down under Deductions, 12, Losses by Fire and Storm, and it was for dishes hurled by said mother-in-law, and while there was no doubt that the storm had actually existed, the claim got thrown out and the Govt. spent \$62.75 collecting the 72c extra tax, yet the boy was really innocent of intending to cheat, as you can see by reading the line your own self.

Another mean snag is laid on the inside sheet under schedule B, Business or Profession, where it says "if profit is less than usual, explain." Well, now friends, and in this case far from gentle readers, if profit being less than usual in business for the past two years is to be explained, believe you me, the Govt. should be the one to do the explaining and not the poor saps who have to fill in the income-tax returns. Also the same remarks apply equally well to the next item, which says "explanation of business expenses." Well, all I will add to that is a few words to this effect: Any amateur who tries to give a real explanation of the

high cost of business expenses will be taken for a Bolshevik.

Well, anyways, it's the truth a great deal of home-wrecking, personal indigestion, and premature baldness is directly traceable to the form of these income-tax forms, and I move that Congress gets them amended to some such simple line as "please indicate in space below how much income tax you feel able to pay this season, attach check, sign on the dotted line, and then return at your earliest convenience."

## Watch for This in Your Office To-day

"FROM February 1st to March 14½," says Mrs. Putnam, "pretty near every normal office will be running on half-time. Half the time the whole bunch, from the steno. with her \$1,200.00 to fling about every year, up to the general mgr., who is probably that because he is pretty near worth the \$20,000 he is getting, no matter what the rest of the office thinks, is doing the work they are paid for. The other half the time they are sneaking in a lick of work that *they* are going to have to pay for—in other words, cribbing a look at the old income-tax blank which nestles among the stock reports, files, minutes, the boss's private correspondence, or what have you?"

"A friend of mine which he has got a job as gen. mgr. in a concern where there is a office all on one floor, and open, too, so that the big majority of people working on it, why they could not even change their mind without everybody else seeing them do it, well, this man I am telling you about said to me, he says, every time I turn around somebody is whisking a income-tax return blank back into their desk—I do not actually see it in most cases, for they are that quick and sly, but I am morally certain on account I have done the same thing myself; but I ought to stop them in business hours and can't unless I catch them at it—how do they get so clever with the disappearing-act?"

"Well, I thought this over with a appearance of thoughtfulness, if you get the idea. And then I gave him the dope. How many of your employees is survivors of a public-school education? says I. And he says why practically all and I says ah that explains it and he says nonsense, how come? And I says why you don't suppose they each kept a copy of Dick Deadeye or Her Trusting Heart or some such great English Classic in their desk all their school days in the same way, and then can't handle a little reading matter like the income-tax in the same manner, do you, and he had to admit it was my deal."

Now that would be about my idea of a sane, sensible income-tax return sheet, which everybody could understand it without no trouble, the same as Please Help Starving China, or Merry Xmas For Guinea Pigs, Make cheques payable to the treasurer, see, or those sort of appeals with which the Am. Public is already familiar. What is more, us citizens could handle such a form in the same way as we handle said familiar appeals. And I got a hunch

the Govt. would get pretty near as much money out of the average run of folks that way as it does using all that old-style, double-crochet-stitch legal lingo.

Of course with most of the folks which have to fight their way through the big sheet, why that is something different. Where there is real money to squeeze, why the Govt. can undoubtedly get it and does, unless the millionaire is a exceptionally good liar, or has a exceptionally good lawyer, or some other modern convenience of the sort which average people can't afford, see? Yes, the big eggs which has to cut down on yachts and drive a harder bargain with their regular diamond-merchants on account of the tax, why I got no tears to waste on them. Nor words, either, so we will leave them go with these few sarcastic remarks.

BUT this holler I am putting up in hopes Congress will do something about it, why it is in behalf of a lot of people on the big sheet as well as on the small one, but not very far up on it. I mean the ones who has all the trouble of filling it out and writing neat figures in the blank spaces and then when it's all done in ink seeing a sign at the top, do not write in this space. And all that kind of trouble like the rest of us, but when he has got it finished why he has not got the fun of having only forty thousand dollars left, the way the guys with \$60,000 up, has. No, the feller I mean has merely the pain of paying out a \$900.00 tax for inst. in four instalments and wondering where and the deuce he is going to get them. What I want Congress should realize about this class of tax-payers is that if the nervous worry they use up on first of all making the blank out as near correct as is humanly possible, and then on how to get the money for the payments, well, if this worry was placed end to end it would reach all the ways from New York to San Francisco. And that ain't right.

Under this same general headline come the part-time workers who get big money when they do. By which I do not refer to coal miners. My impression of coal miners, well, it is the pop. one about they are in the class of millionaires already dismissed from these pages. The part-time workers I am talking about are Actors which get \$200.00 a week. Some weeks. But naturally they don't get it the week the payment on the tax is due. Also many commission salesmen of the kind which pulled down a \$5,000 comm. on that last deal in January, not so (Continued on page 177)

Do you know how to talk to deaf people?  
There are some valuable tips in this article

# The Experiences of A Deaf Person

By Carolyn Wells

**W**HEN a young girl, I met one day in the street an elderly spinster of my acquaintance, who exclaimed, "Oh, my dear, I am so distressed! I can't go to funerals any more!"

Convinced by her manner that this was to her a real calamity, I sympathetically asked, "Why not?"

"Oh," she said, "my eyes have given out! And at funerals they have the rooms so dark. Why, just now I was at old Mrs. Bingham's funeral, and I went in, and I couldn't see, and I sat right down on Elder Simpson's lap! No, I can't go any more."

Soon after that, the poor lady went blind—but her surprise at the first realization of her infirmity was not unlike my own.

I was an enthusiastic "Christian Endeavorer," and one night at the meeting I all unwittingly said my verse of scripture at the same time another Endeavorer was saying his. I didn't know this until I was told later by my brother; but thereafter I was barred from active participation in the Endeavors.

Now, deafness was rampant among my family connections and I had no desire to become like some aged aunts and uncles on my mother's side.

Wherefore I sat diligently to work to try every remedy, every cure, I could learn of, from rubbings and sniffings and faith cures and mental healing to the most fiendish and fearful operations. But nothing helped the condition, so I've been forced to grin and bear it. I think the grinning helps more than anything else.

One of my earliest treatments was at a certain Institute of Healing which flourished many years ago. To it I blithely tripped, fully believing that, as its florid circulars promised, a speedy cure would result.

The treatment pleasantly consisted of running red-hot wires up my nose, and—I think—into my brain. This seared my brain, and I think it seared my conscience, which has never been quite the same since.

Next came a series of balloon-like machines that when inflated were supposed

to blow the deafness out through my ear drums. These exercises were to be done three times *per diem*, and to skip one meant the disastrous failure of all. I must have skipped one, for no cure resulted.

Other interesting experiences followed. The (then) greatest aurist in England, to whom I gained access by influence from high places, informed me that my deafness was caused by eating rare roast beef, and ordered it stopped. I paid his exorbitant fee and left. But a lamb-like obedience to

light than in the dark, though this is probably more a reading of the speaker's facial expression.

I have an old aunt who is a sincere Christian Scientist. She tells me that she is working on my case, and that some fine morning I shall wake up with my hearing perfectly restored. That is, at present, the only hope I have of improved hearing.

But I am, by nature, of the Stoic School of Philosophy. My attitude in the matter is simply—what can't be cured must be endured; and so I accept my deafness as a handicap, and try to win the game in spite of it.

Thomas Edison once told a member of THE AMERICAN MAGAZINE staff that deafness was one of his greatest blessings. Up to that time he had never worn any mechanical device to aid hearing and said he never would, because folks who had anything to say worth saying would make it brief and to the point if they had to shout. If they rambled, he said, he could turn his attention to anything he wanted to, and save time, while they talked on. Also, he said, his deafness was a blessing in shutting out noises and enabling him to concentrate on his work.

Now, that is all very well for an Edison, and I can quite understand how he meant it sincerely. Mr. Edison is a good friend of mine, and I know his nature is not widely social or gregarious. Moreover, he has resources within himself such as few can boast of. His life work demands solitude and silence for its accomplishment. But for

most of us conditions are different.

Personally, I have many resources within myself, and it is these that help me bear my deafness with equanimity, though I do not call it a blessing.

One day Mr. Edison said to me, "Never regret that you are deaf. You miss very little—people's gray matter gives out long before their voices do. Deafness is a blessing, and saves you from being bored by senseless chatter."

And, sometimes, when in a cynical mood, I agree to this. But it is not true. Deafness is far too great a price to pay for immunity from senseless chatter. I can

## When Roosevelt Gave Carolyn Wells a Present

"ONE day I was visiting at Sagamore Hill, during the time of the Presidency of Theodore Roosevelt," says Carolyn Wells.

"Mr. Roosevelt showed me a wonderful gold ring, that had been given to him by a Chinese prince whom he had entertained at the White House. He explained to me the interesting inscription on it, and showed me the meaning of the engraved Chinese characters, which formed a rebus or pun on the name of Theodore Roosevelt. I examined the precious relic, and then handed it back to my host. He looked surprised, and I said, 'Thank you for showing me the ring.'

"'Why,' said Mrs. Roosevelt, who stood by, 'he's giving it to you! Didn't you hear him ask you to accept it?'

"I hadn't, but I joyfully made good my acceptance and so came into possession of a delightful souvenir of T. R., and incidentally of the Chinese prince."

his dictum—and, incidentally, a lamb-like diet—brought about no auditory improvement.

A fearful operation was the removal of my turbinates. This, I think I can say, helped a little; but it is an excruciating agony I would not wish on my worst enemy—if I had one.

Then, of course, there's lip reading. I looked into that, and I'm sure it's a good thing for lots of people. But when I found it meant, for me, several hours in front of a mirror each day, I gave up the idea.

Yet I suppose I do read the lips unconsciously, for I hear much better in the

think of no possible good resulting to anybody in the world from deafness in any degree.

And to those who have not wide resources in themselves, who have not adaptability, patience, and philosophy, it is one of the greatest ills that flesh is heir to.

Among my own acquaintances I have seen one give up all society because of her deafness. Another changed from a bright, sunny disposition to a cross, grumpy, and irascible man. Another became almost a mute, refusing to talk since he couldn't hear. Another is enacting the rôle of a helpless martyr, who makes herself and everyone around her miserable.

Deafness, like all other enemies, is a foe to be met, wrestled with, and thrown.

I have done this entirely by philosophy and common sense. To be sure, I am not very deaf. I can hear ordinary conversation if within fairly close proximity to the speaker, but if six feet or more away they must make an effort if I am to hear.

And this they will not do.

Kind friends, willing and gracious in most ways, will not raise their voices for my benefit. This is not deliberate cruelty, but due to various reasons.

ONE of the most common is doubtless a natural modesty or timidity. It attracts attention to speak loudly, and so the average human being avoids it. It is an evidence of the inferiority complex — this aversion to make one's self conspicuous—but it is well-nigh universal. Your superior, bumptious man will yell across a room without any undue self-consciousness, but not so the average member of society. And to ask anyone to repeat his or her remark is to stir up trouble. Either they do not do it, or they do it with such a bad grace that you wish they hadn't. Your request is ignored, and the stream of conversation flows on, or it is stopped while your curiosity is satisfied, and you are made to seem a troublesome nuisance, while the people with normal hearing wait impatiently for the narration to be resumed.

Deafness a blessing, indeed!

Say, I am invited out to dinner. In the drawing-room I am introduced to several strangers—not one name do I catch. I go out to the table striving to catch sight of the names on the cards either side of my own place. I chat with my neighbor on one side, then on the other, praying heaven that the one on my right (my deafer ear), may have a clear voice.

I get along fairly well with those sitting

next to me—unless one has the habit of talking with his hand over his mouth. It is surprising how many do this. I've been told it's owing to bad teeth; but I'd far rather gaze on dental deficiencies than to listen to conversation through impeding fingers, or even, and not infrequently, through a clasped handkerchief.

However, the next neighbors can usually be managed. It is when the talk becomes general that the trouble begins. A guest across the table will say to me suddenly, beamingly, "You know all about such things, tell us your opinion."

Bitter experience has taught me the futility of asking what is the subject under

mantel, they eternally adjust their cigars or worry their mustaches, in what seems to be a diabolical endeavor to speak as indistinctly as possible.

Conversation is then carried on in low tones, and I am constantly appealed to from outlying districts to express an opinion or corroborate a statement that I cannot possibly hear. If interested, I get up and go over there; but you can't keep tramping 'round a drawing-room, and, anyway, most of the subjects under discussion are of slight interest.

There is a lot of senseless chatter, and it is sometimes boring; but it is a thousand times worse not to know what it is boring about.

A small dinner, a few people, a close, cozy gathering 'round a table or a hearth, these are oases in my desert of deafness, and are welcomed.

I may as well confess right here that what is, to me, the bitterness of my affliction is my hurt vanity.

IT IS my pride that suffers when I know the conversation is quick and bright and witty, when I know the repartee is brilliant, and that I should greatly enjoy the quips and jests that I cannot hear. And, that, could I hear them, I could cap the quotations, could add jests as good as are being made, could flash back repartee that would win applause.

And instead of this, I am dumb, silent, perforce — because I cannot catch the drift of the speech. I am acclaimed a stupid, uninteresting person, with nothing to say of interest or amusement.

That is when the iron enters my soul. Nothing hurts like wounded vanity, nothing galls like fallen pride.

Not that I am over-vain of my conversational powers. But I have perception and receptivity, and I enjoy brilliant and clever conversation, and, given hearing of it, I can at least hold up my end satisfactorily to all concerned. Instead of which, in the quick battledore and shuttlecock of the laughing, chaffing voices, I get only a confused smattering of what it's all about, and can only gnash my teeth instead of using my tongue.

Deafness a blessing? No!

In an effort to conceal my stabbed vanity, I, of course, try to hide my true sensations. Wherefore I try to look as if I were absorbing and enjoying the chat, though I stupidly take no part in it. I smile cannily, as one who deeply appreciates, I nod gayly, as if in rare delight.

One friend, who knows these tricks, says that when I look the most intelligent she knows I am hearing the least. Another says that (Continued on page 160)

CAROLYN WELLS

Carolyn Wells is a widely read and popular writer of mystery stories, general fiction, humorous verse, and articles. Some of her latest books are "Ptomaine Street," "The Mystery Girl," and "The Vanishing of Betty Varian." Her published works number well over two score. In private life she is Mrs. Hadwin Houghton. Rahway, New Jersey, is her birthplace and New York City her present home. In the May issue of "The American Magazine" she will begin a new mystery serial, "Wheels within Wheels"

discussion. Not their choice to recapitulate their recent just finished discussion. Modern talk gallops from one subject to another as fast as a Bandersnatch, and as hard, for me, to catch.

Then, farther down the table, a good story is told. I miss it, or, maybe, I hear all but the point. However, it reminds me of a good story I know. This I tell, and wonder why the laughter is forced and perfunctory. Later I learn that my story was told a few minutes before by someone else and received with great applause.

So the request, often made to me, "Now you tell us a funny story," is too dangerous to comply with, unless it be one entirely original with myself.

After dinner we go to the drawing-room. Here, the guests seem to make desperate efforts to seat themselves as far apart as possible. They camp out on distant sofas and chairs, men stand by the fireplace, where, with an elbow on the

Life had never seemed so good and beautiful to her as now. She sighed, then suddenly lifted her paddle, plunged it into the dark water at her side, and slipped out of the little cave-spot into the sunshine again

"Poor girl. It's like having a ball and chain around her ankle to be obliged to drag a woman like that after her wherever she goes"

# Stella Dallas

The story of a great love

By Olive Higgins Prouty

ILLUSTRATIONS BY J. SIMONT

## Synopsis of Previous Instalments

THIS is the story of Stella and Stephen Dallas, a mismatched pair, and their lovely daughter, Laurel. Stephen, of fine old family, was torn from his post-graduate work by the suicide of his father, who had used trust funds in his charge. Stephen cut himself off from all former associations and got a job in the factory at Milhampton. In his new character he gradually came into affectionate relations with the pretty and vulgar daughter of a workman, and married her. He soon found out his mistake. Later a daughter was born. Stephen threw himself into his work, advanced, studied law nights and got into the legal department. He was taken up by his superiors, and for a time the pair kept up social relations with the best people in town. Finally, when the daughter, Laurel, was about six years old, Stephen had a chance to enter a law firm in New York. After returning a few times he wrote Stella that he had made up his mind that their marriage was a mistake, and that he would come no more. He said he would provide her an ample income.

As Laurel grew up, she visited her father yearly. They were devoted comrades, similar in tastes and in temperament. On one of these visits Laurel is left for a week with Mrs. Morrison, a charming widow, whom Stephen had loved in early life. To her and her three boys he now gave a true and helpful friendship.

It was at this time that Mrs. Dallas met at a cheap seaside resort, a former riding master at Milhampton, with whom she had had a vulgar flirtation. They were seen together by some Milhampton people under circumstances that were innocent enough but suggested a scandalous intimacy. The spread of this story cut off the last social connections of Stella Dallas and her daughter, that were already much weakened. Laurel, who was the apple of her mother's eye, was snubbed by her girl friends.

After Laurel returned from the visit referred to, Stella went into Boston to see a New York lawyer, who had asked her to call at a certain office about a possible divorce. The lawyer suggested that she could secure a divorce quietly on grounds of desertion. She refused. Then he hinted that Stephen could readily get one because of her conduct. Gradually the meaning of this dawned on Stella. She rose to fiery indignation, called the lawyer a nasty-minded man, and rushed away, leaving him confounded but realizing her innocence.

The next chapter tells the story of Stephen Dallas and Helen Morrison: Their early love affair; separation when Stephen dropped all old friends because of his father's disgrace; Helen's marriage to Judge Morrison, an older man; their contented life together without supreme love; her horseback meeting in the park with Stephen; his friendship with the judge, after whose death he is made by will trustee of the estate; the revival of his old but unexpressed love for Helen; his attempt to persuade Stella into a divorce; and his return to Helen after his failure.

In four years Laurel is turned into a beautiful young woman, who keeps her finished charm in spite of her mother's vulgarity and the frequent visits of Alfred Munn.

At the seashore she fell under the notice of Richard Grosvenor, a rich, aristocratic, but naturally fine youth. They frankly fall in love at once. His mother accepts Laurel, in part because she knew of her visits to the accomplished Mrs. Morrison; she had never seen Stella, the mother, who keeps out of sight.

A charming romance begins between Laurel and Richard.

IT WAS about an hour's paddle to Stag Island, as the bird flies, but Richard guided the canoe along the irregular coast line, gliding through the dappled shadows of beech and birch, of dogwood, sassafras, and wild hydrangea, and occasional denser stretches of close-growing spruce and hemlock.

For the first ten or fifteen minutes Laurel didn't say a word. Not a single word! She sat in her perch in the bow and steadily, rhythmically dipped her paddle into the water, drew it back, raised it, reached forward, dipped it into the water again. Richard, a few feet behind her, followed her slow revolutions. The effect upon him was almost hypnotic. It was awkward to be silent with most girls. He seldom was. Most girls avoided any such lapses as this. But Laurel Dallas would drift into silence,

as naturally, as unconsciously, as a canary whose song is interrupted by some simple cause, and out of it in the same unexpected spontaneous fashion.

The "crowd" had been left far behind—when Laurel and Richard slipped into a little sequestered cove, almost a cave, with a leaf-covered roof, a lovely spot. Instinctively both the paddles dug deep into the water and held the canoe stationary. Laurel lifted her paddle very gently and laid it noiselessly across her knees. The only sound in the sylvan sanctuary was the drip-drip-drip of a few drops of water from her paddle's broad end.

Finally Richard said softly from his seat behind Laurel, "Are you there?"

She broke into a low pleased laugh at that. "Every bit of me is here!" she exclaimed. She leaned her head back and

gazed up at the blue sky through the low-hanging branches. She drew in her breath deeply. "Oh, isn't it too beautiful to be true?"

Richard, gazing only at her, thought it was! He didn't say so, simply smiled and remarked: "You like the woods, don't you?"

"I love them!" Laurel exclaimed. But it wasn't the woods she was loving just then. It was life. Life had never seemed so kind and generous, so good and beautiful to her as now! She sighed, then suddenly lifted her paddle, plunged it into the dark water at her side, and slipped out of the little cave-spot into the sunshine again. Slipped out into silence again, too.

"You aren't talking to me very much this morning," later Richard informed her. She made no reply. "You're a funny girl. I never knew a girl in my life who had silence for a line."

"Do you want me to talk?"

"No."

"When I'm in a canoe, near the shore, like this," she explained, "I love sneaking around the corners on the birds and animals when they're not expecting you, and see what they're up to."

SOME five, ten, fifteen minutes later, the canoe, pushing its nose around a bit of wooded peninsula, came abruptly upon a deer standing upon the shore. Laurel made no exclamation at sight of him, nor did she stop paddling or vary her stroke. She simply gazed in silent admiration for a second or two, then abruptly turned and looked back over her shoulder, to find out if her companion saw the beautiful creature. Richard thought he had never seen anything so lovely, so blinding as Laurel's eyes as they met his! He smiled, nodded. She turned back, satisfied. Not a word was spoken, but sharing the deer that way was—well—"Come, won't you please sit down here on the cushions and talk?" Richard asked.

She did finally.

"You're awfully different from any girl I ever knew." Most girls liked being told they were different. It seemed to distress Laurel.

"I try very hard not to be."

"Don't try."

Laurel had never been talked to by any boy like this before. She was at a loss to know how to banter back.

"Are you already booked for the game in November?" asked Richard.

"The game?"

"The big game, I mean. It's in Cambridge this year."

"Oh, no; no, I'm not." Laurel's heart

fluttered. He meant the big Harvard-Yale game! Oh, how happy her mother would be!

"I want you to go with me."

"Why—but I—Do you think your mother? . . . I mean—we—"

"I know," he interrupted, "that we've known each other only a week, and all the rest of that silly conventional stuff. But I'm not a perfect stranger to you. You can tell your mother that my kid brother knows Con Morrison. He visited him once. Anyhow, when your mother is able to come down-stairs, she'll know us herself. It will be all right *then*. I simply had to get my word in now for fear you might get booked up with somebody else. I want you to go to the game with me, if you go with anybody. Will you?"

"Yes, I will," said Laurel, looking off toward the shore, her eyes again suddenly dark and luminous.

Richard looked toward the shore, too. Had she seen another deer?

**WHEN** they landed at Stag Island half an hour later, "Don't forget you're going to paddle back with me, too," Richard whispered softly.

All day long one happy moment followed another as uninterruptedly as one telegraph pole another, flashing by the window on a railroad train. It had been like that ever since the morning Mrs. Adams had fallen into conversation with Laurel on the hotel veranda. That was ten days ago, yet Laurel was only just beginning to become so sufficiently used to the steady succession of kindnesses as to take them for granted.

Mrs. Adams had noticed Laurel the first morning she had appeared alone in the hotel dining-room. So, too, had others noticed her. The head waiter had shown Laurel to a table by a far window. After she had sat there alone during breakfast, lunch, and dinner, Mrs. Adams made inquiries of the clerk. It seemed the new girl's mother was ill up-stairs. Tonsillitis. Mrs. Adams spoke to Laurel that morning, asked her if there was anything she could do to help, and introduced her to

Stella was the first to look away. She coughed, cleared her throat to

two girls standing near by with tennis racquets.

"Do you play?" asked one of the girls.

"Will you play?" asked the other.

It was as easy as that. That very morning Laurel played tennis with three girls of "the crowd;" that very afternoon played golf with three others; that very evening met the boys and danced until the music stopped, running up between numbers to see if her mother was comfortable, and to let her share what she knew would make her happier than anything else in the world.

"Well, I guess we've struck the right place at last, Lollie!" Stella exclaimed from her pillows, with a glint of triumph in her eyes. "Don't think of me. Don't come up again, dearie. I'm all right. I'm bound to be. I just knew we'd happen onto gold some day."

It had all been pure luck. Stella had chosen this particular hotel from a circu-

lar, on the strength of the fact of its high rates. The start had been anything but propitious. Either she or Laurel had been ill from the first moment of their arrival. Laurel was confined to the bedroom the first twenty-four hours, and Stella had been obliged to wander about the unexplored regions down-stairs companionless. Then the moment the fever left Laurel, didn't it go and settle itself upon Stella—settle and stay, too! At the end of two weeks Stella was only just beginning to sit up in a chair by her bed.

**AFTER** lunch under the tall pines on Stag Island the boys went off to explore the coast; and the girls grouped themselves in colorful bunches on the soft brown background and talked lazily, meanderingly, breaking into shrill peals of laughter, now and then, or fragments of popular songs.

Laurel lay back, flat on the ground, idle,

she decided to speak again. Might as well take the bull by the horns, she decided

her hands folded under her head, and gazed up at the murmuring tops of the trees. She wished her mother might be hiding up there among the balsam needles, gazing down at her through the gaps, seeing, hearing.

Deborah, seated beside Laurel, was tickling her nose with a spear of field grass, Laurel attempting to catch it in her mouth by occasional puppylike snaps. Frances, on the other side, was amusing herself by weaving pine needles through the meshes of Laurel's sweater. "I'll pay you back, somehow," purred Laurel contentedly.

Now they were telling her about the theatricals they gave every year in August, discussing what sort of a rôle would be best suited to her; now discussing the delights of the night she would spend on the top of Spear Mountain before the season was over; now commanding her to make herself useful, and sit up and help wind

some yarn. Oh, was it all true? Did they like her a little? Were they her friends? It seemed to Laurel that afternoon, as the shadows grew longer on the western margin of the lake and the hour approached for the homeward paddle with Richard Grosvenor through those shadows, that her cup of happiness was full to the brim.

**AT THE** end of the homeward paddle it seemed to her that that cup was overflowing. Richard had asked her to be his partner in the tennis tournament on Saturday; he had asked her to go to lunch at a neighboring hotel with his mother and himself to-morrow noon; he had asked her to come out alone with him, in the canoe, to-night after dinner; he had asked if he might write to her after he returned to town. He was going back in four days. He had taken a job in his father's office for the rest of the summer.

As they had drawn near to the pier in

front of the hotel he had said to Laurel, interrupting his paddling as he did so, leaning forward, "It doesn't seem possible that I met you only a week ago" (oh, it was the beginning of the old story); "you seem to me like somebody I've known a long while" (told in the same old way). Laurel closed her eyes a moment—he didn't see her—then opened them wide. She had a feeling she might wake any moment and find it all a dream. As she jumped out of the canoe onto the pier beside him, a look passed between them that was like the look when they had shared the deer silently together. For the third or fourth time that day Laurel's heart fluttered and seemed almost to turn over.

**SEVERAL** of "the crowd" were on the pier when Laurel and Richard arrived. Deborah called out brightly to them, "Come along, walk up with us."

She linked a free arm familiarly through Laurel's as she approached, and Richard fell into step on Laurel's other side. Frances and two boys were also with the group. They all moved up the pier together. The girls began singing a popular song.

Then suddenly, in the midst of the chorus, Deborah stopped singing, stopped walking, too. So did the others.

"Oh, girls! Look!" Deborah exclaimed. "There's that awful woman!"

Laurel glanced up. Coming down across the lawn in front of the hotel, approaching the pier, she saw her mother.

Stella was several hundred yards away, but Laurel was familiar with the black-and-white striped foulard which she now wore. Stella had remodeled her foulard this spring. She had given it a lot of fresh pep, with generous dashes of Kelly green. Deborah seemed familiar with the foulard, too.

"What woman?" Louise inquired.

"Why, my dear, look, look for yourself and see. Don't you remember that dreadful dress? Of course you do! You were with us. You saw her about two weeks ago. She was around the hotel all one day."

# "You Told Me to Do It Like That!"

This is the most destructive alibi in business—The company with which I have been associated for over forty years has been built from a small, imperfect enterprise into an organization of 250,000 employees—Its success is based on telling men what to do—but leaving the manner of doing it to them

*By Angus S. Hibbard*

**M**R. BOWERS, of Boston, claimed that his long-distance telephone would not work. He said he could not hear over it, and he honestly believed he could not. He insisted that we take "the confounded thing" out of his office and cancel the lease. The telephone in question was a private wire connecting the Boston and New York offices of his firm. "We want to keep the line," his younger partners told me. "But Mr. Bowers has ordered us to throw it out. There doesn't seem to be anything else for us to do."

"I'll come over and see you," I replied.

Failure to hear well was a common complaint in the early days of the telephone. Very often people did not believe they could hear, therefore they did not try very hard. I suspected that was the trouble with Mr. Bowers. I thought if I could once rouse his attention I could convince him. And I certainly wanted to convince him, for his line was the first private wire ever leased for so long a distance. This all happened in the eighties.

Sitting down at the New York end of his wire, I was soon connected with one of the younger men in the Boston office. I could hear him as plainly as if he were talking from across the street.

"Let me speak to Mr. Bowers," I said.

"I'm afraid he won't talk," the young man replied. "He won't even come near this contraption any more!"

"Call him, anyway," I said. "Tell him who I am and why I want to talk to him."

I persuaded the young man, and while he went off to get the old gentleman I held the wire. Every few seconds I kept saying, as a person does, when not sure of the connection, "Hello! hello!"

Presently I heard a growl. It was the senior partner at the other end.

"I can't hear what you're saying," he shouted; "I can't understand a word of it!"

The situation was critical. I replied emphatically:

"You're a liar!"

"What's that!" he roared. "Nobody ever called me a liar before!"

You may be sure I had the old gentleman's attention in the twinkling of an eye! He certainly tried hard to hear what more I might have to say to him, and he heard everything as distinctly as anybody else who concentrated.

First I apologized. Then I explained

my motive. Finally, I told him that he could hear perfectly well over the telephone. And he agreed with me.

"Of course I can hear," he said. "This is marvelous, wonderful!"

Nothing was too good for him to say. I never heard any more about canceling the lease!

I tell this little story because it shows rather vividly one sort of obstacle met in introducing the telephone—a state of mind, indifference, a "you'll-have-to-show-me" attitude. If

the general public, however, did not believe very seriously in the telephone at the start, it was not altogether the public's fault. The early telephone, Professor Bell's marvelous invention, was a very imperfect instrument, and consisted barely of the principle on which the telephone could work. Very few lines had been installed. But even when the instruments were set up in adjoining rooms it was almost impossible to hear over them. There was no separate transmitter; a person conversing first put his mouth and then his ear to the telephone. There

were no switchboards at the start, and when they did come into existence it was a long time before they were perfected. There was no copper wire; for a number of years the iron wires that served in telegraphy were used. It was several years before the metallic circuit was invented. A satisfactory insulating material was discovered only after hundreds of heart-breaking experiments. Cables had to be perfected to avoid the congestion of overhead wires; and before they were perfected, the wires became so numerous and bothersome in New York City that the mayor sent out men with axes to chop down the company's poles!

So at the start people had some reason to think of the telephone as an impractical toy. How that sentiment was changed, how the telephone was developed commercially, how a little company with a

Mr. Hibbard was one of the leading pioneers in the development of the telephone industry. Born in Milwaukee, Wisconsin, on February 7th, 1860, he became superintendent of the Wisconsin Telephone Company at the age of twenty-one. Five years later he was chosen as the first general superintendent of the American Telephone and Telegraph Company, a position in which he inaugurated the long-distance lines. Later he served as general manager and vice president of the Chicago Telephone Company, and in 1911 he returned to the main offices of the A. T. and T. as adviser to its executive department. In this capacity he did valuable work in reorganizing the Western Union, and when the Government decided on the division of the two companies he was given the job of "unscrambling" them. He has invented and patented many improved devices for use with the telephone, and is still prominent as a consulting expert

handful of employees was transformed into a concern with two hundred and fifty thousand employees, how the product, by constant supplementary inventions, was turned into a nation-wide system of service—all that is as great a romance as the invention of the telephone itself.

And it is, primarily, a romance of organization.

I was fortunate enough to have a part in it almost from the start. I began studying telephony when I was scarcely out of my teens. The second job I had after I left school was secretary to the general superintendent of the Northwestern Telegraph, in Milwaukee. In 1881 he was made president of the Wisconsin Telephone Company, and I went with him as superintendent. That was just five years after Mr. Bell took out his patents on the telephone.

We had to do a good deal of experimenting ourselves, as did everybody connected with the telephone in the early days. In particular, we tried to establish long-distance service. We made some progress in that direction, and in 1885 I went to Boston to attend a conference of telephone men from various parts of the country. There I read a paper on long-distance problems.

Mr. Theodore N. Vail was the head of the company. He heard my paper, and seemed to conclude that I knew something about my subject, for he changed my headquarters to New York and I became the first general superintendent of the American Telephone and Telegraph Company. I had charge of the long-distance department, and in its development helped to work out another lot of new problems.

**WE** WENT ahead as fast as we could, and by the early nineties we had completed a line from New York to Chicago. I discovered, however, that the Chicago telephone system was defective. Nearly all the lines consisted of one wire, and that of iron. The circuit was completed by grounding the wires at either end. The metallic circuit had been proved far superior, but it had not yet been introduced into Chicago.

The telephone service was therefore very bad. Trolley lines, high tension power wires, and other disturbing factors interfered with the telephone wires. Very often the trouble was what was called "cross-talk." In such cases a conversation on one wire would get mixed up with another, and you would hear two people talking at once. It did no good to tell the other fellow to get off the line, for he wasn't on the line. He was on another one, but his conversation, by induction, jumped across to the other wire! If there was no cross-talk still it was often impos-

sible to hear distinctly, because other noises interfered.

We wanted to make our long-distance service perfect and, believing that the Chicago connection would impair it, I refused to connect with the Chicago system.

"We'll make you hitch up!" I was told. They did it by appointing me general manager of the Chicago company! That job with others that followed in the same company lasted for eighteen years.

In 1911, when the telephone company bought control of the Western Union, I returned to New York in order to help rejuvenate that property and also to carry out Mr. Vail's ideas in regard to it.

Mr. Vail was a wonderful executive. What made him so, more than any other one thing, I believe, was his ability to look at his objective and leave the details to others. He always knew where he wanted to go. He firmly believed it was possible to get there. And he allowed nothing to stop him.

But he was not a nagging boss. He did not try to get every detail into his own head, or every plan out of it. He limited himself to telling his associates *what* he wanted done. He picked men in whom he felt confidence, and as long as they got the desired results he left them alone.

Here is a case. Mr. Vail, desiring to establish the best and most comprehensive service of inter-communication possible, brought about the purchase of the Western Union control by the Bell telephone system. Up to that time the Western Union had been a football of Wall Street. It had been kicked here and there by Jay Gould and other financiers, whose interest was limited to the money they could get out of it by stock manipulation.

**M**ANY of the telegraph offices were dirty places, and sometimes located in a basement down a flight of dark stairs. There were, naturally, no adequate standards of courtesy or service.

Mr. Vail wanted to change all that. He had a great object in view, namely, to make every telephone in the country the terminus of a telegraph line. He stated his service ideals to those of us whom he selected to reorganize the Western Union, then he said:

"Now, go and do it."

We understood his thought. If we did not do it, he would find others who could. Of course we put everything we had into the work.

Directing people *what* to do, but leaving *the manner* of doing it to them! that is a fundamental rule in good

management. A great many little business men never get good results out of an organization, simply because they violate this principle.

I learned this rule early in my career, not only from Mr. Vail but also from another man, Edward J. Hall, who was general manager of the American Telephone and Telegraph Company in New York, and my boss in the early days of the development of long-distance telephones. He told me once:

"When you can assure me that you have built up so good an organization that it works smoothly without you, and you have *nothing to do*, I'll go before the executive committee and recommend a raise in your salary."

I took the lesson to heart and recall very well the first time I had a chance to prove it to Mr. Hall. (Continued on page 165)

## Have You More Than One Boss in Your Business?

**"NO MAN** can have two bosses for the same job and do good work," says Mr. Hibbard. "Whenever lines of authority cross, a clash is almost sure to result. Here is what happens: A clerk is given a task by his department head. After a while the general manager comes along. He tells that employee to do something else. Of course the employee undertakes the new assignment. Presently the department head hears about it—from the employee. That is bad.

"The general manager told me to do it," the employee says, and his excuse is perfect. "I thought he was boss; so I had to drop what I was doing for you."

"That department head is not a real boss. The employee knows that his orders are likely to be set aside at any time, therefore he gives him a limited allegiance. One of the principles of good management is that, if you give a man responsibility, you must also give him authority equal to the responsibility."

So my experience was varied. I was mechanically inclined and had my share in the supplementary inventions that made the telephone commercially serviceable. I also had my share in the commercial development. One well-remembered feature of this was the blue bell, long-distance telephone sign, which is now used pretty generally throughout the world, and which I designed at that time. Thus I was enabled to see the tremendous part played in both departments by effective organization.

Just what is a good organization?

It is one, I take it, where a group of people work together effectively and harmoniously. It did not just happen that we worked harmoniously in the telephone company. There were reasons bound up in sound management, and back of that lay the personality of Theodore N. Vail.

# A Taxicab Driver Hasn't Eyes

But he knows more about you than you would ever suspect.  
more than 60,000 passengers a week

*By Nat D.*

President, the Black and White

**A**N OLD lady carrying a reticule and looking anxiously over the tops of her gold spectacles came from the Pennsylvania Station the other day and approached the waiting line of taxicabs. After scanning the faces of several drivers, she approached one of them.

"I was expecting my daughter to meet me," she said, "but I don't find her. I guess she didn't get my telegram. I've lost my pocketbook and haven't any money, but if you'll take me to my daughter's address on Riverside Drive I'm sure that she will pay you."

"All right, lady," said the driver. "I'll do it."

**U**PON arriving at the address, however, they found that the old lady's daughter was not at home. So the driver took the old lady to another address which she gave him, that of a friend of her daughter's. Upon leaving her, he said:

"Lady, I don't believe you're the kind that will let your daughter forget to send the fare. It's five dollars and ninety cents, and if she doesn't pay it I'll have to. That's the rule. There aren't many folks I'd like to trust like this, but I guess you're all right."

"You don't mean to say," exclaimed the old lady, "that anybody would stoop so low as to try to cheat you out of a fare, do you?"

"I certainly do," returned the driver, laughing. "There are lots of sharp people just waiting for a chance."

"Well, don't you worry about me," said the lady. "I'm not sharp that way."

And of course she wasn't. Two days later the driver received from her daughter a check for the amount of the fare, a tip for himself, and a courteous note of thanks.

A surprisingly large number of people seem to think that anything they do to get out of paying taxi fares is legitimate. Perhaps they believe that if they dodge the small indebtedness a corporation has to stand the loss, but the fact is the taxi driver himself is responsible for collecting the amount due from every passenger. If he fails to do so, he has to make it good.

One type of man rides a long distance in a taxicab and then tells the driver to wait for him in front of some hotel or office building with several entrances and exits. Usually, unless he knows his passenger, the driver refuses to permit him to go away from the cab until the fare has been paid, for he suspects his passenger may be looking for a chance to slip through the building and out one of the

lounging in a hotel corridor to make it seem that he owns the place, or, at any rate, lives there.

Sometimes, three or four people of the "dead beat" type take a ride together. A woman hires the cab, drives a short distance, and then picks up two more women and later a man. After riding until the fare is a matter of ten dollars or more, the man leaves the cab. After a few blocks the woman who hired the cab gets out with one of the other women. The last member of the party drives to some address near by and, when the driver demands the fare, she says, "Why, I thought the gentleman paid you. I didn't hire the cab."

## The Shortest and the Longest Taxicab Journeys on Record

**"T**HE shortest taxicab journey I ever knew any one to take," says Mr. Jacoby, "amounted to something less than a hundred yards. A man who had obviously been in New York before, but probably not in recent years, came to the subterranean taxicab exit of the Grand Central Station, entered a cab, and told the driver to take him to the Biltmore Hotel.

"Quit your kidding!" said the driver.

"What do you mean by that?" demanded the passenger indignantly.

"There's the entrance to the Biltmore," returned the driver, "just across the way."

"All right! Drive on!" returned the passenger, laughing. "This is one on me."

"And when he had been delivered across the way he paid a fare of twenty cents, tipped the driver liberally, and seemed to enjoy the experience hugely.

"The longest trip ever made by a New York taxicab so far as I know happened a few weeks ago. A man missed a night train to New Haven, Connecticut, and was so anxious to begin his journey at once that he wouldn't wait for another train. The meter on the cab that took him to New Haven showed 152 miles for the round trip, and the passenger paid a fare of \$63."

**A**BOUT the meanest trick of the dead-beat variety that I know of happened recently. A man drove from the Grand Central Terminal to an up-town hotel. He waved aside the hotel attendants who came to take his bag and suit case and requested the driver to carry them to his room.

Having deposited the man's luggage, the driver said, "The fare's one dollar and eighty cents. You haven't paid yet."

"Why, certainly I did!" said the passenger. "I paid you down-stairs!"

An argument followed, and the man finally said, "I say I paid you down-stairs. Now what are you going to do about it?"

"I'll show you!" said the driver, and he seized the man's bag, and started for the elevator.

"What are you doing with that bag?" demanded the passenger.

"I'm going to turn it in at the hotel desk and advise them to hang onto it, or you'll be trying to beat your hotel bill next."

The passenger called him back and paid the sum due.

It sometimes happens that passengers on getting out of taxicabs find they have left their money at home. A few people see in this a chance to get out of paying the fare. They take the driver's name and then "forget" to send the money. Well-meaning people usually exchange addresses with the driver, so that he can call on them for the money if they forget to

other entrances without returning to the cab at all.

However, if the passenger who asked to be let out in front of such a place was obviously unaccustomed to riding in taxicabs, that is, if he was awkward in getting in or out, or if he showed that he was from the country or some small town, by the questions he asked the driver, then the driver would have little fear about his coming back. The man who tries to beat his fare in this way is usually the "slick" type, the well-dressed fellow who knows just what impressive pose to take when

at the hotel desk and advise them to hang onto it, or you'll be trying to beat your hotel bill next."

The passenger called him back and paid the sum due.

It sometimes happens that passengers on getting out of taxicabs find they have left their money at home. A few people see in this a chance to get out of paying the fare. They take the driver's name and then "forget" to send the money. Well-meaning people usually exchange addresses with the driver, so that he can call on them for the money if they forget to

# In the Back of His Head—

## Extraordinary experiences of our drivers while carrying through the streets of New York

*Jacoby*

Taxicab Company, New York City

send it. Occasionally a man offers the driver something by way of "security."

About a year ago, a man in a dinner coat came hastily out of an apartment house and drove in one of our taxicabs three miles to a hotel. On arriving there he searched through all his pockets and found he had with him just a dime, though he owed two dollars and sixty cents. He took the driver's name, promised to send the money, and added:

"Here's the dime, and here"—he took a gold stud from his shirt front—"is something you can cash in on if you don't hear from me."

Subsequently, not hearing from the passenger, the driver paid the fare; but he was then so skeptical of the value of the stud that he didn't try to find out what it was worth. One day, seven months later, when he happened to be hard up he discovered the forgotten stud in his vest pocket and, upon offering it to a dealer in old gold, was surprised to receive seventeen dollars for it.

**EVERY** week, our five hundred taxicabs transport between 60,000 and 70,000 passengers a distance of 160,000 miles through the streets of New York. Thus the mileage for each day is almost equal to the circumference of the globe. The average trip is about two miles; the average fare eighty cents. Our most regular patrons are the people going to and from railroad and steamship terminals. Every day there are about 6,000 taxicab trips to and from the Pennsylvania Station and about 4,000 to and from the Grand Central.

When taxicabs first came into use passengers were most frequently found in the fashionable quarters along Fifth and Park avenues. To-day, taxicabs along Second

and Third avenues on the East Side are among the busiest we have. Partly owing to the congestion and inadequacy of other means of transportation in New York, mechanics and shop girls are now among our regular customers. Sometimes, when late, they even drive to work in taxicabs. They often go on pleasure rides through the parks. On the East Side especially, it is a common practice for three or four

Actresses, on the other hand, have a keen aversion to riding alone in a taxicab. You almost never see an actress in a taxicab unless she is escorted by a man or accompanied by a woman friend. She seems to feel that if she rides unaccompanied the gossips will report she is lacking in popularity and hence in attendants.

From men customers who ride regularly we seldom have requests for any particular type of driver,

but women sometimes specify the kind of man they want, whether tall and blond or short and dark. Most women prefer the tall, blond man, feeling somehow that he is more reliable and will take better care of their shopping bundles and lapdogs. Women of French or Italian extraction often express a preference for short, dark men.

**RECENTLY**, one of our regular customers who pays her bills by the month telephoned me that she would be unable to do her shopping that afternoon because we had sent her a short, dark man in spite of her standing order for a tall, blond driver. We recalled the short, dark man, a very reliable driver, and sent her the tallest and blondest one available. So her afternoon wasn't spoiled after all. Some time later, when this woman was in my office, I asked her why she had such a pronounced preference for a driver of a particular type. She said:

"My husband was a naval officer, and he was killed in an automobile accident in Paris. His chauffeur was a short, dark man, and since then I never ride in an automobile driven by a man of that type."

People from small towns who hire taxicabs for sight-seeing trips in New York usually prefer to arrange the matter by telephoning direct (Continued on page 131)

PHOTO BY EDWARD ARON

Times Square in New York is called by taxicab men "the best taxicab riding section in the world." More taxicabs pass there in a day than any other point on earth. At all hours of the day taxi drivers crowd their vehicles into this neighborhood, because "fares" are more quickly gathered there than elsewhere. Likewise, taxicab riders find it easier to locate a cab in this neighborhood than anywhere else. In the picture above, which shows Times Square looking north up Broadway and Seventh Avenue from Forty-third Street, forty-two taxicabs can be counted in the space of three blocks. And this picture was taken in mid-afternoon, at a non-rush hour, so that the vehicles, instead of being massed together indistinguishably, would show distinctly! There are 50,000 taxicabs in the United States, and of these 13,000 are in New York. Every day 43,000 people in New York ride in taxicabs, paying on the average a fare of eighty cents. Thus the amount spent in one day in the metropolis for taxicab fares is approximately \$35,000. The average distance traveled by a New York taxicab in one day is sixty-five miles, making the daily total for all cabs in the city 84,500 miles—more than three times the distance around the globe.

girls to plan their shopping trips together. They divide the taxi fare, which is the same for four as for one, so that the cost to each is pretty low.

Manicurists and cloak and suit models are frequent taxicab patrons. Usually they ride two together and divide the fare; but when the occasion requires they do not hesitate to ride alone and they seem not to mind if the neighbors see that they have driven home alone in a taxicab.

## What One Man Learned from a Terrible Experience

(Left) Herbert Graham and his sister, Stella, taken last summer; the boy was seven and a half years old; the girl less than six. (Below) Ready for a combination dive. (Right) Herbert diving from height of 28 feet when he was about five years old. He now dives from 35 feet

**O**N THE morning of June 15th, 1904, a young man who was visiting in New York boarded a steamer which had been chartered for a Sunday-school excursion. The young man was H. L. Graham; and the steamer was the "General Slocum," a name which will always recall one of the most frightful disasters in the history of this country.

Shortly after leaving the dock, fire broke out on the vessel, which soon became a roaring furnace. Of the fifteen hundred passengers aboard, about twelve hundred were drowned, more than half of them being children. Young Graham managed to save himself—that was all. Even if he had retained enough presence of mind to try to rescue someone else, he wouldn't have known how to do it.

But he vowed then that he would profit by that terrible experience. He promised himself that he would become an expert swimmer; that, if he ever had a family, every member of it should learn to swim, and that he would do all in his power to prevent other tragedies like the one he had witnessed. These promises have been kept.

Graham has four children now. The youngest, not yet two years old, is the

(Left) Herbert doing a swan dive. (Right) Stella diving from 26 feet before she was five years old. (Below) Herbert, Stella, and George (2½ years old) ready to dive together. The other picture shows Herbert, tied in a sack. When thrown into deep water he releases himself and comes to the surface

only one that cannot swim; but she will know how before she is a year older. The eldest child, Herbert, was seven and a half years old last summer; the second one, Stella, was less than six years old, and the third, George, was two and a half years old. Each of them can float, swim, and dive. Herbert can swim half a mile, dive from a height of thirty-five feet, and jump from a height of forty feet. Stella, almost two years younger, does very nearly as well. George, who is little more than a baby, can swim

more than fifty feet and dive from a height of six feet.

The three children do a combination dive, standing on each other's shoulders. The two older ones have learned how to rescue another person from drowning. And Herbert, when tied in a sack and thrown into deep water, will release himself, come to the surface, and swim to shore.

"Every child can and should be taught to do what my children have learned to do," declares Mr. Graham. "If other parents had witnessed the pitiful scenes which I witnessed when the 'General Slocum' burned, they would not rest until their own little ones were able to take care of themselves in the water. I began to teach Herbert and Stella when they were

about two and one-half years old. George began practicing in the bathtub when he was only two. A few months later he was swimming and diving in open water. A girl can be taught just as easily as a boy. In fact, Stella learned more quickly than Herbert did and she can do most things as well as he can.

"The first thing I do is to put the child in a float, a ring, like an old-fashioned life-preserver, going around the body under the child's arms. For a few days I let it paddle around in this float, so that it will get over its natural fear and become accustomed to the feeling of suffocation which everyone has when first getting into cold water that is shoulder deep. This feeling is due to the pressure of the water

on the chest, making breathing slightly more difficult.

"The next step is to teach the child to hold its breath under water. I tell him not to breathe; then I quickly duck his head under. The first few times the child will sputter and strangle a little, but he soon finds that he *must* hold his breath. After a few lessons, his fear is gone, and he quickly learns to keep himself afloat. Almost as soon as he is able to swim, I begin teaching him to dive, beginning with a height of two feet and gradually increasing the distance, a few feet at a time.

"Since the two older children have been able to swim well I have taken them out in a canoe and, when they least expected it, have upset the boat, throwing them

into the water with all their clothes on. I wanted them to acquire presence of mind; to have the confidence they would need in an emergency. I also wanted them to learn by actual experience that they could swim almost as well with their clothes on as off.

"Before I take my children on a steamboat I call them to me and explain that if the vessel should have an accident and start to sink, they are to jump overboard and swim to shore. While we are on the boat, I ask them what they would do if the boat should sink. I know what they will say: 'Jump overboard and swim to shore.' But I try in this way to make the thought become a fixed one in their minds, so that they will instinctively act on it in an emergency." ALLAN HARDING

## A Successful Teacher of Unusual Boys

**F**IVE years ago the Oklahoma Board of Education discovered that Miss Mamie Franks was born to teach boys. And not ordinary boys either, but the square pegs—the truants, the misunderstood and often miscalled "bad" boys. She was given one room in a ward building, the services of an instructor in manual training, and the job of salvaging the boys who would not or could not go to school anywhere else. Thus was created the Opportunity School, and in her five years of work Miss Franks has not met with a single failure.

The reason is very simple: She loves boys and understands them. To sum her up in the boys' own vernacular—"she's a good scout." In the Opportunity School no effort is made to fit the boy to the work, the work is fitted to the boy. If a boy prefers to stand and write—he stands.

"Children are made into machines too much," says Miss Franks. "Of course, my boys are self-centered and sensitive, but so have been half the geniuses of the world.

"When a boy fails in his grades for three or more terms he comes to the Opportunity School for still another chance. It doesn't necessarily mean that he is stupid; it merely signifies that there is a wrinkle that the grade teacher with forty or more pupils has not the time to smooth out. For instance, I had a twelve-year-old boy sent to me who, apparently, could not learn to read. It developed that he could not distinguish between the loop letters.

"A drill in phonics eradicated that difficulty and he became normal.

"On the other hand, I have bright boys who easily make a grade and a half in one year, but who will never be normal students for the reason that they are square pegs, or their personality is too strongly developed, or whatever you please to call it, and they do not adjust themselves to the routine of the usual school. In a number of instances I have found boys of sixteen and eighteen who

could work anything in higher mathematics, who could take a car to pieces and reassemble it, and to whom grammar was a sealed book. They were not normal—but neither are some of the great scientists of to-day. I encouraged them along the lines for which they showed the greatest aptitude, gave them the practical side of grammar, such as letter writing and sentence structure, and cut out

preliminaries before departing this one. So sophisticated a gentleman smoked, naturally, and his speech, enriched by certain high explosives, together with the twirling of a blue-bladed knife, brought on complications. The knife was forcibly removed and the knowledge imparted that fists and not knives were the weapons most in vogue.

"Come out," Miss Franks invited.

"Any boy who comes over here looking for trouble can find it." A ring was formed.

"You've got my knife, but there are plenty of brickbats," he blustered.

"No brickbats—fists," said Miss Franks laconically, as a boy of the same size stepped out to do the honors of the school.

"If I had my gang here I'd fix you," boasted Boots.

A car was offered to transport the gang, and then the young bully broke down and refused to fight.

"It was my only chance to get that boy," explained Miss Franks, "I had to call his bluff."

The "bad man" pose died hard that day, but with it died that particular underlying cause, and the lad who emerged developed into one of the brightest boys of Opportunity School.

"I recall the worst truant I ever had," Miss Franks confided. "The thing that cured him was responsibility. I gave him an important job in the kitchen of the cafeteria, one that required his daily attention; and he never failed me." And then she said to me: "It's in them to rise to meet the thing that's coming, and the thing to do is to keep plenty of things coming."

Miss Franks is very quick to seize her opportunity. This year a mother came bringing her son, who had been a flat failure in two schools. "I can't do a thing with him," she said. "He doesn't want to do a thing but dig, dig, dig. The whole yard is a network of trenches."

"Fine!" commented Miss Franks, "I like a cave man."

From that cave she spun every recitation this boy had for two days. For his

WAYNE STUDIO, OKLAHOMA CITY

Miss Mamie Franks, who conducts the Opportunity School of Oklahoma City, is a born teacher of boys. Many of her pupils have "kinks" and "wrinkles" in their disposition, and she has found the secret of ironing these out by unique methods of teaching and play

Browning, which did not interest them."

When a new boy comes in the old boys do what they can to help. If a certain atmosphere is needed to lick him into shape they furnish the atmosphere.

Swaggering in one day with embroidered boots, wearing his belt low, and with the general air of being the original bold, bad bandit, came a boy. Having been ejected from two schools, he was rather bored to have to go through the

drawing lesson he sketched on the board a diagram of the caves and connecting trenches, and as a language lesson described them to the class. His arithmetic consisted of the measurements and dimensions, and geography came in for the formation and topography. After the resources of the cave had been exhausted, it was suggested that, since the whole class had been so interested in

his cave, he, of course, would be equally interested in anything they were. It was a challenge to be a good sport.

One morning Miss Franks announced that she was going to read poetry. "We don't like poetry," the boys chorused. "You'll like this," she promised. And began with the "Raggedy Man," and read from Riley the lyrics all boys like.

"We'll write him a letter and tell him

we don't like poetry, but we like his," they decided. So each boy wrote a letter, and from each letter one sentence was incorporated into the one letter that went to Mr. Riley. It was the year before the poet's death, and though paralyzed he dictated a most delightful letter of appreciation to the boys who did not like poetry but liked his.

LILLIAN FRYER RAINEY

## A Designer of Women's Hats

**G**OOD GROUND is an old-fashioned Long Island hamlet with a couple of streets and a half dozen stores. It is the sort of place where a motorist might stop for gas, or crackers and cheese, and then speed on toward the aristocratic colonies at Southampton and Easthampton. Yet almost any day in the millinery buying seasons you will find the limousines of five or six of the richest and most fashionable women in the country lined up in front of an unpretentious little building set close to the main road that runs through Good Ground.

This square, snug little building, with its front of small-paned windows and its shingled roof, is a studio. But it is neither pictures nor sculpture that the owners of the limousines have come to take away. It is hats.

Here is the workshop—"the studio," he prefers to call it—of Walter King, one of the most distinguished designers and makers of women's millinery. Next door is the little Revolutionary-period house where he was born, and where as a boy he displayed the knack of making hats which were later to carry his name and label from this tiny American village, eighty-four miles out of New York, to all parts of the world.

Italian princesses, English countesses, French women of fashion, wives and daughters and sisters of the captains of American industry, make frequent pilgrimages to Good Ground for their hats. Hetty Green once brought an old hat for him to remodel. It was a concoction of black malines and lace, and she was very pleasant and made no fuss about the bill. Mrs. Carter Curtis Beggs, sister of the late Andrew Carnegie, Mrs. Henry Ford, the Princess Miguel of Braganza, whose husband belongs to the royal family of Portugal, Mary Boland, the actress, Mrs. Fred C. Perkins, of Pittsburgh, wife of the steel magnate, are only a few who have been customers of the roadside shop. And

John D. Rockefeller, Jr., and his wife stop in each summer, just for a visit and to see the beautiful things on display, on their way to visit friends.

While still a youngster, Walter King knew that he wanted to do nothing so much as make hats. At times when he should have been attending to customers in his father's store or studying his lessons, he was thinking up hats that should combine all the lovely colors he saw in the sky, or the water, or woods. Or he was

man. His father's general store offered no great financial opportunities. So he went to New York to study window trimming and interior decoration. His natural ability to create a picture, and his unerring feeling for color and harmonious line aided him greatly, and in two years' time, he found himself in a Southern department store as a window dresser. And his days as a creator of hats seemed to be done.

Walter King's days as a hat designer might have been finished then, if word had

not come to him suddenly one day that his mother, whose gentleness and sympathy and own love and feeling for beautiful things had been an inspiration to him, had been taken with an illness that meant certain and lingering death. The general store was not doing any too well. He was needed at home. So he packed up hurriedly and went back to the little white house by the Merrick Road, and decided to remain there as long as his mother should live.

What should he do? How could he make the necessary money for dainties and luxuries, how could he find a way to help and not add a burden to the already overtaxed

family purse? . . . In the past ten years the fame of the little studio has gone to the far corners of the earth—nevertheless, the butcher's wife, and the baker's wife, and the postmaster's wife, and the school-teachers of his own and neighboring towns—all the people who gave him their patronage when he needed it—buy their hats from him still.

And the women of fashion who have once worn his hats very seldom go to another milliner. They may be at the Riviera or in Paris, in Tibet or Alaska, or London or Omaha or Duluth. All they have to do is to write and order as many hats as they want, and describe the purposes to which they are to be put. Often he sends fifty or sixty hats a week to women who will not know what their next season's headwear is to look like till it arrives.

Walter King is an extraordinarily gifted maker of women's hats. In childhood, when the other boys went clam-digging, he stayed home and made doll hats for little girls out of waste materials around his father's general store. Today, he makes millinery for wealthy, fashionable, titled, and talented women, who come from all parts of the world to his studio at Good Ground, Long Island

making hat frames from the wire off the bales of hay that stood in the grain room, or covering these frames with calico, snipped from the bright colored bolts on the bottom shelf, or with tea matting from the great tea boxes that stood in the corner, near the kerosene and the molasses barrel.

There never was such a maker of hats for the small girls of any neighborhood. While the other boys fished and dug for clams, this boy stayed at home and designed grand creations for the French dolls, and the rag dolls, and the china dolls from miles around.

Then Walter King finished high school, and it was necessary for him to decide what he should do to earn his living in this matter-of-fact world that is used to looking on hat-making as a woman's profession—certainly no profession for a virile

## *A soup to grace any table!*

A glance at this rich puree, a breath or two of its delicious fragrance—and your hand is on its way to the spoon! Artist-chefs create this soup. Nature gives to it the tonic spice of pure tomato juices and the "meat" of the finest fruit, strained to exquisite smoothness. Golden butter enriches it and heightens its flavor and nourishment. All the arts and sciences of the famous Campbell's kitchens are lavished upon it. Here is your appetite's temptation. Here is your good health's delightful ally. Here, in each spoonful, you taste the worldwide reputation of Campbell's Tomato Soup.

### **Cream of Tomato**

made with Campbell's is a dish of special luxury. So rich and velvety that it is a rare delight. Made with Campbell's you taste Cream of Tomato at its very perfection.

# The Girl Who Was a Mystery to Her Town

(Continued from page 15)

dare to look at her mother. All her energies were centered on escape.

Outside, the night was growing dark, though a late summer twilight still lingered in the west. The air was heavy with the scent of June growth. They went up the main street in silence. The second house beyond the Grant homestead marked the end of the village in that direction; the road went on toward the neighboring town. They were alone now. As Rebecca realized the fact, her old timidity returned, but with an entirely different value this time, a feeling of peaceful helplessness, a faith in life that had grown immeasurably deeper and more real in the last few hours.

"Why did you come?" asked Rodrigo in a low voice.

"I had to walk," she answered. "It was close inside. These June nights are too fine to miss."

**H**E UNDERSTOOD her fully, in a great surge of joy. When he spoke again, his voice in the dusk was close to her ear.

"Ah, my love, how beautiful you are!" he whispered. "You cannot know how beautiful I have always dreamed of beauty, but you are more beautiful than any dream. You are reality. I love you so terribly that I am afraid. I have only met you, but I know my heart. I know that this is true. Will you forgive me? Can you believe me?" He touched her arm.

She looked away into the night without speaking. The words were sweeter to hear than she had imagined.

She felt his arms about her, his body close to hers. Slowly she turned to him.

"Say that you love me, too," he whispered. "Say that you understand. We were born to love each other. All these years we have been waiting. Now we have met, and nothing else matters, and nothing can come between us till we die!"

She looked up happily, and gave him her lips in a kiss that sealed her awakening.

Like Captain Gilmore the year before, Manuel Rodrigo prolonged his stay in town. Two days were all that the mate could allow himself. They passed like a dream. He and Rebecca walked in the woods or on the shore; the evenings were spent in the orchard below the house, where the hammock hung among the apple trees. Mrs. Grant saw her plans for a happy match for Rebecca vanishing in the flame of a dangerous romance.

Between the lovers, in those two short days, sprang up a passion as high and extraordinary as their physical beauty. Rebecca was transformed; like some rare lily, she had bloomed suddenly in a night. Love possessed her wholly. She lived through a period of years.

Almost before they knew it, came the hard parting. Rodrigo said good-by to Rebecca at midnight in the orchard. He was leaving town early the next morning. At the last moment, a fear so unreasoning mastered Rebecca that she could hardly put it into words.

"Oh, don't go, don't leave me!" she moaned. "I am terribly afraid."

"I must, dear," he answered brokenly.

"Don't make it harder than it is. There is nothing to be afraid of, Rebecca. My career lies on the sea. I must work hard, and gain command of a vessel. Then you can go with me."

She lay in the hammock for hours after he had gone. No tears relieved her; the fierce pain of parting had stunned her into silence and immobility.

Toward dawn she crept to her room, and soon fell asleep. She was awakened late in the forenoon by voices downstairs. She opened the door to listen—and her heart stood still. Captain Gilmore had arrived unexpectedly.

Until she heard his voice, she had not thought of him during the last two days. She had completely forgotten his love, his proposal of marriage, and the answer that she must make. She drew back hastily and shut the door. There could be but one answer now—but he expected the contrary. How could she explain?

Her confusion persisted during the long drive that Captain Gilmore had arranged for the afternoon. The fresh pain of Rodrigo's absence lay like lead on her heart; most of the time she was thinking of him alone. She listened in silence while the older man talked earnestly and humbly, throwing the force of a mature and noble sentiment into his plea. He had realized early in the drive that the prize was not yet won. Never, she thought, had he seemed so much like a father. She had made up her mind to tell him the simple truth, but now she could not bring herself to do it. The situation was more complicated than she had foreseen. It was complicated by the new impulses that swayed her, impulses so strong that she could not deny them. The secret must be protected; their love would not be understood.

When he had gone—for business had again recalled him hurriedly to Boston—she realized that all she had accomplished was a postponement of the answer for another voyage.

**T**HAT night, Mrs. Grant's frail health broke down; the impending heart attack had struck. Throughout the night her condition was acute. As Rebecca sat by her mother's bedside, she reviewed the events of the past few days in a new mood. She had been selfish and thoughtless; she had forgotten duty and the strong permanent affection that underlies life like a foundation.

From long experience, Rebecca had learned to estimate the severity of these heart attacks; her mother would recover now. Then she must make amends for the trouble she had caused. But how? The net of circumstances seemed closing in.

Two days later came her first and only letter from Rodrigo. It was a letter that overpowered her and swept her back again into the free world of joy and love. It ended in a proposal so wild and alluring that she could think of nothing else after it came.

Dear heart, I thought that I could wait [he wrote]. But I find that I am not strong enough. I want you to come to me. We can be married

here, and you can go home when we sail. I can't begin to tell you how I feel about it. First you were afraid, and now I am afraid. Why should we wait? There is no reason. Then come to me, dear. If you wish it, we can keep the marriage secret for a while. Make some excuse to your mother—and come now.

She carried the problem to the orchard, sitting there all the afternoon with his letter in her lap, reading it over and over, feeling his presence close about her, a spirit of love and desire. More and more clearly with every moment she realized that she must go. She could leave her mother now; these heart attacks passed swiftly. Reasons were futile against life's aching importunity. All her volition answered the call of his love.

**A**T SUPPER TIME she came back to the house. She had settled nothing, made no plans. She had only discovered the strength of her determination. Beyond that, she did not see the way.

"What have you been doing so long in the orchard?" asked her mother, as she went through the kitchen.

"I've been thinking," Rebecca turned to the window. "Mother, I am going away to-morrow afternoon."

"Why, Rebecca! What has happened? Where are you going, dear?"

"I must take the boat for Boston. I may be gone a few days, perhaps a week. Please don't ask me any more."

"But, Rebecca dear, I must know."

True—she must know. Rebecca had vaguely hoped to escape the inevitable; now she saw that it was useless. She saw much more than this. She saw that if she were to tell her mother the whole wild story, it might kill her; that, at best, it would be likely to lay her low again.

She stood for a moment in cruel indecision, watching the evening shadows in the orchard. At length she raised her head wearily.

"Mother, I had a letter this noon, from—from Captain Gilmore." The name rose to her tongue as if by inspiration; until she had spoken it, she had not thought of the subterfuge. She went on hurriedly. "I didn't tell you, dear,—because I wanted to decide alone. He asked me to come to Boston at once, so that we could . . . could be married before he sailed."

"Why, Rebecca! What an unusual request. It doesn't seem like him!"
